No. 583, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*Wanderings in a Wild Country; or, Three Years among the Cannibals of New Britain.* By Wilfred Powell. (Sampson Low.)

MR. POWELL asks for the indulgence of his critics on two grounds: first, that he is "more accustomed to handle the tiller than the pen, and to writing his log than manuscript for the publisher;" and, secondly, because "a lifetime would hardly suffice to enable one to become so thoroughly acquainted with these primitive races as to be able to write of them without some hesitation." As regards his first plea, he need not feel much apprehension, for he relates his adventures—many of them stirring enough—in plain, unaffected language; and for his second, the "hesitation" of which he speaks, his carefulness, when describing a custom of which the meaning is unknown to him, to admit his ignorance—in short, the absence of theorising or dogmatism under considerable temptation to the contrary—will not fail to inspire confidence, especially among those who believe it still early to theorise, or, perhaps, prefer to do that for themselves, and are only desirous of collecting authentic information about these little-known races. Readers of this class, then, though they may, perhaps, complain that there are omissions which a three years' acquaintance with the locality might have supplied, will find much to interest them, as, indeed, will geographers also, the islands of New Britain and New Ireland being more completely unknown than any others of the same magnitude—in fact, one may say, than any other group in the Pacific. They seem, in this respect, to have shared the fate of the neighbouring island of New Guinea, of which, until Dampier's time, they were commonly supposed to form a part.

The most prominent natural feature in New Britain is the tremendous volcanic activity at both extremities of the island. Mr. Powell relates that, while anchored, in 1878, off the Duke of York group, which lies midway between the two great islands, he

"was awake by feeling and hearing something grating violently against the ship's side, and running up on deck found the whole of the harbour covered with huge blocks of pumice-stone, and indeed as far as I could see over towards New Britain the sea was covered; it really appeared as though one could walk to New Britain on it. . . . The eruption of the volcano lasted upwards of a month, and the whole of Blanche Bay and a great part of St. George's Channel were so thickly covered with pumice-stone, that it was

impossible for a vessel, and a boat only with great difficulty, to force a way through. There is no doubt that these fields of pumice-stone have given rise to the report of many reefs that have been searched for afterwards without success, for I defy even a practised eye to tell one from the other. The pumice hangs together in large masses by capillary attraction, bearing with it sometimes branches that have been torn from the trees in its descent; and there settles round the edge of this floating mass a white foam, caused by the incessant washing of the water and the grinding together of the blocks of pumice. This in the distance appears identical with breakers. These fields are carried along by the current until finally thrown on some shore or broken up by a storm."

Besides the many large volcanoes at this (eastern) extremity of the island, and others along the northern coast, Mr. Powell writes that at the western end "the land seemed all on fire" with "innumerable volcanoes, small and large, all in violent eruption," the light by night being sufficient to read by. His voyage along the northern coast to its western extremity covers ground almost entirely unknown, and his survey was carried on under difficulties, with a

"small staff of two men . . . often up to our waists in water, and occasionally having to drive off a shark or two who would flop on to the reefs, churning the water with their tails like a small steamer in ballast."

But such labours are repaid by

"the feeling that the old explorers must have had when suddenly sighting some unknown land in an unknown sea, the imagination strung to the uttermost, not knowing what the next turn of the coast-line may bring them upon. Even to us who know that the supernatural is impossible, it is full of intense and almost breathless suspense and anticipation."

And as our author by no means rejects the native reports of a tribe of men with tails, he could indulge in dreams denied to more hardened and sceptical observers. Among other strange encounters, he met a native wearing the remains of a crucifix, which he would not part with, putting his hands together, for explanation, in an attitude of prayer, and uttering the word "lotu" (which everywhere in these seas means the Christian religion or worship). This individual, however, apparently a relic of an abandoned mission, took part in an attack next day on the vessel, which Mr. Powell repulsed by humanely loading his guns with rock-salt instead of lead, the effect being thoroughly successful. Later on, the vessel was wrecked, and the party was for some days in imminent danger. Mr. Powell saved his log-books and surveys, but lost, with other treasures, an original collection of pets, including tame alligators, pythons, wallabies, and a cassowary. He had also a parrot; but the bird, after learning to talk New Britain and English, "took to laughing, and one day I think he laughed for two hours without stopping, and then fell down dead." His dogs, which met an untimely fate in different ways, were not the least valuable members of the expedition, if only from their sensitiveness to the neighbourhood of land. Dogs, Mr. Powell says, "will detect the smell of a reef even at night while asleep, and will awake and run to the side of the vessel and whine."

The author's remarks on the character of the people, their conduct in various circumstances, and the motives which probably actuate them show that he has studied them with attention. He points out how many of their actions, otherwise inexplicable, may be understood by trying to imagine ourselves in their place; and he immensely admired the pluck of a native who, while trembling with fear, ventured on board a foreign vessel, having never seen one before. While duly reprobating the evil deeds of white men, Mr. Powell doubts whether these are, as is usually supposed, the main cause of atrocities such as the murders of Bishop Patteson and Capt. Goodenough. He believes the natives are too familiar with scenes of blood and cruelty to think much about avenging them. But, besides that there is a good deal of evidence the other way, it is conceivable that the wholesale and novel form of injury inflicted by kidnapping, or by the introduction of epidemic diseases, might excite resentment against the white man generally.

No one will complain that Mr. Powell's experiences of New Britain cannibalism are not set forth in sufficiently realistic style. Certainly we can recall no other instance where cannibalism has been so universal, or so unrestricted by the formalities which usually mitigate it; but perhaps it is that few Englishmen have had the same opportunity of studying the habits of such tribes while still quite unaffected by outside influences. In speaking of this subject Mr. Powell says that in New Guinea cannibalism is only practised by a few inferior tribes about the Gulf of Papua. Our present information, we think, hardly entitles us to lay down these limits; and, at all events, Mr. Powell identifies the New Britain cannibals with the higher tribes of New Guinea. To say the truth, cannibalism is no mark of an inferior, or even of a specially savage, race. The Fijians, for instance, in all that regards physique, character, and institutions, are *facile principes* among the Melanesians.

Among the peculiar customs described by the author, one of the strangest is the *Duk-duk*. The mysterious being so called (of whom a drawing is given) is a disguised figure, employed in every community to administer justice by the order of the chief. Only a few initiated know who or what he is, women and children being forbidden, and afraid, to look at him. The author notes the resemblance to Mumbo Jumbo, and even speculates as to whether the *Duk-duk* may be referred to some primitive African tradition. Certainly the institution has a very African cast.

The illustrations given of implements, weapons, musical instruments, and the like are not numerous, but they are accompanied by careful description, thus facilitating comparison with similar productions of other islands, which may throw light on the relations of the respective peoples. That this is the author's intention may be gathered from his concluding remarks, in which he urges the necessity of a speedy exploration of some of the least-known islands before their peculiar manufactures, customs, traditions, and speech—not to mention the people themselves—are swept away by European intercourse, the contact with the trader and

with the missionary being about equally fatal to archaeological interests. Mr. Powell will have done good service to science if a well-organised expedition should be the result of his appeal.

COURTIS TROTTER.

*English Towns and Districts.* By Edward A. Freeman. With Illustrations and Map. (Macmillan.)

THIS highly interesting volume appears opportunely for those among the number of our scholars and students who are proposing to pass vacation time not only this side of the English Channel, but within the insular limits of the realm of "the English Justinian;" to forego the more exhilarating attractions of Pontresina and Zermatt, of Tyrol and the Pyrenees, of Norway, the Ardennes, and the Highlands, and to be content for once to explore their native land, and to bestow on Silchester, Lincoln, or Carlisle something of the same respectful and solicitous regard with which they have before looked on Trier, on Rheims, or on Autun. A few weeks thus spent will result in no little profit, even when estimated in relation to those labours of the study or the class-room from which they are primarily designed as a relaxation and a diversion. "Many of us," says Mr. Freeman, in his Preface (and none can claim a better right to be heard on such a question)—

"many of us, in these days of foreign travel, have very little notion of the treasures of art and history which still live in the towns and villages of our own country. And many of us have not fully grasped the truth how largely in every land national history is made up of local history."

In connexion with this local history he now gives us some thirty brief, but trustworthy, studies of places, some half-dozen of which the English tourist can hardly fail to pass through or to find within easy access. And whether in "the most interesting of English cities," gazing on the walls which rose at the behest of him from the Burgundian Avalon,

"spectabile quorum  
Vix opus inciperet nummosa pecunia Croesi;"

or, resting in the "City of the Legions," under the shadow of its historic castle, before visiting the mighty bulwark of Hadrian and Severus; or, pausing on the site of the Damnonian Isca, ere losing himself amid the hills and vales of Devonshire; or scanning in the solitudes of Llanthony the remains of "one of the most instructive pieces of ecclesiastical architecture in our island"—the tourist will find in this volume a suggestive companion, who, without appealing to his credulity, will largely aid him in recalling on each ancient site and under each venerable tower (tottering or otherwise) the associations of a real, though shadowy, past.

There is not much, it is true, that is quite new to us in these pages, for they represent mostly revised reprints of contributions to the *Saturday, Macmillan*, or the *Archaeological Journal*, as these in turn were reproductions of papers and addresses read before

sundry learned societies at intervals extending over more than a quarter-of-a-century. It must, indeed, have been with something of melancholy that the writer, as he revised each sketch, recalled the long list of sympathising friends and scholars—a Shirley, a Haddan, a Willis, a Pauli, a Guest, a Green—who, since he wrote his paper on Kidwelly, have passed away, to leave him *facile princeps* in the wide and important province of our national history which he has made so peculiarly his own. We might, indeed, be inclined to ascribe in some measure to such feeling the fact that the work of revision has not been carried farther. The language, for example, in which, in the paper on Cardiff and Glamorgan, reference was made some twelve years ago to the moot question of a non-Aryan population in Britain before the Celtic immigrations is scarcely suited to existing evidence and opinion on the subject as summarised in Mr. Elton's excellent *Origins of English History*. But, in fact, wherever buildings and ruins are wanting, Mr. Freeman's interest in a period seems to fail him. He greatly prefers stones to syllables. The inductions of the comparative philologist or ethnologist may sometimes, to use his own phrase, take away his breath, but he rarely cares to discuss them, and almost confesses himself an "intruder" in the age of Boadicea. He may adopt with a slight modification the sarcasm of a celebrated wit on the "Dark Ages," and avow that he knows nothing of the ages which *built* nothing—built nothing, that is to say, which should remain in after-times as enduring mementoes of laborious patience and constructive genius.

The somewhat select circle of readers to whose sympathies this collection especially appeals will be inclined, again, to regret the almost entire absence of allusions to the literary interest which attaches to each cathedral or monastic foundation, and to the labours to which Mr. Freeman himself is so largely indebted—that in investigating the antiquities of St. Albans, for instance, he should have passed by almost unnoticed the achievements of its *scriptorium*; and that, in summing up the more notable reminiscences which attach to the later history of the foundation at Glastonbury, he should have omitted the picture of Leland, halting on the threshold of its splendid library, lost in admiration at the imposing array of its contents. It is really singular that, in dilating on the valuable illustration once afforded by the ancient seat (now in ruins) of the Montagues at Cowdray of our sixteenth-century domestic architecture, he should have passed by in silence the *Book of Orders and Rules* compiled by Anthony Lord Montague himself, and printed in the collections of the Sussex Archaeological Society—the key, as it were, to the whole economy of the household. The obvious answer to this criticism, of course, is that the original scope of each paper was antiquarian rather than literary; but, in giving the series to the general public, a certain recognition of the latter element might have very fitly found place, and would have involved but little additional trouble or matter.

J. BASS MULLINGER.

TWO BOOKS ON THE VAN ARTEVELDS.

*James and Philip van Arteveld: Two Episodes in the History of the Fourteenth Century.* By James Hutton. (John Murray.)

*James and Philip van Artevelde.* By W. J. Ashley. (Macmillan.)

HERE we have two works before us, printed within a few months, relating the lives of the same people, and going over exactly the same ground. The first is deficient in literary style and accuracy, but teeming with facts mixed up without method, and with but few dates; the second, from its very nature (for on the title-page we learn that it was the Lothian prize essay for 1882), is deficient in facts and exceedingly elegant, aiming at the broad grasp of an intricate subject. Both are important in their way. When read together, they form an excellent guide to the period; it is much to be lamented that in some form or another they cannot be blended. To use Mr. Ashley's definition of the subject, they form "the record not of jealous and meaningless squabbles, and of the uproars of the *residuum*, but of an intelligible advance in the world's order."

Both works teach us a great deal about the early history of Flanders. In fact, we are almost tempted to wonder why either work is termed a Life of James and Philip van Arteveld rather than a History of Flanders down to the end of the Arteveld period. Mr. Hutton's opening chapters are very dry; the relationships and intermarriages of the earlier Counts are therein detailed in a manner that can interest none but the genealogist. On p. 3 we are confronted with Robert II., but the list of these Counts fails to supply us with the first of that name. On pp. 48 and 49 Robert and Philip de Cassel both presumably refer to the same individual; and we should much like to have Mr. Hutton's authority for his statement, on p. 96, that in the fourteenth century "the Flemish clergy were busy selling indulgences."

Turning to Mr. Ashley's essay, we meet with quite a different rendering of the same subject, for he deals with the people and their growing influence on the body politic of Flanders, and scarcely troubles us with any strange names until he introduces us to the personages who are to play a part in his drama. We glide with him almost insensibly through the establishment of the mark system, and the aggregation of communities, until we find ourselves face to face with the merchant guilds in the commercial towns and their development into an oligarchy of wealth. Beneath them the artisans likewise form their guilds. The Counts ally themselves at one time with the craftsmen; at another time they are seen treating with the merchant guilds. Then they fall back on France, until, under Peter Coninck, the artisans defeat King Philip of France at Courtrai; and the Count, in knighting the rebel leader on the field of battle, recognises the strength of the new power. Political rights, however, are still far from the craftsmen; the Count evades his obligations, and becomes more than ever a despised satellite of France. Year by year the artisans fight single-handed for their

rights, until the war between England and France brings matters to a crisis, and the necessity for an able man to guide the liberties of his country produces James van Arteveld.

Both of our authors leave us much in doubt as to the real identity of James. Mr. Ashley, while admitting to want of confidence in his materials, gives us vague assurances of his greatness. "Throughout the first period of his public activity his name seldom appears; and the initiative would almost seem to have been taken by Vaernewyck and his friends of the ruling class." And, again, "The characteristic feature of the constitution of Flanders in the fifteenth and later centuries is the organisation of the country in the Four Members; . . . native historians generally attribute its creation to James van Artevelde, and deem it his chief claim to distinction;" and farther on we read, "unfortunately, the lack of evidence leaves us ignorant as to the exact share taken by Artevelde in these changes;" finally, Mr. Ashley speaks of his ultimate fall from a position about which nobody seems to know anything, as "utterly inexplicable."

Mr. Hutton is not so vague, inasmuch as he is not so sceptical. Froissart is his Bible, and Froissart's pretty little anecdotes he never presumes to doubt. He gives us, for example, that wonderful story of the sudden freak which placed van Artevelde at the head of affairs; and he never suggests that it is, to say the least of it, extraordinary that a man should lean out of his window one day and tell a crowd that if they followed his advice they should have all they desired, and that on the strength of this, without any demur, an insignificant man should be chosen as captain of a revolution.

Mr. Hutton tells a very interesting story about the reasons why Edward III. of England assumed the title of King of France. We give his words: "They"—the deputies sent to meet Edward on his landing in Flanders—

"appear to have expressed their readiness to serve under him to the best of their abilities provided he would quarter the arms of France with those of England, and call himself King of that country; otherwise, however great their good-will towards him, they would forfeit the sum of two millions of florins to the Apostolical Chamber, besides incurring a sentence of excommunication if they acted offensively against the King of France for the time being. Edward is represented to have been somewhat startled at this proposition, seeing that he had not conquered any part of that kingdom, and it was uncertain whether he ever should; on the other hand, he was unwilling to lose the aid and the assistance of the Flemings, who would be of greater service to him than any others at that period. In the end, by the advice of the lords of the empire, Edward acceded to this novel proposition."

We look to see what Mr. Ashley has to say on this matter, and read as follows:—

"The reason assigned is obviously erroneous. There is no proof of any such obligation. . . . If his [Froissart's] account had been correct, the Flemings would indeed have been simple-minded to suppose that the Pope could be tricked by so transparent a device."

Undoubtedly Froissart is an annalist to be taken with reservation; in spelling, too,

he shows the same national contempt for giving us German names correctly as his countrymen do now. Francis Ackerman he promiscuously calls *Atermen* or *Aterman*. We must admit to agreeing with Mr. Ashley in feeling a little sceptical about the facts. Nevertheless, we are glad Mr. Hutton can assure us that "James van Artevelde evinced a high order of statesmanship in his sustained effort to found a nation through the close alliance of Brabant and Hainault with Flanders."

We will now briefly glance at the hero of Sir Henry Taylor's stirring poem. In Mr. Hutton's character of Philip van Artevelde there are too many inconsistencies to make it satisfactory. We are told on p. 279, "As for Philip van Artevelde, adversity revealed the noble qualities of the man, and showed that he had inherited from his father something more than a great name." On the following page we read: "Van Artevelde and his captains had formed an inflated opinion of their own skill and valour, and foolishly underrated," &c. . . . Again: "He forgot his duty as a general, and descended to the level of a mere fighting man;" and, lastly, "with regard to Philip van Artevelde, it is less easy to summarise; he does not appear to have possessed any originality or any very marked individuality—the master mind was Peter van den Bossche."

Turning to Mr. Ashley's essay, we are disappointed to find nothing which will give us any idea of Philip's character or position. He does not come on the scene at all until the concluding pages of the book, and is dismissed as a man who was engaged in many battles and finally died in one of them. No attempt is made to place him before us as a living person; he is merely named as an individual during whose time certain important constitutional changes took place. As to Philip van Artevelde being endowed, as Sir Henry Taylor tells us, with "a noble nature and great gifts, courage, discretion, wit, and equal temper and an ample soul," Mr. Ashley offers no suggestion, and doubtless wisely, for neither he nor anybody else will ever know. If the name of Artevelde had not become great in our ears by Sir Henry's poem, would it have ever appeared on the title-page of these two volumes?

J. THEODORE BENT.

#### *Sketches of Bird Life.* By J. E. Harting. (W. H. Allen.)

PEOPLE seem never tired of hearing the life-history of the commoner British birds. Year by year with the swallow and cuckoo comes a stream of books about them of a more or less scientific nature. These *Sketches* partake of both characteristics: some are excellent, and the kind of work to be expected from their author; the rest are mere book-making, ornithological shoddy. The chapter on the peewit, for instance, is as bare of new facts, as arid and monotonous, as the wide fallow fields over which the bird is so often seen flying. That on the blue titmouse works up again a good many well-known anecdotes, quotes no less than a page and a-half from Mudie's book on birds in the author's own six pages, and even tells the threadbare story

that the best way to see the blue-tit's lively movements is to suspend a piece of suet from a stick. As for the robin, he would indeed be clever who could point to a single new fact in this bird's history, save perhaps the recently discovered one that, like many other (if not all) of our British birds, the robin is now known to migrate regularly backwards and forwards to the Continent; and this Mr. Harting does not mention. The chapters on the short-eared owl and the bullfinch are written in too popular a fashion to have made it worth while, we should have thought, to reprint them. They are sketches, but sketches characterised by little breadth or fullness. Lovers of the country may reasonably resent this thin fare when offered them by an ornithologist of such knowledge, and an observer so keen and experienced, as Mr. Harting.

It is a pleasanter task to turn over a new leaf, and dwell upon a chapter like that devoted to the cuckoo. Here Mr. Harting fastens upon the theory which was put forth respecting the colour of its eggs by Dr. Baldamus, logically and clearly disproving it, and reconciling, so far as can be done with our present knowledge, the facts connected with the cuckoo's choice of nest and the colour of the eggs it lays. Perhaps the author speaks too generally when he says:

"What really takes place, we believe, is this—the cuckoo lays her egg upon the ground; the colour of the egg is variable according to the condition of the ovary, which depends upon the age of the bird, the nature of its food, and state of health at the time of oviposition. With her egg in her bill, the bird then seeks a nest wherein to place it."

Some eggs may be so laid, and certainly are so carried, to a suitable nest; but it does not follow that this is the bird's invariable practice. The whole chapter is worth reading by all students of British bird-life. Similarly that on the golden plover is an excellent statement of the bird's migrations and changes of plumage, and cannot fail to be useful to all sportsmen, many of whom possess the vaguest knowledge on these points. The ruff and reeve, once so common in the fenny districts of East Anglia, now almost exterminated, are well figured and described in another of these *Sketches*. Mr. Harting rightly dwells upon the very variable colours of these birds. In no other native bird is such variation to be found. "Orange, lemon, clay-colour, lead-colour, and black may be found, with all the intervening shades." It is small wonder that, in the infancy of ornithology, naturalists were led to create several species from these utterly dissimilar colours, the whole story emphasising the warning, needful not in ornithology only, *nimum ne crede colori*.

Mr. Harting's principle in the better of these essays is to discuss some disputed point in a bird's economy, and, partly from evidence, partly from his own experience, pronounce a definite judgment upon it. It is on such debatable ground that a veteran ornithologist is always listened to with pleasure. Thus his discussion respecting the method in which a wood-cock so often carries its young from one feeding ground to another is a model of lucidity and interest. Finally, he decides that the bird is able to carry its

young in two or three different manners, and the evidence which he adduces bears out the verdict. The curlew and the heron are two more birds on which Mr. Harting has pleasant, well-written chapters. He recommends the latter bird as excellent eating, if served with lemon and cayenne. A friend was about to try the experiment, but, on a full-grown water-rat being extracted from the heron which he was about to eat, abruptly changed his mind.

The illustrations partake of the same unequal character as the Sketches which they adorn. Some are unrecognisable unless the printers had kindly labelled them. The thrush, the nightingale, and the robin are examples of this kind. On the other hand, the woodcock carrying its young is most characteristic. The young titmice, too, are beautifully drawn; the curlew and golden plover are unmistakable; but it is a nice question whether the peewit should be represented flying with erect crest: our own impression is that the crest is only elevated when the bird is on the ground, daintily stepping over a favourite haunt. The kestrel figured on p. 10 must surely have been idealised from a stuffed parrot.

At least two regular Histories of British birds are at present being published in parts. The best account to give of Mr. Harting's more carefully written essays in this book is to say that they may fitly supplement either of these scientific works. Every country dweller will find in them one or more chapters which must prove specially interesting to him; and those essays in which Mr. Harting is seen at his best must provoke the wish that he would more frequently give ornithologists such good and careful work.

M. G. WATKINS.

*Studi su Dante.* By Raffaello Fornaciari. (Milan.)

THESE interesting Studies (with the exception of the last and most important) have been already published, or delivered as lectures. They exhibit a minute acquaintance with the literature of commentators and editors, and, what is better, with the various works of Dante himself. The author continually asserts as the guiding principle of his exegesis that Dante is his own best commentator—a principle already formulated and exemplified by Giuliani in his *Dante spiegato con Dante*.

The first article deals with the allegorical purpose of Santa Lucia in Dante's system—a subject on which a vast variety of opinion has prevailed from the earliest times (see p. 7). Fornaciari, adopting and expanding a theory of Ruth's (*Studi*, &c.; 1865), maintains (1) that in the Dantesque hierarchy a relation exists between Lucia and Virgil similar to that between the Virgin Mary and Beatrice; the former pair belonging to the active life, and the latter to the contemplative life (so constantly in antithesis in Dante), the members of each pair representing higher and lower types of each life. He notes that Mary first requests (*chiede*) Lucia to assist Dante. She betakes herself (*si mosse*) to Beatrice, who finally sets in motion Virgil, who is the lower symbol of the active life, and who cannot

pass beyond the entrance of the Earthly Paradise. The antithesis between Lucia and Mary is supported by the singular passage in *Conv.* iii. 5, in which Maria and Lucia are the names given by Dante to two imaginary cities at the North and South Poles respectively. (2) That Lucia symbolises the Justice, and Mary the Mercy, of God. In support of this, various reasons, more or less fanciful, are given, culminating in the grotesque argument with which the paper concludes—viz., that Santa Lucia, having plucked out her eyes to preserve her virtue, was well qualified to symbolise Justice, who is also represented as blind! In this, as in some other arguments, it is assumed that Santa Lucia is the well-known Syracusan martyr in the time of Diocletian. We miss any reference to the point ingeniously raised by Witte (*Dante Forsch.* ii. 30), that the Santa Lucia referred to by Dante was another and comparatively obscure saint of that name—viz., Lucia Ubaldini, sister of the Cardinal (*Inf.* x. 120) who was living in 1225 in the cloister of Santa Clara of Assisi in Florence, the very name from which Piccarda was carried off (see *Parad.* iii.). She would therefore have a special interest for Dante on these grounds, and possibly, too, from her day falling on May 30, which Witte conjectures to have been Dante's birthday. In that case, she might be regarded as in some sense his patron saint.\*

The second article is an elaborate defence of a theory of Benassuti that the *ruina* of *Inf.* v. 34 (again a *crux* of commentators) is to be explained in connexion with the two *ruine* "altrove" (*Inf.* xii. 45; xxi. 106; xxiii. 136) as due to the earthquake at Christ's death; and a number of reasons, moral and allegorical, are suggested why such a *ruina* should be found at this particular point in Dante's system.

The third deals with the question of the allegorical significance of the Furies in Dante, a subject on which the varieties of interpretation are almost endless, from the earliest commentators downwards (p. 50, &c.). The article expands into a discussion of the special appropriateness of the nine different principal mythical beings, or classes of beings, corresponding severally (a novel point, as far as I know) to the nine circles of the *Inferno*—viz., Charon, Minos, Cerberus, Plutus, Flegias, the Furies, the Minotaur, Geryon, the Giants. Medusa, often regarded as a personification of heresy, the author interprets (after Boccaccio) to be *i beni e piaceri mondani*; the Furies he considers to be the guardians of the Stygian pool and the tormentors of its occupants; and the "sacrilegious" Flegias (see *Virg. Aen.* vi. 618) as the presiding spirit of the city of Dis and the heresiarchs.

\* I have never seen the interesting statement of Boccaccio quoted, as it seems to me it might well be, in support of Witte's theory: "... quello che già mi ragionasse un valent' uomo, chiamato ser Piero di messer Giardino da Ravenna il quale fu uno de' più intimi amici e servidori che Dante avesse in Ravenna: affermandomi avere avuto da Dante, giacendo egli nella infermità della quale e' morì, lui avere di tanto trapassato il cinquantesimo anno, quanto dal preterito maggio aveva infino a quel dì." This, if not necessarily, at least most naturally, implies that his birthday fell at the end of the month, especially in the mouth of one so precise in his statements as Dante.

He further assumes, as justifying this function of the Furies, that in that Stygian pool four classes of sin are punished—Anger, "Accidia," Envy, and Pride. Much of his argument rests on this assumption of an extremely doubtful and much disputed point. It is distinctly denied (though on various grounds) by Witte, Todeschini, Benivieni, Minich, and others that Envy and Pride are punished as separate sins in the *Inferno* at all. Some, at any rate, of the above-named scholars would similarly exclude "Accidia" also.

The fourth essay deals with Dante's treatment of Ulysses in particular, and of the Greek heroes generally, which is doubtless coloured by the recollection that they were the enemies and destroyers of that Troy which is so closely identified by Dante with the divinely ordained Empire of Rome (*cf. Inf.* ii. 20). In *Inf.* xxviii. 10 (and also in his prose works) *Trojani* is used for *Romani*, the latter word, as might be expected, being substituted by some copyists.

The last and most important of these Studies discusses elaborately the interesting and apparently inexhaustible questions of the relation between the *Vita Nuova*, the *Convito*, and the *Divina Commedia* ("Dante's trilogy"), and the admixture of the literal and allegorical in regard to Beatrice, the Donna gentile, and Dante's relations to them and others. After lengthy citations of passages throwing light on these subjects from the various works in question, we have a judicial statement of the principal difficulties and problems requiring solution (pp. 130, &c.); then an historical sketch of the modern literature of the subject, the elaborateness of which may be inferred from a bare list of the authors whose views are severally expounded and criticised—Biacioni, Dionisi, Trivulzio, Fraticelli, Balbo, Giuliani, Ruth, Lubin, Carducci, d'Ancona, Witte, Scartazzini, Wegele, with three or four more. The main landmarks of Fornaciari's own conclusions are:—

1. The *Vita Nuova* was completed within thirty months (*Conv.* ii. 13) of Beatrice's death—i.e., *circa* 1292. (This need not apply, as Witte has already observed, to the last section, which may have been added much later, and after the abandonment of the unfinished *Convito*.)

2. The *Convito*, both poetry and prose (a disputed point), was entirely posterior to the *Vita Nuova*, and probably about 1294, but possibly the *Vita Nuova* may not have been "published," and some of its sonnets may have been inserted after this date. (Compare Ugo Foscolo's similar theory respecting the *Divina Commedia*.)

3. He distinguishes the "alquanti giorni di malvagio desiderio" of the *Vita Nuova* from the "trenta mesi" of the *Convito*, and supposes Dante's affection to have successively centred on (1) Beatrice; (2) Donna pietosa (*alquanti giorni*); (3) Beatrice again (*Vita Nuova*, § 43); (4) Donna pietosa again as the queen of philosophy (*trenta mesi*).

4. Dante's love for the Donna pietosa was in no sense literal or sensuous.\* Fornaciari regards the Donna pietosa (whom, again, he

\* Dante states this in general terms as distinctly as possible in *Conv.* i. 2 (*fin*), iii. 3 (*sub. fin*), &c., and these and similar passages ought to have settled the question.

distinctly identifies with the Matelda of the *Purgatorio*) as a symbol of active life, and argues that Dante incurred Beatrice's reproaches (in *Purg.*, cantos 30 and 31) "volgendosi alle cose del mondo, ed avviandosi verso la vita attiva e civile." This is also the view maintained by Scartazzini (*Abhandlungen*, &c.), and I think he shows successfully that it is consistent with all, or nearly all, the expressions occurring in that celebrated passage.

5. The reality of both the literal and allegorical senses of these and other personages is to be everywhere insisted on, some of the above-named critics having evaporated one and some the other of them.

This last point, recognised, of course, by other writers, though denied by many, appears to be of cardinal importance for the understanding of Dante. With Dante all things were "double one against the other." The habit of seeing an allegorical meaning in the objects and events around him was to him quite natural and spontaneous—as natural as in the nineteenth century it would be to enquire into their causes (see numerous passages in *Convito*, Tratt. ii., especially Ch. 1 and 13). It is almost as hard for us to realise this habit of mind as that of the mythopoeic age of Greece or the habitual symbolism of a Hebrew prophet. The blending of the literal and allegorical to us means confusion. Our efforts to realise and define lead to sacrificing the reality of either one or the other. Between these errors most commentators oscillate. Fornaciari, among others, has the merit of insisting on the reality of both, though, as in the case of free-will and foreknowledge, and similar antitheses in theology and philosophy, we may be compelled to assert the independent truth of two conditions whose co-existence is unintelligible to us.

E. MOORE.

*The Shakspeare Flora.* By Leo H. Grindon. (Manchester: Palmer & Howe; London: Simpkin, Marshall & Co.)

Few books relating to Shakspeare have ever been got up with greater taste than the volume which has just issued from a provincial press under the title of *The Shakspeare Flora*. This is not the first attempt that has been made to familiarise us with the "trees, plants, flowers, and vegetable productions" mentioned by Shakspeare, for the Rev. H. N. Ellacombe some time since published privately a work on this subject, in which he took up each plant alphabetically and gave it an article of greater or less dimensions as the necessity of the case demanded. Here we have a work divided into chapters treating first of the trees and shrubs, then of wild flowers, garden flowers, cultivated fruits, the farm, the wayside, the market and shop, and, lastly, of book and hearsay names, thus bringing out, in an attractive and very readable form, "the poetry of every allusion where poetry is involved." In some respects the student will prefer Mr. Ellacombe's method of adducing each passage from Shakspeare's works as the text on which the discourse which follows is founded; but Mr. Grindon has had regard more especially "to beginners," and to such offers his friendly aid.

And we may say at the outset that they will never regret having placed themselves under his leadership, for, except occasionally in connexion with matters philological, he carries us entirely along with him.

We are afraid that the author has relied a little too implicitly upon the authority of Dr. Prior in discussing the etymology and history of some plant-names, although we have not noticed that Dr. Prior's *Popular Names of British Plants* is referred to. An instance may be adduced, however, to show how Mr. Grindon has been led to adopt the view of Dr. Prior without even noticing the fact that many of our dictionary-makers hold another opinion. Commenting on Shakspeare's weeds (p. 220), he says, "'Cockle,' anciently 'kokylle'—a name derived from *caucalis*, the Greek *καυκαλῖς*, the wild carrot—is mentioned in 'Coriolanus,' iii., 1, in a figurative sense—

'We nourish 'gainst our senate  
The cockle of rebellion.'

Dr. Prior says:—"COCKLE, A.S. *coccol*, L. *caucalis*, Gr. *καυκαλῖς*, some umbelliferous plant, which Clusius says (p. ccii.) was the same as *δαῦκος ἄγρια*." Prof. Earle, in his *English Plant Names*, gives us (p. 42) an instance from a trilingual vocabulary of the names of plants belonging to the thirteenth century in which "cockle" glosses *xizania* and *neels*. He makes no remark on the etymology of the word, but states elsewhere (*Philology of the English Tongue*, p. 21) his conviction that the word "cockle" is of British origin. Prof. Skeat supports this view in his recently published dictionary, and adduces, by way of illustration, the Gaelic and Irish *cogall* and *cogull*, which, besides having similarity of sound, have also identity of meaning. In reference to the "Hardocks" mentioned in "King Lear," the author again inclines to Dr. Prior's view, which, indeed, is also held by many others, that it is the burdock (*Arctium Lappa*, L.). But the reference to

"—all the idle weeds that grow  
In our sustaining corn"

leads me to believe that the *Centaurea nigra*, L., usually known in the Midlands and West of England as "Hard-heads," is intended. We read (p. 92) of the pansy, and we are told that

"the French name is (according to the *Epitome de Plantis*, 1586), 'pensée,' whence very obviously the Shakspearean one, though when first employed in our own country there is no evidence to show. That Continental names should accompany flowers brought as exotics across the Channel, as in the case of the sweet-william, originally the sweet-ciliet (of which latter word 'william' is a corruption), would be next to a matter of course."

Now, without disputing for a moment the general fact, the particular instance here adduced is certainly open to challenge. Our author again seems to have relied on Dr. Prior, who says: "SWEET WILLIAM, a popular name of a common garden flower, perhaps from the French *ciliet*, L. *ocellus*, a little eye, corrupted to *Willy*, and thence to *William*." The very plausibility of this explanation is enough to make one suspicious; and we at once ask, Can any instance be adduced, either from books or from our lists of local plant-names, which preserves to us the intermediate link

*Willy*? I admit that in a volume on *Flowers and Flower Lore* (p. 157) I have myself inclined to this interpretation of the name, but have stated that as yet I have found no reliable evidence which may be adduced in support thereof, while rival theories and explanations are there fully investigated.

While these points are adduced to show how possible it may be that readers of Mr. Grindon's work will refuse to accept all the conclusions at which he arrives, we cannot forbear stating that as a general rule his statements are made with great caution, and that his references to Hebrew and Greek words show careful study without pedantry. However, when we come to the work as a whole, and take it up for the sake of reading what Shakspeare has to say of our common flowers and plants, we are delighted with the graceful and easy manner in which the author wades through the maze of passages in which any particular name appears, and culls for us its pith and substance without wearying our patience or provoking our displeasure. We have not here a long string of quotations interlarded with a few commonplace and trivial remarks, but the text is made to lead up to each particular example adduced, so as to bring into it as well as out of it all that it was Shakspeare's intention to teach. Take, for example, the following passage from p. 66 on THE ELDER as an illustration of the style throughout:—

"The homely, old-fashioned elder of the hedge-row, and of hillsides otherwise untenanted by an arborescent plant would become familiar to Shakspeare in his boyhood, for is it not this to which every lad brought up in the country resorts for toys and pop-guns? One can easily imagine the recollection of the sports of his schooldays that would suggest the image in 'Henry V.,'—'That's a perilous shot out of an elder-gun, that a poor and private displeasure can do against a monarch' (iv., 1); and that other in the 'Merry Wives,' where the pith, so light and compressible, so easily forced out, stands for the reverse of the 'heart of oak'—'What says my Aesculapius, my Galen, my heart of elder?' (ii., 3). The copious creamy bloom of the tree, precisely concurrent with mid-summer, is somewhat honey-scented; the rich black-purple clusters of fruit recommend themselves for a kind of wine or cordial—in such company we do not look for unpleasing scent of foliage; so much the more remarkable, therefore, the contrasted character adverted to in 'Cymbeline,' where the tree supplies a metaphor quite seasonable:—

'And let the stinking elder, Grief, entwine  
His perishing root with the increasing vine.'

—(iv., 2.)

In 'Love's Labour's Lost' the poet shows his acquaintance with the old tradition preserved by Sir John Mandeville, playing, at the same time, upon the twofold meaning of the word:

'Holofernes. Begin, sir, you are my elder.  
Biron. Well followed; Judas was hanged on an elder.' (v., 2.)

In some cases, when Warwickshire may fail to supply an instance of survival of old pronunciations, we find them elsewhere. Mr. Grindon says, "When Shakspeare wrote, the word 'reasons' was pronounced 'raysons.'" This explains the pun employed in the words, "Give you a reason on compulsion! If reasons were as plenty as blackberries I would give no man a reason upon compulsion."

Now in Devon and Somerset the country-folk generally pronounce the words "reason" and "raisin" exactly alike, while "plenty as blackberries" and other phrases of a similar kind are of every-day occurrence in the speech of the West of England. Speaking of the orange, our author remarks (p. 277) that "No mention of this queenly fruit occurs in the classic authors, the 'golden apples' of ancient mythology having been quinces." However true it may be that the quince derived its name from the Cretan city Cydonia, we should have been glad to know on what ground the generally received tradition, that the orange was the golden apple of the Hesperides, of Hippomenes, and of Atalanta, is rejected. When our own opinion has been formed, the dogmatic support of another opinion only provokes a challenge, and in this case we cannot feel content to accept the statement without desiring some authority. Mr. Grindon reminds us, as Prof. Earle had already done before, that the importance of plants in medicine appears from the very names "drug" and "druggist." A drug was a *dried* plant, prepared and administered according to certain notions often derived from the doctrine of signatures. It is worthy of note that in the Far East we find the word for medicine derived from that meaning a plant or herb; and the doctors' shops in China to-day are exactly like the places which we should imagine used to exist in England centuries ago when doctors were neither more nor less than herbalists. We are reminded of the superstition prevalent in the age of Shakspeare, and still lingering on, which linked the destiny of mortals with that of trees and plants. The bay-tree (pp. 12, 299, cf. p. 82) dies when the king departs this life:

"'Tis thought the king is dead; we will not stay;  
The bay-trees in our country all are withered."

A farmer informed me the other day that many people used to augur success or failure by watching the sage planted in the garden. If the plant prospered, the owner was making money and thriving; if it died, he became poor. He added: "I had a proof of this a little while ago. At the place where I was living in Beds the sage in our garden withered up just at one time, but after that it revived again, and it was just as the people said." I find many such superstitions still lingering among the older folk in out-of-the-way places, and in Shakspeare's time they must have been far more numerous.

Enough has been said to show that Mr. Grindon's work should occupy a place on the table of every student of Shakspeare, of botany, and of nature.

HILDEBIC FRIEND.

#### RECENT THEOLOGY.

*The Book of Adam and Eve: a Book of the Early Eastern Church.* Translated from the Ethiopic, with Notes from the Kufale, Talmud, Midrashim, and other Eastern Works, by the Rev. S. C. Malan. (Williams and Norgate.) "The contest of Adam and Eve" with Satan is one of those curious apocryphal histories which, like the "Ascent of Isaiah," and several others, the Eastern mind loved to construct upon the simple narrative of Scripture. The adventures of Adam and Eve after their ex-

pulsion from Eden; the temptations by which, one after another, Satan seeks to beguile them; the promises which they receive of redemption in a distant future, and the fortunes of their descendants the patriarchs—these form the subjects of the narrative which is here for the first time made accessible to English readers by Dr. Malan. The work dates probably from the fifth or sixth century, and is written in a simple and unaffected style. Till recently it was only known from the Ethiopic, and a German translation of the MS. at Tübingen was published in 1853 by Aug. Dillmann; but two years ago Dr. Trumpp, having discovered at Munich a MS. of the Arabic original (from which the Ethiopic version appears to have been made), and having obtained a collation of another Ethiopic MS. in the British Museum, published the Ethiopic text itself in the *Transactions of the Bavarian Academy of Sciences* for 1881. Of this text Dr. Malan's volume is a translation. We have compared a considerable portion with the original, and find that, though there are occasionally slight marks of inadvertence (e.g., p. 35, of *his being filled* instead of *I have filled him*; pp. 42 and 49, *fasting for hardship*; p. 44, *kingdoms for bars*), on the whole the translation is exceedingly accurate and readable. The histories which the author has embodied or alluded to in the course of his work are, in many cases, evidently derived from the floating body of legend and parable current during the early centuries of the Christian era. They accordingly exhibit frequent points of contact with the Talmud and other Jewish writings, the Koran, and in particular with allusions occurring in the works of Ephrem Syrus. Many of these are illustrated by Dr. Malan, with much learning, in the notes at the end of the volume. Ethiopic has not received at the hands of English scholars the attention which is its due; and we thank Dr. Malan, while placing in our hands this quaint creation of Eastern fancy, for contributing at the same time to remove a reproach from English scholarship.

*The Doctrine of Last Things contained in the New Testament compared with the Notions of the Jews and the Statements of Church Creeds.* By Samuel Davidson. (Kegan Paul, Trench and Co.) In this little work Dr. Davidson treats the doctrine of last things under five heads—viz., "Christ's Second Advent," "The Resurrection," "The Intermediate State," "The Last Judgment," and "The Resurrection State: Rewards and Punishments." Under these heads he brings together the different passages of the New Testament bearing on each subject, adding explanatory remarks and comparing the passages adduced with statements of the Church formularies. The work, it is hardly necessary to say, is written in entire independence of any dogmatic system. Under the head of "The Resurrection State," Dr. Davidson has to deal with the question of the eternity of future punishments, and on this point his views are more to be depended on than those of Canon Farrar, whom he combats. He maintains that the doctrine is certainly contained in the New Testament, and even in the words ascribed to Christ, but seems half inclined to make it an open question whether Christ actually taught it. The book, though somewhat defective in style, is, as regards its matter, good so far as it goes, but it may be regretted that so important a subject has not been more adequately treated.

*Biblical Theology of the New Testament.* By Dr. Bernhard Weiss. Translated from the Third Revised Edition by the Rev. David Eaton. Vol. I. (Edinburgh: T. and T. Clark.) It is now a good many years since Prof. Weiss's *Lehrbuch der Biblischen Theologie des Neuen Testaments*, then in its second edition, was

reviewed in the ACADEMY (June 2, 1873). The third edition (of which the present volume, containing about the half, is a translation) differs in no essential respect from the second, either as regards form or substance. It contains, naturally, some modifications of statement, some additional notes, and references to works published in the intervening decade, showing that the author has spared no pains to keep pace with the still increasing literature of his subject. A work so thorough as this, and which so fully recognises the historical character of the science of Biblical theology, was well worth translating, and the Messrs. Clark deserve the thanks of students for including it in their "Foreign Theological Library." Mr. Eaton's translation, if such Germanisms as "potential," "subsume," &c., may be pardoned, is in all respects a satisfactory rendering of the original. The second volume of the work, we observe, is translated by the Rev. James E. Duguid.

*The Story of the Old Catholic and Kindred Movements, leading up to a Union of National Independent Churches.* By A. M. E. Scarth. (Simpkin, Marshall and Co.) This small book, written from a polemical point of view which it is not within our province to discuss, aims at giving a terse, but sufficiently accurate, account, not only of the actual movement with which it is chiefly engaged, but of all similar ones in Western Christendom. The author disclaims all originality of treatment, and acknowledges that he has merely attempted to form a *cento* from the words of those best able to speak upon the subjects with which he deals. And where he has had a definite model to follow, as in his summary of the leading events in Dr. Neale's *History of the Jansenist Church of Holland*, his work is fairly well executed; but, in the absence of such guidance, he is much less helpful. There is nothing said, for example, of the Febronian controversy in the last century, or of the abortive movement of Johannes Ronge in 1845; nor is the account of the events which led up to the Vatican Council by any means adequate. There is no evidence of use having been made of the Letters of Quirinus, of Pomponio Leto's *Otto Mesi a Roma*, of the *Tagebuch* of Prof. Friedrich, or even of such accessible works as Mr. Arthur's *The Pope, the Kings, and the People* (1877), and *The New Reformation*, by "Theodorus," issued as far back as 1875. It is not a sufficient handbook, consequently, of its subject, and needs much revision to make it such. But there is a commendable absence of heat and bitterness in the tone and language; while the chapter on the *Culturkampf* in Germany, if somewhat meagre, is, at any rate, fair and temperate.

*A Popular Introduction to the New Testament.* By J. Rawson Lumby. (Hodder and Stoughton.) In many respects Prof. Lumby's work is well fitted to serve its purpose of a popular Introduction to the New Testament. It is simply and plainly written, and conveys in an intelligible manner much needful information. Making all due allowance, however, for its avowedly popular character, its handling of critical questions, we think, can hardly be considered satisfactory. Not only does Prof. Lumby adhere closely to traditional views, defending even the authenticity of Second Peter (as, of course, he is well entitled to do), but he is rather apt to write as if there were no other views worthy of serious consideration. This is particularly the case with his treatment of the gospels. Indeed, Prof. Lumby goes so far as to say that "of the genuineness and authenticity of the second gospel there has never been any serious question;" while, in reference to St. John, his remark that "the early acceptance of the gospel entirely overthrows the arguments of those who would assign to the

work a date of about A.D. 165" seems a little wanting in candour, as if there were no alternative between that date and the apostolic authorship. No doubt Prof. Lumby might reply that it was not his part to suggest difficulties, and that he was not writing for those by whom they are felt; but in the present state of Biblical knowledge this plea will scarcely be considered valid. Moreover, he seems to become more polemical as the work advances; and, in dealing with the Acts and the Pauline epistles, he at any rate makes the attempt fairly to meet and state the objections of "modern criticism." In this respect, this is decidedly the best part of his work. In future editions we trust more consideration will be shown for the reader by the substitution, for the title of the whole work, of proper headings to each page.

*Juán de Valdés' Commentary upon St. Paul's Epistle to the Romans.* Now for the first time translated from the Spanish, having never before been published in English. By John T. Betts. Appended to which are the Lives of the twin brothers, Juan and Alfonso de Valdés, by Edward Boehmer. With Introduction by the Editor. (Trübner.) This work derives its chief interest from the fact of its author having been one of the old Spanish Reformers, and the twin brother of Alfonso de Valdés, secretary to Charles V., and one of the correspondents of Erasmus. Juan, having compromised himself with the Inquisition by a Dialogue called "Mercury and Charon," in which he depicted in strong colours the corruption of Rome, sought safety in Naples. In 1533 he was chamberlain to the Pope at Bologna, but in the autumn of the same year he returned to Naples, and probably never left it. He was the friend of Carneseochi, Peter Martyr, Oholino. It would seem that he translated the Psalms from Hebrew into Spanish, and he was the first who translated the New Testament from Greek into Spanish. He died at a comparatively early age in 1541, thereby probably escaping the Inquisition. It was certainly worth while to revive the memory of such a man, and perhaps there was no better way in which this could be done than by the translation of his Commentary on the Epistle to the Romans. The volume presents us with a reproduction in English of the old Spanish title-page to the original work, which was printed at Venice in 1556.

*New Testament Autographs.* By J. Rendel Harris. Supplement to the "American Journal of Philology," No. 12. (Trübner.) This essay contains some ingenious speculations, or calculations, based on the assumption that, in making a copy, the original line was always adhered to as to the size of page of the New Testament Autographs. It is further assumed that the original writer would, as a rule, fill his last page; and, as the results confirm both these assumptions, we have thus obtained a clue by which our steps may be directed. The result is that there were two sizes of page, one represented by the third of a column of B, the other by the fourth of a column of N. It is evident that, if this conclusion can be relied on, it must have an important bearing on the determination of the text. Thus, Mr. Harris finds that the celebrated pericope de adultera would have filled exactly four pages of the autograph; but, in its present place, it must have begun four lines from the top of a page. The inference would seem to be that it cannot originally have stood where it stands now—unless, indeed, it was intentionally omitted. Mr. Harris finds a place for it, however, at the end of the fifth chapter, where it would be wrong by only a single line, implying that one line has been lost from the first five chapters. In this case, then, the conclusion does not seem very certain. If the passage began with a new page, it becomes intelligible how it

might have dropped out by accident; but this, we suggest, is not a necessary consequence, as it may also have formed no part of the original document. Its insertion or re-insertion in the wrong place, on the other hand, is well explained by assuming the previous introduction of the gloss John v. 3, 4, which occupies just the ten lines required to fill the remainder of the fourteen-line page. In other respects, this method of investigation seems likely to yield important results; and it may be interesting to add that it "agrees with many other applied critical tests in rejecting" the passage 1 John v. 7.

*The Epistle of Paul the Apostle to the Hebrews.* With Notes and Introduction. By the Rev. F. W. Farrar. "The Cambridge Bible for Schools and Colleges." (Cambridge: University Press.) Very naturally Canon Farrar repeats here the views respecting the Epistle to the Hebrews which he had already advanced in his work on *The Early Days of Christianity*; and, if he does not demonstrate that Apollos was its author, he shows at least that there is no other writer known to us from whom it could have proceeded. Certainly, it is time that all attempts to defend the Pauline authorship should be abandoned; and, it must be said, it seems a little incongruous to retain the name of Paul in the title of an edition which so decidedly rejects his authorship. Canon Farrar's notes, it may be added, are learned and sensible, and may be specially recommended for their illustrations from Philo and the rabbinical writers.

*The Acts of the Apostles (xv.-xxviii.).* With Introduction and Notes. By J. Rawson Lumby. (Cambridge: University Press.) It is not necessary to agree with Prof. Lumby as to the date and authorship of the Acts in order to acknowledge the value of his contribution to the "Cambridge Bible" series. If his introduction is a little one-sided, and deals with "alleged difficulties" somewhat superficially, his notes are scholarly and to the purpose, and, indeed, seem to leave no point untouched on which the student is likely to require information.

*The Epistle to the Hebrews in Greek and English.* With Critical and Explanatory Notes. By Frederic Rendall. (Macmillan.) In his Introduction to this edition of the Epistle to the Hebrews Mr. Rendall advances some strong arguments against the theory of authorship revived with such confidence by Canon Farrar. If Apollos was the author, he contends, it is strange that he was not known to be so either at Alexandria or elsewhere. Moreover, Apollos is spoken of by St. Paul as his own equal in age and standing, whereas the writer of the Epistle to the Hebrews seems to have belonged to a younger generation, and to have been contemporary with Timothy. Besides a Greek text "based entirely on that of Westcott and Hort," and an excellent Commentary, Mr. Rendall supplies us with an independent translation, in which we notice some important divergences from the Revised Version. In ix. 1, for example, we find *τὸ τὸ ἅγιον κοσμητὸν* rendered "and its sanctuary complete;" and this rendering Mr. Rendall supports by Josephus, who calls the regular ceremonial of the Jewish temple *κοσμητὴ θεμελίᾳ* (B. J. iv. § 5, 2), certainly not in the sense of "worldly." The Epistle to the Hebrews, Mr. Rendall says, has hitherto obtained but scanty attention from English critics. However that may be, with this and Canon Farrar's edition noticed above, the student will henceforth have no reasonable ground for complaint.

*Das Christentum und die heutige vergleichende Religionsgeschichte.* By Julius Happel. (Leipzig: Schulze.) This little book reads rather

too much like a sermon, but is otherwise a clear and interesting account of the method and objects of the science of religion and its bearing upon Christianity. The name of the publisher is a guarantee for the scholarship of the work, which contains a good many remarks that deserve to be remembered. We can thoroughly recommend the book, though the reader will observe that no proof is given of that superiority of Christianity to all other forms of faith upon which so much stress is laid. In fact, it is somewhat difficult to make out what the author's conception of Christianity exactly is.

We have also received:—*Natural Law in the Spiritual World*, by Henry Drummond (Hodder and Stoughton); "The Cambridge Bible for Schools and Colleges"—*Obadiah and Jonah*, with Notes and Introduction, by the Ven. T. T. Perowne (Cambridge: University Press); *Christianity and Common-sense: a Plea for the Worship of our Heavenly Father*, and also for the Opening of Museums and Galleries on Sunday, by A. Barrister (O Chapman and Hall); *Sunday Meditations*, Adapted to the Course of the Christian Year, by Daniel Moore (Religious Tract Society); *Sermons and Lectures to Theological Students*, by the Rev. M. Kaufmann (Birkenhead: Griffith); *Holiness in Daily Life*, by George Tugwell (Walter Smith); *Christian Ministry to the Young: a Book for Parents, Pastors, and Teachers*, by Samuel G. Green (Religious Tract Society); *Genesis the Third: History not Fable*, by Edward White (Unwin); *The Bisen Life: Hymns and Poems for the Christian Year*, by Richard C. Jackson (Masters); *The Knell of Time*, by the Author of "Life and Truth" (Nisbet); *Christian Ideals and Hopes: an Argument from Moral Beauty*, by the Rev. R. St. John Tyrwhitt (S. P. C. K.); *Studies in Church History*, by Henry O. Lea (Philadelphia: Henry O. Lea's Son and Co.); *Sacred Scriptures of the World*, Compiled, Edited, and in part Retranslated by the Rev. Martin K. Schermerhorn (New York: G. P. Putnam's Sons); &c., &c.

#### NOTES AND NEWS.

MR. R. BOSWORTH SMITH'S *Life of Lord Lawrence*, which is issued in America by Messrs. Scribner, has met with a reception more enthusiastic than any other English book republished there in recent years. The Government of the United States have ordered that a copy of it shall be placed not only in the library of every ship in the navy, but also in every public library throughout the country. It must be rare that a writer and his subject are found to be so worthy of one another, and of such a distinction. We have reason to hope that our suggestion of a popular edition of the work may be realised at some not very distant date. But when a book runs through three editions in a few weeks at the price of thirty-six shillings, it is hardly to be expected that the author should at once consent to interfere with so successful a sale.

We understand that Mr. Stopford Brooke intends to enlarge his *Primer of English Literature* into a full History of the subject.

MR. LEWIS CARROLL'S new book *Rhyme and Reason* will be abundantly illustrated by Mr. Henry Holiday and Mr. Arthur B. Frost.

It will be good news to many that Mr. Walter Besant has prepared a little volume of *Readings from Rabelais*, which will be published soon by Messrs. Blackwood.

THE Duke of Devonshire has, at Mr. Furnivall's request, again lent his 1597 Quarto of "Richard III." to Mr. Griggs to be photographed for the series of Shakspeare Quarto Facsimiles. The reproduction of the book will be ready in August, it is hoped.

MR. JULIAN HAWTHORNE'S novel, "Fortunes of a Fool," is at last resumed in the July number of *Macmillan's Magazine*, and will shortly be issued by Messrs. Macmillan in two volumes.

MESSRS. KEGAN PAUL, TRENCH AND CO. will shortly publish a small work, under the title of *The Economic Revolution of India*, by Mr. A. K. Connell, author of *Discontent and Danger in India*. It consists of an examination of the financial and economic results of the Public Works policy pursued by the Indian Government during the last thirty years, and is to some extent a reply to Sir John Strachey's *Finances and Public Works of India*.

MESSRS. MACMILLAN announce a popular edition of Baron von Nordenskiöld's *Voyage of the Vega*, with portrait, maps, and illustrations.

THE new volume in the "English Citizen" Series will contain *India*, by Mr. J. S. Cotton, and *Colonies and Dependencies*, by Mr. E. J. Payne.

A NEW volume on the Theory and Practice of Education, by the head-master of Uppingham School, will be published very shortly by the Cambridge University Press.

MESSRS. BURNS AND OATES have in the press a work by the Rev. Henry Formby, entitled *Hebraice, Græce, Latine*; or, the True Philosophy of the Christian School. It is a sequel to the author's *Investigation into the Growing Unbelief of the Educated Classes*.

THE new volume of "Philosophical Classics for English Readers" will be *Leibnitz*, by Mr. Theodore Merz.

MR. H. E. CHETWYND-STAPYLTON has completed the first part of his work on *The Stapletons of Yorkshire*, on which he has been long engaged. It promises to form an important contribution to Yorkshire family history.

WE understand that the forthcoming number of the *Westminster Review* will contain a paper by Mr. H. Schütz Wilson upon "Wallenstein in Connexion with the Drama."

MR. EDMOND GOLDSMID, of Edinburgh, the hon. secretary of the Aungeroyle Society, has printed a prospectus of "curious and out-of-the-way books," which he proposes to print privately for the gratification of a select body of subscribers. The list comprises many rarities which are well worthy of being re-issued, but the editor does not seem to be aware that several volumes in his proposed series of reprints have been included in the accurate reproductions of Prof. Arber, which are the delight of all scholars. We especially refer to *Webbe's Trauaites*, *King James's Counterblast to Tobacco*, *Prince's Chronological History of New England*, and the *Secrets of Angling by Denny*. Nor do we see the utility of reprinting a work which can be purchased in the second-hand book market so frequently as *Thomas Wright's Political Songs of England*, one of the publications of the Camden Society. By bringing such books as these into the selection Mr. Goldsmid is doing an injury to the rest of his series, many of which deserve such a circulation as he proposes.

THE new Calendar of "Treasury Papers" just issued under the direction of the Master of the Rolls extends from August 1, 1714, to the end of 1719. Among the subjects of domestic and historical interest which receive elucidation are:—The Cattle Plague which broke out at the end of 1714; the Rebellion of 1716; Scottish affairs; the Royal African Company; the poor Palatines; and the administrative practice of the Commissioners of Customs and Stamp Duties. There are also a few interesting biographical notices of the Duke of Douglas, William Penn, and Sir Christopher Wren. Some of the miscellaneous matters of interest contained in the volume may be classified under the following heads:—Colonial Bishops; Con-

science Money; the Custom House, London; the Demolition of Dunkirk; the Public Seals; Parliamentary Elections; the Records at the Tower of London and elsewhere; and Trade and Manufactures. The editor, Mr. Joseph Redington, Assistant-Keeper of the Public Records, draws attention in his Preface to a curious letter from Capt. Wivell, the commander of the *Fubbs* yacht, who thought the "honour of the nation" would stand higher if his bed on board his yacht were decorated with damask. The gallant captain cites the precedent of other yachts in making this application, but his best claim on the Lords of the Treasury would seem to have been his statement that he was the oldest captain in England.

MR. W. J. ROLFE announces that his editions of Shakespeare's "Poems" (one volume) and "Sonnets" (one volume) will be out on June 20, and that "Titus Andronicus" has been sent to press. This will form the fortieth volume of his edition of Shakespeare's Works, and will complete it. The Life, &c., will be an extra, or independent, volume.

THE fifth volume of the *Modern Scottish Poets*, by Mr. D. H. Edwards, of the *Brechin Advertiser*, will appear at an early date. Another volume, completing the work, will notice a number of Scottish-American authors. Mr. Edwards is also engaged on a *History of Brechin*.

WITH the title *The Water Highways of the Interior of Africa*, Mr. James Stevenson has published a carefully written little book, which contains a number of excellent maps, and gives a large amount of interesting information on the products, state of trade, and means of communication in Central Africa. The author's practical object is to show the way to a further development of commerce with the natives, and to point out the means of putting a stop to the slave trade, now carried on with such appalling activity.

THE first number of the new volume of the *Pictorial World* will contain a story by Mr. D. Christie Murray, entitled "The Way of the World," illustrated by Mr. Hal Ludlow.

MR. H. WESTON-EVE, head-master of University College School, has been appointed Dean of the College of Preceptors, in the place of the late A. K. Iabister.

THE Académie des Sciences morales et politiques has elected Prof. Flint, of Edinburgh, as corresponding member, in the place of the late Sig. Mamiani.

UNDER the title *Datos, epigráficos é históricos, de Talavera de la Reina*, Padre Fita has reprinted as a pamphlet, with Fortanet, of Madrid, his recent articles in the *Boletín de la Real Academia de la Historia*. It contains, besides corrections and additions to the *Corpus Inscriptionum*, an interesting ecclesiastical document of 1204, and extensive taxation and other lists relating to the Aljama of the Jews in Talavera.

THERE is announced for publication in Seville, Madrid, and Barcelona, a "Biblioteca de las tradiciones populares Españolas," edited by Antonio Machado y Alvarez (Demofilo). A volume of 300 pages is to appear each quarter. The subscription is 15 frs.

WITH reference to the plot of *The Giant's Robe*, the novel by the author of *Vice Versa*, which opens the first number of the new series of the *Cornhill*, a correspondent writes:—

"In 1879, W. W. Follett Synge published (with Messrs. Chapman and Hall) a novel called *Tom Singleton*: Dragoon and Dramatist, which turns on just the same subject as *The Giant's Robe*. Tom Singleton, who has had great experience of amateur theatricals, and knows what will 'go,' sends home a play to a barrister, whose own plays are rejected for want of that knowledge; the

barrister is called Graham, and is the false hero of the novel, as the schoolmaster is to be of *The Giant's Robe*."

**Errata.**—In the ACADEMY of last week, p. 454, col. 2, paragraph 7, for "Asaher," read Ashbee; and for "Allabone," read Allibone.

### GERMAN JOTTINGS.

THE Prussian Ministry of Education has issued new regulations with regard to subjects that should, and that should not, be taught in public schools. In lessening the limits of natural science, the Minister observes that an acquaintance with the hypotheses of Darwin and others is not required, and that such subjects should be entirely excluded from the regular course of instruction in natural science.

PROF. KÖLBING has just produced an admirably thorough edition of the Early-English romance of *Sir Tristrem*, and has dedicated it to the memory of the first editor of the poem, Sir Walter Scott. Prof. Kölbings's very full notes illustrate the subjects of the romance as well as its language; his Glossary is exhaustive; his Introduction deals with the authorship and all the specialties of the poem; and he has appended a German translation of it. The book is a credit to its editor.

F. A. BROCKHAUS, of Leipzig, will publish this year Dr. Oscar Lenz's account of his second great African expedition (which he made in the disguise of a Mussulman in 1879-80), under the title, *Timbuktu, Reise durch Marokko, die Sahara und den Sudan*. It will be remembered that this journey was undertaken at the request of the German Afrikanische Gesellschaft.

DR. A. NEMÉNYI announces a book under his editorship—*Das moderne Ungarn*—in which the Hungarians will describe themselves and their land. It is to consist of a series of essays and sketches by W. Deak, Aeböth, Jokai, Pulszky, Vambery, Hevesi, Mikszath, Eötvöss, &c. The name of Adolf Doczi (Dux), who has popularised Hungarian literature in Germany by his translations, does not appear in the list.

HERR ADELBERT KÜHN, of Weimar, has produced a very interesting volume under the title of *Schiller, sein Leben und sein Streben*. It does not pretend to give a continuous narrative of the poet's life, or a general critical survey of his works; but it is a collection of facts connected with his life and works which will be indispensable for the future biographer of the poet. Among the *curiosa* we find an extract from an "Auction Catalogue," in which an autograph MS. is offered for sale that Schiller is said to have written in 1808—three years after his death!

THE well-known lexicographer, Dr. Daniel Sanders, to whom Germany owes so great a debt of gratitude for his *Deutsches Wörterbuch*, has just issued a most useful and comprehensive monograph on the "Construction of Sentences in German," under the title of *Satzbau und Wortfolge in der deutschen Sprache*. In this work he has brought the bewildering mass of rules concerning "German construction" into a compact whole, and we heartily recommend the book to both teachers and students of German in this country. We have rarely met with a more systematic and exhaustive treatise on so intricate a subject.

DR. HATCH'S Bampton Lectures have appeared in a German form (Gießen: Ricker) under the editorship of Dr. A. Harnack, with the title of *Die Gesellschafterverfassung der christlichen Kirchen im Alterthum*.

THE *Oesterreichische Rundschau* for June contains an article (the first of a series) by Prof. J. Schipper entitled "Altenglische Humoristen: Geoffrey Chaucer."

## ACKNOWLEDGMENTS.

WE have on our table:—*Correspondance ministérielle du Comte J.-H.-E. Bernstorff*, in two volumes, and *Den ældre Grev Bernstorffs Ministerium*, introductory to the preceding (Copenhagen: Glydendal); *Studi biografici e bibliografici sulla Storia della Geografia in Italia*, per G. Uzielli e P. Amat di S. Filippo, in two volumes, Second Edition (Rome: Società geografica Italiana); *Histoire de la Participation des Belges aux Campagnes des Indes orientales néerlandaises, sous le Gouvernement des Pays-Bas (1815-30)*, par Eugène Gruyplants (Brussels: Spineux); *Alexandre Vinet, considérée comme Apologiste et Moraliste chrétien*, par F.-L.-Fréd. Chavannes, and the same title in Dutch, door Dr. J. Cramer (Leyden: Brill); *Die Verfassung des Fränkischen Reichs*, von Georg Waitz, German Translation, Vol. II., Part I, Second Edition (Kiel: Homann); *Études de Religion et de Littérature anciennes*: I.—*La Légende d'Enée avant Virgile*, par J.-A. Hild (Paris: Leroux); *Das Landesgesetz für Irland vom Jahre 1881*, in deutscher Uebersetzung und im Original, von Dr. Eduard Wiss (Leipzig: Duncker and Humblot; London: Nutt); *Studien und Vorschläge auf dem Gebiete des Lebensversicherungs-Geschäftes*, von Johannes Jónas (Berlin: Puttkammer und Mühlbrecht); *Urkunden aus den antichri Archivi der Biblioteca comunale von Verona*, von Dr. Jos. Kohler (Würzburg: Stahel); *Die eigenliche Hauptfrage im gegenwärtigen Mittelschulstreit*, von Dr. G. Neudecker (Würzburg: Stuber); *Von Kants Einfluss auf die deutsche Kultur*, von Dr. Hermann Cohen (Berlin: Dümmler); *Kulturgeschichte in ihrer natürlichen Entwicklung bis zur Gegenwart*, von Friedrich von Hellwald, Third Edition, Parts I. and II. (Augsburg: Lampart; London: Trübner); *Grundzüge der Moral*, von Dr. Georg von Gizycki (Leipzig: Friedrich); *Blicke in die Religionsgeschichte, zu Anfang des zweiten christlichen Jahrhunderts, mit Berücksichtigung der angrenzenden Zeiten*, Part II., von Dr. M. Josi (Breslau: Schottlaender); *Deutsche Litteraturdenkmale des 18. Jahrhunderts—Verauch einiger Gedichte*, von F. von Hagedorn (Heilbronn: Henninger); *Le Christianisme et la Méthode expérimentale*, par Ch. Lagrange, précédé d'une Lettre de M. Girardin (Paris: Hachette); *Sous les Chênes verts*, par N. de Sémenow (Paris: Calmann Lévy); *Histoire de la Terre*, par H. de Lagrené (Paris: Rothschild); *Annuaire diplomatique et consulaire* (Gotha: Perthes); &c., &c.

## ORIGINAL VERSE.

## ON OPENING THE "PARADISO."

WITH tremulous awe I come, great Florentine,  
To trace thy path from circling sphere to sphere  
That wheels about our middle earth, in fear  
Of the white ardour of that soul of thine  
Concentrated in the third last song divine.  
But I will pray thee by those eyes most dear  
Whence thine eyes drew their strength of vision  
clear,  
And follow her and thee thro' hosts that shine.  
So shall I see the heavens flush for shame  
At the Apostle's iterated cry:  
So hear the antique father of thy name  
Pronounce the exile's doom, and drawing nigh  
To the bounds and source of light behold in flame  
The symbol of the Trinal Mystery!

U. E. DAWKINS.

## OBITUARY.

## HENRY FRANCIS TURLE.

WITH a great shock I heard of the death of Mr. Henry Francis Turle. It was only a week or two before that I had met him, seemingly in

the enjoyment of the best of health, and brimming over with his usual cheerfulness of disposition. Then came the news, which most of us refused at first to credit, of his sudden death. Last Thursday, June 28, he stopped at home with a slight indisposition, to which neither he himself, his medical attendant, nor his relations attached any importance. In the evening he was speaking to a servant, when, without a moment's warning, he fell back on his chair and was dead.

His interest was centred in two things—the literary journal which he conducted, and the buildings within the precincts of Westminster Abbey. At first the assistant of Dr. Doran in the management of *Notes and Queries*, he had been since that gentleman's death the sole editor. That the paper which Mr. Thoms brought to a high state of perfection, and Dr. Doran had worthily maintained, should be left unimpaired at his own death was Mr. Turle's great wish, and his prayer has been granted. Never since its establishment has *Notes and Queries* been more generally entertaining than it is at present. As one who had passed nearly the whole of his life, in schooldays as well as in manhood, under the shadow of Westminster Abbey, he laboured zealously for the foundation which he loved. He mourned over the condition into which the school had passed. He deplored the changes which had been made in the structures around it. The earnestness with which he regarded every number of his paper, and every institution in Westminster, was extended to the welfare of his friends. They recognised his kindness during his life; they can only repeat their acknowledgments after his death. A better friend never lived.

W. P. COURTNEY.

## MAGAZINES AND REVIEWS.

THE new *Cornhill Magazine* is extremely disappointing; and, unless the succeeding numbers of the fresh series are a great improvement upon the one now before us, it will be necessary to consider the *Cornhill* as practically given up by the educated reader. The change in price from a shilling to sixpence will obviously fail to reconcile him to inferior quality in literature and in illustration; yet this is apparently what awaits him. The first chapters of the new novel by the author of *Vice Versa* are feeble in themselves, and they betray the plot with in-artistic haste. One or two of the shorter tales are almost without literary merit. One, again, the tale of a "Lay Figure" which was really a dressed-up skeleton, has a certain touch of constructive power; and the "Warning," which we presume to be Mr. Payn's—a warning on failure of memory—is tolerably entertaining, though not at all up to the best level of the writer. The illustrations, we regret to say, are no improvement on the text. Among the best are Mr. W. Ralston's; but they, in common with the others, suffer, it appears, from having been badly cut or badly printed. The paper is of poor quality. Altogether, indeed, unless, as we intimated above, there is to be a marked improvement hereafter, it is clear that the *Cornhill* can only appeal to a different public from that which has hitherto supported it.

THE *Contemporary Review*, after a life of seventeen years, likewise begins a new series with the July number. So far as we understand the new departure, it will consist in making permanent certain features which have hitherto been only occasional. For the future, each monthly number will contain—(1) a review of life and thought in a foreign country, by a native; (2) summaries of the work done in literature, science, art, &c.; (3) notices of books. Of these three new departments we take leave to think the first the only really desirable one. At the present time, when

newspapers deal in little but telegraphic news, it is more than ever important that Englishmen should be informed of the general tendencies of thought and conduct abroad; and, if the other writers at all approach the wide knowledge, the soundness of judgment, and the grace of style shown by M. G. Monod in the current number, we have no hesitation in prophesying success for this venture. But the other two departments we do not care about. Summaries, such as those of which we have specimens, are not wanted by scholars, and will not be read much by the general public. They are both too long and too short. And to give "literary notices of all important new books" we know from experience to be impossible—even in four times the space allotted.

CONSIDERABLE artistic interest attaches to the current number of *Merry England*. Mrs. Meynell's article, "The Story of a Picture," is illustrated with nine reproductions of studies made by Sir Frederick Leighton for his noble design for the dome of St. Paul's Cathedral, "And the sea gave up the dead that were in it." The studies in themselves are most interesting; and, though Mrs. Meynell modestly speaks of herself as an outsider, her comments are characterised by knowledge as well as judgment. Mrs. Butler also contributes an illustration, entitled "A Cistercian Shepherd," which accompanies an article by Mr. J. G. Cox. The design itself is more successful than the manner in which it is reproduced, though it may be urged that sheep lend themselves readily to a somewhat woolly treatment. "In a Berkshire Village a Hundred Years Ago" is the title of a readable article by the Rev. J. F. Cornish.

## SOME BOOKS OF FRENCH LITERATURE.

MR. GEORGE SAINTSBURY vient de publier une collection de *Specimens of French Literature from Villon to Hugo* (Oxford: Clarendon Press). Considéré sous le rapport du choix des morceaux, ce livre est excellent et témoigne de la grande connaissance que Mr. Saintsbury possède de la littérature Française. Il y a pourtant quelques remarques à faire au sujet de certains auteurs. Ainsi Sainte-Beuve est représenté seulement par un fragment d'un article de critique sur "Parny, Lamartine, and Victor Hugo." En revanche, aucune pièce de ses poésies n'est citée, et cependant la place de Sainte-Beuve comme poète dans le mouvement romantique est très-importante, puisque c'est certainement de son *Joseph Delorme* qu'est issue la portion moderne et psychologique des *Fleurs du Mal* de Charles Baudelaire. Parmi les écrivains de cette même époque romantique, Mr. Saintsbury a omis aussi le charmant poète Brizeux qui devait trouver sa place à côté de Barbier, son ami. Il me semble encore que le morceau d'Honoré de Balzac aurait pu être choisi de manière à donner plus exactement l'idée de son génie propre. Mr. Saintsbury a pris "A Scene in Norway," description très-brillante, mais tout à fait en dehors des habitudes du style de Balzac. Car elle fait partie d'un roman mystique—*Seraphita*, qui est une exception dans l'œuvre de l'auteur. C'est, au contraire, quelqu'une des descriptions d'un coin de la province Française qu'il eût fallu détacher, car c'est là où Balzac est incomparable. C'est beaucoup aussi d'avoir donné deux morceaux du très-médiocre chansonnier Panard tandis qu'il n'y a pas un seul extrait des délicieux *Mémoires* du prince de Ligne. Mais, comme on voit, ce sont là des faiblesses de détail, et il n'était pas possible dans un ouvrage qui parcourt quatre siècles littéraires et davantage, de les éviter tout à fait. Le même éloge doit être donné au texte des morceaux choisis, qui a été très-soigneusement collationné d'après les meilleures éditions. A

mon sens la plus grande critique qu'il y ait à faire au livre porte sur l'ordre des morceaux : Mr. Saintsbury a voulu que le rangement de ses *Specimens of French Literature* correspondît exactement à l'ordre où les noms des auteurs sont amenés dans son *Histoire*. Il en résulte que des fragments de dates très-diverses sont voisins les uns des autres. Par exemple, un extrait de Sénancour, qui est mort en 1846 et qui écrivait son *Obermann* au commencement du siècle, précède immédiatement un extrait de Montesquieu, qui, comme on sait, donna ses chefs-d'œuvres avant 1750. Les extraits de Chateaubriand arrivent avant ceux de Vauvenargues, et ceux d'André Chénier avant ceux de Diderot. Mr. Saintsbury n'aurait-il pas pu éviter l'apparent désordre que ces singuliers déplacements de dates donnent à son excellent ouvrage, en adoptant un rangement des extraits conforme à la chronologie, et en renvoyant par de petites notes aux pages correspondantes de son *Histoire* ? Il aurait obtenu ainsi tous les avantages de son présent livre, sans l'inconvénient, tout extérieur d'ailleurs, que j'ai signalé.

La collection des *Grands Ecrivains de la France* que publie la maison Hachette vient de s'enrichir du premier volume des œuvres de La Fontaine. On y trouvera une excellente notice sur le poète par M. Paul Mesnard, et les cinq premiers livres des fables avec des notes de MM. Julien Girard et Desfeuilles, qui contiennent tous les renseignements philologiques et historiques qui peuvent faciliter l'histoire du style de La Fontaine. Le livre est imprimé d'après le dernier texte des *Fables* publié du vivant de l'auteur en 1678, 1679 et 1694. La division adoptée pour les fables est celle de l'édition de 1705 (Paris : H. Charpentier). On a du rejeter la très-confuse division de La Fontaine lui-même, laquelle, comme l'a remarqué Walckenaër, n'a plus de sens dans une réimpression totale.

A LA librairie Calmann-Lévy vient de paraître un très-intéressant volume sur la vie mondaine dans le dix-huitième siècle français. Le titre de l'ouvrage est *Les dernières Années de Madame d'Epinay*. Il a été composé d'après des documents nouveaux par MM. Lucien Perey et Gaston Maugras, et fait suite au précédent ouvrage des mêmes auteurs sur la *Jeunesse de Madame d'Epinay*. Les sources de ce travail sont une partie inédite des *Mémoires* de Madame d'Epinay retrouvée par les auteurs aux Archives nationales et à la bibliothèque de l' Arsenal à Paris, ainsi qu'une correspondance manuscrite de Grimm et de Madame d'Epinay et de cette dernière avec son fils. PAUL BOURGET.

#### NOTES FROM MELBOURNE.

May 20, 1883.

SEVERAL new professorships have been established at the Melbourne University—viz., a Professorship of Chemistry, to fill which Mr. Kirkland, formerly lecturer on the subject, has been appointed; Prof. Allan fills the new Chair of Anatomy; Prof. Kernoh that of Engineering; and Prof. Andrew that of Applied Mathematics. Prof. Morris has also been elected to a Chair of English, French, and German Language and Literature. The university has increased very much during the last two years, and now numbers almost four hundred students. It speaks well for Melbourne that its students are recruited from all parts of the Australian continent, including Tasmania and Queensland.

Mr. Ormond, to whose munificence is due the college which bears his name, has determined to spend £40,000 more in finishing his good work.

Sir W. Clark, Bart., and his brother have added a wing to Trinity College, and both of these affiliated colleges are full of students.

The Working Men's College, originated by Mr. Ormond and materially assisted by the indefatigable efforts of its hon. secretary, Prof. Pearson, of Oriel College, is to be at once begun. It is to cost £10,000, and will be built in Swanston Street, near the Public Library.

The trustees of the Public Library and National Gallery of Melbourne have thrown open their picture gallery on Sunday afternoons to the public. Parliament is disposed to resent this action, but the country seems to back up the action of the trustees; and, as Melbourne is the only town in the Australasian colonies where such institutions are closed on Sundays, it is hard to suppose that Parliament will not be compelled to adopt the policy of the trustees whom the Government have from time to time appointed.

Prof. Walker, who had just arrived in Auckland to occupy the Chair of Mathematics in that university, was drowned while yachting, and Prof. Tucker had a narrow escape.

#### READINGS AND MUSIC FROM BROWNING.

THE Browning Society signalled the end of a second year of successful work on Friday, June 29, by the repetition of the experiment made last summer of an "entertainment" consisting of readings, recitals, and musical renderings of passages from the poet's works. The Botanic Theatre of University College was even fuller than before—indeed, crowded with an audience who evidently appreciated and enjoyed the selection which had been made. It would be unjust not to recognise the great difficulty of selecting from Mr. Browning's poetry when the purpose is not education, but entertainment. He is so "terribly in earnest" even in his humour that it would be ungracious to complain, for instance, of the comparative absence of the humorous from the programme; and, again, so much of his writing is, in a sense, theological. The "Pied Piper" had already done duty, and "Holy Cross Day" (well read by Mr. J. King) was, under all the circumstances, as good a choice as could have been made. But the ripple of mirth in the audience contrasted somewhat—not unpleasantly—with its general gravity.

The plays were unrepresented on this occasion. Where selection is so difficult, they afford perhaps the readiest mine for quarrying from, for scenes bear removal better than extracts, and there are scenes in, for instance, "Strafford" and "Colombe's Birthday" which would light up a programme. Still, Mr. Browning's plays are not his most characteristic works; and if those who were responsible elected to walk by faith and not by sight, they seem to have had their reward.

Miss L. Drewry recited "Love among the Ruins," "Before" and "After," and "Pheidippides." The last is perhaps too long, unless it can be followed without effort, which was hardly the case. Miss Hickey gave a fine passage from *Pompilia*, in the "Ring and the Book," with much grace and feeling. This time—it is not always so—the male readers were, on the whole, the best heard; and in particular Mr. R. F. Horton's "Martin Relph" was a gem of what some old writers would have called "a just and proper elocution." The stillness of a large audience is seldom so absolute as during this reading. The same gentleman read "Tray;" and "Donald" and "Rudel to the Lady of Tripoli" were well given by Mr. D. S. MacColl.

An argument of "Martin Relph" and of "Pheidippides" was appended to the programme. A word or two of introduction to some of the readings would not have been amiss; it is sometimes given on like occasions in the case of authors who do not require such watchful following as Mr. Browning.

For music, the Cavalier tunes, which found so much favour on the first occasion, were wisely repeated; and three songs were given as set to music by Mr. Malcolm Lawson—namely, "Tell me, you who do not love her," sung by himself; "You'll love me yet" (from "Pippa Passes"), by Miss Lawson; and "One way of love," by Mr. Montague Shepherd. Mr. Lawson also played a *toccata* from Galuppi, which was a welcome variety and much enjoyed. No doubt there is not much by Mr. Browning that lends itself readily to musical treatment, and poems fitted into music like pictures into frames are seldom quite satisfactory. Still, if inspiration should visit the right man in the right mood, there would be nothing in English song sweeter than "The year's at the spring," or the first stanza in each case of "O day, if I squander," or "Oh to be in England"—nothing more impressive than "The Lost Leader."

The performance ended with the lines "Touch him ne'er so lightly," spoken as an epilogue by Miss Hickey (a happy conception—why not also a prologue?); and a cordial vote of thanks to the singers and sayers brought the proceedings to a close.

#### CORRESPONDENCE.

##### THE LATE BISHOP COLENSO.

37 Broadwater Down: July 3, 1883.

In several of the accounts which have been given of Bishop Colenso's studies in the Penta-teuch, it has of course been noted that in the

latest Part of his work he still adhered to his original view as to the relative dates of the Elohist and Jehovistic documents, maintaining the priority of the former, in opposition to the conclusions of Kuenen and the Dutch school, or, to use a term which now seems justifiable, the modern school of Biblical criticism. As Mr. Westlake, in the obituary notice published in the last number of the ACADEMY, remarks, Dr. Colenso, in the Preface to his seventh volume, wrote that he reserved "any final judgment, in deference to the opinion of Prof. Kuenen and other eminent writers." It does not appear that he has published since that date (1879) any further expression of opinion on the subject; and I think it will be a matter of much interest to those who recognise the various value of the Bishop's critical investigations, but who think he was mistaken on this important point, to know that he had seen reason to change his position, and to fall in with the general consensus of opinion on the subject. A letter from Dr. Colenso, which I received just a month ago—not improbably the last he wrote on theological matters—contains the following interesting passage:—

"At my time of life, and distracted as I have been from critical studies by the political events in Zululand, in which I have felt it my duty to concern myself (much against my personal wishes), I can hardly expect to be able to compose and publish another critical work, though I still take a deep interest in such labours, and at intervals, amid great interruptions, I have pursued my researches. As, however, in my published volumes I have maintained that the Elohist narrative (Gen. i.—Ex. vi. 5) is the *oldest* portion of the Pentateuch, I wish to leave on record the fact that I have been compelled, by a thorough investigation into the linguistic evidence, to abandon this view, and to regard the Elohist narrative as a 'deposit' (to use Mr. Wicksteed's words) of the later 'priestly stratum' [the reference is to an article, by Mr. P. H. Wicksteed, on the Literature of Israel, in the *Modern Review*, January 1883]. But it appears to me still to stand by itself—i.e., broken off at Ex. vi. 5, and separated from the Exilic and post-Exilic priestly matter, and to be of older age than Ezekiel, to whom Ex. vi. 6-8 appears to be due, and perhaps even to be older than Deuteronomy, which would account for Deut. x. 22 = Ex. i. 5, Jer. iv. 23, which seems to be a reminiscence of Gen. i. 2, Deut. iv. 32; comp. Gen. v. 1 (אָדָם), &c."

Apart from these details of analysis, which may be left for the experts to consider, it would have been interesting to know what was the special linguistic evidence which led Dr. Colenso to abandon the old position which he had defended so tenaciously. If no account of this has been left, the conclusion, at any rate, is to be put on record; and it is satisfactory to know that, as regards the main contention, the author's judgment, which is now, in so deeply to be lamented a sense of the word, his "final" one, was in the direction of that practical unanimity towards which the scientific Biblical criticism of the present day is tending.

R. CROMPTON JONES.

East Dulwich, S.E.: June 30, 1883.

One little incident in the life of the late Bishop Colenso is so typical of his whole career that it may perhaps, and not uselessly, be added to the worthy tribute of his friend Mr. Westlake which appeared in the last number of the ACADEMY.

In 1865 there was perhaps a no more misunderstood and generally suspected body of men than those who composed the then Anthropological Society of London. The reasons were not difficult to find, its existence being a revolt against the slower, if more patient, method of ethnology, and constituting an energetic struggle to transform at once the facts of that science by their application to a

broader theory—in fact, to build a science of anthropology on applied ethnology. Some of the most burning questions that could then be dealt with were most unflinchingly discussed; and, as the subjects of the "Negro" and "Missionary Enterprise" were in turn taken up, the society, in time, was described in some quarters as an assembly of Atheists and slave-owners.

A paper having been read by the late Winwood Reade on "Efforts of Missionaries among Savages" which treated the question with tomahawk and club, the Bishop of Natal, who was one of the audience, subsequently contributed a paper himself on the same subject. Of course, it was more or less in the nature of a reply to Mr. Reade, but may remain a standard of fair controversy. Dr. Colenso began by stating, in reference to the controverted paper:

"There were some statements in it from which I dissented, and some which I much regretted; yet I felt that it was good to have the question raised—to have had the work of missionaries among savages inspected and discussed from a layman's point of view; and I was too well aware, from my own observations and experience, that some of Mr. Reade's strictures were far from being undeserved."

The general tone and contents of that paper (of which the ACADEMY is not an arena for discussion) were phenomenal alike as coming from a bishop and as addressed to the Anthropological Society of that day.

W. L. DISTANT.

#### THE MSS. OF JUSTINIANUS AT HOLKHAM.

Oxford: June 28, 1883.

Montfaucon, in his *Diarium Italicum* (Paris; 1702), pp. 433-37, gives a brief account of the library of Julius Justinianus at Venice, adding that he had desired to work it up more carefully, but could not because the library at Justinianus' death had fallen into unknown hands. It may not be without interest to scholars to learn that many of these MSS. of Julius Justinianus are now in the Earl of Leicester's library at Holkham. If the genial librarian and vicar, the Rev. Alexander Napier, would compare the list in Montfaucon with the volumes extant it would be a valuable service. I saw a number of the volumes in the list during a cursory glance at the library a few days ago, but will only refer to a MS. of Chrysostom on St. John of the eleventh century, and to a copy of the Gospels with Theophylact's commentary, dated 1228. Many of these MSS. contain a note at the top of the first page in Montfaucon's hand. By omitting to observe that the month was October, Montfaucon subtracted 5508 instead of 5509, thus making the date 1229. Roscoe's MS. catalogue of the Holkham Library corrects Montfaucon for making a  $\zeta$  of a  $\beta$ , Roscoe himself, and not Montfaucon, being wrong; it is one of the zetas with a preceding vertical stroke, followed by a 3-shaped line; hence, Roscoe gives the date as 1224.

CASPAR RENÉ GREGORY.

#### A SIAMESE BESTIARY.

St. Bede's College, Manchester.

With reference to Dr. O. Frankfurter's letter in the ACADEMY of June 16, allow me to say that a large collection of Siamese *suphasit* has been lately translated into French by M. Edouard Lorgeon, and published, with a brief Introduction, in the *Bulletin de l'Athénée orientale* (Nos. 1, 2, and 4, 1881; Nos. 2, 3, and 4, 1882). The two sayings quoted by Dr. Frankfurter are given by M. Lorgeon on p. 273 of the *Bulletin* for 1881, in a slightly different translation, and with the substitution of the heron for what Dr. Frank-

furter translates stork. The version "il ne mange que des cadavres: il est innocent" sounds certainly more natural than the rendering "it eats only dead animals free from guilt and sin."

These *suphasit* are full of similar curious observations concerning all kinds of animals and birds. I venture to quote one or two specimens:—

"Le crabe n'a pas de tête, et sait pourtant faire usage de ses pieds; le serpent n'a pas de pieds, et il atteint en rampant le cime des arbres. La poule n'a pas de lait, et cependant elle réussit à nourrir ses poussins; quand un homme porte la haine dans son cœur, si impuissant qu'il paraisse, ne le méprise pas."

"Le crapaud qui naît abrité par la fleur du lotus, ne sait pas goûter les parfums de la fraîche corolle épanouie. Le *phumara* (scarabée géant), fût-il à quatre lieues de distance, vient d'un vol rapide s'enivrer de la douce poussière renfermée dans le sein de la fleur."

"Il y a quatre choses fort difficiles à trouver: les pieds dans un serpent, le fiel dans un rat, le sang dans un crabe, et la vertu dans la guerre."

It is worthy of remark that one at least of the birds mentioned in these "animal moralisations"—viz., the swan—is unknown in Siam, and is only spoken of according to Indian traditions.

L. C. CASARTELLI.

#### SCIENCE.

##### CURRENT SCIENTIFIC LITERATURE.

*Physiological Cruelty.* By Philanthropos. (Tinsley Bros.) This is one of the best-written answers to the sensational arguments of anti-vivisection agitators that has come under our notice. Beginning with an enquiry into the nature of pain and what we mean when we speak of "cruelty," the author proceeds to discuss the limit of our rights over the lower animals, concluding that "to make painful experiments upon living animals lies within an universally recognised right over them, and is not wrong in itself, but depends for its morality or immorality upon the circumstances and motives of each particular act." The next chapter, on vivisection, disposes of the popular fallacy that physiological experiments are necessarily, or even frequently, painful. The immense debt that physiology owes to the experimental method is then insisted upon; and the true relations between physiology and practical medicine are pointed out with great force and clearness. There cannot be a greater mistake than to suppose that the chief use of physiological experiment has been to provide specific answers to pressing questions in medicine and surgery. Experiment has often done this, and the brilliancy of its occasional contributions to practice has tended to blind both its advocates and its opponents to its far greater and more beneficent, though more indirect, achievements in the theoretical field. It is not this or that discovery in physiology which might not be dispensed with, or arrived at by some other road; it is the entire change in the intellectual atmosphere surrounding the medical practitioner, in his way of looking at things, that constitutes the real debt owing from the practical to the scientific department of biology. This is well seen by the author, who does not exaggerate in saying that physiology without experiment would be

"a hazy pseudo-science, working by guess, rashly trying by-paths in the dark, or timidly standing still for fear of making a mistake, blundering about among human lives, taking up a theory to-day and dropping it to-morrow, nebulous, in-consequent, untrustworthy."

*Man before Metals.* By N. Joly. (Kegan Paul, Trench and Co.) So many works have been

written of late years on the subject of man's antiquity that there is scarcely room for much novelty in telling the story once again. Prof. Joly, of Toulouse, in writing a volume for the "International Scientific Series," necessarily traverses the familiar ground, and discourses on stone implements, bone-caves, kitchen-middens, lake-dwellings, and the like. The slender geological sketch at the beginning of the volume is by no means satisfactory, and might have been omitted with advantage. It will be seen from the title that the work does not profess to compass the whole range of prehistoric archaeology, but is limited to those obscure ages in which man is supposed to have been a stranger to the use of metals, excepting, perhaps, gold. In the second part of this volume Prof. Joly deals with the subject of Primitive Civilisation, and repeats the facts and arguments well known to English readers by the writings of Tylor, Lubbock, Evans, and Dawkins. Although the work is written by a distinguished disciple of the French school of anthropology, it exhibits rather the cautious spirit which breathes in the writings of the anthropologists of this country. Prof. Joly is free from any suspicion of rashness; he seems anxious to keep within the pale of orthodoxy, and even has misgivings as to the existence of Miocene man.

*Celebrated American Caverns.* By Horace O. Hovey. (Cincinnati: Clarke and Co.; London: Crosby Lockwood.) The Rev. H. Hovey is well known as an enthusiastic explorer of subterranean America. The papers on cave exploration which he has contributed from time to time to *Scribner's Magazine* and other American periodicals have prepared the way for the work which he has just issued. In the early chapters he discourses on caves in general—their origin, their uses, and their contents; but the reader who is familiar with the well-known volumes of Prof. Boyd Dawkins need not linger over this part of the book. In fact, the interest of Mr. Hovey's work centres in his description of the caves with which he is personally familiar. By far the greater part of his book is devoted to popular descriptions of the three grandest known examples of caves—the Mammoth cave in Kentucky, the Wyandot in Indiana, and the Luray cave in Virginia. The Luray cave, which was discovered as recently as 1878, is now illuminated with the electric light and placed in telephonic communication with the neighbouring hotel. Mr. Hovey's picturesque descriptions are illustrated with some capital wood-engravings and plans, the latter being in many cases of especial value since they are the results of his personal surveys.

*The Life of John Duncan, Scotch Weaver and Botanist.* By William Jolly. With Portrait. (Kegan Paul, Trench and Co.) Two years ago the author appealed to the benevolent public for assistance in smoothing the declining years of the subject of this memoir, then about eighty-six years old, who, after a life of untiring industry, had fallen, through no fault of his own, into the direst poverty. And the appeal met with a generous response. Only for a few months did he enjoy his happier fortune; and his friend now brings his biography before the public. Few men have entered life under sorer auspices than John Duncan. With the ban of illegitimacy on his birth; treated in childhood with revolting barbarity by his masters and companions; not even learning his alphabet at school—every chance of happiness seemed wrecked by a most unfortunate marriage. His indomitable energy led him to teach himself, when a youth, to read and write, till, in later life, he even made some progress in the Greek New Testament; his keen powers of observation and his deep love of nature made of him a botanist and an astrono-

mer; and to these qualities must be added a true Scotch fervour of piety. It is well that the lesson of such lives should be on record. Our only doubt is whether, if Mr. Jolly could have compressed his 500 pages into 250 or less, the biography would not have been more widely read, quite as interesting, and more useful.

*The Sun: its Planets and their Satellites. A Course of Lectures on the Solar System by Edmund Ledger. "Gresham Lectures."* (Stanford.) Books on astronomy multiply rapidly, and the course of discovery is slow, so that, if something sensational is aimed at, the writer is driven to draw on his imagination, or to put it in a more favourable light, to discuss probabilities which are at present unproven. Much of the vague half-knowledge with which the reading world is possessed concerning the worlds of space is derived from this sort of literature. Mr. Ledger's excellent lectures, if carefully studied, will form a useful corrective to the fanciful literature of which we speak. There is not much in his pages that cannot be understood by any thoughtful person who will read it carefully. Not that it is easy reading: on such a subject knowledge is not to be gained without some effort. As an introduction to astronomy for those who do not desire to make the science a special object of study, we know no book better suited. It is so carefully written that we apprehend that, when a thing is stated as certain, it is quite safe to receive it as such. The explanation of the methods used in estimating the relative weights of the members of our solar system seems to us remarkably clear. The comments, also, on the supposed influence of the moon on the weather are very good. Mr. Ledger makes a suggestion, which we have heard more than once before, but which always strikes us as very funny. He is of opinion that it would be a wise change to let Easter be a moveable feast no longer, but that the day should be fixed once and for all. That some amount of convenience would follow we admit, but how is it to be done? Does Mr. Ledger think that a short Act of Parliament would accomplish it. Astronomy may lay claim to be the queen of the sciences—though somewhere or other, in his wilderness of collections, Bandal Holme argues that this august title really belongs to heraldry—but she is not the only science in which man is capable of taking interest. History has some claims upon our attention, and such a wanton violation of historic tradition would rouse the ire of every man who had read a chronicle or examined the date of a charter. The disputes for long weary centuries between Constantinople and Rome on this very question, which are unsettled yet, make us dread any further complication.

*Modern Metrology.* By Lewis D'A. Jackson. (Crosby Lockwood.) We have deferred too long a notice of this useful book on the metrical units and systems of the present century. In the hope of doing justice to the author's original and laborious treatment of a complex and perplexing subject, we have waited for leisure, not merely to read the 450 pages of Mr. Jackson's text and tables, but to verify his re-calculated values, and to appraise his proposed English metrical system. But in the end we find ourselves obliged to be content with a general but cordial recommendation of *Modern Metrology*. For exhaustive tables of equivalent weights and measures of all sorts, and for clear demonstrations of the defects of the various systems that have been proposed or adopted, Mr. Jackson's treatise is without a rival. We are not, however, in love with his new metrical system. This is founded on the weight of a cubic foot of water at 32° F.—namely, 998.79 commercial ounces, which are assumed to be 1,000 scientific ounces, each thus differing from the old

ounce by .12 per cent. One thousand ounces, or a foot weight, are called a *talent*; the divisions of the ounce are thousandths, called *mile*, and these are again subdivided into thousandths, called *dots*. The time has not arrived for the construction of a new metrical system, the constants and standards on which it must be based having to be re-determined. Till this has been done, we must accept for scientific use the French system, although we acknowledge its defects—notably the absurdity of measuring the kilogram-weight of distilled water at 4° Cent., while the measuring vessel itself is assumed to remain at the temperature of 0° Cent.

*The Typo-Nucleus Theory.* By Otto Richter. (MacLachlan and Stewart.) The papers which together form the greater part of this pamphlet have, we think, previously appeared in the *Chemical News*. We confess ourselves unable to grasp the meaning of most of Dr. Richter's views, nor can we accept much of that residual portion which we do understand. His fundamental hypothesis assumes that all elementary molecules are made up of an equal and even number of individual atoms so disposed with reference to the three conjugate axes of space as to exhibit the configuration of an "elongated six-sided parallelopipedon." Neither this "tube-like prismatic structure" nor the imaginary detail of its constituents and functions commends itself to an ordinary chemist. The absence of diagrams, the errors in mineral formulæ, and the cumbersome and obscure diction of the whole paper do not encourage further study. What can we say to Dr. Richter's new formula for *autunite*?—

#### AN EROTIKON FROM POMPEII.

On a piece of wall belonging to the *theatrum tectum* or Odeon of Pompeii, a building which Nissen dates about 75 B.C., excavations conducted under the superintendence of Mau have recently laid bare several new *graffiti*, a full account of which, including his own transcripts, has been given by Sogliano in the *Notizie di Scavi* for February of the present year (p. 52). Many of these are in Latin elegiacs, unfortunately, in most cases, imperfectly preserved. One tetrastich, however, exists almost entire, and forms an interesting addition to the scanty remains of Roman erotic poetry in the first century B.C. The supplements are Prof. Bücheler's.

"Quid a]t? vi me oculi, posquam deduxistis in ignem,  
no]n ad vim vestreis largificatis genis.  
Verum] non possunt lacrumæ restinguere flammam,  
hæ]c os incendunt tabificantque animum."

The elision of the final *s* in *largificatis*, the peculiar compounds *largificare*, *tabificare*, the *ei of oculi vestreis genis*, the spellings *posquam deduxistis lacrumæ*, combine to show that these verses were written before 700/54, and belong to the Sullio-Ciceronian period. Possibly, like many others of the Pompeian *graffiti*, they are written from memory—the composition of some known poet, copied by the love-stricken scribbler exactly or inexactly. In any case, their tone and style—nay, the very conceit of tears extinguishing the fire of love—is a close reproduction of the well-known epigrams by Valerius Aedituus, Porcius Licinius, and Q. Catulus which A. Gellius has preserved (*N. A.* xix. 9).

Another distich contains a remarkable pun, quite in the style of Plautus:—

"Sei quid Amor valeat nostei, sei te hominem scis,  
Commiserescere; mihi da ueniam ut ueniam."

R. ELLIS.

## OBITUARY.

WILLIAM SPOTTISWOODE.

MR. WILLIAM SPOTTISWOODE, whose death we briefly recorded last week, was born on January 11, 1825. He was educated at Harrow, and at Balliol College, Oxford. He graduated in mathematics and carried off the mathematical scholarships of the university. Since then he has contributed largely to mathematical literature, to which, indeed, he mainly devoted himself until quite a recent date. His favourite department seems to have been those new branches of geometry and algebra in which such conspicuous progress has been made within the last forty years. As a complete list of Mr. Spottiswoode's publications has been recently published in *Nature* (April 26, 1883), it is unnecessary for us to discuss in detail his work in this direction. Somewhat late in life he gave much of his time to physical subjects; and one of the first-fruits of this changed attention was the course of lectures on the "Polarisation of Light," afterwards published under this title in the "Nature" series. This excellent little book is even now the best elementary introduction to the subject accessible to the English student, though it is impossible that the entire field could be covered in ten elementary lectures printed almost as they were delivered. Mr. Spottiswoode's power of exciting interest in this beautiful but difficult branch of optics was shown by the popularity of these lectures at the Royal Institution. Of late, Mr. Spottiswoode had been concentrating his attention on electrical investigations; and he was, we believe, at the time of his death engaged in a research the results of which we hope may still be given us.

But, remarkable as Mr. Spottiswoode was as a *savant*, he was still more remarkable as an organiser and as a friend. There was no one who was more generally loved, or who better deserved to be so. In no society was he, or, in fact, could he be, ill spoken of. To his power as an organiser both the success of his own private business and the value placed on his services by such bodies as the British Association and the Royal Society, to both of which he was treasurer for several years, are a sufficient testimony. These are not the only societies of whose councils he was a permanent member. The Royal Institution and the Mathematical Society owe him much. And his power was not merely that of the good man of business, but seems to have sprung from an exceptional combination of business aptitude with sound judgment and a generous sympathy with the highest aims. This same generous sympathy has often aided his friends, and was extended to his relations with his workmen, who always regarded him with confidence as well as affection. In few cases has there been so striking a concurrence in the feeling of loss which has befallen the scientific world.

## SCIENCE NOTES.

It is proposed to celebrate, on November 1, the fiftieth anniversary of the Edinburgh Geological Society. A *conversazione* will be held in the Museum of Science and Art at Edinburgh, and an address will be delivered by the Duke of Argyll, the patron of the society.

SINCE the re-opening of the Parkes Museum at 74a Margaret Street, W., by the Duke of Albany, weekly lectures have been given on subjects connected with the science of hygiene. The Dean of Llandaff will take the chair at the next lecture, on Thursday, July 12, at 8 p.m., when Dr. C. H. Ralfe, assistant-physician to the London Hospital, will give an address on "The Hygiene of Schools." Admission is by ticket, free on application to the secretary, or by payment at the door.

MESSRS. MACMILLAN will shortly publish, in a little volume, the papers by Dr. T. Lauder Brunton on "The Nature of Inhibition and the Action of Drugs upon it" which have recently appeared in *Nature*.

DURING several years' residence in Naples, Mr. H. J. Johnston-Lavis has been a close student of the geology of Vesuvius and Monte Somma. His studies have led him to recognise, in a paper lately submitted to the Geological Society of London, eight successive phases in the history of the volcano. The first phase of which any well-marked record still remains appears to have been one of chronic activity, manifested by the outflow of lava and the ejection of scoria. This was followed by a period of inactivity, when denudation was at work. The third phase was characterised by violent paroxysms, to which succeeded a period of chronic activity. Then came a quiescent stage, followed in due course by the paroxysms of the sixth phase, and the less violent manifestations of the next epoch, which at length subsided into the chronic activity characteristic of the modern period of Vesuvian history.

## MEETINGS OF SOCIETIES.

ANTHROPOLOGICAL INSTITUTE.

(Tuesday, June 12.)

PROF. FLOWER, President, in the Chair.—Dr. E. B. Tylor read a paper on "Old Scandinavian Civilisation among the Modern Esquimaux." Among other evidences of contact with European civilisation the author made particular mention of the lamp used by the Esquimaux for cooking and for warming their dwellings. One of these primitive-looking lamps was exhibited by Dr. John Rae. It consists of a flat, semi-circular dish of steatite, or pot-stone, about fifteen inches in diameter and two inches and a-half deep, with slightly sloping sides. In it the natives burn oil, using for wick fragments of sphagnum, arranged along the edge of the lamp. Dr. Tylor considered that the metal lamps used in the South of Europe, and some of those used in Scotland at the present day, were exactly the same in principle as these Esquimaux lamps, and that they must all have been developed from the same original idea.—The Director read a communication from Mr. J. H. Rivett-Carnac describing some palaeolithic stone implements found by himself and Mr. J. Cockburn in Banda, a hilly district of the North-western Provinces of India. Specimens of these implements were exhibited, presented by Mr. Rivett-Carnac to the Institute.—Dr. E. B. Tylor read a paper by Mr. A. W. Howitt on "Australian Beliefs."

(Tuesday, June 19.)

A SPECIAL meeting was held on June 19, at Piccadilly Hall, by invitation of Mr. Ribeiro, to view the Botocudo Indians brought over by him to this country.—Hyde Clarke, Esq., V.-P., was in the Chair, and Mr. A. H. Keane read a paper on the Botocudos.—Mr. Ribeiro presented the Institute with a small collection of typical Botocudo weapons.

(Tuesday, June 26.)

PROF. FLOWER, President, in the Chair.—Mr. Worthington G. Smith exhibited a collection of palaeolithic implements from Leyton and Walthamstow.—Mr. R. B. White read a paper on the aboriginal races of the North-western provinces of South America. This paper referred to a strip of country about 600 miles in length by from 100 to 250 in width, bounded on the west by the Pacific Ocean, and extending from 1° North latitude to the 8th parallel. It is now embraced by the States of Cauca and Antioquia, two of the nine States of the Columbian Union, which was formerly called New Granada.—Mr. J. Park Harrison read a paper on the relative length of the first three toes of the human foot. The author adduced evidence to show (1) that a long second toe was a racial characteristic existing at the present day in Egypt (according to Pruner Bey), in South-west Africa, and in many of the Pacific islands, including Tahiti. It appears also to have prevailed among the ancient Peruvians and

Etruscans. (2) When met with in Europeans, excepting, perhaps, in Italy, it may be attributed mainly to narrow shoes, but sometimes to mixture of blood. (3) Mr. Harrison had ascertained, by measurements, that a second toe even slightly longer than the first was not, as generally supposed, common in statues of the best period of Greek art, nor in accordance with the rules laid down in Flaxman's lectures at the Royal Academy. (4) Unfortunately, the peculiarity was being perpetuated by casts of the feet of Roman or Graeco-Roman statues, which, in some cases (as, for instance, that of the left foot of the Farnese Apollo), were modern restorations. Travellers were asked to observe the respective lengths of the toes in foreign countries, and especially in Italy.

ROYAL SOCIETY OF LITERATURE.—(Wednesday, June 27.)

J. HAYNES, Esq., in the Chair.—Mr. Robert N. Cust read a paper on "Algeria, Tunisia, and the Sahara," from observations made by him during a recent tour in that part of the world. Arrived at Algiers, the first thing that struck him was the beauty of the country and the abundance of herbage. The old houses are very interesting, but everything has been completely Frenchified, except the strangely mixed population of Moors, Negroes, Kabyles, &c. There are no signs of oppression. The railroad now traverses the province from one end to the other—from Oran to Tunis. The Arab buildings, though beautiful and even fine, fall far short of the great Muhammadan structures of India. Constantine (the ancient Cirta) is the wonderful city of the Eastern provinces, and between it and Algiers is the mountain country of the Kabyles—at present well under French rule, but ready to break out again, as in 1870, at the first reverse to their masters. From Constantine Mr. Cust made his way into the Sahara, partly by rail to Batna, partly by *diligence*, seeing a good deal of the "indigènes," the ancient Numidians, who have outlived Carthage, Rome, the Vandals, the Arabs, and the Turks. Much of their land has, however, been taken from them, 90,000 soldiers being required, even in the time of peace, to hold Tunis and Algeria. The Roman ruins in various places of the North of Africa are remarkably fine, especially those of Tysdrus (El-Djem), and Theveste (Tebessa). Copies of many of the best of these may be seen in Col. Playfair's *Travels in the Footsteps of Bruce*.

SOCIETY OF ANTIQUARIES.—(Thursday, June 28.)

C. S. PERCEVAL, Esq., Treasurer, in the Chair.—Gen. Pitt Rivers exhibited a collection of locks and keys of all dates and countries, explained the gradual steps by which improvements were made, and called attention to the great similarity of form and plan in specimens from widely different places.—Mr. Kirby exhibited a few deeds relating to Hyde Abbey found at Winchester College, ranging from the thirteenth to the sixteenth centuries. Several names of manors occur in the attestations which were hitherto unknown.

## FINE ART.

## OLD MASTERS AND SCOTTISH NATIONAL PORTRAITS AT EDINBURGH

A RICH and interesting collection of works by the Old Masters and of Scottish National Portraits has been brought together by the Board of Manufactures, and displayed in the galleries of the Royal Scottish Academy, Edinburgh. It is the first time for many years that the public of that city have had an opportunity of studying the productions of the great schools of the past; for, though the Scottish Academy have on three occasions—by their general exhibitions of 1863 and 1880, and their Raeburn exhibition of 1876—illustrated the history of Scottish art, no collection representative of the work of the Old Masters has been on view in Edinburgh since 1830, the year of the last display of the Royal Institution. In the present exhibition special prominence has been given to the department of national

portraiture; but this has been supplemented with so rich and varied a gathering of other works as to afford something approaching a regular and complete view of the art of the past. Hardly any school or period is quite unrepresented, proving what a mine of art-wealth exists in the great houses and the public institutions of the country, and with what energy and success these treasures have been collected by the Board from their courteous and generous possessors. It is to be hoped that the exhibition will be largely patronised by the Edinburgh public and by the tourists who throng the city during the summer and autumn months, and that so its promoters may be encouraged to plan frequent displays of a similarly delightful and educative character.

Chronologically considered, the exhibition opens with a series of examples of the early Italian and Flemish schools—works that are interesting and characteristic of their periods, though in several cases the attributions to the various artists are more than doubtful. Two excellent and authentic Holy Families represent Botticelli—one, a picture of the usual circular form, lent by the Marquis of Lothian, being full of the rich colour and tender wistfulness of expression so characteristic of the master; the other interesting for its fine rendering of a classical bas-relief of mounted figures which appears behind the kneeling St. John. A fair-haired Madonna, with an angel presenting to Christ a peasant child, who offers a sprig of lily of the valley, is a richly coloured example of Dürer—executed during his visit to Venice—wanting, however, somewhat in quietude and repose, as is frequently the case in the paintings by the artist. Quintin Matsys is seen to great advantage in a subject of "The Gamblers"—a crowded little composition, full of exquisite brightness of hue, and truth, and variety of attitude and expression, with a most charming vista of wooded evening landscape seen in the distance through a window. Some ten works bear the name of Holbein, mainly pictures of small size, the most interesting being "Wishart the Martyr," "Margaret Tudor," and an unknown portrait lent by Sir Arthur Halkett. They, however, include the noble life-sized "Sir Nicholas Carew," accepted as a genuine Holbein by Waagen and Scharf, though some doubts were cast upon its authenticity when it was seen at the Academy in 1880. Its handling certainly presents marked differences from the Duke of Norfolk's "Duchess of Milan," which may be accepted as a sufficient standard of the master at his highest; but it is difficult to think of any other painter of the time possessed of skill sufficient for the production of so splendid and impressive a work. It is the property of the Duke of Buccleuch, from whose collection comes another of the gems of the exhibition—a portrait by Rembrandt of his "Second Wife [or, more correctly, Saskia Ulenburg, his first wife] in the Character of a Jewish Bride," a work strongly recalling the master's etching which bears a somewhat similar title. It is executed in his more delicately finished and detailed manner. The fair-haired, portly lady stands fronting us, bearing in one hand a bunch of flowers, and in the other a staff garlanded with leaves. The lighting is singularly tender and effective, and the details of the rich drapery are treated with the most exquisite and artistic elaboration. Among the works of the other Dutchmen is a charming and solidly painted family group by Nicholas Maas, and a fine cabinet portrait of this artist's wife. By Ouyt are no fewer than ten works, mostly authentic, including a large landscape with mounted figures, seen under his customary mellow warmth of golden sunshine, and a study of poultry distinguished by quite exceptional richness and force of colour. The

painters of still-life in Holland are admirably represented by several of the most delicate subjects of John van Huysum and the De Heems.

Of the art of the great time in Italy we have some noble examples, the collection being especially rich in Titians. The most complete is the "Holy Family" lent by the Marquis of Lothian—a small cabinet picture, in perfect preservation, and of unsurpassable finish, with the colour of the master at its richest and fullest. A large unfinished classical subject is interesting as showing the artist's way of work; and beneath it hangs a weird piece, with wonderfully potent and juicy colour, entitled "The Triple Mask"—three human faces, representative of youth, manhood, and age, set upon the heads of a dog, a lion, and a wolf. Among the works by Veronese is a bright and charming sketch for one of the Louvre pictures. Bassano is represented by an imposing Venetian Doge; and Bonifacio by a spacious canvas—"The Return of the Prodigal," notable mainly for the splendid panorama of blue Alpine peaks which rise in the distance. The painters of last-century France are conspicuous by their absence; but a small circular subject by Watteau of a red-clad, standing male figure and a group of seated ladies is thoroughly representative of this their greatest master, and might compare, for its sweet interweaving of delicate colour, with the "Fête Champêtre" placed in the Scottish National Gallery by the bequest of Lady Murray.

Passing to the department of national portraits we find examples of Gerards, Zuccaro, a striking likeness of Dobson by himself, and Lelys and Knellers in plenty. Vandyke is represented by some fine canvases like the full-length "First Earl of Denbigh" and that "Marchese di Spindola" which figured in the last winter exhibition of the Royal Academy; but several of the works which bear the artist's name are too cold and poor in colour for us to believe that they are by the hand of the great pupil of Rubens.

The three leaders of English portraiture are well represented—Gainsborough, by "Henry Duke of Buccleuch," the well-known figure with the arms round a terrier's neck, and other portraits and landscapes; Reynolds, at his best, by works like the full-length "Elizabeth Gunning" and the superb head of "William Beckford," who is also portrayed by Romney in a most graceful and perfect gallery-subject—which comes, like the other, from Hamilton Palace—standing in sweetly coloured costume beside the ruins of a classical temple and beneath the embrowned foliage of autumn. The work of such of the Scottish portraitists as Ramsey, Aikman, the two De Medinas, and Raeburn is displayed in singular profusion; and George Jameson becomes at last something more than that mere name which he has hitherto been to the most of even cultivated Scotemen. "The Penny Wedding" and "Blind Man's Buff" of Wilkie come from the Royal collection; and the delicate landscape art of Patrick Nasmyth is represented by four examples. The works in colour are supplemented by a series of nearly a hundred drawings by the Old Masters lent by Mr. Francis Abbott.

J. M. GRAY.

#### TENTURES ARTISTIQUES.

DESPITE the interesting exhibitions of painted tapestry which we have noticed from time to time, there has never yet been one in England which showed fairly the decorative capacity and usefulness of this branch of art. The superiority of the present exhibition of "Tentures artistiques" at the Studios of Mediaeval and Industrial Art, 175 and 176 New Bond Street, is twofold. It is entirely composed of masterly work, and the draperies are arranged

so as to show their practical effect in the decoration of a house. Staircase, passages, and a suite of rooms are fitted up with painted tissues, showing their adaptability to hangings for the wall, curtains for the windows, coverings for chairs, cloths for tables, and even for the decoration of ceilings, so that no one can call in question the variety of beautiful uses to which the art can be applied. With a few exceptions the paintings have been executed by celebrated French artists, and have been recently exhibited at the *Exposition des Beaux-Arts* at Paris.

Although most of the paintings are upon humbler stuffs, there are admirable examples of painting on silk, on satin, and on velvet. The nature of the material produces a great variety in the quality of the effects produced. The transparency and brightness of silk, for instance, give to it a charm all its own when dyed with the pellucid and brilliant colours at the command of the tapestry painter. Ravvier, painting on this tissue, has achieved a very remarkable success. His elegant and beautifully modelled nude female figure called "The Falling of the Leaves" is an exquisite illustration of perfect artistic command over materials. As a picture it is beautiful, but it is lustrous beyond example. The touch has been so sure and the penetration of the liquid colours so perfect that the effect is almost as fine on one side of the silk as on the other. The paintings on white velvet are almost as remarkable; the glistening pile when left for the high lights lends itself to a marvellous imitation of iridescent surfaces like the gleaming sides of fresh fish or the opalescence of shells. Such experiments as these open out new vistas of possible decorative triumphs to be won by the artistic perception of the peculiar capacities of different tissues.

For those who care little for the minor luxuries of play of light and colour, and all the thousand dexterities and ingenuities which this kind of art seems naturally to foster, the exhibition will yet afford much scope for delight; for tapestry-painting brings the class of effects hitherto peculiar to real tapestry and mural-painting within the range of ordinary householders and moderate purses. Such fine designs as those which, in illustration of scenes from Molière, Mazerolle has painted on the ceiling of the *Théâtre français* can now be transferred without loss to a piece of cloth which can be moved at will and rolled up and cleaned without difficulty or damage. Two of these scenes, "Le Misanthrope" and "Le Dépit amoureux," are among the grandest of the tapestries exhibited in the lower gallery. Other notable works on a large scale are "Baiting Horses," by T. Lewis Brown; "Coquetterie," by Hippolyte Dubois; a "Cavalier," by Luminais; "Telling Fortunes," by J. Cornilliet; and "The Procession of the Peacock," by C. Monginot. A large landscape by A. Guillon; a "Hunting Scene," by E. Gluck; Feyen-Perrin's "Astarte"; Joseph Blanc's "Aphrodite"; and two pretty *genre* scenes by Leron, exhibit in the upper gallery the ability of tapestry-painting to deal with nearly every class of subject usually treated on canvas, while the staircases are hung with imitations of old tapestry which have all the effect of woven work.

Such paintings as these are, indeed, fit only for apartments of unusual size—for public halls and galleries, for palaces and hotels; but there are enough of these to supply ample employment for all able hands that may be willing to turn to such honourable and beautiful work. For tapestries of this class alone there would therefore seem to be a large and immediate future, and it is difficult to estimate the effect upon public taste of such a means for multiplying swiftly and economically the masterpieces of decorative

art. But perhaps the place in which this beautiful branch of painting will develop most quickly and fruitfully is the ordinary household. It is as applicable to small as to large designs, to pure ornament as to scenic pictures. Rooms which would be all too small for the "Blood-hounds" of O. de Penne would be enlivened and enriched by such a piano panel as that numbered 62, or such a charming screen as the "Children after Legrain" (168). Of the numerous minor applications of the art to curtains, portières, &c., we can only notice the charming effects produced by colouring patterns already woven in white cloth. By taking advantage of the different tones and tints produced by the incidence of light on the various surfaces of damask-like fabrics, endless beautiful and unexpected results may be obtained by the union of a little work and a good deal of taste. COSMO MONKHOUSE.

### THE EGYPT EXPLORATION FUND.

By the kind leave of the Managers of the Royal Institution, the Egypt Exploration Fund held a general meeting in their theatre to receive M. Naville and hear his report of his discoveries.

Sir Erasmus Wilson, as president, opened the meeting in a short address, in which he forcibly stated what the Fund had achieved, and especially dwelt on the happy fortune which had secured the invaluable services of M. Naville, one of the first Egyptologists of our day.

Miss Amelia B. Edwards, as one of the hon. secretaries, then read a summary of the work of this spring, showing the great value of the discovery of Pithom-Succoth and its bearing on Egyptian and Biblical history.

Mr. Reginald Stuart Poole, the other hon. secretary, after communicating Lord Dufferin's regret at his inability to be present, and his warm sympathy with the society, made the financial statement. The work of one year having been completed, it was important to determine at what date subscriptions should be renewed. It was proposed, as the most convenient method, to adopt the financial year, and to reckon all contributions received before April 1, 1883, as of the year 1882-83, and all subscriptions since received as of the year 1883-84. Sir Erasmus Wilson had contributed £500 last year. He now contributed £1,000. The receipts up to the day of meeting amounted to £2,209 8s. 6d., inclusive of £75 promised and £100 conditionally given, Mr. W. Fowler, M.P., having promised £50 if nineteen other persons would give the same sum; three had already done so, two of whom had paid their donations. The working expenses, partly met by a gift from Sir E. Wilson of £10, and the cost of starting the project would, it was believed, fall short of £50; the exact sum could not be stated until the advertisement bill was received. The excavations at Pithom cost about £650. The balance available for future excavations was therefore about £1,600. It was the intention of the council to print M. Naville's memoir on Pithom-Succoth, and present it to every subscriber or donor for 1882-83 of £1. Mr. Poole suggested the advantage of small subscriptions, and that friends should club together and send in a subscription of £1 under a single name in order that no one should lose the opportunity of reading the memoir.

The President then communicated to the meeting the donation to the society of two important monuments discovered by M. Naville at Pithom-Succoth—a granite hawk bearing the name of Ramses II., and a squatting statue of a recorder of Pithom.

The Earl of Wharnccliffe moved a vote of thanks to the Egyptian Government, and spoke of the interest with which he had visited M. Naville's works during their progress, and

of the great importance of their results in illustration of Bible history.

Mr. Villiers Stuart, M.P., seconded the vote, and, also speaking as an eye-witness, warmly eulogised M. Naville's conduct of the excavations, and congratulated the society on the great results achieved.

Rogers Bey acknowledged the vote on the part of the Egyptian Government, and stated the warm interest taken by H.H. the Khedive in the antiquities of Egypt and all well-directed efforts for their elucidation.

The President then, in a few telling words, proposed the presentation of these monuments to the Trustees of the British Museum. The motion was warmly seconded by Mr. William Fowler, M.P., and unanimously carried. Mr. E. A. Bond, Principal Librarian of the British Museum, cordially thanked the society on the part of the Trustees, and stated how glad he was to be able to place these treasures under Dr. Birch's care, where all England could see and study them.

M. Naville then delivered his discourse on Pithom-Succoth, which was listened to with deep interest. He stated that, on reaching Cairo, he consulted with M. Maspero as to the best mound to attack. Tell-el-Maskhutah, the supposed site of Ramses, was decided upon. Before undertaking the work, M. Naville visited Ismailia, where some monuments previously discovered at Tell-el-Maskhutah were placed in the great square. He read their inscriptions; and, finding Tum to be the chief god of the place, he formed the conclusion that its sacred name was Pithom, or the "House of Tum," and that it was most probably, from its neighbourhood to Goshen, the Pithom of Exodus. This was the more probable as Dr. Brugsch had already discovered, from geographical documents, that a Pithom in eastern Lower Egypt was called by the civil name Succoth. Having secured the valuable aid of M. Jaillon, a French engineer, and having had a *dahabeah* placed at his service rent free by the liberality of Messrs. Cook, M. Naville began operations. He examined the site of the town, and found that its broad crude-brick walls enclosed a temple, but were mainly filled with large store-houses, most carefully constructed of crude bricks in the style of Ramses II. From a careful examination of the monuments and fragments unearthed, he proved that the place was Pithom-Succoth; that, like the Pithom of Exodus, it was a store-city, even bearing the name the "store-house," Ar, whence the Greek and Roman Heroöpolis, Hero, &c. The oldest name found was that of Ramses II., who was unquestionably the builder of Pithom—therefore the Pharaoh of the oppression, as Menephtah, his son, was the Pharaoh of the exodus. M. Naville then discussed the route of the exodus. He said that three lines had been proposed—the old line, from opposite Memphis to Suez, now abandoned by all scholars; the line of Dr. Brugsch, passing from Zoan to Kantarah and Magdolon, and then along the narrow strip of land which separates Lake Serbonis from the Mediterranean; and, lastly, the line of the Sweet-Water Canal, which passes by the mound of Pithom-Succoth. M. Naville, while speaking with extreme caution as to the direction of the exodus-route, stated that the northern line advocated by Brugsch was now untenable. It was evidently "the way of the Philistines," which the Israelites were commanded not to take. But he noticed that the successive stages rather indicated districts than towns; there was a land of Ramses, a land of Succoth, and probably also a land of Etham, and this idea would accord with the movements of a vast body of people. Further excavation was needed for the complete clearing up of this problem.

Not the least curious of M. Naville's dis-

coveries was that of a great tablet of Ptolemy II. Philadelphus, which deserved to be called the Stele of Pithom—a record of the work of this king on the canal of the Red Sea, his building of Arsinoë, of his expedition to Ethiopia and foundation of a town there, with his transport of elephants, concluding with a summary of tribute received. This document is a most valuable addition to our knowledge of the history of Egypt under the Ptolemies. It will be published and fully discussed, with the other monuments discovered, in M. Naville's memoir.

M. Naville was cordially thanked by the meeting for his deeply interesting memoir; and the kindness of the Managers of the Royal Institution, and that of Sir Erasmus Wilson in presiding at this important meeting, were heartily acknowledged.

### EGYPTIAN ANTIQUITIES FOUND AT ROME.

Rome: June 21, 1883.

THIS year has witnessed many discoveries of Egyptian antiquities in Italy. In the ACADEMY of March 31 I referred to the statues of Osiris and Isis Taposiris found in the district of Faesulæ, and I ought to have mentioned another Osiris discovered in this city on the Esquiline between the Via Principe Amedeo and the Via Napoleone III., on the same spot where a statue of Hades with Cerberus also came to light. The effigies of these Egyptian divinities are of interest because they throw light on the influence exercised by the religion of ancient Egypt on Roman civilisation. We have, however, lately discovered in Rome some remarkable remains of pure Egyptian art.

A magnificent temple to Isis and Serapis stood in *Regio IX.*, which took its name from the temple, but we know little or nothing of this building. On its ruins, and above the very sanctuary, was built the church of Santa Maria Sopra Minerva, near which many Egyptian antiquities have been found at different times. Here some discoveries were made in the sixteenth century, and others have occurred in our own days. In the garden of Sig. Tranquilli's house, behind the church of Minerva, were found statues, sphinxes, and a granite obelisk with hieroglyphs. Many persons believed these antiquities to be Roman imitations of the time of Hadrian. There is no doubt, however, that they are genuine relics brought from Egypt. No competent archaeologist who has examined the antiquities which were bought from Sig. Tranquilli by the Italian Government for the Florence Museum (see Catalogue 1225) can have any hesitation on this point. Another fine example of Egyptian art is a sphinx in gray granite, supposed to represent Queen Hatsépu, now in the possession of Baron Giovanni Barracco. This gentleman, who possesses a collection of Greek and Roman sculpture which has been figured in the *Gazette archéologique* by M. Lenormant, has taken much interest in the Egyptian remains of the temple of Isis; and this purchase by the State was mainly due to his exertions. His learned essay on the Hatsépu sphinx was published by Prof. Schiaparelli in the Catalogue to the Egyptian Museum at Florence (vol. i., p. 154). A short time ago Sig. R. Lanciani began an excavation, at the instance of the Archaeological Commission of Rome, in the Via S. Ignazio, not far from the Casa Tranquilli; and at a depth of about six mètres he found a sphinx of basalt, of Egyptian make. The sphinx was taken to the Museum of the Capitol, and is believed to be an effigy of King Amasis, of the XVIIIth Dynasty. Sig. Lanciani read a paper on this find at the last meeting of the Reale Accademia dei Lincei, in the presence of the Crown Prince of Portugal and the Duke

of Oporto; and he exhibited a photograph of the sphinx and a plaster cast of its inscription. He remarked that the hieroglyphs are nearly effaced, as if by hammering; and he stated that, in the opinion of some scholars, this was done by order of King Cambyse, who, according to Herodotus (books ii, iii.) outraged the memory of Amasis. Sig. Lanciani has finished a monograph which sums up all that is known about the temple of Isis and Serapis, and all the discoveries that have been made from the street of San Stefano to the church of San Macuto. In his opinion, nearly all the materials of the temple were brought from Egypt.

As I write, I hear of a fresh find. Near the spot where the sphinx was excavated, a portion of an obelisk has been discovered. Its proportions are much the same as those of the obelisk in the Piazza della Minerva, which also was found on the site of the sanctuary of this temple. Some persons read the name of Rameses II. on the base of the obelisk now coming to light. At present a small portion only of the monument has been exposed, and I reserve further remarks until the work is finished. F. BARNABEI.

### CORRESPONDENCE.

#### PICTURES BELONGING TO THE LATE VITAL DE' TIVOLI.

London: July 4, 1883.

Many will have heard with regret of the death of Sig. Vital de' Tivoli, Italian teacher to the University of Oxford, which happened lately at Pisa, after a long illness and much suffering. A number of pictures belonging to him, some formerly in the possession of Baron Kirkup, are now offered for sale, and can be seen at the studio of Sig. Buggiani, Howland Street.

The following are the most interesting:—A number of early Florentine pictures of the fourteenth and first half of the fifteenth centuries, chiefly from churches in Florence, and all in very genuine, untouched condition. The finest of these is a large *retable*, or altarpiece, in five compartments, with central figure of the Madonna, and four single figures of saints—a very delicate and beautiful painting, attributed to Orcagna. Several of these early paintings are still in their original frames. Among the later pictures there is a fine half-length figure of Christ—an *Ecce Homo*—similar in design to that by Fra Bartolommeo in the Pitti Palace. It is painted on canvas, and is apparently the work of one of Perugino's pupils. A carefully finished portrait of a youth, with deep-green background, is a noble piece of work both in drawing and colouring. It is attributed in the catalogue to Antonio Moro, and may possibly be an early work of his. A small seated portrait-figure of a lawyer or professor in his study is very rich in colour, and finished with miniature-like refinement—a good example of Steinwyck's style, especially in the careful treatment of the architectural details of the room. A highly finished study in oil by Nicolas Poussin of Pluto and Proserpine—one of the panels of a ceiling in the Barberini Palace, Rome—is a very remarkable piece of work for the Venetian-like richness of its colouring and the great technical skill of its execution. It might almost have been from the hand of Tintoretto.

Perhaps the most noteworthy painting in the collection is a small half-length painting of the Madonna, which, both from the internal evidence of its style and from its well-authenticated pedigree, appears to be an undoubted work of Murillo in his second, or "calido," manner. This little painting (described in Stirling's *Annals of Spanish Painters*) was known as

"La Virgen de la Servilleta;" it was designed to decorate the door of the Tabernacle for the Host in the Capuchin church at Seville, and was stolen thence by the French during the Peninsular War. J. H. MIDDLETON.

#### HYDE PARK CORNER AND ITS SURROUNDINGS Burlington Fine Arts Club: July 2, 1883.

Now that a clearance has been effected on this highly important site, the public has a good opportunity of judging of the effect of what may be called "crowding" in more senses than one. How the arch which has just been removed ever came to be placed in a corner in such a confined space right against St. George's Hospital on one side, with nothing on the other, like a pig with one ear, has long been a puzzle to persons of taste. An arch of such a size should have ample space about it on each side. We seem to sadly lack a sense of proportion in our architectural compositions. This arch was erected many years before the Duke's statue was thought of. They had no affinity for each other; but, the arch being on the spot, it was thought a fine opportunity for utilising it. So up went the statue, without much thought about its appropriateness as to size or position when aloft. The late Lord Carlisle (when Lord Morpeth, I think) saw this, and would have had the statue taken down again directly; but the Duke of Wellington, having been appealed to, said he thought the people would not like its removal, so the statue has remained an eyesore in one of the most conspicuous spots in the metropolis ever since. The artistic view of the question probably did not trouble the Duke much. Before it is too late, allow me to suggest what was recommended for the statue—viz., that a rough timber model of the arch should be placed *in situ*, that we may judge of its effect. The home proposed for it will not, I fear, be found an improvement on its former position, any more than was the change of place selected for the beautiful marble arch of Flaxman, which was, at a great expense, thrust into a corner on one side of Park Lane, and ruthlessly uprooted from its first-rate position as a grand entrance to Buckingham Palace when the frightful *façade* was erected, looking for all the world like an ordinary row of houses, and surmounted with the most incongruous and grotesque ornaments, of which the less that is said the better. I will but refer to the lamented Mr. Street's last lecture on this irreparable injury done to Buckingham Palace.

As to the statue, it is by this time pretty clear, I suppose, to most people that it looks no better on *terra firma* than it did in the air; and Mr. Reinagle was probably not far wrong when he is said to have remarked that its best place is the melting-pot. It is a ghostly, not to say ghastly, "dead alive" looking thing at the best, but, more than that, everything is out of proportion. The cocked hat is too big for the Duke, the Duke is too big for the horse, and the horse was too big for the arch. Then no horse of any breed, even a war-horse or charger, need have something very like a snout to account for his "sniffing the battle and the breeze." "Such a neck-stretching animal," as Reinagle is said to have called it, "the Duke would never have mounted." Again, the neck is thrust into the chest without much consideration for withers and shoulder, which accounts for the same artist's remark that its body is too short, making the legs appear too long. If the statue is destined to remain in existence (which I cannot help thinking will be a great mistake), the best site for it is probably that selected—viz., within the rails of the park opposite the Horse Guards, where it will be least seen.

A word or two, in passing, on our love of

"crowding" in ornament as well as in mass, as illustrated in our Houses of Parliament, and I have done for the present. Barry was so led astray by that beautiful little *bijou* Henry the Seventh's Chapel as to suppose that harmony would be secured by building an immense structure alongside of it in the same minute style of ornamentation. There never was a greater mistake. It is a triple—nay, a quadruple—loss, for the effect disappears at a distance, from which alone so large a building can be properly seen; the quantity of needless—nay, injurious—work is more than doubled, while the expense of keeping it in repair is doubled also; and, lastly, from the perishable nature of the stone, which was selected from a bad part of a quarry of excellent building material (the mountain or carboniferous limestone), the building has actually to be recased. This operation, I understand, costs the nation £2,000 every year! R. WINN.

#### NOTES ON ART AND ARCHAEOLOGY.

AFTER serving the seriously artistic public for a period of forty years in the Print-Room of the British Museum, and having for half that long period filled the chief post in that department to the satisfaction of all who may rightly conceive its obligations, Mr. G. W. Reid has retired. The announcement was first made several days ago, and the language of eulogy has already been justly exhausted *à propos* of the event. Mr. Reid has been a model Keeper—such an one as it will be impossible to replace. He has always united with true learning a happily instinctive taste and power of discrimination. He has, with equal zeal and discretion, added impartially to the great collection of prints and drawings under his control. His stores of knowledge, and his yet more precious gift of fine observation, have been placed willingly at the service of all who had even the very slightest claim to seek his aid. We chronicle with genuine regret the disappearance of Mr. Reid from the scene of his active and unceasing labours.

THE announcement that Prof. Sidney Colvin will be appointed Keeper of the Prints in the room of Mr. Reid is, to say the least of it, premature. Next week the Trustees will meet, and the vacancy caused by Mr. Reid's retirement will be filled; but, until that has taken place, nothing can be said with certainty, and as little should be said as possible.

THE project for the establishment of a British School at Athens, which took a definite shape at the brilliant meeting held at Marlborough House on June 25, has since received very numerous promises of support, and its ultimate success seems assured. It has been resolved to invite a number of those who have already expressed their approval to join the general committee elected on June 25. A full list of the committee, as thus enlarged, with a list of the subscriptions already promised, will be published at an early date; and a public meeting in connexion with the scheme will in all probability be held in the autumn. Meanwhile, subscriptions, or promises of subscriptions, will be received by the bankers, Messrs. Grindley and Co., 55 Parliament Street; or by either of the acting honorary secretaries, T. H. S. Escott, Esq., 38 Brompton Crescent, S.W., and Prof. Jebb, Springfield, Cambridge.

DURING his recent visit to town, Card. Newman gave a sitting to Mr. Barraud, of 263 Oxford Street, the result of which is an admirable photograph, happy alike in pose and in expression. The Cardinal looks well, but has aged much since the date of Mr. Oulless's fine portrait.

MR. HENRY BLACKBURN, encouraged by the success of his *Academy* and *Grosvenor Notes*,

purposes to issue immediately a similar volume, on a larger scale, containing full-page illustrations of pictures now exhibiting not only at the Academy and the Grosvenor, but also at the other exhibitions. The publishers will be Messrs. W. H. Allen.

THE Académie des Inscriptions has awarded its prizes for numismatics to two members of the British Museum staff—Mr. Barclay V. Head and Prof. Percy Gardner. As another proof of the increasing attention paid to numismatics in England, we may mention that a first class in the final classical school was recently obtained at Oxford by a candidate who took up this as his special subject.

WE were several weeks ago enabled to refer to a movement for carrying to its proper completion the late Alfred Stevens's monument to the Duke of Wellington in St. Paul's; and we are to-day rejoiced to be able to say that a memorial, influentially signed, will shortly be presented to the Government, praying them to appoint a committee of experts to advise upon the completion of the monument and its transfer to the site originally designated for it. It will be within the recollection of a few of our readers that the full-sized model of the equestrian figure to surmount and complete the monument is now preserved in the crypt, and that such of the monument as has been executed—the incomplete monument, to speak more accurately—stands in the Consistory Court on the south side of the cathedral, and at a spot where a wooden screen prevents its being viewed from the nave. We sincerely trust that the prayer of the memorialists will be granted with promptitude, and that thus there may be shown, now at last, a fitting honour to the great Duke and a no less necessary measure of respect to an original and powerful artist. Stevens was one of the few sculptors of the last or of our own generation whose work had in it the energy and individuality which are necessary elements of permanence, and of this anyone who either sees a little of Stevens's work or reads the critical biography of the artist by Mr. Walter Armstrong may speedily persuade himself. When so many of the public places of London are made ridiculous by the presence of effigies into which—as has been said elsewhere—Art does not enter, it is a curious extravagance to allow the genius of Alfred Stevens to be wasted.

SIR FREDERICK LEIGHTON has, we understand, consented to be president of the branch committee of the Viennese Society of Graphic Arts, now being formed in London for the purpose of ensuring the adequate representation of England at the International Exhibition of the Graphic Arts which will shortly be held in the Künstlerhaus at Vienna. The object of the exhibition is to illustrate the progress of the arts since 1860. The objects exhibited will include engravings on steel, wood, and copper, etchings, lithographs, and chromo-lithographs, and other reproductive processes; oil-paintings will be excluded. The vice-presidents of the committee include Mr. Seymour Haden, Mr. W. L. Thomas, and Mr. Louis Fagan. Those who wish to send contributions to the exhibition, or to join the British committee, should apply to Dr. Pick, 28 Queen's Road, St. John's Wood.

### THE STAGE.

A MEASURE of fashionable impropriety [having now been introduced into the French plays, and Mme. Chaumont, with her witty "cheek" and her adroit innuendo, having succeeded to the quieter and more dignified art of Mme. Blanche Pierson, the audiences at the Gaiety have been this week a little larger. But Fashion, as we hinted last Saturday, has to some extent deserted the speculation of M. Meyer; and only the sensational attraction of Mme. Sarah

Bernhardt, for the week after next, will be potent to recall it temporarily. Nor can we profess to profoundly sympathise with the desire to see the great French actress of the day under the conditions in which she will chiefly be beheld in London. Seen in "Fédora," Mme. Bernhardt can do little but gratify a silly curiosity—the piece is so repulsive, so equally devoid of comedy and beauty. "Fédora" is a sensational play directed to the stalls; and the more intelligent admirers of Mme. Sarah Bernhardt's art will prefer to witness the exhibition of her art in a play which has more claim to be considered a work of literature. "Fédora" is an adroit and ingenious patch-work, best designed to display the least humane characteristics of a woman of genius. As for Mme. Chaumont, and the performances of this week, there is little that it is necessary to say about them. Mme. Chaumont remains clever, but does not become more acceptable; and, in the opinion of some, "Divoçons" does not, on further acquaintance, become less coarse. "La Cigale" has shared with the better-known comedy much of the attention of the piquant actress. It was played on Tuesday night, Mme. Chaumont having "opened," as the phrase is, in "Divoçons."

THE attempt to re-arouse at the Globe Theatre an interest in so ancient a melodrama as "Flowers of the Forest" has not been well advised, and will probably be soon abandoned. "Flowers of the Forest" was made for the Adelphi, and for Mme. Celeste, and for thirty years ago. If it had ever been a first-rate piece, it might be a first-rate piece to-day. But, with the second-rate, fashion changes more rapidly than with what is excellent, and it was always to the second-rate that "Flowers of the Forest" belonged. Report says that Mr. Charles Kelly has been especially unfortunate in this new revival, but that Miss Harriett Jay has confirmed, so far as was possible, the good impression she made in her last part. Without recourse to such a piece as "Flowers of the Forest," a good place may surely be found on the London stage for a lady of such marked energy and of such various gifts.

THE performance of "Charles the First" given at the Lyceum a few days ago proved the vitality of a piece in which historical accuracy is by no means conspicuous. One does not require to be a partisan of the Round-heads in order to discover in the relations of Charles and the Puritan warrior, as they are presented by Mr. Wills and his interpreters, a measure of burlesque. But the dramatist need never be invited to make a philosophical study—it is sufficient that he presents us with characters in whose fortunes we may sympathise. Now it is impossible for the playgoer who enjoys emotion, and asks nothing better than that he shall be given cause to weep, to refrain from sympathising to the full with the woes of Charles and Henrietta Maria. This is due in a measure to the stage-craft as distinguished from the pure literary art of the writer. It is due, as the similar result in "The Lady of Lyons" was due, to the writer's appreciation of what would be profoundly effective, not in a book, but on the stage. The late Lord Lytton and Mr. Wills are alike, by their work, proved to be experts in adapting or subduing pure literature to the conditions of the stage, and both have been fortunate in their interpreters. Nor is this surprising, for, given a drama of such great acting qualities for the two principal performers as "The Lady of Lyons," and every leading man or *jeune premier*, and every leading lady or *première amoureuse*, of the theatre will desire to appear in it. Charles the First and Henrietta Maria in Mr. Wills's play are well-nigh as favoured as Claude Melnotte and Pauline in Lord Lytton's. There is no likelihood that they

would cease to be found attractive parts even if they were abandoned by the genius and the grace of Mr. Irving and Miss Ellen Terry. At present, however, it must plainly be admitted that in the performance of these artists lies much of the acceptability of the piece. The chivalry and elegance, the expression of pride and of pathos, at the command of the two leading players at the Lyceum are never, we think, beheld to greater advantage—at least they are never more clearly manifested—than in Mr. Wills's imperfect chronicle and popular and dexterous drama.

### MUSIC.

#### RECENT CONCERTS.

THE last subscription concert of the Henry Leslie Choir was given at St. James's Hall on Thursday evening, June 28. The first part of the programme concluded with an unpublished Motett for double choir, "Thou wilt content them," by Gounod. The MS. score in the possession of the Choir bears the date 1851. It is a short piece, of smooth and graceful writing, but not in any way remarkable. Another novelty was a part-song by Henry Leslie, conducted by the composer, entitled "Kind Words." Like many of Mr. Leslie's songs, it shows facility and experience. In the performance, the Choir dropped considerably in pitch. The rest of the programme consisted of well-known madrigals and part-songs, and Mr. Caldicott's humorous glee "Little Jack Horner." Miss Clara Samuelli and Messrs. Lloyd and Santley were the vocalists; Mr. Lazarus and M. Hollmann the instrumentalists. With the exception of the Leslie part-song, the whole of the concert was conducted, and in an efficient manner, by Mr. A. Randegger.

The ninth, and last, Richter Concert took place at St. James's Hall on Monday, July 2, and the large audience listened most attentively to the last orchestral performance of importance which will probably be heard in London for several months. Herr Richter announces three concerts in October and November, and the usual summer series of nine next year. The present series has proved most successful, and the Richter Concerts are now justly regarded as a special feature of the London musical season. We hope that Herr Richter, in addition to the Beethoven and Wagner works by which he has established his fame, will next season add to his *répertoire* some novelties of interest and importance. The programme last Monday included Schubert's unfinished Symphony in B minor; Beethoven's Choral Symphony, with Miss Annie Marriott, Miss Orridge, Mr. Barton McGuckin, and Mr. Frederic King as solo vocalists; and Wagner's *Kaisermarsch*. The performances were all extremely fine. Herr Ernst Schiever gave a conscientious, if not very brilliant, rendering of Max Bruch's first Violin Concerto. At the close of the concert Herr Richter was rapturously applauded.

The Browning Society's entertainment at University College on Friday evening is noticed in another column of the ACADEMY. Mr. Robert Browning has not attracted many composers; and some explanation of this fact may be found in the philosophical character of his muse. There are, nevertheless, many lines worthy to be set to music in his Dramatic Lyrics; and, with the exception of "You'll love me yet" from "Pippa Passes," sung by Miss Emily Lawson, the songs in the programme were taken from this source. "One way of love" and "Is she not pure gold, my mistress," were composed by Mr. Malcolm Lawson in his usual fanciful and characteristic style; the former was sung by Mr. M. Shepherd, the latter by the composer himself. There was also a pianoforte solo by Mr.

Lawson in the second part of the programme, which we could not stop to hear. It was entitled "Toccata Galuppi." Let us hope that, like the poet's "brave Galuppi," Mr. Lawson "sat and played his toccata stately at the clavichord," and conveyed to his hearers a musical picture of the "plaintive sixths," "com-miserating sevenths," and "answering octave" mentioned in the poem. The programme included also the Cavalier tunes "Marching along," "King Charles," and "Boot, saddle, to horse, and away," composed by Mr. O. Villiers Stanford for solo (Mr. Brereton) and chorus. There is a certain quaintness and originality about the music, though perhaps not quite the true "Cavalier" ring.

There are various concerts about which we ought to speak, but space compels us to notice only a few, and these very briefly. Mdme. Helen Hopkirk gave a pianoforte recital at Prince's Hall on Thursday, June 28; and, in a programme including a Beethoven Sonata, Schubert's *Grande Fantaisie* in C, and pieces by Chopin and Liszt, proved herself an able and intelligent interpreter of composers of various styles. Sig. Pirani, at his recital in the same hall on the following day, displayed excellent mechanism in Bach's Prelude and Fugue in A minor, and played with taste some trifles of his own. The Chopin selection was, however, not very satisfactory. The programme included songs by Mdme. Hersee and Signorina Barri; and a duet of the concert-giver's played by himself and Mr. W. Ganz.

Mdlle. Hélène Armin gave a morning concert at the Steinway Hall last Tuesday. In spite of the hot weather, the room was crowded. The vocal portion of the programme gave great satisfaction. Mdlle. Armin sang with much taste and intelligence various songs, and, with Mdlle. T. Friedländer, some pleasing little duets by Jadasohn. Miss Carlotta Elliot, Mr. R. Hollins, and Mr. H. Thorndike contributed solos; the last-named was very successful with Marzials' "My love is come." Miss Agnes Zimmermann and Mr. C. Armbruster in solos and Liszt's "Les Préludes" for two pianos added greatly to the success of the concert.

Mr. Quatremayne gave his evening concert at Steinway Hall on the evening of the same day. He sang a *Cavatina* from Rossini's "Zelmire," and Carissimi's "Vittoria," the latter suiting him far better than the former. He also gave (by desire) Hatton's "Fair is my love" and a new song by Duvivier. He was in good voice, and his singing was much applauded. Out of a long programme we would mention Miss Agnes Larkcom's excellent singing of Ganz' still popular "Sing, sweet bird," Herr Wiener's clever performance of a Spanish dance by Sarasate, and the graceful playing of Miss Clarissa Mills, who ought, however, to have chosen a piece more suited to her capabilities than Chopin's *Ballade* in G minor.

J. S. SHEDLOCK.

## TO PROPRIETORS of NEWSPAPERS

and PERIODICALS.—WYMAN & SONS, Printers of the *Builder*, the *Printing Times*, *Health*, *Knowledge*, *Truth*, the *Furniture Gazette*, the *Review*, and other high-class Publications, call attention to the facilities they possess for the COMPLETE, ECONOMIC, and PUNCTUAL PRODUCTION of PERIODICAL LITERATURE, whether illustrated or plain. Estimates furnished to Proprietors of New Periodicals, for either Printing, or Printing and Publishing.—74 to 76, Great Queen-street, London, W.C.

## SUN FIRE and LIFE OFFICES,

THREADEWELL STREET, E.C.; and CHURCH CROSS, S.W.;  
OXFORD STREET (corner of Vere-street), W.  
FIRE. Established 1710. Home and Foreign Insurances at moderate rates.  
LIFE. Established 1810. Specially low rates for Young Lives. Large Bonuses. Immediate settlement of Claims.

## SUMMER TOURS in SCOTLAND.

GLASGOW and the HIGHLANDS  
(Royal Route via Crinan and Caledonian Canals).—Royal Mail Steamer "COLUMBA" or "IONA," from GLASGOW, DAILY, at 7 A.M., from GREENOCK at 9 A.M., conveying, in connexion with his West Highland Steamers for Oban, Port-William, Inverness, Lochave, Skye, Gairloch, Staffa, Iona, Glencoe, Stornoway, &c. Official Guide, 3d.; Illustrated, 6d. and 1s., by post, or at W. H. SMITH & SONS's Railway Book-stalls.—Time Bill, with Map and Fare, free from the Owner, DAVID MACBRATNE, 119, Hope-street, Glasgow.

## MACMILLAN & CO'S LIST.

NOW READY AT ALL THE LIBRARIES.  
MR WILLIAM BLACK'S NEW NOVEL.

### YOLANDE:

The Story of a Daughter.

By WILLIAM BLACK,  
Author of "Macleod of Dare," "Shandon Bells," &c.  
3 vols., Crown 8vo, 31s. 6d.  
"A thoroughly pleasant, readable book, showing all Mr. Black's best qualities as a novelist."—*Pail Mail Gazette*.

### THE VOYAGE of the "WANDERER," R.Y.S.

From the Journals and Letters of C. and S. LAMBERT.  
Edited by GERALD YOUNG. With numerous Illustrations, Coloured and Plain. Royal 8vo.  
[Nearly ready.]

Macmillan's 4s. 6d. Series.—New Volumes.

BUT YET A WOMAN. By Arthur Sherburne Hardy. Crown 8vo, 4s. 6d.

Also a POPULAR EDITION, paper covers, ONE SHILLING.  
"A novel to read and re-read with delight."—*Independent*, N.Y.

NEW NOVEL BY THE AUTHOR OF "MR. ISAACS."

DOCTOR CLAUDIUS: a True Story. By F. MARION CRAWFORD, Author of "Mr. Isaacs." Crown 8vo, 4s. 6d.

"Mr. Crawford has achieved another success. . . . Mr. Crawford has the power of constructing a story and of telling it well. . . . Few recent books have been so difficult to lay down when once begun as 'Mr. Isaacs' and 'Dr. Claudius,' and few have been, and will be, read with so little skipping."—*Athenaeum*.

FOLK-TALES of BENGAL. By the Rev. LAL BEHARI DAY, Author of "Bengal Peasant Life." Crown 8vo, 4s. 6d.

A MISGUIDED LASSIE. By Percy Ross. Crown 8vo, 4s. 6d. [Next week.]

WITH A PREFACE BY CHARLES DARWIN.

### THE FERTILISATION of FLOWERS.

By Professor HERMANN MÜLLER. Translated and Edited by D'ARCY W. THOMPSON, B.A., Scholar of Trinity College, Cambridge. With a Preface by CHARLES DARWIN, F.R.S. With numerous Illustrations. Medium 8vo, 21s. [Next week.]

MR. E. A. FREEMAN'S NEW BOOK.

ENGLISH TOWNS and DISTRICTS: a Series of Addresses and Essays. By E. A. FREEMAN, D.C.L., LL.D. With Illustrations and Map. 8vo, 14s.

### THE LIFE of GEO. FREDK. HANDEL.

By W. S. ROCKSTRO, Author of "A History of Music for Young Students." With an Introductory Notice by GEORGE GROVE, D.C.L. With a Portrait. Crown 8vo, 10s. 6d.

Now ready, Vols. II. to VI., Globe 8vo, 5s. each.

RALPH WALDO EMERSON, the COLLECTED WORKS of. (Uniform with the Eversley Edition of Charles Kingsley's Novels.) Globe 8vo, 5s. each.

1. MISCELLANIES. With an Introductory Essay by JOHN MORLEY. [In preparation.]

the UNCONSCIOUS.

By Edward von Hartmann. Translated from the German by W. C. COUPLAND. In 3 vols., post 8vo. [In December.]

### THE QUATRAINS of

OMAR KHAYYAM.

The Persian Text with an English Verse Translation. By E. H. WHINFIELD, M.A., late of the Bengal Civil Service. Post 8vo, cloth. [Nearly ready.]

### THE LIFE and WORKS of

GIORDANO BRUNO.

Post 8vo, cloth. [In preparation.]

### DIALOGUES and

PHILOSOPHICAL FRAGMENTS.

By Ernest Renan. Authorized Translation from the French. 1 vol., post 8vo. [In preparation.]

LONDON: TRÜBNER & CO., LUDGATE HILL.

SATURDAY, JULY 14, 1883.

No. 584, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*Frederic the Great and Maria Theresa.* From hitherto Unpublished Documents, 1740-1742. By the Duc de Broglie. From the French, by Mrs. Cashel Hoey and Mr. John Lillie. (Sampson Low.)

"THERE are many historians," writes Gibbon, "who put us in mind of the admirable saying of the great Condé to Cardinal de Retz: 'Ces coquins nous font parler et agir comme ils auroient fait eux-mêmes à notre place.'" This well-founded complaint would have little force if writers of history came equipped to their work like the Duc de Broglie, whose well-known accomplishments as a scholar have been completed by a varied experience as politician, diplomatist, and Prime Minister of France, well calculated to qualify him as an exponent of the conduct and motives of statesmen, ambassadors, and kings. His present book may be less imposing as a literary monument than his *History of the age of Constantine*. But it is an exhaustive, lucid, vivacious account of the origin of the rivalry of Frederick the Great and Maria Theresa, from which only the professional student of history will care to turn to the native authorities, most of whom are Dryasdusts of an appalling description—suitable to consult, but impossible to read. Some scribblers of the Berlin "reptile-press" have ventured to call it a mere lampoon on Prussia and Frederick, inspired by French spite, fatuity, and ignorance. The Duc de Broglie, as is natural, does not adopt the style of prostrate adulation appropriate for Hohenzollern hacks. But he has as thorough an appreciation of Frederick's greatness as any Prussian need have, and his criticisms on "the great King" are not more severe than those current in non-Prussian Germany, or than the judgments of Macaulay and Stanhope, or than those of the father of Prussian history—we mean Old Fritz himself.

In his Preface the author observes that a portion of the interest of his narrative arises from the resemblance between 1740 and "the more tragic dramas of recent times," meaning the campaigns of Sadowa and Sedan. In the case of readers with the true historic instinct, this portion will be infinitesimally small, or *nil*; history, like music and painting, is a separate kingdom of the mind, and its value is independent of its bearing on contemporary politics. The Duc de Broglie claims, and with justice, to have "successfully resisted the temptation to warp historic truth by seeking in the past misplaced allusions to the present," saying, that if, notwithstanding his care, 1740 looks like 1866 and 1870, the

reason lies in the survival of certain traits of national character whereby his countrymen of the present day closely resemble their ancestors. According to the Duc de Broglie, the phrase with which all Europe got so nauseated under the Empire—the readiness of France to "go to war for an idea"—was not mere newspaper or diplomatic nonsense, but was an accurate description of a permanent attribute of the French, who, under Louis XV., as under Louis Napoleon, preferred "an ideal aim whose generosity and grandeur appealed to their imagination, to practical and positive results." Now, in the modern period named, the foreign policy of France contained some ideal elements; but then these were the fruits of the Emperor's cosmopolitan mind, and were utterly hateful to his nation: witness the Italian war against Austria. Of the "generosity and grandeur" that inspired the cry "à Berlin" thirteen years ago it is as superfluous to speak as of the "ideal aims" by which the French have been guided in Tunis, Madagascar, and Tonkin. But we will take a look, under the Duc de Broglie's guidance, at the policy of 1740, when, as the Preface says, France espoused Marshal Belle-Isle's "idea" of re-establishing the German "empire according to its primitive conception." The question was whether, on Maria Theresa's accession to the Austrian throne, France, faithful to her treaty engagements, should help the Empress-Queen against Prussia gratuitously, or should extort a territorial compensation for her services. The first course, says M. de Broglie in his narrative, would have been one of "almost ideal disinterestedness," the second "sufficiently honourable." France had also the option "of breaking all her engagements without either provocation or excuse, and throwing herself blindfold into the hazard of a Continental aggression . . . in concert with a faithless ally like the invader of Silesia. This line of action would strangely combine every kind of wrong with every sort of danger, and unite imprudence to perfidy. Nevertheless, the third course was, after due reflection, adopted by France."

Thus does our author in his narrative justly castigate the policy which, as we saw, he describes in his Preface as guided by an "ideal aim, whose generosity and grandeur appealed to their imagination!"

Further light is thrown on the author's theory by his animated description of French society in 1740, which shows the character of those by whom the said policy of "generosity and grandeur" was conceived and executed. The normal morals of the time were those of the Château of Cirey, whose mathematical mistress, Voltaire's "learned and loving Emilie" (a respectable person as things went), solved her differential equations by help of a husband and two lovers. It excited no remark that Louis XV.'s inner seraglio included four sisters, three of them simultaneously present, of whom Mme. de Mailly and the less beautiful but more attractive Mme. de Vintimille were now in possession. This Paphian pair and the other affectionate Circes of the *cil-de-bœuf* were in the hands of the *petits-crêvés*, who, again, owing to the privileged position of the aristocracy at the King's *levers*, *couchers*, hunts, Mass, parties, and picnics, had full command of the royal

ear. Card. Fleury, the Minister, then nearly ninety, was sinking into decrepitude, and only wanted to be allowed to go on in imbecile inactivity. The *petits-crêvés*, anxious to play at soldiers, and seeing Austria in trouble, supposed that it must be the right thing for France to seize the opportunity of hitting a final blow at her hereditary rival. A thoroughly stupid notion, says the Duc de Broglie, which showed their ignorance of the elementary fact that the rivalry of the Bourbons and the Hapsburgs had been definitely closed, after a hundred and fifty years of fighting, in favour of France, which now enjoyed perfect security under the balance of power fixed by the Treaties of Westphalia and Utrecht, and had no motive whatever for destroying Austria, and setting up the Elector of Bavaria as Kaiser in place of the natural tenant of the throne, the husband of the Empress-Queen.

The cries of the *petits-crêvés* for war with Austria were re-echoed by the mistresses, who longed to ape the military progresses of Mlle. de la Vallière and Mme. de Montespan in view of the battles and sieges of Flanders. Their clamours, which were backed by some of Fleury's colleagues, prevailed; the Cardinal was forced to go in for "generosity and grandeur," and sent for the Count de Belle-Isle to crumple up Austria into several separate States, for which little operation he was designated by the public voice as the one adequate man, on the very slender grounds that he had in other days commanded a division under Berwick, and was said to have *in petto* a plan for the invasion of Germany. The Sun-god, as he is called by Carlyle with his usual felicity in nicknaming, is surrounded in history by a certain halo, through which we discern, as facts, that he had great talents, or luck, as a financial gambler; that he talked incessantly and persuasively, though not, it seems, eloquently; that he had all his grandfather Fouquet's boundless capacity for flirtation, and a rare talent for courtly swagger and display. D'Argenson calls the Count "Gulliver in the Senate of Lilliput," and the Duc de Broglie speaks of him as the one Frenchman of the period with a real individuality; but Voltaire, who must have known, does not write as if he thought much of him, and remarks that his reputation depended on his promises, not on his deeds. Nor does he seem to have particularly impressed Frederick, who wrote that, whereas in Germany the French were believed to be mostly fools, Marshal Belle-Isle and his suite were "sensible persons." The author's view is a little fluctuating; he does not attach much weight to the opinions of the *cil-de-bœuf*; and, knowing his Parisians well, warns us that they were, and are always, ready "to mistake audacity and genius." We must confess to entertaining a suspicion that the Sun-god was something of a solar myth, not, perhaps, so mere a "mud-dog" and utter sham as the rest of them, but still essentially a humbug. A man who is to go abroad as commander-in-chief and ambassador requires a body as well as a soul; and Belle-Isle was totally disqualified by sciatica and other ailments for generalship in the field, and his army of invasion went to total wreck. His diplomacy, in spite of his legion of cooks and

scullions, was not much more brilliant than his strategy, for he was gulled by Frederick, only succeeding with the episcopal electors, and with them merely by enormous bribing. Then his gallantry, of which the Duc de Broglie speaks with respect as a scientific factor in Belle-Isle's political intrigues, is subject to considerable deductions. In that promiscuous age, in order to prevail with beauty, a lover did not need to possess great fascinations, or to be a supreme artist in the use of sentimental dynamite. Belle-Isle's terms to the Circes of the *cil-de-bœuf*, as to the bishops in Germany, were ready cash; according to his friend President Henault, his summons to the King's councils followed on a tip of 200,000 frs. given by him to his friend and protectress M<sup>me</sup>. de Vintimille—a story questioned by the Duc de Broglie on deductive, but inadequate, grounds.

If we are to look in the past for allusions to the present, we shall find them in these proceedings in abundance, but not in the way indicated by our author. From 1740 to 1870, and later, what M. Comte calls an "ordre invariable" of facts is constantly recurring in French history. We see a great nation gifted with high intelligence, but destitute of political instincts, being constantly carried away by gusts of ignorant passion, and surrendering its destinies to the hands of jobbers and quacks whose audacity it mistakes for genius. M<sup>me</sup>. de Mailly and her sisters are seen to be a permanent institution. If France is concerned with Croats or Kroumirs, the historian must never forget the rule, "*cherchez la femme*."

G. STRACHEY.

*The Poetical Works of William Wordsworth.* Edited by William Knight. Vol. III. (Edinburgh: Paterson.)

THE poems of 1804 and 1805 are contained in this volume. Setting aside the Prelude, towards ascertaining the chronology of which Prof. Knight does good service, these were with Wordsworth comparatively unproductive years. The poem "To the Cuckoo,"

"O blithe New-comer! I have heard,  
I hear thee and rejoice,"

dated by its author in his elder years 1804, belongs almost certainly to the spring of 1802. "A mild morning," Miss Wordsworth wrote in her diary, March 22, "William worked at the Cuckoo poem;" and on March 25: "A beautiful morning, William worked at the Cuckoo." More than a mere date is involved in this correction. There is no poem of 1804 with which the "Cuckoo" links itself; but it falls precisely into its proper place if dated March 25, 1802. For what is the central point of personal sentiment in "The Cuckoo"? The continuity of feeling in youth and manhood: this shout of the cuckoo can still (Wordsworth was thirty-two years old) recall the visionary glory of nature which may fade all too soon into the light of common day:

"And I can listen to thee yet;  
Can lie upon the plain  
And listen, till I do beget  
That golden time again."

This verse belongs, in all probability, to March 25, 1802; and on March 26 Dorothy

Wordsworth enters in her journal, "W. wrote the 'Rainbow':"

"My heart leaps up when I behold  
A rainbow in the sky;  
So was it when my life began,  
So is it now I am a man."

It is the feeling of "The Cuckoo" re-embodied in song. The visionary sound, the visionary sight, alike prove to Wordsworth that his former self, to whom the world appeared "apparelled in celestial light," is not extinct. Let the "Cuckoo" and the "Rainbow," therefore, live together henceforth in our memories, and let the two poems appear side by side in future anthologies. The "Ode on Intimations of Immortality"—which acknowledges the fading of this supernatural light of imagination, and asserts that this may, without breach of moral continuity, transform itself into a sober, but tenderer, colouring of humanised passion—belongs to 1803-6. In the interval the heroic death of Wordsworth's brother had occurred:—

"A deep distress hath humanised my Soul."

Therefore, though nothing can bring back the hour

"Of splendour in the grass, of glory in the flower," Wordsworth will not grieve, but find strength in what remains; and every sunset will remind him, who has seen the sunset of a heroic life, that

"Another race hath been, and other palms are won."

The beautiful verses beginning

"She was a Phantom of delight"

belong to 1803-4. As Wordsworth with characteristic honesty stated, they were not originally inspired by his wife's presence. A seed of song blown from the poem "To a Highland Girl (at Inversneyde)" was fertilised in feelings that had gathered about Mary Wordsworth. It is classed as a poem of the Imagination, not of the Affections. And it is worth observing that the motive of the poem has much in common with the train of thought which forms the "Ode on Intimations of Immortality." The glory of nature passes away, and a sober colouring takes its place, yet the fountains and the groves are none the less beloved. So this Phantom of delight, this lovely Apparition, transforms herself into a being wholly human, yet dearer and of more worth because "a traveller between life and death."

Many readers of these exquisite verses have stumbled, or have been obliged to pull up, at the lines—

"And now I see with eye serene  
The very pulse of the machine."

Machine! Was Mrs. Wordsworth a spinning-jenny or a hand-loom? Prof. Knight writes:

"The use of the word *machine* . . . has been much criticised. For a similar use of the term see the sequel to *The Waggoner*—

'Forgive me then; for I had been  
On friendly terms with this Machine.'

The progress of mechanical industry in Britain since the beginning of the present century has given a more limited, and purely technical meaning to the word, than it bore when Wordsworth used it in these two instances."

Being part of the regularly moving apparatus of carriage, Benjamin might, perhaps, be viewed as a kind of human clock, marking

day as well as hour, "a living almanack." And yet I am loath to name that "frail child of human clay" a machine; and, on the whole, I prefer to live on wedded to my error of supposing that the Waggon and not the Waggoner was the machine. But how about the domestic machine, Mary Wordsworth? I do not know whether the suggestion has been thrown out (which I throw out very timidly) that Wordsworth may have used the word here in the sense defined by Johnson—"Machine, supernatural agency in poetry." Bossu gives us a chapter in his treatise on epic poetry, "*Quand il faut user de machines*." "Aeneas," says Dryden, "knew nothing of the machine of Somnus." Can it be that Wordsworth chooses the word under the influence of its associations with the supernatural? In stanza 1 the Phantom, the lovely Apparition, is sent, as if from some superhuman power,

"To haunt, to startle, and waylay."

In stanza 2 the Spirit is found to be a woman by all the sweet visible tokens of womanhood; but the secret of her being is not yet touched. In the third stanza the identification of spirit and woman is completed, and the inner law of her being is discovered. The machine has a pulse, the supernatural agent has a human heart and conscience! I disbelieve in far-fetched interpretations of poetry; and if this be far-fetched, let it be dismissed.

In a former article, while commending the plan, and in part the execution, of Prof. Knight's edition of Wordsworth, I noticed his inaccuracy in the work of collation. Of the present volume only a hundred pages admit of collation, the remainder of the volume being occupied with "The Prelude," for which only a single text exists. I have not fully tested the collation of the shorter poems of 1804-5; but, so far as I have examined Prof. Knight's work in this volume, it is good, though not faultless. The most serious slip I have found is the omission of a stanza of the "Ode to Duty" in its earliest form (1807)—a stanza which appears between "Through no Disturbance" and "Stern Law-giver":

"Yet not the less would I throughout  
Still act according to the voice  
Of my own wish; and feel past doubt  
That my submissiveness was choice:  
Not seeking in the school of pride  
For 'precepts over dignified,  
Denial and restraint I prize  
No farther than they breed a second Will more wise."

It is also worth setting right the record of the interesting series of changes in the second stanza of "The Cuckoo" by altering the last line of the 1827 version as given by Prof. Knight to

"As loud far off as near."

An affecting alteration in "The Kitten and the Falling Leaves" is noted by the editor. In the text of 1849, "Laura" is changed to "Dora." Wordsworth's daughter, Dora, died in July 1847; the sorrowing old man now expressly connects this poem of animal frolic and infant glee with his dead child, whose laughing babyhood it pictures.

This volume, like its predecessors, contains many excellent notes on the topography of Wordsworth's poems.

EDWARD DOWDEN.

*Samuel Sharpe, Egyptologist and Translator of the Bible.* By P. W. Clayden. (Kegan Paul, Trench & Co.)

THIS handy and well-printed volume treats of a character fast becoming scarce among us—the man who, through quiet habits and early hours, contrives to combine shrewdness and care in business matters with accurate investigation of obscure literary problems.

The family history contained in the opening pages, though not so bewildering as that of the Caesars, would be more easy to grasp if illustrated by a genealogical table after a fashion commended by Mr. Sharpe himself. It is, however, set forth with great care; and for most purposes it will be sufficient to note that Samuel Sharpe was descended on the mother's side from Philip Henry, the ejected clergyman, and was a nephew of the poet Rogers. He was born in 1799. At the age of seven he was left, by the death of his parents, to the care of his half-sister, Catharine, who devoted the best of her life to bringing up the orphan family. From 1807 to the end of 1814 he was at the school of Mr. Cogan, of Walthamstow. Mr. Cogan could reckon Lord Beaconsfield among the many distinguished men who were once his pupils. Of the future statesman the schoolmaster's judgment is thus recorded:—"I don't like him. I never could get him to understand the subjunctive." Samuel Sharpe's studious habits began early. Those acquainted with the ordinary English school-boy will be somewhat astonished to hear that during play hours he "read many of the best English histories and other standard works." On leaving school he entered the banking-house of his uncles, Samuel and Henry Rogers, and soon gained a reputation for carefulness and punctuality. We are told "that the keeper of the turnpike-gate at the end of Paradise Row set his clock for several years by the young clerk as he passed through the gate on his way to the City." During his clerkship he continued his school studies before breakfast and in the evening. He says of himself:—

"My reading at this time was as much the effect of quiet habits as from a love of knowledge. I enjoyed the pleasure of feeling my progress, but I sat at my books because I had neither pocket-money nor high spirits to lead me into more foolish amusements."

In fact, as his biographer remarks, he despised society too much.

This withdrawal from the world enabled him to carry out two laborious undertakings—the investigation of Egyptian hieroglyphs and the translation of the Bible. The value of his contributions to the former must be decided by the few who are competent to speak with authority. All, however, should respect the untiring zeal which gave to those who could profit by them most important materials for the study of hieroglyphs. He says of his *Egyptian Inscriptions*:—"My publications are wholly an expense. But I have my satisfaction in it. It is not more expensive than keeping a saddle-horse." As a translator of the Bible and a commentator he was indefatigable. His New Testament, translated from Griesbach's Text, reached before his death its thirteenth thousand. This large issue was of course due to his habit of giving it away freely—in fact, sow-

ing it broadcast wherever there was a chance of its bearing fruit. There can, however, be little doubt that his efforts greatly stimulated the demand for that revision of the Authorised Version which was undertaken in 1870.

But many of the readers of Mr. Clayden's book will be more interested in the glimpses it affords of Mr. Sharpe's work in connexion with ordinary education. Whether himself teaching poor children in Harp Alley School, or contributing thousands of pounds for the support and development of more ambitious institutions, he showed throughout his life the warmest interest in all that tended to the spread of sound and enlightened views as to the training of the young. In this, perhaps, his special characteristic lay. Other men have turned from the counting-house to study and to illustrate the most important branches of literature and science, but few have combined with this so much successful effort to raise their less fortunate brethren on the ladder of learning. One of Samuel Sharpe's most practical forms of benevolence was to provide for the education of promising children who, without his aid, would have been left untaught. That he paid the fees for many boys at University College School is well known, and it may be surmised that similar benefits were conferred elsewhere. His liberal hand was guided by strong common-sense. He might have founded a scholarship, or endowed a chair for some out-of-the-way branch of study representing a special hobby of his own; but he was far too practically benevolent. Where real need was shown he was ever ready to open his purse. The cloister of University College let in the east wind and the snow on young people too heedless to guard against such dangers. Mr. Sharpe, being taken to the spot when a keen March wind was driving in showers of sleet, simply asked the cost of glazing the open arches, and forthwith sent a cheque for the amount. This was, however, but a small part of his munificence to University College. How he dealt with his income is thus shown in his own words:—

"I saw the folly and even the wickedness of accumulating without a rational motive, and I seriously turned over in my mind how to spend money usefully. Besides ordinary charities, the three lines then open to me were—to print and give away my books, which were of a class very little saleable; to help University College, which I saw was moving the education of the nation; and, thirdly, to help the unpopular cause of Unitarianism. . . . In thus giving away money, my daughters nobly encouraged me, and were quite content with our quiet, inexpensive way of living."

Mr. Clayden gives interesting sketches of the political and theological movements of the time, in all of which Mr. Sharpe took a warm interest, and also extracts from his diary, which (among more serious matter) contains anecdotes often gathered at the table of his poet-uncle. Among names thus introduced are those of Lucy Aikin, Bonomi, Dyce, Horne Tooke, and Crabb Robinson. The volume also contains a graphic account of his four brothers, Sutton, William, Henry, and Daniel; but the interest naturally centres round Samuel Sharpe himself. His character is indeed drawn with a friendly hand; but those who had the good fortune to know him

will admit its substantial accuracy. Shrewd, patient, genial, generous, so strict a follower of conscience that he eventually differed from almost every man and every body of men with whom he came in contact, Samuel Sharpe was so good, so earnest, so frank, and withal so kindly an opponent that to differ from him was only less pleasant than to agree.

TALFOURD ELY.

*Worcester.* By the Rev. J. Gregory Smith and the Rev. Phipps Onalow. "Diocesan Histories." (S. P. O. K.)

THE editors of this volume—who have done their work with the conscientious care and literary skill which might have been expected of them—claim for the see of Worcester special importance as being a border-see; but, as a matter of fact, a very few pages suffice to chronicle the events which its frontier position either caused or influenced. In truth, Diocesan Histories, like County Handbooks, must vary in interest with their subject-matter; and as Worcestershire does not rise above the high average of the Western counties in the wealth of its historic associations or in the beauty of its scenery, so, also, its diocesan annals are undistinguished, though far from being uninteresting.

The antiquity of the see is no matter of dispute or doubt. The territory of the Hwiccas (or Wiccii), which embraced the whole of modern Worcestershire, was an important province of the kingdom of Mercia; and, through the instrumentality of Archbishop Theodore, the wish of its prince for episcopal government was conceded as early as the seventh century. The Bishop of Lichfield, who had hitherto exercised jurisdiction over all Mercia, opposed the measure, but in those simpler times obstruction was readily met by forcible remedies. Winfrid, therefore, was deposed, and in 680 a partition was effected, and Worcester at once erected into a separate see. The limits of the diocese followed—as was then the rule—the tribal boundaries. In them were included Gloucestershire east of the Severn; the southern part of Warwickshire called "the Feldon"; and the county of Worcester, except the deanery of Burford, which belonged, and still belongs, to Hereford. In thus describing the see we have necessarily made use of modern terms, but it must not be forgotten that dioceses existed before counties, and that, in point of antiquity, parishes take precedence of manors. At the Reformation the diocese of Worcester was reduced in size with a view to the formation of the new diocese of Gloucester; and, although in the reign of Edward VI. the two sees were temporarily united, and Bishop Hooper for a few months held both of them together, a final severance was effected by Queen Mary. The only change since made has been the addition of North Warwickshire, in which, however, is included the important town of Birmingham.

Among the bishops of Worcester will be found not a few names of note. Wulfstan, who was canonised in 1218, left his mark upon the diocese, which he administered for two-and-thirty years. To him it owed not merely the commencement of the cathedral, but also the conception of Great Malvern Priory.

"It was at his bidding, also, that Heming, the monk of Worcester, carefully and laboriously compiled the valuable collection of charters and other historical documents which bears the name of *Hemings Cartularium*." Walter de Cantilupe (1237-66) was a fine specimen of the "baronial bishop"—a prelate of noble origin, large ideas, and lordly will, who took a genuine interest in the welfare of his diocese, as a baron would take in his barony. In contrast with him we have, in the period immediately preceding the Reformation, a succession of subtle, self-seeking Italians, including Julian de Medici (afterwards Clement VII.), who enjoyed the revenues of the see for a year, and seems never to have visited it. But the most conspicuous name in the list is, of course, Hugh Latimer, an Englishman of Englishmen, whose vigorous powers of mind and speech must have recalled to the memories of some in his diocese the plain-speaking of John Langland, the Malvern clerk, who denounced in scathing language the corruptions of the Court and Church. Among Latimer's successors, the most eminent were Hooper, burnt at the stake in 1555; Sandys, who, in another sense than that meant by the editors, was "a man of metal," as his will testifies; Thornborough, from whom Richard Baxter received ordination, and Morley, who failed to keep Baxter in the Church; Gauden, the reputed author of the *Eikon Basilike*; Skinner, whom the editors dismiss in far too summary a fashion; Hough, whose resistance to James II. at Magdalen College, Oxford, is a matter of history; and Hurd, "the amiable, learned, and ingenious" biographer of Warburton, and an admirable specimen of the "Greek-play" bishop whom it is the fashion now to disparage.

In any account of the religious condition of Worcestershire in the seventeenth century we should expect to find reference made to the authorship of *The Whole Duty of Man*. It has generally been ascribed to Dorothy Lady Pakington, who seems to have been assisted in its composition by Dr. Fell, but the evidence is not conclusive; and the editors are judicious in declining to give a verdict. They are cautious, also, in their expression of opinion upon the celebrated "Worcestershire agreement." But the efforts which are now being made to effect what is called "Home Reunion" point towards some of the same objects which Baxter's scheme had in view; and it is impossible to doubt that in the Church of the future "the right of the people to 'try and discern' the proceedings of the ministers" will meet with far greater acknowledgment than has hitherto been the case.

The editors have been able to bring together a great deal of valuable information about the condition of the clergy and the state of the churches at various periods from the MSS. collected by Dr. Prattenton, and now deposited in the library of the Society of Antiquaries. The Diary of Mistress Joyce Jeffries is well known to every student of Herefordshire and Worcestershire; and the Diary of Mr. Townshend, of Elmley Lovett, is evidently of even greater value, and well worthy of publication. By means of such materials as these the editors have been able to give freshness and vitality to their pictures of the

past, and, we hope, to secure for their useful work acceptance outside the diocese to which it especially relates.

CHARLES J. ROBINSON.

*First Annual Report of the Bureau of Ethnology, Smithsonian Institution, 1879-80.*  
By J. W. Powell. (Washington: Government Printing Office.)

THE first impression produced by a volume of this sort is almost one of envy at the happy position of a country which, not requiring to maintain large armaments in time of peace, is enabled to apply considerable sums to the support and encouragement of science. From the Director's prefatory remarks we learn that the Bureau of Ethnology was founded by the liberality of Congress, in 1879, for the purpose of continuing the anthropological work hitherto carried on by the various geological and geographical Surveys, which were in that year replaced by the general United States Survey. The new department was wisely attached to the venerable Smithsonian Institution, and placed under the management of Major Powell, who had already distinguished himself by much useful ethnological work, especially in connexion with the former Geological Survey of the Rocky Mountain region. The rapid progress already made by the Bureau in organising anthropological research throughout the North-American continent is sufficiently attested by the varied contents of this first volume of its transactions, which, besides the official Report and several ethnological and philological papers by the Director, contains valuable and often profusely illustrated contributions by H. C. Yarrow on the Mortuary Customs of the North-American Indians; by E. S. Holden on the Picture-writing of Central America; by C. C. Royce on Cessions of Land by Indian Tribes to the United States; by Col. Garrick Mallery on Sign Language among North-American Indians. The volume, which consists altogether of 640 quarto pages, concludes with a useful catalogue of linguistic MSS. in the library of the Bureau, and a few illustrations of the method of recording Indian languages from the MS. papers of J. O. Dorsey, A. S. Gatschet, and S. R. Riggs. There is also an Index, which, though not very copious, has evidently been prepared with much care.

The Director's contributions deal mainly with such general questions as the evolution of speech, of primitive mythologies, religious and social institutions, and other subjects of a more or less speculative character. Although often treading on dangerous ground, his views are, on the whole, sound, moderate, and always well expressed. Exception may perhaps be taken to the theory that languages have been evolved in numerous independent centres after the spread of mankind over the face of the earth. But even here Major Powell has at least the authority of one or two distinguished names on his side, although the theory itself must on many grounds be unhesitatingly rejected.

Mr. Yarrow's elaborate paper on Mortuary Customs, which is illustrated with a large number of coloured and plain lithographic plates and cuts, will be read with much

interest. It forms a continuation of a preliminary treatise already issued; and, when all the materials have been collected, it is intended eventually to embody the whole in a final quarto volume, forming one of the series of "Contributions to North-American Ethnology" prepared under the direction of Major Powell. Meantime, the present instalment constitutes by itself a valuable contribution to the subject, which is treated under the several sections of burial by inhumation, embalmment, deposition in urns, surface burial, cremation, aerial and aquatic sepulture. It should be stated that materials from all quarters "will be most gratefully received and acknowledged in the final volume," and that "criticism and comments are earnestly invited from all those interested in the subject" (p. 203).

In his attempt to decipher the Palenque, Copan, and other Central-American writings, Mr. Holden has at least arrived at the negative conclusion that these inscriptions are not phonetic, but true pictographs, or perhaps it would be more correct to say *ideographs*. This point he seems to have fairly established by an ingenious process of induction, and he concludes "that we may safely say that in proper names at least a kind of picture-writing was used which was *not* phonetic" (p. 236). Of such names he claims to have deciphered three, all "pure picture-writing except in so far as their rebus character may make them in a sense phonetic" (p. 243). Thus is got rid of the "misleading and unlucky alphabet handed down by Landa," which he agrees with Dr. Valentini in regarding as "a Spanish fabrication." The proper names now known, concludes Mr. Holden,

"will serve as points of departure, and it is probable that some research will give us the signs for verbs or adjectives connected with them. It is an immense step to have rid ourselves of the phonetic or alphabetic idea, and to have found the manner in which the Maya mind represented attributes and ideas" (p. 245).

Unfortunately, to all this it must still be replied that *adhuc sub judice lis est*. M. H. de Charencey, who has also been recently at work on the Yucatec, or "calculiform writings," as he calls them, and who has the advantage of some knowledge of the Maya language, still adheres to the Landa alphabet, and considers that, like the Egyptian, the Maya graphic system "admettait la co-existence d'éléments idéographiques, syllabiques et alphabétiques, et souvent, suivant l'occurrence, le même caractère pouvait y jouer successivement le rôle de syllabe ou de simple consonne."\* The results obtained by these two palaeographers are often as conflicting as are their respective methods. Thus the open hand forming part of the sign for the god Cukulcan (the Aztec Quetzalcoatl) is taken by Holden to represent the "Strong Hand," one of this god's titles. But de Charencey treats it as purely phonetic, sometimes representing the syllable *nab*, because *nab* = hand in Maya, sometimes representing the letter *n* only—that is, the initial of that word, as in the Egyptian system. Hence, also, Holden takes the whole sign for

\* *Mélanges de Philologie et de Paléographie américaines* (Paris, 1883), p. 181.

Cukulcan as the rebus of his name, "Snake-plumage," whereas de Charencey reads it off phonetically, *Cu-kul-can*. But while the balance of probability appears to lie with Holden, both essays display much ingenuity, and will repay perusal.

Of Col. Mallery's treatise, which has already been issued in a separate form, it is not too much to say that it creates the science of inarticulate speech in the same sense that the writings of Sir W. Jones, W. von Humboldt, and Bopp may be said to have created the science of articulate speech. This new science, which must henceforth be studied, not as the rival, but as the complement, of comparative philology, finds its justification in a remark of wise old Dalgarno, who well observes that "*non minus naturale fit homini communicare in figuris quam sonis*." And, before Dalgarno, Quintilian had already said that "*manus non modo loquentem adiuvant, sed ipsas pene loqui videntur*." Col. Mallery, who supports himself with these authorities, fairly argues that voice and gesture were both originally instinctive, as they still are; consequently, that neither has ever entirely usurped the functions of the other.

"With the voice man at first imitated the few sounds of nature, while with gesture he exhibited actions, motions, positions, forms, dimensions, directions, and distances, and their derivatives. It would appear from this unequal division of capacity that oral speech remained rudimentary long after gesture had become an art" (p. 284).

But, according as articulate speech grew in perfection, the cruder method naturally fell more and more into abeyance. And thus it happened that among the most cultured peoples the very principles of the process became gradually neglected and ultimately forgotten. But they still survive among many savage races, and for obvious reasons more vigorously among the prairie Indians than elsewhere. Hence North America certainly affords the very best field for the study of gesture speech, and there would accordingly appear to be a certain fitness in the coincidence that here the science has been developed and established on a solid foundation.

What is true of sign language is largely true of anthropological research generally; and the manifold contents of this first "Annual Report" give warranty that its magnificent opportunities will not be neglected by the new Bureau of Ethnology founded by the munificence of the United States Government in the federal capital. A. H. KEANE.

#### NEW NOVELS.

*Farmer John*. By George Holmes. In 3 vols. (Hurst & Blackett.)

*A Modern Lover*. By George Moore. In 3 vols. (Tinsley Bros.)

*Hélène*. By Mrs. Arthur Kennard. In 2 vols. (Bentley.)

*Poppy*. By Mrs. Beresford. In 3 vols. (White.)

*The Wild Birds of Killeevy*. By Rosa Mulholland. (Burns & Oates.)

*Farmer John* is a story, or rather a sketch, of

rural life belonging to the school of composition whose most accredited exponent is Mr. Thomas Hardy. It is as definitely modelled on his lines as the stories in *Household Words* used to be on those of Dickens, but the pattern has not yet become trite, so that no harm is done by the resemblance. The scene is laid in the West country (North Somerset, it would appear, just where it borders on Devon), and a great deal of it—more than a ripper judgment would approve—has been written in dialect. Mr. Holmes knows his locality well, and makes no mistakes that we have noticed in the vocables of his characters; but, as he depicts the exceptionally clever and educated parson of the story as hopelessly unable to guess the meaning of his parishioners when speaking in their vernacular, it might have occurred to him that the average reader may be in the same plight. Mr. George MacDonald has fallen into the same error in more than one of his novels; yet he is entitled to plead that North British is no mere uneducated provincialism, but a tongue with a copious literature, illustrated by such names as Burns and Scott, to go no farther back. The wiser plan in other cases is that of George Eliot, who accentuates a few pronunciations and idioms, writing the bulk of the dialogue in ordinary English, and not performing such works of supererogation as spelling "Hawker" as "Ah'ker" every time it is uttered by a yokel. There is almost no plot in the tale before us, whose interest depends wholly on the force with which two or three characters and situations are drawn, exhibiting strength and promise, but showing a little crudity and inexperience. John Hawker, the hero of the story, is described as a man of unusual capacity, of rugged and unsocial disposition, and as having a strain of insanity in his blood, and a past of which all that we learn is that he emerged from it with a triple vow against drink, shaving, and marriage. He is chosen by the new vicar as parish churchwarden, thereby ousting a former holder of the office, who is thus made an enemy to both of them. The parish is in a very low moral and religious condition; and the vicar, finding himself quite unable to get touch of the people, welcomes a mission of the Salvation Army, here described as the "Heavenly Railway," and asks Farmer John to attend the first service and to report upon it, that it may be decided how far it deserves encouragement. The scene is boldly sketched. Farmer John is himself affected by the contagion of theopathic hysteria, and, besides, falls irrevocably in love with a girl he sees there; and the remainder of the book is mainly taken up with the progress of his wooing, which is soon discovered by his sister and others of the villagers, exposing him and the girl to serious misrepresentation. Besides these troubles, he is torn by scruples arising out of his vow, and nearly dies of an illness brought on by his hesitation between the two. At last he determines to marry and emigrate, when, on the eve of his wedding, he is fatally injured by a blow of a stone during a riot directed against the revivalists with whom he has identified himself. That is the whole of the mere plot; but there is much more in the story itself than so meagre an outline suggests, so that,

in despite of many faults (such as no reason being given for his vow, nor any adequate explanation of his strange illness), the book deserves to be read, and may be viewed as the forerunner of a more artistic and finished work.

No sharper contrast could be found than between the rough Puritan farmer and the sensuous, effeminate, and wholly immoral hero of *A Modern Lover*. Lewis Seymour is a young artist of merely third-rate capacity; receptive but not creative, idle, self-indulgent, cowardly, and lying. He is an effeminated Tom Jones, and with a Lady Bellaston too, though matters do not go quite so far, owing rather to chance than to restraint on either side. He is handsome in person and caressing in manner, being one of those people who are not only petted by women, but even win on such men as have no special reason for dislike. He gets his first real chance in art from the devotion of a poor work-girl who lodges in the same house, but who wisely flees after she has risked her self-respect for his salvation from famine. He is taken up by a lady much older than himself, separated from her husband, whom he all but seduces, and on whom he sponges to the last; he deserts her for a beautiful girl of high rank, who is madly in love with him, and whom he marries, mainly by the elder woman's help; he loses her affection by his shameless infidelities, and is left at the end of the book a thriving, fashionable portrait-painter and A.R.A.—a rank he has achieved not by merit, for he is described throughout as merely a facile and superficial duffer, but by a social intrigue managed by his wife before she finds him out. There is a great deal that is very clever in the story, and the art-talk is specially well done; but the atmosphere is unwholesome, and the book does not leave a pleasant taste on the palate. It is Zola in evening dress and with a clean face, but Zola all the same.

*Hélène* is a society novel, not badly planned, and with three or four characters fairly well drawn, but written in a slipshod style, sometimes actually ungrammatical, and with the pestilent solecism "different to" showing its ugly face every now and then. The heroine is the child of a young French noble and his mother's English companion, whom he has persuaded into a marriage unrecognised by the Civil Code, though ecclesiastically valid. He is drowned before he can repair his false step by a regular marriage; but one of his relations provides a small annuity for the widow, and obtains the family's sanction for her to bear his name. She marries Hélène, while still a mere child, to the Count de Ferrin, an elderly gentleman, from whom she conceals the truth about the girl's birth. He dies not long after, and the mother and daughter come over to London, where they live with her brother, an ex-Roman Catholic priest and present revolutionary writer; and Hélène supports her mother by painting fans and such-like work. She is presented to the reader at the beginning of the story as staying in the country with some friends she had made in Paris; and while there she meets with a young guardsman, Sir Maurice Perceval, heir of an old, but impoverished, family. They fall in love, and she rejects him, on grounds which she does

not assign—his poverty, which makes a wealthy marriage expedient for him, their differing creeds, and, above all, her own illegitimacy. In pique he makes a rich marriage; and the latter part of the book is taken up with his attempts to have his cake as well as eat it—to persuade Hélène to yield to his passion on strictly Platonic grounds. She has taken up dramatic recitation as a profession, and has become the fashion, so that they often meet in society; and the malice of a cousin of Perceval's, with whom he had more than flirted in the past, contrives to spread a good deal more than the truth about the pair, and to make general mischief. In the end, Hélène sees no solution of the entanglement except to enter a convent, and the last page depicts her as bidding farewell to Perceval and his wife the day before she takes the final vows. Both she and Perceval are sketched with some vigour and individuality; and, in particular, his hereditary and conventional polish is shown to overlie a coarse and selfish nature, with little of true nobility in it. The writer makes a good many minor slips in touching subjects with which she is not familiar, and even comes to grief over the English system of titles, describing a Miss Purvis, after marriage to Lord Hopkins (!), the eldest son of an earl, sometimes as Lady Hopkins, but more often as Lady Maud Hopkins.

*Poppy* is a book which justifies its title by its soporific quality. Though sensational, it is deadly dull; though crowded with long passages of very fine writing, it is in particularly slovenly English; though professing great knowledge of the world, it is full of clumsy mistakes, such as representing a man of position preparing to commit a public bigamy, though he is closely watched by his clever and unscrupulous wife, and his marriage is known to at least one friend of higher social standing than his own; making a shrewd banker execute a new will, with only one witness, to whom a legacy of several thousands is left; and causing an American citizen to stand for an English constituency. Every character of importance in the book acts as a lunatic or a fool, and never contrives to interest or amuse under either condition; and, whereas much might be pardoned were this a first effort, as its crudeness would lead a reader to suppose, the writer claims the authorship of at least one previous story, and presumably more, so that she has no excuse for thrusting such "skimble-skamble stuff" upon a much-suffering public.

Miss Mulholland's graceful idyl is intended, she tells us in her brief Preface, to show English readers a more favourable side of the Irish peasant character than that with which political troubles have lately made them familiar. She has borrowed from the late Prof. O'Curry the picture of the pride and pleasure taken by some of the peasants in the legendary lore of Celtic times; and she has idealised two figures—a young lad and a girl-child, to whom he acts as guardian and playmate. The girl, Fanchea (Fainche), has a wonderful gift of musical song; and Kevin, the boy, has a faculty for seeing poetic visions which her songs call up, though he is slow

at books, and accounted dull by his kindred and neighbours. The girl is stolen by gipsies because of her voice, and the lad quits home to seek her. After many adventures, they meet again as man and woman, to marry and be happy, he being a poet of mark, and she a successful *prima donna* who has abandoned the stage after one entire triumph in her *début* at Milan. But none of the preparation for this future takes place in Ireland. It is in England that both find the friends and the culture which lead them to distinction and happiness; and, accordingly, the story does not fulfil the author's intention, for even the Irish home to which they return at the end of the story is the gift of an Englishman's bounty, and ranks them with the landlord class. The book has many merits, and some vivid bits of description—notably an appreciative sketch of Verona. But only the mere beginning of the story is concerned with Irish peasants and their ways; and the English reader will hardly learn the lesson it is intended to teach him, but will more probably be inclined to say that if Kevin had remained at home, instead of getting to London, he would either have never bloomed into a poet at all, or would have devoted his powers to writing lampoons and denouncing "land-grabbers."

RICHARD F. LITLEDALE.

#### SOME HISTORICAL BOOKS.

*Chronological Chart, Synchronistically and Ethnographically Arranged.* By E. J. Ensor. (Stanford.) The plan of this chart is good. There are perpendicular lines for every ten years in a century, and horizontal lines to carry on the history consecutively. Periods and, from the Christian era, centuries are coloured according to a plan, so as further to assist the memory. The horizontal central division is devoted to literature. Only the leading events—the landmarks of history—have been given, that the general impression may not become confused. Thus, to take an instance. Elizabeth succeeded to the throne in 1558. On looking down the line we see all that was happening in those ten years between 1550 and 1560—the exact state of things that Elizabeth had to consider. Charles V. was just dead, having abdicated two years before in favour of Philip II., while his brother Ferdinand had been elected Emperor in his place, and was struggling hard for Hungary with the great Sultan Soliman the Magnificent. Philip was on the point of forcing Henri II. of France to make the disadvantageous Peace of Cateau Cambresis, which restored Savoy to Philip's general, Emanuel Philibert. Mary Queen of Scots married the Dauphin Francis, and assumed the title of Queen of England as against Elizabeth. Paul IV., a bitter enemy of Spain, had been compelled by Alva to make peace, and so Italy ceased to be the battle-field of Europe. Tasso was just coming forward into life. In Portugal, Sebastian was beginning his ill-fated reign. The Northern princes who had established the Reformation were still reigning—Christian III. in Denmark, Gustavus Vasa in Sweden, Joachim II. in Brandenburg, Albert the Grandmaster of the Teutonic Order, who had secularised Prussia; and the Diet of Augsburg had, in 1555, confirmed the Religious Peace of Passau. While the old Polish line was passing away with Sigismund Augustus, Ivan the Terrible was consolidating the power of Russia, and the English had opened up a trade with Archangel in 1553. We miss the

Indian events. The great Sultan Akbar reigned almost contemporaneously with Elizabeth. At the same time, Persia was rising in power under the Sophis. But the author expressly excludes China and India, and only a few later Indian events occur as connected with English history. The main objection to the chart is its size, but this could hardly have been avoided. Its utility must be tested by actual use, and a teacher would add or omit something for his special period.

*The Jesuits : a Complete History of their Open and Secret Proceedings from the Foundation of the Order to the Present Time.* Told to the German People by Theodor Griesenger. Translated by A. J. Scott. (W. H. Allen.) We were once upon a time in a second-hand bookseller's shop, amusing ourselves by turning over a pile of books, every one of which seemed to our unenlightened mind utterly worthless. On our remarking this to the owner of the volumes, he said:—"There is a purchaser for everything; the problem of my trade is to find him." We sincerely hope and confidently believe that the problem of finding purchasers for this History of the Jesuits will be found very difficult of solution. A more worthless book we never encountered. The Jesuits have a most complex history. For anyone to call his account of them "complete" shows no little assurance. Griesenger's rhapsody may, however, be considered fairly complete in its own way. It seems to contain nearly every wild statement against the Order that has been uttered during the last three centuries. To read such a book through would be an almost impossible task for anyone who had come to years of discretion, unless, indeed, he had been brought up in a hotbed of theological controversy. We have not attempted it. The few chapters we have examined have convinced us that neither instruction nor amusement was to be gained by going farther into the mire. As a specimen of the sort of information a student will gain who enters on the task we give the following, which is a fair and temperate sample. Under Mary the First we are told that

"thousands of Protestants perished on the scaffold. Under Mary's successor matters were, however, altered. . . . She had the generosity and sagacity not to persecute the Catholics, but gave her protection to all those who recognised her sovereignty and rendered her complete homage as loyal subjects."

The number of Protestants who suffered in the Marian persecution is given by the late Dr. S. R. Maitland as 277. This is, we are sure, a very nearly correct estimate. Maitland was a most accurate and painstaking student, and spent much time and labour in making his catalogue as complete as possible. The chapter on the morality of the Jesuits is disgusting in a high degree, most of the statements made therein, whether true or false, have but little bearing on the character of the Order.

*The Chair of Peter.* By John Nicholas Murphy. (Kegan Paul, Trench and Co.) This is a book which it is impossible to read without respecting the writer. It is the work of a Roman Catholic, who wishes that Protestants, "instead of misapprehending or misrepresenting the tenets of the Catholic Church, should accept her own account of the faith which is in her." Perhaps Mr. Murphy is making a larger demand than he realises. One cannot expect that one's opponents should take one's principles, motives, and actions at one's own estimate. But if all controversialists wrote with Mr. Murphy's good feeling and obvious sincerity, misunderstandings and misrepresentations would be less common. Mr. Murphy's book is expository, and aims at showing the grounds on which the Papal Primacy is asserted, and the historical develop-

ment of that doctrine. Mr. Murphy takes his stand on "the Catholic belief," and those who differ from it will have no difficulty in seeing where their divergence begins. There is a transparent simplicity about Mr. Murphy which disarms criticism. He states his own point of view, and finds corroboration for it everywhere. Thus of the condition of the Church before the Reformation he says:

"That there were abuses there can be little doubt, as there must have been very great laxity of morals, and the necessary consequence, weakening of faith, among the clergy, especially in Germany. This may be inferred from the fact of so many shortly afterwards abandoning the Church of which they were ministers, to profess the doctrines of the innovators."

This is, indeed, a splendid instance of pure logic applied to facts; but, unfortunately, we possess definite information concerning the comparative morals of Wittenberg and Rome. We give this as a sample of Mr. Murphy's historical method. But we can commend his book to the reading of those who ask themselves how it is possible for an intelligent man to become a Roman Catholic. The study of Mr. Murphy's mind, as shown in its pages, will go far to supply an answer.

UNDER the name of *A Short History of the English Parliament*, Vol. II. (Williams and Norgate), Mr. Bisset presents the reading public with a few discursive thoughts on matters which happen from time to time to attract his notice. It is no doubt interesting to know what he has to say about Lord Beaconsfield's policy, the conduct of the Irish landlords, and Sir James Outram's skill in shooting tigers; but the human mind is unfortunately feeble, and is apt to look for some consecutiveness in the books from which it derives sustenance. Mr. Bisset, too, is a good hater, and he keeps up his old contempt not only of kings and persons in authority, but also of everyone who has not had the supreme good fortune to be born as "a happy English child." The following extract is a good specimen of Mr. Bisset's sympathetic treatment of the classes which he dislikes. The Duke of Wellington, he tells us, had once spoken of himself as an English gentleman—

"which [p. 19] is altogether a different thing from a French *gentilhomme* or a German prince, to say nothing of a German baron, a rank having some affinity to that which Lady Joan Fitz-Warene, the granddaughter of a waiter, assigns to English baronets. 'Our physician,' observes her ladyship, 'is a baronet, and I dare say some of our tradesmen, brewers, or people of that class.'"

It is needless to add that of any scientific conception of history or politics Mr. Bisset is entirely guiltless.

*Johannis Burchardi Diarium*. Par L. Thuasne. Tome I., 1483-1492. (Paris: Leroux.) This is the first instalment of a new and complete edition of a work round which much controversy has raged. The diary of Burchard, Papal Master of Ceremonies under Alexander VI., supplied, for a long while, material for Protestant invective against the immorality of the Popes who preceded the Reformation. The work was only known by extracts—first those of Leibnitz, then of Ecard and De Brequigny. The genuineness of the German and French MSS. from which these extracts came was denied, and it was said that there were interpolations due to Protestant malice. In 1855 Genarelli published the first part of Burchard's diary from the Florentine MS., which, presumably, had never passed through the hands of heretics. The original MS. of Burchard is jealously guarded in the Vatican, and M. Thuasne has not been able to use it for the present edition. But a copy of the Vatican MS. was made by order of Alexander VII., and is now in the Chigi Palace in Rome.

M. Thuasne has collated the Paris, Florentine, and Chigi MSS., and has found few differences of importance. A comparison of his edition with Genarelli shows a much more scholarly treatment and a more adequate edition of the text. The work will occupy three volumes, and M. Thuasne reserves for the last volume his critical remarks and illustrations of the many interesting questions which Burchard's diary raises. We will defer our remarks on the work till its appearance in a complete form.

*Ungarns Geschichtsquellen im Zeitalter der Arpaden*. Von Heinrich Marczali. (Berlin: Hertz.) This handy little book is a German version by the author himself of a work crowned by the Hungarian Academy. We recommend it to the attention of all who, without knowing the Hungarian language, take an interest in Hungarian history. In the brief compass of 163 pages M. Marczali discusses the original authorities for Hungarian history to the end of the thirteenth century. They are classed as of native and of foreign origin; and the former are subdivided into legends of the saints, chronicles, annals, and monographs. The most interesting portion of the book is the account given of the development of the national chronicle and the filiation of the different mediaeval Hungarian Histories that have come down to us. The annalistic form and local point of view that characterise the contemporary work of the monks of France and Germany are but slightly represented in the Hungarian sources. The reason of this, as M. Marczali says, is to be found in the fact that Hungary was, with England, the most centralised State in Latin Christendom. The Hungarian chronicles are marked by their national patriotism and the interest with which they follow the fortunes of the kings, who are identified with the State and the nation. In the vividness with which they unconsciously reveal the national feelings of their times the student of the history of the Arpads will find a compensation for their want of chronological precision and their scantiness of detail. In the section devoted to the foreign authorities the largest space is allotted to the Byzantines, who, in M. Marczali's opinion, have not yet received all the attention due to them.

THE *Journal of the Royal Historical and Archaeological Association of Ireland*, Nos. 47-52, 1881-82. The papers on the Geraldine family which appeared in previous numbers are now supplemented by copious notes, by Mr. A. Fitz Gibbon, extracted from the State papers and elsewhere, in illustration of the pedigrees; and to these are added some charming engravings of the Dominican house at Kilmallock, now in ruins, where Edmond the White Knight and his son Maurice lie buried. The east window, of five lights, is a very beautiful specimen of early English architecture. Another fourteenth-century transept window is almost equal to it. Part 47 contains a drawing of a remarkable processional cross found at Bally Longford, which we believe was exhibited at the Society of Antiquaries' in London. The lacelike open-work border is most exquisitely finished, contrasting strongly with the rude and archaic style of the figure, or, correctly speaking, the crucifix. It is a specimen of modern slovenliness in the use of language to apply that word to what our ancestors more accurately called "a cross with a crucifix." The date is inscribed on the upper limb thus, "m. xxi. ooooo." And Mr. Hewson has shown from the pedigree of the persons whose names occur in the inscription that this must be read 1479—i.e., 1000 + (500 - 21). The common forms iv. xl. xc. are instances of this form of numbering, but such an elaborate subtraction sum is almost unique in the Roman or any other system of numerals. Mr. Knowles contributes some

remarks on Irish beads, with coloured illustrations of some of the more remarkable specimens which he has seen. As a warning to collectors he tells a story of his making an imitation antique to convince a dealer that his goods were not necessarily all genuine, and subsequently finding this identical forgery in the cabinet of his friend Canon Grainger. Mr. Shearman's paper on the Celto-Britons of Armorica is full of out-of-the-way information about a very obscure period.

## NOTES AND NEWS.

WE understand that Mr. Edwin Arnold has finished another Indian poem, which Messrs. Trübner will probably publish in October. It will contain five idylls from the Sanskrit of the *Mahabharata*—"Savitri, or Love and Death," "Nala and Damayanti," "The Enchanted Lake," "The Saints' Temptation," and "The Birth of Death."

AT about the same time an illustrated edition of Mr. Arnold's *Light of Asia* will also be published by Messrs. Trübner.

WE hear that Mr. Austin Dobson will edit *The Vicar of Wakefield* for the "Parliament Library."

AMONG the articles in the next volume of the *Encyclopædia Britannica* will be "Mexico," by Prof. A. H. Keane, "Mummy," by Miss Amelia B. Edwards, and "Municipalities," by Mr. C. I. Elton.

THE Duke of Devonshire has lent Mr. Griggs his quartos of *Richard II.*, and the Heyes *Merchant of Venice*, as well as that of *Richard III.* To the first, Mr. Harrison, of the New Shakspeare Society's committee, is preparing an Introduction; for the second, Mr. Furnivall is doing the like work, so that the facsimiles of these plays may soon follow that of *Richard III.* with Mr. Daniel's Introduction.

MR. GRIGGS was from the first convinced that the fire at his late place of business was the act of an incendiary, who threw inflammable materials through a skylight. He now has no doubt that it was done by a Fenian, for he finds that he was mistaken for a photographer living within a minute's walk of his old place, who made the negative of "No. 1" (Tyman) from which were taken the prints of that murder-organiser lately exposed in the shop windows.

ON Monday next, July 16, a meeting will be held at the Home Office, on the invitation of the Dutch Minister, in support of the project to erect a statue of Grotius at Delft. In this connexion we may mention that Dr. H. O. Rogge, librarian to the University of Amsterdam, has just issued part i. of a Bibliography of Grotius, which is not only interesting on its own account, but is also an admirable example of bibliographical method. It is published by Nijhoff, of The Hague; and it may be obtained in this country from Mr. Quaritch.

M. EMILE DE LAVERGNE, of Liège, is at present travelling in South-eastern Europe; and we shall doubtless have before long the result of his impressions. At Bucharest he was entertained at a public banquet, at which the Roumanian Minister for Foreign Affairs took the chair.

A NEW novel by Miss Anne Beale, entitled *Squire Lisle's Bequest*, will shortly be published by Messrs. Hurst and Blackett in three volumes. The same firm have also in the press *Adrian Bright*, by Mrs. Caddy.

THE Rev. Charles Stubbs, Vicar of Granborough and author of *Village Politics*, has just sent to press with Messrs. Sonnenschein a volume of sermons preached before the Uni-

versities of Oxford and Cambridge. They all deal with the attitude towards social and political questions which, in the opinion of the author, the National Church must adopt if she would seek to influence the modern democratic movement in England.

MR. STUBBS has also in preparation a volume of selections from modern writers on Christian ethics. The work is designed partly for school use, and partly as a general Reader and manual of devotional thought. The author has endeavoured to avoid all sectarian interpretation of Christian doctrine, bringing into prominence the true catholicity of Christian ethics as distinct from dogmatic theology. This volume Messrs. Sonnenschein promise before the close of the present year.

MR. WALTER LEWIN, of Bebington, Cheshire, has printed as a pamphlet, under the title of *Evolution and Religion*, the speech made by Prof. J. Fiske, of Harvard, at the farewell banquet to Mr. Herbert Spencer at New York in November of last year. He has added a Preface, quoting from letters recently written on the subject by Mr. Spencer himself.

MR. JAMES GIBSON CRAIG, of Edinburgh, whose reprint of Craig's *Catechisms* we recently noticed, has just issued, in an edition limited to twenty-five copies for presentation to friends, a series of *Facsimiles of Old Book Binding* from some of the examples in his own collection. As the Preface informs us, the publication of the volume was not contemplated from the first, when Mr. Craig had one after another of his rare and beautiful volumes reproduced by chromo-lithography; it was only after a considerable number of plates had accumulated that the idea of publishing them presented itself. It is to be regretted that, as a consequence, some of the specimens are only given in colours and gold, and without the extra printings by which, in the majority of cases, the surface and texture of the original leather has been so admirably rendered by the skill of the Messrs. Waterston. Among the specimens of the work of the great binders are examples by Grolier, Le Gascon, the Deromes, and Padeloup; while among the treasures that are interesting from their historical associations are a calf-bound copy of Pardin's *Chronique de Savoie*, impressed with the lion rampant and tressure flory counterflory of Scotland, and the initial M ensigned with a crown—a book which formerly belonged to Queen Mary, and is mentioned in a list of "Jowellis, Plenissing, &c.," in the Castle of Edinburgh, dated 1578, as "pertening to oure Sovereane Lord" James VI. and "his hienes dearest moder;" a volume from the library of her husband, the Earl of Bothwell, bearing his shield of arms on the side; another with the bear and ragged staff of Robert Dudley, Earl of Leicester; and a fourth with the coronet and three castles of M<sup>me</sup>. de Pompadour.

LAST Saturday, July 7, Mr. George MacDonald, with eight members of his family, gave a dramatic recital in costume, at the Steinway Hall, of an English version of Corneille's "Polyeucte." This is to be repeated to-day, and followed on the next two Saturdays by "Macbeth."

THE University of Zürich is about to celebrate the fiftieth anniversary of its foundation. An Academiesches Gymnasium, provided in course of time with a staff of seventeen professors, was established at Zürich in 1520. In the year 1833 the old Gymnasium, the Medizinisch-Chirurgisches Institut, the Collegium Humanitatis, and the Politisches Institut for the Education of Men for Political and Civil Service were amalgamated and constituted into a university. The only old university in Switzerland is that of Basel, founded in 1459. The

Universitätspedell Henke is drawing up a memorial for the jubilee, which will contain a complete list of degrees, &c., since the foundation of the university and other historical materials.

THE latest issue in the "author's edition" of Mr. W. D. Howells' works (Edinburgh: David Douglas) is *Italian Journeys*, in two volumes. Nothing could be more pleasing than the format of this series, which is sold at the incredibly low price of one shilling a volume; but we confess that we prefer Mr. Howells' later novels to his earlier books of travel.

IN the same series has also appeared recently Mr. George W. Cable's *Old Creole Days*, which consists of a collection of studies—very vivid in colour and very graceful in expression—of life in Louisiana some thirty or forty years ago. The book is one symptom out of many of the renaissance of the South in literature.

MESSRS. SOTHERAN have published this week two more volumes (vii. and viii.) of their library edition of Richardson, completing *Clarissa Harlowe*. As the volumes increase they look well upon the shelf, but we have found by use that the binding is by no means so carefully stitched as it ought to be. There is no point which more demands the attention of publishers (for it is they alone who can enforce an improvement) than this matter of binding. It is quite common for pages to tear away and backs to crinkle even after a single reading.

#### AMERICAN JOTTINGS.

THE many colleges throughout the United States have been holding their "Commencements," or public degree days, during the latter part of June. Special interest attached to the Commencement at Harvard, where the board of overseers, after an acrimonious public debate, had, some weeks earlier, refused to confer the degree of LL.D. on Gen. Butler, the Governor of the State of Massachusetts. Gen. Butler, however, was magnanimous enough to be present at the Commencement, and seems to have been well received. His speech on the occasion certainly does him credit. At Madison University, in the State of New York, the prize for the best oration was awarded to Akyahugo Myattway, a native of Burmah, who has passed through the full academical course.

It is stated that Mark Twain has succeeded in obtaining a Canadian copyright for his new book, *Life on the Mississippi*. Last year he failed in a similar attempt for his *Prince and Pauper*. On that occasion it was held that a temporary residence in the Dominion was not enough; but this time he has effected his object in a roundabout way. Temporary residence in Canada, together with prior publication in England, sufficed to give an English copyright to his English publisher, who forthwith acquired a Canadian copyright in his own name.

PROF. MAX MÜLLER's *India: What Can it Teach us?* has appeared in a cheap American reprint.

THE latest additions to the "Franklin Square Library" (published at twenty cents, or tenpence) are the Duc de Broglie's *Frederic II. and Maria Theresa* and Mr. Black's *Yolande*.

THE American public seem to be buyers not only of paper editions, but also of *éditions de luxe*. Messrs. Lippincott announce a library edition, limited to 250 copies, of the works of Prescott, in fifteen volumes; and also Gray's *Elegy*, with wood-cuts by the best American artists. The same publishers, not satisfied with the English get-up of that pleasant selection, *The Book-Lover's Enchiridion*, have prepared an American reprint of it in larger type.

A RECENT number of the Boston *Literary*

*World* contains an interesting account of a "Browning room" at Wellesley College, though it fails to state where Wellesley College precisely is. The room is named after the poetess, not the poet. In the centre is a marble bust of Mrs. Browning by Story, near which is the autograph of "Little Mattie," with a letter from Mr. Browning—"I beg to present to Wellesley College the original MS. of the first poem in the collection of 'Last Poems by Elizabeth Barrett Browning.'" There are three painted windows, with designs from "Aurora Leigh," "Lady Geraldine's Courtship," and "The Romance of the Swan's Nest." The room is furnished throughout with the aim of exhibiting a standard of artistic decoration; and, judging from the description, the aim would seem to be attained. The students at Wellesley College are women.

THE *Critic*, which changed from a fortnightly to a weekly issue at the beginning of the present year, has had the courage to return to its former rate of issue during the summer and early autumn. As its editors judiciously observe, "the publishing business is stagnant, the theatres and art galleries are closed, the orchestras that make New York their winter home are absent on missionary tours of the States, and the opera singers are fled to Europe, followed by thousands of good Americans."

#### FRENCH JOTTINGS.

THE professors of the Collège de France have selected M. Renan to succeed the late M. Laboulaye not only as the administrator of the college for a term of three years, but also as their representative on the Council of Public Instruction.

IN addition to the names already mentioned (of which that of M. About is probably the best known in England), M. Emile Montégut, one of the leading contributors to the *Revue des Deux-Mondes*, has offered himself as a candidate for the chair in the Académie française vacant by the death of Jules Sandeau. M. Montégut's latest work is a collection of essays on English literature.

M<sup>me</sup>. MICHELET announces a volume upon the early life of her husband, based upon autobiographical memoranda found among his papers.

M. PALLAIN, of the French Foreign Office, will shortly publish, with Plon, a work upon Talleyrand's diplomatic mission to London in 1792.

THE late Louis Veuillot, the well-known editor of the *Univers*, has left behind him a large number of papers, from which his brother intends to publish a selection—two volumes of *Œuvres inédites*; two volumes of *Derniers Mélanges*; and two volumes of *Correspondance*.

M. ALPHONSE DAUDET has resumed in the *Nouvelle Revue* his "Histoire de mes Livres," or chapters of literary autobiography. In the number for July 1 he treats of *Les Lettres de mon Moulin*, which began to appear in a Paris newspaper in 1866, and won no great success when published in 1869 in book form. Two thousand copies were sold with difficulty; but says M. Daudet now—"N'importe! c'est encore là mon livre préféré, non pas au point de vue littéraire, mais parce qu'il me rappelle les plus belles heures de ma jeunesse."

M. MORGAND has just published, under the editorship of M. Alphonse Pault, of the Bibliothèque nationale, a textual reprint of the first edition of the *Maxims* of La Rochefoucauld printed at the Hague in 1664, collated with the author's MS. and with the editions of 1665 and 1678. This *editio princeps*, the existence of which was long doubtful, is described as "a kind of *ballon d'essai* by

no means to be despised." An Appendix contains an unpublished letter from La Rochefoucauld to Mlle. de Soudéry on the subject of her collaboration; and an extract from "the work of an English Protestant minister," translated into very indifferent French, from which, according to a contemporary MS., M. de La Rochefoucauld derived almost the whole of his *Maxims*, "n'y ayant; adjousté que le beau français."

THE same publisher announces for issue by subscription in October next a series of fifty-eight illustrations to the works of Alfred de Musset, etched by M. Lalauze from the original water-colours by M. Eugène Lami.

THE *Revue politique et littéraire* for July 7 prints a letter by M. James Darmesteter, addressed to M. Guillaume Guizot, upon "The Study of English in France," which will serve as a Preface to a forthcoming volume of *Essais de Littérature anglaise* by the former writer. Though short, it gives a careful comparison of the claims of English and of German to be studied in France. The conclusion is—German for science; English for commerce, for literary value, and for political instruction.

AT a recent meeting of the Académie des Sciences morales et politiques, four names were mentioned for a vacancy among the corresponding members in the department of history. Of these four names, three were English; but Prof. Waitz, the veteran historian of Berlin, was elected.

THE longevity of the members of the Institut has often attracted attention. At the present time, no less than seven are eighty years of age or over. The *doyen*, or "father," of the Institut is M. Chevreul, the chemist, now in his ninety-eighth year. He was elected to the Académie des Sciences so long ago as 1826, and still continues to lecture. M. Dumas, the chemist, and M. Milne-Edwards, the biologist, are both of them in their eighty-fourth year. M. Mignet, the historian, is eighty-seven. It is noteworthy that not a single member of the Académie des Inscriptions has reached seventy.

A COMMISSION appointed by the municipality of Paris to draw up a catalogue of the popular libraries has adopted a resolution to exclude from this catalogue the Bible "et tout autre livre controversé religieux pouvant, à quelque titre que ce soit, fausser ou passionner l'opinion."

#### ACKNOWLEDGMENTS.

WE have on our table:—*Lorenz Oken*: a Biographical Sketch, by Alexander Ecker, with Explanatory Notes, Selections from Oken's Correspondence, and a Portrait, from the German by Alfred Tulk (Kegan Paul, Trench and Co.); *The Signora*: a Novel, in three volumes, by Capt. E. D. Lyon (Bemington); *Serge Panine*; or, Can You Blame Her? by Georges Ohnet, Translated by Jessie Hamilton (Simpkin, Marshall and Co.); *A Treatise on the Law of Electric Lighting*, by Henry Cunyngame (Stevens and Sons); *Kallós*: a Treatise on the Scientific Culture of Personal Beauty and the Cure of Ugliness, by F.R.C.S. (Simpkin, Marshall and Co.); *The Mystery of Being*; or, What Do We Know? by J. Tyler (Kegan Paul, Trench and Co.); *Christ Versus Krishna*, with a Concise Review of Hindooism, proving its Derivation from Christianity, by L. A. Sakes (Allahabad; London: Trübner); *The Philosophy of Advertising, and Newspaper Register*, by Henry Sell (Sell's Advertising Offices); *The Stage in the Drawing-Room*; or, the Theatre at Home: Practical Hints on Amateur Acting, by Henry J. Dakin (Griffith and Farran); *Ecarté*, by Aquarius (W. H. Allen); *The River of Life*: an

Allegory, by Webster Strelley (Manchester: Tubbs, Brook and Ohrystal); *Dynamic Sociology*; or, Applied Social Science, as Based upon Statistical Sociology and the Less Complex Sciences, by Lester F. Ward, in two volumes (New York: Appleton); *On a Mexican Mustang*: Through Texas, from the Gulf to the Rio Grande, by Alex. E. Sweet and J. Armoyn Knox (Trübner); *A Tour in the States and Canada*: Out and Home in Six Weeks, by Thomas Greenwood, Illustrated (Upcott Gill); *Philosophy of Landscape Painting*, by William M. Bryant (St. Louis News Company); *Books, and How to Use Them*: Some Hints to Readers and Students, by J. O. Van Dyke (New York: Fords, Howard and Hulbert; London: Trübner); *Libraries and Readers*, by William E. Foster (New York: Leypoldt); *Libraries and Schools*: Papers Selected by Samuel S. Green (New York: Leypoldt); *The Possibility of Not Dying*: a Speculation, by Hyland C. Kirk (New York: Putnam); *Brain-Rest*, by J. Leonard Corning (New York: Putnam); *Atlas*, by Charles Leonard Moore (Philadelphia: Potter); *Annual Report of the Chief Signal Officer to the Secretary of War for 1880*, in two parts (Washington: Government Printing Office); *Report of the Commissioner of Fish and Fisheries for 1879*, Part VII., Inquiry into the Decrease of Food-Fishes, The Propagation of Food-Fishes in the Waters of the United States (Washington: Government Printing Office); &c., &c.

WE have also received the following new editions:—*Lectures on the Science and Art of Education*, with other Lectures and Essays, by the late Joseph Payne, edited by his son, Joseph Frank Payne, with an Introduction by the Rev. R. H. Quick (Longmans); *Twelve Wonderful Tales*, by W. Knox Wigram (Bentley); *Talks about Plants*; or, Early Lessons in Botany, by Mrs. Lankester, with Six Coloured Plates and Twenty-six Wood-engravings (Griffith and Farran); *Margaret Sim's Cookery*, with an Introduction by L. B. Walford (Blackwood); *Phyllis*, by the Author of "Molly Bawn" (Smith, Elder and Co.); *The Theory and Practice of Banking*, by Henry Dunning Macleod, Fourth Edition, Vol. I. (Longmans); *Tobermorey*, by the Author of "Stronbury" (Edinburgh: Macniven and Wallace); *The Standard of Value*, by William Leighton Jordan, Third Edition (Bogue); *Elementary Text-Book of Physics*, by Prof. J. D. Everett, Illustrated with numerous Engravings on Wood (Blackie); *The Public School French Grammar*, Part I., Accidence, by P.-H.-Ernest Brette, Gustave Masson, Elphège Janau, and H.-O. Levandier (Hachette); *Excerpta Facilia*: a Second Latin Translation Book, by H. B. Heatley and H. N. Kingdon (Rivingtons); *Virhy and its Therapeutical Resources*, by Dr. Prosser James, Fifth Edition (Baillière, Tindall and Cox); &c., &c.

#### EPIGRAMS.

##### XXXV.

LIKE leaves on the swollen stream of the swift days  
Do all men somewhither move rushing;  
While Man stands at the brink, with eyes that gaze  
Back to the source and forward to the sea.

##### XXXVI.

The perfect notes of the symphonious spheres  
We never shall so rightly understand  
As music shaken by the singer's tears  
And vexed with tremblings of the harper's hand.

##### XXXVII.

For thee, the gods yet haunt Olympus hill:  
Thou seest beside each muse-frequented rill  
The twice nine feet of song a-straying still:  
For there is nought he may not see, who will.

##### XXXVIII.

For metaphors of man we search the skies  
And find our allegory in all the air.  
We gaze on nature with Narcissus-eyes,  
Enamoured of our shadow everywhere.

##### XXXIX.

I plucked this flower, O brighter flower, for thee,  
There where the river dies into the sea.  
To kiss it the wild west wind hath made free:  
Kiss it thyself and give it back to me.

##### XL.

Onward the chariot of the Untarrying moves;  
Nor day discovers him nor night conceals;  
Thou hear'st the echo of unreturning hooves  
And thunder of irrevocable wheels.

##### XLII.

Thou deemest that the soul through death ascends  
To lordlier halls than sumptuous Life doth rule.  
They needs were bright and wide, to make amends  
For such a strait and lampless vestibule.

##### XLIII.

We are what all the Past hath made us. Who  
Can guess the difference to thee and me  
Had never Julius' heart been stricken through  
Nor Egypt's ripe mouth kissed by Antony?

##### XLIV.

Full high we soar, and dive exceeding deep,  
And tease the gods to fling the unwilling meed;  
And best of guerdons is the grassy sleep  
And dusty end of all our dream and deed.

##### XLV.

Love, like a bird, hath perch'd upon a spray  
For thee and me to hearken what he sings.  
Contented, he forgets to fly away:  
But hush! . . . remind not Eros of his wings.

##### XLVI.

The joy long distant, and at length brought near,  
How dimm'd and flaw'd a thing it doth appear.  
Earth's fruit hath still its bloom! the plucking  
blurred,  
And heaven itself were heavenliest aye deferred.

W. W.

#### MAGAZINES AND REVIEWS.

*Macmillan's Magazine* for July contains an article by Prof. Fawcett on "State Socialism and Nationalisation of the Land." It is a new chapter added to a forthcoming edition of the *Manual of Political Economy*. Mr. Fawcett is opposed in theory to State interference. Most men are so in matters where they are not personally interested; but, none the less, things steadily drift onwards towards what the majority of thinking men condemn. Mr. Frederick Pollock publishes an address which he delivered at the Royal Institution on "The Forms and History of the Sword." It is a pleasant study of the process of evolution applied to a limited subject-matter. *Macmillan's* has begun a series of literary articles signed M. A. W., which are admirably adapted to the purpose of telling the reader all that he need know about current foreign books without troubling to read them. In the present number "M. Benan's Autobiography" is exhibited in all the points which could interest the general reader.

THERE is no very striking paper in the July number of the *Antiquary*. By far the best, as showing original research in a field as yet but seldom traversed, is Mr. Gomme's article on "Rhythmical Laws." The title, however, is misleading. The paper does not relate to the observed laws which govern rhythms, but to those ancient laws which, in the form in which they have reached us, are in rude verse or

jingles. The writer maintains that "one of the means by which it is possible to test the antiquity of certain codes of law is their more or less adaptability to verse or proverbial expression." In this he is no doubt correct. We had no idea, however, until we read Mr. Gomme's article, that there was so much English evidence bearing on the matter. Mr. Keary's second paper on the coinage of the British Isles contains some useful information, but is far too much condensed. The article on Armour, by Mr. Brailsford, with which the number opens, will repay perusal.

WE notice together the second and third numbers of *La Revue du Droit international* for 1883. The second number contains a paper by Prof. Brusa, of Turin, on "La Jurisdiction du Vatican," written from an Italian point of view, which sees no foundation for a claim of sovereignty on the part of the Pope, unless it should be conceded under a convention with the King of Italy. A paper on the Armenian Question, from the pen of M. Ed. Engelhardt, an ancient Minister Plenipotentiary, invites the attention of Europe to an oppressed people, for whom Europe has stipulated much and Turkey has performed little or nothing under the Treaty of Berlin. A third paper is by M. Wijnmalen, of the Royal Library at The Hague, on the "Third Centenary of Hugo Grotius," and on the proposal to erect a statue to the great Dutch jurist in his native city of Delft. The next number contains, among other articles, a paper on the "Question of the Lebanon," by M. Joseph Jooris, Minister Resident, who supports the policy of France as the sole Power which pursues in Syria a policy that is disinterested and conformable to the wants of the populations. Putting aside the strong bias of the writer, who seems to think that France alone is entitled to exercise a protectorate over the Mountain of Syria by reason of her traditional guardianship of the holy places in Jerusalem, the article is of value as introducing the reader to an Asiatic province of the Ottoman empire which is governed by a Christian pacha nominated by the Porte after consultation with the Christian Powers. We should have wished, however, a fuller reference to the Règlement organique of June 9, 1861, the Magna Charta of the Christians of the Mountain, in pursuance of which Great Britain, France, Austria, Prussia, and Russia have a voice in the appointment of the Governor of the Lebanon. The writer adds a postscript, from which it would appear that the recent nomination of Wassa Effendi in succession to Rustem Pacha has been approved by the Christian Powers, and gives to the Maronites of the Lebanon a governor of their own religion. The last article that we shall mention is from the pen of Prof. Emile de Laveleye, of Liège, on the "Neutralisation of the River Congo." It well deserves, as do all the writings of M. de Laveleye, the attention of those who fear to read every day of Central Africa becoming the battle-field of rival European colonists. We are not sanguine as to the practicability of M. de Laveleye's entire scheme as regards the neutralisation of the river, nor do we think that the neutralisation of a great river, whose banks are occupied by uncivilised tribes of African origin—if by neutralisation is meant the total prohibition of armed public vessels to ascend the river from the sea—would be favourable to the police of the river or to the security of European settlers. M. de Laveleye, however, hints at the application to the Congo of the régime adopted in Europe with regard to the lower waters of the Danube. Some arrangement of an analogous kind, we think, might reasonably find favour with the European Powers, who, in concert with Portugal, might agree upon the perpetual freedom of the "navigation" of the

Lower Congo, the police of which river should, in that case, be regulated by an international commission.

### ITALIAN FICTION.

*In Provincia*: Nouvelle e Bozzetti. Per Mario Pratesi. (Florence: Barbèra.) As the immoderate habit of reading has produced in this country the nuisance of the three-volume novel, so, in Italy, there has resulted from the opposite cause a whole literature of scrappy fiction. Italians are too poor to buy novels, as they are too poor to buy pictures; or, at least, three or four crack novelists more than suffice to supply bulky work. Less fortunate writers—and in Italy one may say that everyone is less fortunate—must either starve or adapt their fiction to the wants of the literary monthlies or weeklies, and more especially the weeklies. Now the monthlies (and there are not more than a couple of them) are so crammed with serious matter that they can give but little space to fiction; and the weeklies (the *Fanfulla della Domenica*, the *Domenica letteraria*, and a whole host of provincial rivals) consist most commonly of only one sheet—that is to say, the equivalent of four pages of the ACADEMY. A long *feuilleton* cannot be carried through a weekly paper; and, on the other hand, the whole paper, upon which the literary Italian expends the considerable sum of one penny, cannot be devoted to a single story. The result is that everyone who has any talent for fiction is forced to write things which, if published in the *Nuova Antologia*, may extend to some forty pages of volume print, if in the *Cronaca Bizantina* or the extinct *Rassegna Settimanale* to ten or twelve, but if printed in the penny papers to not more than two or three pages. Hence it comes that the work of an Italian writer of fiction resembles closely those innumerable tiny sketches which cover the studio walls of young Italian painters: studies of single heads, trees, cows, street-corners, &c., which, if framed in huge frames, may possibly take the place of pictures, and which have the advantage of costing not thousands of francs, but two or three napoleons. Of course such a state of things is rather sad; and it implies a frightful waste of invention and observation; for these scrappy works, of which the writer or artist is obliged to produce a number enormous in proportion to their cheapness, require very often only to be magnified in proportions and elaborated in workmanship to be real pictures and real novels. But if the workman starves and the present work loses, the future artistic and literary world of Italy decidedly gains. For this necessity of stopping short at mere studies of single bits of cabbage-field or village lane, or single heads and single trees, entirely precludes the younger generation of Italian artists from becoming, like our English ones, the repositories of a weary tradition of idealism and sentimentality; it brings them in contact with nature, and prepares for any happier future time or for any happy accident (such as those which have given us Morelli and Michetti) men who are bound by no rule save reality and inspired with no purpose save that of their own fancy. And, similarly, the melancholy necessity of writing character-sketches for penny journals (in every five or six numbers of which one may see, signed by Matilde Serrao, Emma Perodi, Renato Fucini, or a number of other names, a remarkable waste of talent) has the advantage of forcing Italian writers of fiction to make slight characters and incidents interesting by mere shrewdness of insight and dexterity of handling; and of preparing, therefore, a vast amount of first-rate rough material of fiction, unspoil by habits of doing the romantic, or the goody-goody, or the society, or

the back-alum sort of novel; and which, when the time is ripe for the production of a real Italian novel, may be cast into a perfectly original, modern, and truly national mould.

This moment has not yet arrived, and the Italian novel is still a hypothetical matter; but even now the humble molecules of Italian fiction can sometimes unite into a work which is remarkable, and beautiful, and valuable, and which must last. Such work is that of Sig. Mario Pratesi, whose volume, *In Provincia*, appeared a few weeks ago. It is the first flower of that seed of realism and fancy which, for the last ten years, has been scattered unnoticed throughout Italy; it is the real reality of humbler Italian life, seen with marvellous accuracy of vision, but selected with admirable instinct for the beautiful and the important; it is the work of a fastidious and wayward fancy, but executed by an eye which has seen everything, and by a hand which can portray anything; it is essentially what the art of the future must be, if it is to be anything at all: impressionism directed by idealistic selection.

To describe, or even define, the principal stories and sketches contained in Sig. Pratesi's book is no easy matter; to tell the mere plot of such things as "Un Vagabondo," "Belisario," "Fra Anacleto da Caprarola," or the little masterpiece called "Un Corvo fra Selvaggi" would be mere loss of time. The best way in which I can indicate the peculiar charm and value of Sig. Pratesi's work is by reminding those who are familiar with Central Italy of the walks which they must have taken along the dusty high-roads, between the old, scarred, weather-stained farms and villas on either side, the walls covered with caper and snapdragon, and surmounted by tufts of rosemary and hedges of roses, the rusty, twisted iron gates leading through the overgrown garden of the spectral *casino* among the hill-side olives, the trellis-surrounded barns painted with faded coats of arms—roads which wind up and down among clay hills just ribbed with cypress avenues and patched with feathery pinewood, or which cut straight through the sere pasture-land, the desolate tracts of canal and pool, of the Maremma; by reminding them also of their strolls up and down the rugged alleys of the hill-side towns of Southern Tuscany and Umbria, where the high, black walls, with iron rings and clamps and massy projections for barricade beam-heads, shut out all but a rift of blue sky, and the passage is stopped by the chairs of whole families of artisans seated in the shade, by the watted carts and bullocks of the men who bring faggots and charcoal from the mountains. I would remind them of such walks as these, and of the almost nostalgic desire which comes over the foreigner to see into the lives and thoughts and feelings of the men and women who thresh the corn in those roadside barns, who dream away their years behind the discoloured shutters of those crumbling villas, who look at him from out of the dark setting of the doorway, or the frame of pot-herbs and carnations about the narrow windows. This desire, more difficult by far to satisfy than the mere aesthete's wish to re-people the old towns and villages with apocryphal historic spectres, is what is satisfied by such a book as *In Provincia*; and herein, as much as in its beautiful descriptions and humorous and pathetic touches, consists its fascination. Sig. Pratesi gives us the actors on this solemn or quaint stage of Central Italian street and high-road. We learn the secret dreams and passions of the cobbler near the highest gate of Siena; the hopes and doubts and hatred of the monk who, banished from his sequestered monastery, wanders vaguely about in his black and white robes, seeking sympathy in the dark lair of the apothecary and the wax-light maker, where no odious ex-

Garibaldian or Piedmontese "buzzurro" can intrude; we penetrate into the kitchen parlour of the tanner of Fontebranda, and into the sordid study, all dust and cobwebs, where the usurer-notary (one of the most characteristic of Italian types) who has slowly bought large and small of the district out of their heirlooms, their pictures, their tapestries, their palaces, their hovels, their once princely villa or their little bit of heavily taxed field, sits among his papers dealing out loans of a few souidi and working his way to a place as papal chamberlain or as Italian senator. He shows us, especially in the longest story of this collection, called "A Vagabond"—which is a wonderful instance of the romantic charm which can be got out of passionately felt realism—the tragedy, sordid and grotesque, and yet not without a sullen dignity, of those poor Italian lives, worn to the bone by national poverty, by ignorance, by work amid malaria, in which we people of the North, deluded by laughter in the theatres and strumming and shouting in the streets, insist upon seeing only lazy cheerfulness. But there remains a figure, of which I could wish that Sig. Pratesi should draw the moral likeness (the bodily portrait would require an Italian Millet), a figure, frightfully typical of a class, which has remained burnt into my recollection, of a tall, gaunt old peasant of the marsh-land by the Adriatic, bony and hollow-cheeked, like a saint of Pol-laiuolo, grizzled and wrinkled, and bent by premature old age, standing, with feeble knocking knees and bowed back, the embodiment of over-work and famine, and the dull, savage imbecility which accompanies them, staring vacantly at the numbers posted up outside the lottery office of a hamlet near Pesaro: a heap of five or six wretched cottages, without a church, without a school, but with its office of the lottery all covered with coloured advertisements and surmounted by its shield of Savoy, as it was a few years back by its tiara and keys. A figure such as this is missing in Sig. Pratesi's book; but perhaps there are things which a man who feels the miseries of the poor folk of Italy in so vivid and tragic a manner has not the heart to delineate.

## CORRESPONDENCE.

## A CAXTON FRAGMENT.

Oxford: July 7, 1883.

College libraries still afford a field for bibliographical research, in spite of the generations of students who as fellows or scholars have lived in close proximity to them. The MSS., indeed, in Oxford colleges have been fully catalogued by the late Mr. Coxe, who was not likely to pass over anything valuable; but only Merton, Balliol, and Magdalen, and (to a small extent) Oriel and Worcester, have issued catalogues of their printed books. With regard to the rest, we may reasonably hope for discoveries in the future; at Queen's, for instance, there is a copy of an undescribed edition of the "A B C" the few known issues of which are fully treated by Mr. Bradshaw in the third volume of the *Communications* of the Cambridge Antiquarian Society. But the present letter will be confined to one or two results of a cursory search among the bindings of the printed books of Merton College.

Of the *Directorium Sacerdotum* or *Pye of Sarum* Use three issues by Caxton are known to exist. Of the first version, printed before 1480, a unique fragment of sixteen pages is in the British Museum. Of the first edition of the second version (1487?) there is a unique copy, also in the British Museum; of the second edition of this second version (1489?) there is again but one perfect copy known, which is in the Bodleian Library; a single leaf is to be found among Bagford's fragments in Harleian MS. 5919. It is of this last issue that another fragment was found at Merton on July 1. In 1544 Dr. Hobhouse, lately Bishop of Nelson, discovered parts of eight leaves in the binding of a book in that library which, although taken out at the time, bound separately, and catalogued, seem to have escaped even the sharp eyes of Mr. Blades. These eight leaves are signatures v 2, v 3, v 4, v 5, v 6, v 7, x 1, and x 8, and have all lost a line or two at the foot of the page and (with the exception of v 5, v 6, and v 7) also a piece of the outer edge of the text.

The new fragment consists of four leaves (signatures p 3, p 4, p 5, and p 6) wanting a few letters, but with untouched margins, which prove the original size of the page to have been eleven inches by seven inches and a-half. They were in a large folio volume of Joannes de Imola, bound in stiff card boards with stamped leather sides. The binding may be recognised by some of the readers of the ACADEMY when I mention that the chief ornament is a double rectangular border bearing the repeated devices of a rose, portcullis, *fleur-de-lys*, deer couchant, and bird, with "I. B." at the top and bottom. It may here be noted that, in the opinion of Mr. Macray, the Bodleian *Directorium* is not in the original cover, as Mr. Blades supposes, but in one of the time of Selden, to whom the volume belonged.

Of the extremely rare poem "Great Brittaines Sunnes-set, by William Basse" (Oxford, 1613)—one perfect copy known, and one imperfect—nearly the whole has come to light in a Merton binding. Small parts of the title, dedication, and stanzas 5 and 6 alone are wanting, but the duplicate leaves with the duplicates in the Bodleian would make up another complete copy if combined. Among lesser finds, a leaf (sign. i 7) of Alexander de Ales on the *De Anima* of Aristotle (Oxford, 1481), many fragments of Thomas Hyll's Almanack and Prognostication for 1572 calculated for the meridian of Oxford, part of the first leaf of the "Tempest" from the first folio of Shakspeare, and a contemporary MS. list of State prisoners at some period in Elizabeth's reign, showing to whose custody each was consigned, testify to the variety and interest of the waste sheets in bookbinders' shops in the sixteenth and seventeenth centuries.

F. MADAN.

## THE NAMES "TRISANTON" AND "ANTONA."

98 Roebuck Road, Sheffield: July 5, 1883.

I wish to offer one or two remarks by way of supplement to my letters in the ACADEMY of April 28 and May 19. Since the publication of those letters I have endeavoured to discover whether my emendation of *Ann. xii. 31* has been anticipated. I have not been able to find that any editor of Tacitus has made a similar suggestion; but the editor of the new Didot Ptolemy has proposed to read the words of Tacitus as *cunctaque castris cis Trisantonam*. This reading had occurred to me as a possible alternative to the one which I actually proposed in the ACADEMY. My reasons for rejecting it were that the word *castris* is not necessary to the sense, and that it is unlikely that Tacitus would have perpetrated such a jingle as *castris cis Tris*. The Paris editor has not forestalled my identification of the Trisanton with the Trent, which, so far as I know, is entirely novel.

Mr. R. Neville's statement (ACADEMY, May 26) that the Arun appears in old maps as the Tarant is decisive with regard to the identity of Ptolemy's Trisanton; and my own suggestion of the Sussex Ouse must therefore be withdrawn.

The name of Trisanton, or Trisanton, appears to have belonged to no fewer than six British rivers. In addition to those which have already been mentioned, the Midland Trent, the Sussex Tarant, and the Montgomeryshire Taraunon, there are the Tarrant and the Trent in Dorset, and the Hampshire Test. The last-mentioned name (*Tersta* in the *Cod. Dip.*) differs from the rest in having been corrupted from an earlier form of the British name. This may be explained by the fact that the territory traversed by the lower waters of this river belongs to the very oldest of the Saxon conquests. In support of the identity of the names of *Tersta* and *Trisanton*, it may be remarked that the maps

give a "Trent Hill," situated on the bank of the Test. The name of Hurstbourne Tarrant, near the source of this river, cannot, I fear, be relied upon as affording additional confirmation, since it is stated in Dugdale that Hurstbourne derives its affix from the connexion of the place with Tarrant Nunnery in Dorset.

It has been pointed out to me that in the Pasmaunthal in Tyrol is a river Sanna, formed by the union of two streams called the Trisanna and the Rosanna. The resemblance in sound between Trisanna and Trisanton is certainly striking, whether it possesses any etymological significance or not. HENRY BRADLEY.

#### THE DERIVATION OF "SWEET WILLIAM."

London: July 10, 1883.

With reference to Mr. H. Friend's remarks in your last issue on Dr. Prior's suspicious explanation of the name "Sweet William," I beg to adduce the following passage from an able essay on flowers in the *Quarterly Review* of July 1863. Speaking of the small red pink *Dianthus prolifer*, the writer says:—

"This is perhaps the original 'Sweet Saint William,' for the word 'Saint' has only been dropped since days which saw the demolition of St. William's shrine in Rochester Cathedral. This, however, is but a conjecture; and we must be content to remain uncertain whether the masses of bright flowers which form one of the chief glories of old-fashioned gardens commemorate St. William of Rochester, St. William of York, or, likeliest of the three, St. William of Aquitaine, the half-soldier, half-monk, whose fame was so widely spread throughout the South of Europe."

ST. CLAIR BADDELEY.

#### A YORKSHIRE PROVERB.

July 9, 1883.

Can any of the readers of the *ACADEMY* trace the origin of a curious Yorkshire popular saying, "As throng [i.e., busy] as Throp's wife when she hanged herself with the dish-cloth"? Is the name "Throp" used merely because of alliteration, or could it be a corruption of a name in a popular story? I have in vain made enquiries in the West Riding, and from people living in the East Riding; they only seem to use the expression because their fathers used it. It is probably of great antiquity. I do not know whether it exists in any form in any other county. ENNA HALFDON.

#### SCIENCE.

*Inquiries into Human Faculty and its Development.* By Francis Galton. (Macmillan.)

IN this deeply interesting and very valuable work Mr. Galton has gathered together into a single strand the main threads of all his enquiries into human faculties undertaken since the publication of *Hereditary Genius*. To a great extent his present book may be regarded as supplementary to that classical investigation, though its field is considerably wider, and its excursions on either side of the central line of thought are far more devious than in his earlier contribution to the science of humanity. Many of the papers which go to make it up are already familiar to the readers of contemporary magazine literature; but they are here presented in somewhat fresh

connexions, and the light thus thrown upon their origin in their author's mind often enables one to see new implications in them which would hardly have suggested themselves when the articles first appeared in the naked form.

The peculiar shape which the central Darwinian impulse has taken in Mr. Galton's idiosyncrasy—he, if any man, will forgive us for thus envisaging the matter—is a very original one. In the first place, its intimate alliance with the mathematical faculty in his case has cast him upon the habitual employment of statistical methods which have hardly ever been applied to this class of question by any other investigator. Then, again, his singular ingenuity in discovering devices for rendering into objective form what seems at first sight the most elusive subjective element (conspicuously shown in the invention of composite portraiture) has enabled him to apply these or similar methods with measurable accuracy to many phenomena which most other people would have regarded as hopelessly given over to the vaguest conjecture. Once more, the unusual mixture in his nature of the inductive and the deductive temperaments (for they are temperaments rather than consciously adopted methods in most men) has made him occupy a middle position between the pure Darwinian and the pure Spencerian standpoints, which is productive of much excellent and light-giving conciliatory work. On the one hand, Mr. Galton is never apt to jump at conclusions when, by any possibility of ingenious research, facts and experiments can be forthcoming to test the truth of rival hypotheses; on the other hand, he is never afraid to apply *a priori* reasoning in the boldest manner whenever he has a firm basis of ascertained fact on which to ground it. His work is thus always fresh and, above all things, eminently suggestive. There is hardly a single line of thought pursued in this book which does not open out endless vistas of future research for coming psychologists and anthropologists; hardly a thread which does not serve as a clue to guide us through innumerable minor labyrinths, unexplored, as yet, by the author himself. For general philosophical grasp, and for insight into the deeper problems of human nature, the work is well worthy of Mr. Galton's high reputation.

The same general motive which led Mr. Darwin into his great theory of the origin of species has led Mr. Galton more specifically to investigate the question of the improveability of the human race. This is the key-note of his present book, which deals in particular with the influence of inherited nature, and the possibility of applying deliberate selection to the best family strains. In the matter of inherited qualities, Mr. Galton has pushed scientific determinism to its logical conclusions. For him, the individual is at birth in the main (potentially, at least) all that he can ever become; while making every due allowance, with even Puritanical scrupulosity, for the effects of nurture and circumstances, he feels, probably more fully than anyone else has ever before felt, the paramount importance of the inherited traits. Every man being essentially a compound of his progenitors, the facts of race become the most important

facts of all in the history of the individual. In his essay on twins, Mr. Galton very instructively shows the irresistible power of these predetermining causes, and exhibits the inherited nature as working out its own predestined course almost as relentlessly as the Nemesis of a Greek tragedy. Sad-denying as this idea undoubtedly is, there are, on the other hand, many elements of comfort for the faltering optimist in other parts of Mr. Galton's work. His discussion of the Malthusian problem is certainly the most cheerful chapter in that dismallest dilemma of the dismal science that we ever remember to have read; while his simple discovery that you can absolutely annihilate a feeble or undesirable race, gradually, peacefully, and almost unconsciously, by no more violent means than by never marrying off its women until they are twenty-nine years old, is a most encouraging one for those people who have too readily taken it for granted that the extinction of a race must necessarily imply gross cruelty or great misery. The possible ethnographical implications of this calculation are also very valuable; they help to explain how the descendants of a once very small or insignificant fraction in a population may come at last to swamp and outnumber all the rest.

Of the practical measures by which Mr. Galton thinks such a systematic improvement of the human (or national) stock might be effected, we can only say that they seem for the present perhaps a trifle premature. It will not be till altruism has gained a far wider body of converts than at present that any united action, or even any considerable individual action, can be taken in any such direction. So long as unlimited competition continues to place the balance of material advantages in the hands (on the average) of the least altruistic and often of the least really valuable members of the community, it seems useless to expect either that moral self-restraint will prevent the multiplication of consciously inferior stocks (physically, intellectually, morally), or that special inducements will be given for the multiplication of stocks recognised as superior in one or all of these respects. On the contrary, the actual tendency seems to act towards the repression of such better stocks, inasmuch as merit, growing later and later of recognition, can seldom now marry until its best powers have been impaired. If the spread of Mr. Galton's opinions can do anything towards bringing about a better state of public feeling, it is well; but we must confess we see little prospect of his counsels producing more than the most limited result in the present jarring world of mainly unscrupulous and self-regarding units. Among a society where hereditary insanity, hereditary cancer, hereditary scrofula, hereditary drunkenness, and hereditary crime go on placidly reproducing themselves, each after his kind, from generation to generation, without even a thought of responsibility incurred—nay, more, among a society where merely to suggest the bare notion of such responsibility is regarded as probably wicked and certainly indelicate—what hope is there of such moral and united efforts for the general amelioration of the human race as

Mr. Galton ingeniously suggests? He must pay the usual penalty, we fear, for being so much in advance of the men among whom he lives.

There are two less immediately connected and minor portions of Mr. Galton's work which it would be impossible to pass over entirely in silence. The investigations into the phenomena of visualisation, number-forms, &c., are very curious; and, as so many eminent persons testify to the reality of the phenomena, it is difficult to doubt that there is some truth in them. At the same time, to those introspective people who have never themselves experienced anything in the remotest degree resembling them, they certainly sound, at first hearing, extremely incredible. One's first impulse, indeed, is to believe that hundreds of intelligent and scientifically minded correspondents have entered into a vast conspiracy to deceive Mr. Galton; and, even after one has read oneself out of this primitive incredulity, it is hard to suppose that the "subjects" have not highly coloured their descriptions of their own peculiar faculty. If the phenomena are really genuine, we cannot deny that it is so much the worse for our hopes of raising psychology to the position of a real science; for the existence of such singular diversities of mental faculty between individuals, if proved, would make unification and generalisation in psychological matters even more difficult and more hopeless than ever. The other point is the investigations into the efficacy of prayer. These are narrated with a quaint, scientific naïveté, which is not intended, doubtless, to be ironical, but which is as perfect a specimen of irony, in the pure Greek sense of the word, as we ever remember to have seen. The transparent candour, reverence, and scientific precision of Mr. Galton's reasoning will prove (quite unintentionally) a thousand times more annoying to dogmatism than any other tone that could possibly have been adopted. Abuse the dogmatists can stand, but gentle persuasion and clear logic are really too trying. When Mr. Galton remarks that he has not yet examined into the truth of Father Clarke's statement that "substantial curative effects are often produced by pilgrimages to Lourdes," or notes the absence of any marked answer to the daily prayer "that the nobility may be endowed with grace, wisdom, and understanding," or cites the history of English ducal houses in opposition to the belief of the Psalmist that the descendants of the righteous shall continue while those of the wicked shall fail, he is only honestly applying the methods with which he is familiar elsewhere to the particular subject under dispute; but it is almost impossible for unscientific readers not to suspect him of intentional satire.

Taking the book as a whole, it is the worthy production of a mind which is keen, acute, and subtle, as well as powerful; and it is one which no psychologist, no evolutionist, and no moralist can afford to leave unread. As to the politicians, they need it more than anybody; but what fraction of a chance is there that they will ever read it? And yet, if the blind lead the blind, what wonder that they both tumble into the ditch?

GRANT ALLEN.

# EMENDATIONS OF "SALTAIR NA RANN."

CELTIIC philology has during the last thirty years made great strides forward; but it is not yet advanced enough to give a critical text or a complete version of the 162 Middle-Irish poems recently published in the "Anecdota Oxoniensis," under the title of *Saltair na Rann* ("The Psalter of the Quatrains"). The difficulty is partly due to the obscurity of some of the subjects, partly to the antiquity of the language (which is about eight hundred years old), partly to the licence which the stringency of his rules as to rhyme compelled the author to allow himself in matters of grammar, but chiefly to the occasional carelessness or ignorance of the twelfth-century copyist. Though the text which he has given us is generally accurate and intelligible, of the 8,392 lines about 450 are more or less corrupt. In these he has managed to commit every crime of which an Irish scribe, as such, could be guilty. He omits, for instance, marks of length, letters, syllables, whole words. He joins words that should be separated. He bisects words that should be undivided. He inserts and transposes letters and even words. He confounds the letters *n*, *r*, *f*, and *s*; *b*, *d*, and *l*; *c* and *t*; *a* and *u* which in the Irish handwriting resemble one another. Lastly, like all mediæval Irish scribes, he sometimes interchanges the aspirated *d* and *g*, the sounds of which were similar, if not identical. Many of his errors have already been corrected in the published text; but many more remain. Of these I shall here give the corrections which have the most important bearing on the construction and interpretation of the text, and which—looking at metre, rhyme, alliteration, context, and parallel passages—may be made with the greatest certainty. The figures refer to the lines of the printed poems, which are numbered consecutively from 1 to 8392. Words and letters conjecturally inserted are enclosed in brackets.

40, indao[i]r. 101, Rosuidig secht rinn, réim [cain]. cf. 7719. 131, cain rith rind rethait insain. 133, na ré[e]. 186, rodelb dúili [dia] huagréir ("who formed the elements to his perfect will": cf. 1613). 223, na albe sreith, "the range of the mountains." 235, insert [grían]. 267, for feili, read fáil. 276, oí[a]t[cheim]me[i]s. 288, foda[s]riada ("closes itself," from *for-tadaim* with the infixed pronoun *das*: cf. *fo-t-r-óir-gell*, 3385, from *for-gellim*; *fo-s-r-or-dingsetar*, 5297, from *for-dingim*\*). 291, dorósat. 343, co céit rath. 395, do ohria[i]d. 447, ó thalman treib. 552, Saraph[é]in. 654, targ[ai]. 661, do[a]ib. 669, hin-uachtarchom ("in summo") dat. sg. of *uachtarcham*, the superl. of *uachtarach*). 698, friat[ndrim]. 711, for inalag, read naslóg. 790, dele na (cf. 584). 825, Ciano[m]beth. 840, air[m]itein. 843, bad[t]airnind. 889, tor. 917, Híttu, huacht, [gorta] ocus tess. 933, 'Mad (i.e., Immad, "abundantia") nofail. 1081, [inn]aitheac. 1090, 1354, tochomrao[ht]. 1147, a[t]saindil. 1169, iar [s]ét[ai]b. 1173, O[i]a. 1201, Fo[r]acaib. 1203, omit in. 1221, fia [ba fó]. 1224, dígu ("contemptio"). 1248, dothomailt. 1289, Ifirn [drúad]. 1302, cenfrith[t]uidecht (*f* dotted). 1469, talman traecht. 1601, Th'folt (*f* dotted). 1785, adf[a]sa. 1801, na secht rinn ("the seven planets": cf. 101, 7924). 1855, [fair]sing. 1888, [a]oenur. 1893, abois. 1905, Dia [dil]. 1919, [sain]dil. 1929, 'Sed (i.e., is-ed). 1945, do[t]menmain. 1989, In rí [réil]. 2033, do Dia [dil]. 2050, dogén. 2065, omit Dia. 2066, cid inglan ("though it is impure"). 2077, immsóil. 2078, for cogoe, read cen góil

\* The same strange metathesis of *r* occurs in the Würzburg Codex, 11\*10, *fo-da-r-or-cenn*, "he ended them," from *for-cennaim*, "I end," and in the Ambrosian MS. 25\*5, *fo-da-r-rathmíne[dar]*, "memorat eam," from *for-aithmíneir*, "memoro."

(as in 283, 1099, 3167). 2149, in detaoh. 2169, Roalecht[s]atar. 2189, Fodoralaig féin ("prostrated itself," *foalgaim*). 2201, Beir [lat]. 2263, dó. 2324, cohuag[d]a. 2331, tria riagla ("per regulas": cf. 7961). 2394, do[s]rósat. 2433, [a]ochtur (cf. 7271). 2452, istricha. 2540, cachri[g]. 2544, for tonnaib (cf. 2614). 2694, fo[nim] nél cachnaith Nemruaid ("Nimrod used to sing [teach] under a heaven of clouds": cf. 2141, 2725, 4991, &c., and note the interesting *cachnaith*, the absolute form of the reduplicated secondary present active of *canim*). 2789, Rothairniger[t] (the *n* dotted). 2824, Issau [án]. 2844, co trét no-oisce[d] Iacob ("to the flock which Jacob was tending," *obsequabatur*). 2882, da[i]m (as in 2114). 2890, in ge[i]n ("the offspring"). 2900, ama[i]rsech. 2923, omít dia. 2938, o[c]cáireib. 2942, [i]fál. 2968, cáire[oh]. 2983, Ó na sethar sreith ("from the series of the sisters"—i.e., the sons of Leah and Rachel). 3120, ro[t]togaeth. 3131, na bráthreib (a licence for *na bráthir*, 3493). 3135, nian-anacht. 3160, omít eo. 3203, na didohim (= *tuidchim*). 3250, combat tadcereith dergór ("that they should be redeemed with red gold"). 3251, nogabtais. 3263, dofuctha. 3275, bia[i]d. 3279, nimbai (the *m* dotted). 3297, Ioseph [dó] corath (cf. 3365). 3386, mbladna. 3437, 'Sindara. 3465, andúiri. 3526, aibbl[i]b. 3598, dii[t]. 3658, dofuc. 3735, iarslichtib. 3808, conni. 3824, t'fortaoh—so 3888, d'fortaoh (*f* dotted). 3880, rollin diumus ("pride filled him"). 3884, tabra[i]d. 3945, Ro[s]leicset. 4083, s[l]ocht (cf. 5102). 4142, [a]athair. 4364, [na]stomacha. 4422, dosorra[i]nn (from *doiridim*). 4428, roráid[i]. 4454, domuin [druin]. 4477, amra. 4493, iarsain. 4570, ardb treraib tochomrao[ht] (*treraib*, dat. pl. of *tríur*). 4639, mór d'uloc doromnat[h]. 4685, crúad. 4745, forcachleth. 4767, cir[r]tis. 4778, omít the third ba. 4796, dergthened (cf. 7136). 5026, tri cóic. 5071, ni th[r]uaraid (cf. *doruairaid*, "remansit," 4985, *tarfuairaid* 7627). 5130, la buidnib. 5147, omít orann, a gloss which the scribe has inserted in the text. 5164, inngléroinn (*roinn*, "division"). 5255, condathuib. 5257, 5299, rodassáir. 5276, rodassarái. 5279, rodassádi. 5359, rodáil[i]. 5364, andegdoene. 5410, arc. 5519, ba[t]dimdaig. 5544, [phopuil]. 5603, omít og. 5624, d'foraicin (*f* dotted). 5650, trétu. 5655, coro[s]alig. 5726, 'sinleo. 5752, ba hé dauir [dochraid] dermór. 5811, cia lóg. 5858, bi[aid] he cor ar cartine. 5880, cenluire[i]oh. 5923, [Cise]. 5965, inare[i]th. 5999, tindrem. 6095, censámugud. 6174, 6196, 6212, Achimeliach. 6231, achial. 6377, Dodechaid. 6378, David delb[dae] dréim do drong. 6393, omun. 6405, Corothofind. 6459, cen tuil. 6481, i[c]ocoud. 6549, Rodo[s]ealaig. 6625, imgaes [glain]. 6626, ar airmite[i]n. 6651, co sonairdib eid (cf. 2778, "with happy signs of peace"). 6663, rosmathir (cf. 7955). 6690, domórféirg (cf. Fiaco's hymn 34). 6739, dosrat fo chrúach [orúad] cachta. 6744, fors[é]is. 6761, conam-mad air ("commensus est"). 6766, slúagai[d]. 6797, Dorairohe[i]l. 6889, iarsét[ai]b. 7025, arordan. 7035, [nách]. 7155, roda[s]amach. 7156, ro[m]mallachsat. 7183, atracht cen cheo, ba gním cóir. 7203, fosralaig ("prostravit eos"). 7269, b[i]it. 7272, 7296, doab. 7337, 7361, Bf [rán]. 7414, Siliam (i.e., Silas). 7505, Insa-[cart] dos-raiga ("the Priest," i.e., Christ, Heb. vii. 15, "who chose her," i.e., Mary). 7665, 8003, betha. 7670, segda [Solman] (cf. 6888). 7893, [ind]aigein. 7895, nirfoillaig (the *f* dotted). 7923, rith ro[i]so (cf. 1339). 8014, 8015, transposse atá from the former line to the blank in the latter. 8035, ni[t]teroca. 8055, ánnis. 8074, Dia [dil]. 8157, Beti[t]. 8266, seissit alúag ("hosts will sit," *seisist*, 3d pl. s-fut. active of *seidim*; the 3d sg. *seis*, 8273). 8278, dorósat. 8369, síröite (óite, O.-Ir. óitiu = *iuvetus*).

So much for the scribe's errors. The follow-

ing corrections of the printed text and notes are rendered necessary by mistakes or oversights of the editor:—48, 66, 1642, the *-b*, *-g* of the MS., though ungrammatical, should stand for rhyme's sake. For the same reason, in 631 the *talmaind* (with *nd* for *n*) and in 1548, as in 5612, the *diſgen* (with one *n*) of the MS. should stand; and in 2934 we should probably read *lainerda[ig]*. In 1315 the *ch* should be *n*. In 3936 the *d* of *tened* should stand, as it was obviously inserted to prevent elision. 1317, note, read *Cia*. 1684, read *dott'airchissecht*. 2001, dele "[ba]": *marb* here stands for *romarb*, as *saer*, 7409, for *roshaer*; *cruthaig*, 7879 (and, probably, 33), for *rochruthaig*. 2069, the reading of the MS. *A a ben* may be right. 2615, read *iarnDia* (as in 2995). 3771, 6112, 6761, dele *hyphens*. 3173, 3807, 3864, 3919, 7533, dele *commas*. 1569, 4739, 4740, 5982, and 6828 should have quotation-marks. 5635, read *nis'nacht* (= *ni-s-anacht*) 5835, dele note; *dingéba*, "I will repel" (redupl. fut. of *dingbaim*), is right. 6143, dele first comma. 6762, read (with MS.) *alladaib*. 6969, read *it* foimsid (*it*, "thou art," as in 7800). 7880, read *'na du* ("in its place," *dú*). 8282, dele "[n]." WHITLEY STOKES.

### SCIENCE NOTES.

In recording the appointment of Prof. Huxley to the presidency of the Royal Society, in succession to the late William Spottiswoode, it is needless to do more than join in the universal approbation with which the selection has been received.

So large has been the demand both in England and America for Dr. Klein's masterly work, *The Elements of Histology*, that the first edition, issued a few weeks since, has been exhausted, and Messrs. Cassell and Co. have already in preparation a second edition.

PROF. BABINGTON has prepared two pages of additions and corrections to the eighth edition of his *Manual of British Botany*, which may be had gratis by application to Mr. Van Voorst, 1 Paternoster Row.

THE posthumous writings of Marie Roualt have just been published under the editorial care of his friend, M. P. Lebesconte. Roualt founded the geological museum at Rennes, of which he became curator. He was in many ways a remarkable man. Originally a shepherd, and afterwards a barber, he taught himself the elements of natural science, and worked out with much self-denial the geological structure of a part of Brittany. At his death, in 1881, he left three papers on local geology, dealing specially with the palaeozoic fauna. The work now published is devoted mainly to a study of the amorphous of the Silurian rocks of Brittany, and is illustrated with beautiful lithographs from Roualt's own drawings.

WE have received:—*The Life and Work of Charles Darwin*, by Prof. L. C. Miall (Leeds: Jackson); *Sir William Hamilton: the Man and his Philosophy*, by John Veitch (Blackwood); *Introduction to the Critical Study of Philosophy*, by the Rev. Asa Mahan (Elliot Stock); *The New Principles of Natural Philosophy*, by William Leighton Jordan (Bogue); *The Smithy and Forge: a Rudimentary Treatise, including Instruction in the Farrier's Art, with a Chapter on Coach Smithing, with numerous Illustrations*, by W. J. E. Crane (Crosby Lockwood); *The Ethics of Diet: a Catena of Authorities deprecatory of the Practice of Flesh-eating*, by Howard Williams (Pitman); *The Message of Psychic Science to Mothers and Nurses*, by Mary Boole (Trübner); *The Heavenly Bodies: their Nature and Habitability*, by William Miller

(Hodder and Stoughton); *The History of a Lump of Chalk: its Family Circle and their Uses*, by Alexander Watt, with Illustration (A. Johnston); "Robinson's Country Series"—*The Apple in Orchard and Garden*, by James Groom, *The Potato in Farm and Garden*, by R. Fremlin, *Fruit Culture for Profit*, by E. Hobday (Routledge); &c., &c.

### PHILOLOGY NOTES.

MR. R. D. SETHNA has been appointed lecturer on Marathi at University College, London.

THE new volume in "Trübner's Collection of Simplified Grammars" is *Tibetan*, by H. A. Jaschke, which will be followed by *Danish* by Miss Otte, and *Roumanian* by M. Torceanu.

MESSRS. MACMILLAN announce a school edition of *Juvenal*, edited by Mr. E. G. Hardy, head-master of Grantham Grammar School.

PROF. SIEVERS, of Jena, has been appointed to the Chair of Teutonic Languages at Tübingen.

M. CONSTANS is engaged upon a Chrestomathy of Old French, which will be published by Vieweg.

THE library of the Institut has been enriched by the bequest of all the Oriental MSS. belonging to the late Jules Mohl.

THE last number of the *Calcutta Review* (Trübner) contains an article on "The Behar Dialects," by Syamacharan Ganguli, in reply to Mr. Grierson's claim on behalf of these dialects, or some one of them, to rank as the official language of the province. The writer argues his case with both skill and good temper; and his conclusion is of interest from a political, quite as much as from a linguistic, point of view. Though a Hindu and not a Mahomedan, if we may judge from his name, he advocates the recognition of Hindustani as the one national language of the entire peninsula.

THE following are the contents of the current number of the *Journal of Philology* (vol. xii., No. 23):—*Cicero, De Natura Deorum*, Book II., by J. B. Mayor; *The Cleophones in Aristotle*, by I. Bywater; *Tacitus, Hist. v. 5*, by W. Ridgeway; "Epeus in Homer and in an Olympian Inscription," by W. Ridgeway; *The Age of Homer*, by A. H. Sayce; *Horace, De Arte Poetica*, by H. Nettleship; *Ovid, Metamorphoses*, by R. Ellis; *Placidus, Nonius*, &c., by J. H. Onions; *The Nuptial Number in Plato, Rep. viii. 246*, by J. Gow; *Aristotle, Poetics*, by O. Begg; *Indian Folk-lore Notes from the Pali Jātukas and the Kathā Sarit Sāgara*, by O. H. Tawney; *A Metrical Practice in Greek Tragedy*, by A. W. Verrall; *Ovid, Ibis, 539*, by A. E. Housman.

THE last number of the *American Journal of Philology* (No. 13) contains, besides minor notices, articles by T. R. Price, on "The Colour-System of Vergil;" by M. Bloomfield, "Historical and Critical Remarks Introductory to a Comparative Study of Greek Accent;" and by J. P. Postgate, "Etymological Studies," ii.

### MEETINGS OF SOCIETIES.

ARCHAEOLOGICAL INSTITUTE.—(Thursday, July 5.)

T. H. BAYLIS, Esq., Q.C., in the Chair.—A vote of sympathy with Mrs. Coates on the death of her husband, the Rev. R. P. Coates, was passed.—Prof. Bunnell Lewis read a paper on the Gallo-Roman antiquities of Reims, calling special attention to the Porta Martis, the Mosaic of the public promenades, the Tomb of Jovinus, the Inscriptions, and the Coins.—Mr. Park Harrison adduced further evidence of the antiquity of the inscrip-

tions found by him at Stonehenge.—Mr. W. M. F. Petrie read some notes on a collection of *graffiti* of the fifteenth, sixteenth, and seventeenth centuries from the Great Pyramid.—Mr. E. Wilmott exhibited a further collection of rubbings from the brasses in Cobham church, which were commented on by Mr. Waller.—Mr. J. Nightingale exhibited a fine pre-Reformation chalice from Wyllye church, and a panel gilt tankard of very good design from Fugglestone church, Wilts.—Mr. P. B. Brown sent a watch by Daniel Quare, with a silver "cock," and other watches.

BROWNING SOCIETY.—(Annual Meeting, Friday, July 6.)

THE REV. J. S. JONES in the Chair.—The second annual Report was read and adopted, and the officers for the year elected.—A short paper on "Saul" was read by the Rev. H. O. Beeching, which was mainly an account of the poem.—In the discussion that followed part was taken by the Chairman, Mrs. Sutherland Orr, Miss Hickey, Dr. Berdoe, Mr. Furnivall, Mr. Kingsland, and Mr. Gonner.

### FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

*The Parthenon.* By James Fergusson. (John Murray.)

THIS handsome and well-illustrated volume is really a comprehensive treatise on the various modes of roofing and lighting employed in the temples of the Greeks—a very difficult problem, certainly not dealt with satisfactorily by any of the numerous archaeologists who have hitherto discussed the subject.

The main object of Mr. Fergusson's work—on which he has expended much study both of historical evidence and of the buildings themselves, aided in no small degree by his practical knowledge of architecture—is to combat the old and once universally accepted theory of the "hole-in-the-roof" (hypæthrum) method of lighting the cella, with its statue of the deity to whom the temple was consecrated.

In the first place, Mr. Fergusson denies that any but a very small minority of the temples were hypæthral; and, secondly, that the hypæthrum, when it did exist, was in the cella roof at all. The objections to what may be called the orthodox theory are, first, that rain and snow, during the violent storms not unfrequent in Greece, would certainly wet all parts of the cella and beat upon the statue itself—a very serious matter in the case of one made of gold and ivory. That this could have been allowed is extremely improbable, especially as Pausanias (book v., chap. xi.) is careful to describe the various methods by which the ivory was preserved by a careful attention to the exact amount of moisture it required. Thus, at Olympia, the great statue of Zeus by Pheidias was rubbed with oil on account of the damp nature of the surrounding soil; while at Athens the similar statue of Athene, in the dry air of the acropolis, was cleaned with water to keep the ivory in good state. Such refinements as these would surely have been idle had the statues been exposed to the beat of rain.

The second objection is the inartistic effect supposed to be produced by the sun-light

striking downwards into the cella from the roof-opening. It may, however, be questioned whether this method of lighting would always be ugly in effect. The best preserved of the Egyptian temples—that at Denderah, of the Ptolemaic period—is still completely covered by great slabs of stone, in which a few square openings are cut to admit the light. It is difficult to imagine anything more beautiful than the soft light which is reflected upwards all over the walls and ceiling of the chambers from the brilliant splashes of sunshine which fall on the pavement when the sun is high, thus flooding the whole room with a subdued, but sufficient, illumination. Still, this method of lighting requires a bright, cloudless sky, a condition of things by no means constant in Greece.

Mr. Fergusson seems to attach but little importance to Vitruvius' evidence on the subject, and yet in one point the Roman writer strongly supports a part at least of Mr. Fergusson's theory. Vitruvius, in his classification of temples, sets those that are hypæthral in a category by themselves—mentioning peculiarities, such as their being decastyle and dipteral, which completely exclude by far the greater number of temples which most archaeologists have hitherto included in this class.

In the author's ingenious and detailed derivation of the Doric style from an early wooden type it is difficult to see why he excludes the column from this survival of timber construction. Surely the trunk of a tree is a primitive and obvious method of support to the horizontal beam; and even the abacus would arise naturally from a flat piece of wood being laid at the top of the trunk to prevent the pressure of the architrave splitting it downwards with the grain. At pp. 89, 90, this method of construction is mentioned, and a passage from Pausanias is referred to which records the fact that the original house of Oenomaus at Olympia had wooden columns, one of which was preserved as a relic in the opisthodomos of the Heraion. Even in later times wooden pillars have been not unfrequently used, as in the Holy House at Mecca, the cloister round which in the seventh century was supported by whole trunks of palm-trees.

Before dealing fully with the original and ingenious theory which Mr. Fergusson has for so many years been advocating, the subject of temples admitted by all to be hypæthral is discussed. These are reduced to four—namely, those at Samos, Didyme, Ephesus, and that of the Olympian Zeus at Athens. A plate showing a proposed restoration of this last is given at the end of the volume. The rain-and-weather difficulty is got over by putting the roof-opening, not over the cella, but over the pro-naos (a sort of vestibule), from which the light passes into the cella through a large window in the end wall. The restoration is ingenious, but unsupported by existing evidence; and the kind of roofless attic which admits the light and breaks the line of the roof appears contrary to the spirit of the Greek styles, and will probably not be insisted upon by the author, who does not lay much stress on this particular scheme of restoration.

The most important part of the book is the

second half, which treats of the Parthenon and other well-preserved Doric temples, such as those at Aëgina, Phigaleia, and Paestum. It is to this class that the author applies that system of lighting of which he is so enthusiastic an exponent. Without going so far as to admit that what may be called Mr. Fergusson's "clerestory theory" is proved with mathematical certainty, it must be allowed that it is in the first place perfectly suited to the requirements of the case, both as regards security against the rain and as providing an excellent and well-directed supply of light; secondly, that it cannot be contradicted by any known fact, and is to some extent supported by many of the existing constructive details. Without explanatory drawings, it is difficult to give a good notion of this theory, but it may be roughly described thus:—A range of open metopes or windows are placed over the internal rows of columns; light is admitted to these by small openings in the roof, over the space between the cella wall and its lines of columns—what may be called (except in the case of the Phigaleian engaged shafts) the aisles. These aisles are roofed with marble slabs resting on the upper internal architrave, and the rain which falls on to this roof is carried off by holes through the cella wall, and discharged harmlessly on to the pavement of the open peristyle. In this way an ample supply of well-directed light is provided, while the rain is prevented from beating into the cella. The trifling amount that might during violent storms be driven against the grills with which Mr. Fergusson fills these open metopes could easily be excluded by curtains. By this system a real constructive use and meaning are given to the otherwise rather objectless internal row of columns, which certainly, in the case of cellae as narrow as those at Aëgina and Phigaleia, could hardly have been inserted simply to diminish the bearing of the roof timbers. Mr. Fergusson adopts the name *ῥο δῶρον* for these metope-windows, but it would appear from the classical use of the word that it would more correctly be applied to the rectangular openings in the roof itself. The term *ῥοαία κεραυῖς* (*Plut. Perio. xiii.*) obviously refers to a perforated roof-tile, and would very well suit Mr. Fergusson's external openings.

A very interesting set of illustrations are given to explain the method in which this system was probably applied in the very abnormal temple at Bassae, near Phigaleia, so carefully measured and drawn by Cockerell at the beginning of this century. Mr. Fergusson suggests a different dimension for the height of the internal columns; but, as one of these was found quite complete, its height can hardly be questioned when published by so careful a draughtsman as Cockerell. In plate ii., however, Cockerell's measurements are closely followed, and seem to suit Mr. Fergusson's theory very well. At p. 77 doubt is thrown on the discovery by Baron Haller of the perforated tile with both its upper and lower angles curved. But the existence of this *ῥοαία κεραυῖς* appears to be a very important piece of evidence in support of Mr. Fergusson's own theory, which requires a number of small rectangular open-

ings in the roof, instead of one large open space extending over both slopes. The width of the roof-opening is given by this doubly curved tile, and it is very much too narrow for any possible aperture of the usual hypæthrum class, while it fits exactly a smaller roof-aperture such as that drawn by Mr. Fergusson on p. 76.

It is more difficult to agree with the author in his theory that the strange arrangement on plan of the internal engaged columns at Bassae is due to the architect's wish to set the external roof-openings symmetrically with regard to the columns of the peristyle. In the first place, this temple is not in the valley where Phigaleia stood, as Mr. Fergusson asserts, but at Bassae, on a very elevated part of Mount Cotylios. No one who has ever seen it can forget the glorious extent of the view from the temple steps—a sort of panorama of the oak-clad valleys of Arcadia, with the brilliant blue sea beyond. On this account the roof-openings would be practically invisible; and, again, it would have given quite equal symmetry of external effect if the internal columns had ranged with those of the peristyle, thus setting an opæion over each of the voids. Owing to the loss of the statues and internal fittings of the cella, the real explanation of its mysterious arrangement will probably never come to light.

Mr. Fergusson devotes some interesting chapters to the great temple at Paestum, the recently discovered Heraion at Olympia, and some of the abnormal Greek temples, such as those at Eleusis and Agrigento. The section of the Paestum temple (p. 82) is rather misleading owing to the omission of the end wall of the cella. The rebated upper architrave of the internal range of columns, which Mr. Fergusson suggests, though doubtfully, must be rejected. The evidence of photographs, on which this particular point rests, is always rather uncertain, both from the misleading effects of shadow and also from the stupid practice of painting out the skies, which often quite falsifies the outline. Having climbed up to it with great difficulty some years ago, I can testify to the fact that, on one side at least, the architrave has the usual unrebated form.

In so minute and careful a treatise on the Greek methods of lighting, one cannot but regret that the author has not dealt with the very interesting subject of the so-called "Temple of Concord" at Agrigento, which is, on the whole, the best preserved of all the specimens of Greek architecture, and specially interesting for its two perfectly preserved windows in the end walls of the cella and the posticum, as well as for its stone staircase, still complete and in good preservation. The position of the two remaining windows, which, it should be noted, are wrongly drawn in Wilkin's *Magna Graecia*, show that there were originally two at each end, close under the ridge-piece of the roof. As there are, of course, no corresponding windows in the tympana of the pediments, but little light, sparingly reflected from the peristyle floor, can have passed through into the cella, which may very well have been lighted in addition by the "opæia" of Mr. Fergusson's theory.

The last chapter of the book is devoted to

the Parthenon, and explains the application of the "opaion" theory to the lighting of the cella, with its marvellous chryselephantine statue. The whole proposed restoration of this has been worked out with great care and patience, aided greatly by Mr. Penrose's most valuable work, not on paper only, but with the important—in fact, almost indispensable—aid of a large and accurate model. The large plates showing the section and internal perspective are particularly interesting, as well as the suggestion for the internal arrangement of the plan on p. 108. It is a pity that the plates do not follow the plan in the management of the staircase—surely a much better arrangement than that with open stairs in discordant raking lines behind the statue. This is, however, a matter of comparatively small importance, and does not affect the main question.

The same holds good throughout this very interesting and laborious work; it is the minor points and side issues to which exception may be taken, rather than to the main object which the author is anxious to set forth, and to which he has devoted so many years of thankless and little recognised labour.

J. HENRY MIDDLETON.

#### THE ART MAGAZINES.

MR. J. SADDLER'S engraving on steel after the late Henry Dawson's grand picture of Durham, which is given in the current number of the *Portfolio*, is a sign that the great English school of landscape line-engraving is not extinct. We wish we could accept the plate as a sign that it is reviving.

WRIGHT OF DERBY forms the subject of articles in both the *Art Journal* and the *Magazine of Art* this month. We have seldom seen more beautifully executed wood-cuts than those of Wright's "Convent of St. Cosimato" and the famous "Air-Pump" in the former. That of "Sterne's 'Maria'" in the latter is good, but the other examples of Wright are below the usual level of the *Magazine of Art*. This level is, however, well sustained elsewhere, especially, perhaps, in the full-page illustration of Mr. Onslow Ford's spirited figure of "Mr. Irving as Hamlet," and in admirable representations of Mr. J. D. Linton's noble drawing in the "Institute" and Mr. Boughton's "Peacemaker" from the Royal Academy. With the exception of some extracts from Mr. Ruskin's recent lecture on the "Mythic School" and one of Mr. Walter Armstrong's interesting chapters on the "Year's Advance in Art Manufactures," the *Art Journal* contains little letter-press of interest; but that of the cheaper journal is rich and various, including an admirable note by Mr. Austin Dobson on Miss Margaret Thomas's "Bust of Fielding," two fine sonnets by Mr. Eugene Lee-Hamilton on frescoes by Signorelli, and one of Miss Jane Harrison's capital papers on "Greek Myths in Greek Art."

THE latest parts of *American Etchings* which have reached us contain "Spring" (a ploughing scene), by Peter Moran, and "Hackensack Meadows," by Mrs. M. Nimmo Moran. The latter is by far the more charming of the two—a bright bit of open country, with a sunny sky, like in manner to the work of the etcher's husband, Thomas Moran, but not without individuality.

THE etching of "La Grand'mère," by Mdlle. Lucie Contour, after the picture of Emile Renard in the Luxembourg, is the etching of an engraver. Mdlle. Contour has already earned

laurels with the burin; and it is therefore not surprising that this plate, which is one of the best which has appeared in recent numbers of *L'Art*, is remarkable rather for careful skill than for freedom. As an interpreter of the character and tone of the original it is satisfactory. "La Rafale," an etching by Edmund Yon after his landscape in the Salon, is a painter's etching, and is very brilliant and effective. Among the more interesting articles which have lately appeared in this giant of art magazines may be mentioned one on the proposed alterations in the streets of Florence, by F. Otto Schulze, and M. Octave Lacroix's "Un Voyage artistique au Pays-basque."

#### AUTOTYPES FROM THE HERMITAGE.

THE collection of the Hermitage at St. Petersburg, though little known in comparison with other national galleries of Europe, has a wide and well-deserved fame. It boasts no less than five Raphaels, including the exquisite "Vierge de la Maison d'Albe"; it is exceptionally rich in Rembrandts, Rubens', and Van Dycks, in Murillos and Velasquez'; it contains the "Adoration of the Magi" by Botticelli, one of the best of Andrea's Holy Families, "La Madone dei Latte" by Correggio, Titian's "Toilet of Venus," Tintoretto's grand "Rescue of Andromeda," and two or three admirable examples of Franz Hals. It comprises perhaps the best collection of the Spanish school out of Spain, and is rich in Flemish and Dutch pictures. It has three works of Alonzo Cano, the "Virgin in Triumph" of Quintin Matsys, "La Vierge au Pommier" and "La Vierge à la Tonnelle"—two of Cranach's most important pictures—no less than five Van der Helsts, and a Brouwer. The above summary of the attractions of the Hermitage may give some notion of the importance of the latest enterprise of Messrs. Ad. Braun and Co., of Paris, and the Autotype Company of London, who are now engaged in publishing a series of no less than 432 autotypes from the most celebrated paintings in this gallery. The size of the great majority is about nineteen by sixteen inches, of the rest about twelve by ten inches; and the work therefore exceeds in magnificence even the splendid series from the Prado which the same publishers recently issued.

About eighty of the Hermitage set have now appeared, and there can be no doubt that they are the best autotypes yet executed. This is especially visible in the case of dark pictures like the superb "Abraham entertaining the Angels" of Rembrandt. By some improvements in process, of which Messrs. Braun preserve the secret, they are able to obtain far more detail in the passages of deep shadow, and also tones more truthful in relation to the colours of the original, than has been possible before. Instead of the large spaces of blank darkness to which we are accustomed in photographs from pictures, every corner of these large and beautiful reproductions is as varied as the originals. It is needless to say that no other method has been found which can in any way rival such autotypes as substitutes for the pictures themselves. "The Toilet of Venus," by Titian, may be instanced as a wonderful example of how the colour of an original can be suggested in monochromes. The large scale on which these reproductions are made renders them almost faultless guides in the study of the handling of different artists. Even in some of the minutely painted Dutch pictures this is easy to distinguish. The firm modelling, for instance, of Paul Potter, and the light glitter of his foliage are fully given; and, in the case of artists of more broad and personal characteristics of touch, such as Franz Hals or Rembrandt, it is possible to trace each stroke of the brush.

#### CORRESPONDENCE.

PITHOM, FAYOUM, MOERIS.

London: July 9, 1883.

The report of the Egypt Exploration Fund omits from the interesting discourse of M. Naville a point of great importance. This accomplished Egyptologist did not fail to emphasise the LXX. as a guide to the traditional site of Egyptian localities mentioned in the Old Testament. The Arabs, in their oral and written records, have preserved for 1,240 years, without the slightest variation, the accounts which the companions of 'Amr adopted with the country which they claimed as their ancestral possession. "Ibrahim," "Yussuf," and "Moosa" are their "Moses and the prophets." From the end of the kingdom of Judah, 588 B.C., when the princes were carried captive to Babylon, the fugitives to Egypt also kept for another thousand years, as the Church holds, their sacred books as unspotted from the world in which they lived as those Samaritans who have jealously guarded their rolls amid all the changes of dynasty and name from Samaria to Nablous. After the reign of Solomon (1015 B.C.), if not half-a-century earlier, under David, intercourse between Palestine and Egypt was so intimate that there was in all probability a colony of Jews who, like the Ionians of Herodotus, kept up commercial and religious relations with their brethren in the Holy City. If the exodus took place in 1324 B.C., only a little more than three centuries had elapsed between the proclamation of David as King of Judah at the great Semitic shrine of Hebron and an event which, with its extensive political changes, creation of new landed proprietors, new subdivision of the soil of an important and fertile province, accompanied by the widespread loss of household servants and Government workmen, and the destruction of whole regiments and a royal commander, could never have been effaced from the records of a nation of historians.

It is indisputable that for the last ten centuries not a doubt has been raised that Fayoum is the equivalent of Pithom. The town Sevek yielded to Crocodilopolis, Arsinoë, and Kom el-Fares. The "lake district"—Phiom, Pithom, Faiûm—has not changed its name in 2,500 years.

Saadia ben-Joseph was born, in A.D. 892, in the Fayoum—as Munk says, in his *Notice sur Rabbi Saadia* (Paris, 1838), "l'ancienne Pithôm, dans la haute Egypte." He was called "Alfayyumi" (אלפיימי), ou en Hébreu, Hapithomi (הפיתומי). He translated Pithom in Exod. i. 11, Al-Faiûm, or, as the Latin of the Polyglott puts it, "Aedificaveruntque civitates, horrea Pharaoni, in Phaïum et Ain-Semes." He has always been termed Ha-Pithomi by the Jews in the countless references in Hebrew to him. Masûdi and the Arab historians call him El-Fayoumi when they are testifying to the esteem in which he was held by men of a kindred nationality. Taking up at hazard such a book as *Les Merveilles d'Egypte selon les Arabes* of Murtadi ibn-Gaphiphe (p. 107), "ce que Dieu en dit dans l'histoire de son Prophète Joseph, à qui Dieu fasse paix, quand il parle ainsi au Roy; donnez-moy la surintendance des magasins de la terre," one finds from "Hasame fils d'Isac" down to the shékhhs who live on the Bahr Jussuf and the great shékhhs of the Cairene mosques, as I know from my own personal enquiries Jewish skill and energy are believed to have created the fertile province of Pithom or the Fayoum. "Joseph, . . . quand il fut Maître de l'Egypte, et haut élevé dans la faveur du Baïan [cf. Wadi Reïan] son Pharaon . . . fut envié par les Favoris du Roy. Alphiom se nommait alors la Geoune [qy. גֵּוּנָה] c'est à dire le Marest." In these Arab traditions the nobles say to Pharaoh, "Commandez à Joseph

de détourner l'eau de la Geoune et de l'en faire sortir, afin que vous puissiez avoir une nouvelle Province et un nouveau revenu." Joseph accomplishes the task. The Arabs well knew that an enormous interval of time must have elapsed between the redemption of the Fayoum and their own day. Now the LXX. expressly connects Pitho(m) (Pi-Tum), Raasamee (Ra-Mesee), and On, which is called Heliopolis.

Meri-Tum or Mer-Tum (Meidum), "Beloved of Tum," is the splendid monument erected for some other purpose than a tomb a short distance south of the "horrea Pharaonis," the royal granaries near Memphis, close to On, which is Heliopolis. There is, therefore, good reason to suppose that the children of Israel were employed in the excavation and construction of the vast lake of Moeris and its canals. It would have been a wise and far-sighted measure for the reasons given by the Egyptian king in council.

Should a truly catholic tradition, taught in Calcutta and Cairo, in Rome and in Oxford, in the mosques of Mecca and the synagogues of Prague, be exchanged for "a granite hawk" and "a squatting statue"? This does not detract from the importance of continuing the excavations. In any event, M. Naville will discover and translate such tablets as that of Ptolemy II. He deserves cordial thanks and pecuniary support; but he must have been startled by the exaggerated and dangerous importance given to this Tum.

As for Succoth, it rests, so far as I am aware, solely upon a conjecture of Brugsch Bey, published in the *Zeitschrift ägypt. Spr.*, p. 8, 1875, that the "Palestinian Succoth" was the Egyptian *tuka*. How can a *Tuka* 30' of lat. to the north of Ismailia be connected with a Pithom at Tel el-Maschuta? COPE WHITEHOUSE.

#### NOTES ON ART AND ARCHAEOLOGY.

ON Wednesday Mr. Sidney Colvin was appointed Keeper of the Prints and Drawings in the British Museum, in succession to Mr. G. W. Reid. The appointment, that is to say, was then made by the principal Trustees, subject only to the formal sanction of the Treasury. The nomination may be said to have come from the popular voice, or at least from the unanimous opinion of those qualified. After saying so much, we must add that much is expected from Mr. Colvin in his new post, which he owes not less to his capacity for organisation than to his excellence as a scholar, or his ability as a critic, or his eminence as a connoisseur, distinguished as he is in all these walks of life. Under his rule the Fitzwilliam Museum, from chaos that it was, has become a model of order and arrangement, and an excellent educational influence; while, again, the credit is wholly his of having endowed the university, in the new Museum of Classical Archaeology, with a collection only second in comprehensiveness and completeness to the famous gallery at Berlin.

We are informed that action is being taken by the authorities of the National Gallery in the matter of the National Gallery Loan Act, lately passed. Certain provincial museums have, we believe, been invited to make application for such loans as they may desire, consistently with the provisions of the Act; and, shortly, a certain number of pictures and drawings may be expected to leave Trafalgar Square. But that there may be no misapprehension on this head, it is as well to point out, first, that no picture which can be of substantial importance in London, either for its own distinguished merit or as forming part of a sequence it is undesirable to break, can be permitted to leave the National Gallery; and, secondly, that works received by gift or bequest, even if

they should not be of the first importance, cannot leave the National Gallery under a term of years. And it is equally desirable that it should be widely known that important purchased pictures will not be suffered to quit the gallery. There will remain, however—after the Trustees and the Director have taken the most discreet view of the powers conferred on them—a sufficient number of instances in which the despatch of pictures to provincial galleries will be compatible with the best interests of the student of art in London. The National Gallery possesses many Turners which it is unable to exhibit. Some of these will be sent into the country. It likewise owns a certain number of pictures by Turner's smaller contemporaries which may be profitably spared, and which may be capable of arousing, in provincial places, some legitimate interest in artistic study. As has been said elsewhere, it is to be hoped and believed that the application of the new Loan Act will foster museums in the country, and tend even to encourage their foundation. The provincial museum in France is an institution of usage—a thing of course. Of England the chronicler should one day be able to say the same.

A SUBSCRIPTION has been set on foot to purchase for the Derby Corporation Art Gallery Wright of Derby's famous picture of "The Orrery." The present owner has offered it to the gallery at the very low price of £400. Considering the size and importance of this picture, which is a companion to the celebrated "Air Pump" in the National Gallery, it will be simply a disgrace to the town if the necessary funds are not immediately raised.

AN exhibition is now open at South Kensington, in the new library buildings, of prize works by students of Government schools of art throughout the country. These prize drawings, paintings, models, decorative designs, &c., number somewhat over five hundred, having been thus reduced by a process of national competition out of a grand total of nearly a quarter-of-a-million sent in.

THE beauty of form and the perfection of workmanship of the violin have long allowed to rank among objects of art, or of what the French are fond of styling "haute curiosité." It will therefore be interesting to record in a line or two the prices fetched by certain ancient fiddles of repute at the auction-rooms of Messrs. Puttick and Simpson only the other day. The fiddles had belonged to Mr. Hulce, of Ashton-on-Mersey, in Cheshire. A Stradivarius of characteristic elegance—an Antonius Stradivarius of the date of 1687, the middle period of the maker's life—realised £500. A hardly less desirable instrument than the tenor just mentioned was one wrought by Joseph Guarnerius, whose excellent work yet bears no likeness to that of his still more illustrious predecessor. It was dated 1728, and fetched £290. It belonged to the last of the three periods into which M. Fétis has divided the labours of this master—a period in which, as Mr. Hart tells us, Guarnerius's work was of the boldest, his construction of the most massive kind. A good example of Gasparo di Salo, of Brescia, the founder of the Italian school of violin-making, sold for £45; and for £330 there was sold a noble violoncello, the work of Francesco Ruggerius, a great maker of the cello, whose work in general belongs to the school of Amati.

THE organisers of the forthcoming Printers' Exhibition at the Agricultural Hall are arranging for a comprehensive display of designs for Christmas, New Year, birthday, and other congratulatory cards, and of paintings in oil and water-colour, etchings, &c., of a nature suitable for cheap reproduction and sale by stationers.

THE Royal Cambrian Academy of Art will hold its second summer exhibition at Rhyl from July 23 to September 15.

A CURIOUS story comes from Athens. M. Maletopoulos, a well-known collector of antiquities, has addressed a letter to the Parnassos Society reporting the discovery by fishermen of a large bronze equestrian statue lying under the sea close to the shore of Delos. M. Maletopoulos says that he has in his possession one of the feet of the horse.

#### THE STAGE.

##### MDME. BERNHARDT AND "FÉDORA."

MDME. SARAH BERNHARDT has this week paid her flying visit; and, twelve hours after these lines are in the hands of our readers, she will probably have accomplished the extraordinary task of playing nine times within the space of six days the most arduous part in her repertory. For that is what "Fédora" undoubtedly is—a strain and a sensation from beginning to end. The rush to see it has been remarkable; the palmy days of the French theatre in London appear, for a brief time, to have returned; and M. Meyer, the director of the foreign enterprise at the Gaiety, may, at the last, unexpectedly be encouraged to try his fortune once again next year. The excitement caused by this week's performances would have been ridiculous had they been occasioned only by the piece, of which all that can be said is that Mdme. Bernhardt's literary tailor has guaranteed her a perfect fit. "Fédora," as we had occasion to remark last week, is not literary. It is melodrama, devoid of style, devoid of beauty, and tolerable only by reason of the art of its interpreter. In this respect it is a curiosity. It is, perhaps, only lately that Mdme. Bernhardt has known her genius to be so potent and independent that she could employ it on a piece like "Fédora." Generally, her triumphs have been in association with the legitimate triumphs of the dramatists, though often, it may be, it was she who gave vitality to the efforts of the minor dramatic poets, and she who renewed the youth of Racine. Still, her work has generally been with worthy material; she has been the interpreter of the writer of comedy as distinguished from the mere playwright. Hardly at all, we think, till the moment of her appearance in "La Dame aux Camélias" did Mdme. Bernhardt forsake literature; and even "La Dame aux Camélias" has literary qualities, though these are somewhat hidden in the stage presentation of the piece. But, in "Fédora," literature has been thrown aside by one of its accepted professors, and M. Sardou has been content to produce what one actress of genius could perform with effect. "Fédora" will die with her—nay, it is probable that the actress will survive "Fédora."

A criticism in much detail of her performance in it would be out of place now that that performance is on the point of being seen for the last time in London; and the piece we have on a previous occasion described with care. But of the performance it may at least be said that it reveals nearly every phase of the lady's talent. There is hardly any emotion that Mdme. Bernhardt is fitted to express that does not somehow get itself expressed in the part. We pay the distinguished literary tailor the compliment of declaring that he has understood his business completely. Mdme. Bernhardt pouts and Mdme. Bernhardt caresses; she flirts, she intrigues, she implores, she denounces, she passes from rapture to despair. Nothing could be more clever; few things could be as seizing and as impressive; yet, after all the performance, there must remain the distaste which is occasioned by the presentation of a character in many points repulsive, and varied beyond the natural bounds of humanity. We

have thus, we confess, but little sympathy with the last curious triumph of the greatest actress of the Continent. It is a display of genius, and—what is now, under M<sup>me</sup>. Bernhardt's peculiar circumstances, almost more—of unspoilt and delicate art. But the reputation of the actress ought, of right, to be based on performances in which she excites less violently. The spectator knows that it is within her power to shock him less and to charm him more.

#### STAGE NOTE.

THE Lyceum Theatre has not yet closed; but the crowning event of Mr. Irving's dramatic season—and, in a sense, it may be said, even of his dramatic career—has taken place. The banquet was practically certain to be an immense success; so, indeed, is the American tour. More than five hundred people dined, and as many more would have been glad to dine in his honour, even at the cost of paying a couple of guineas to be waited upon indifferently, and to hear at least one or two speeches which were ill-timed to such an occasion. But Lord Coleridge spoke appropriately; the American Minister was, of course, witty; Mr. Toole was really prodigiously funny; and Mr. Irving himself was simply admirable. The tact and the good feeling, the manner and the matter, of his address were, it is admitted on all hands, alike excellent. Even in columns like our own—devoted generally rather to criticism than description—such a demonstration as the dinner to Mr. Irving has a right to be chronicled. It is an event in the history of the stage, and betrays the attainment by the stage of the highest level in public appreciation that has ever been reached in England. One or two highly sympathetic chroniclers of the event have somehow curiously qualified the recognition of this fact. The "great days" of the stage have been referred to, and we are supposed to be well-nigh as appreciative of the theatre as was the public of those days. The truth is, in one sense, we are far more appreciative, and, in another, far less. Our audiences are less intelligent in theatrical matters. The stupid element has been introduced and fostered by the multiplication of stalls and the fashion of resorting to the theatre in the middle of the first act and when men much too rich, but never too bright, are dulled with recent dinner. But in another sense we are far more appreciative. The best of us allow to the comedian his proper rank as an artist, and it is as possible for a youth from Winchester and Oxford to go upon the boards as to enter some of the professions of longer social acceptance. The youthful actor is not looked down upon. His position may be better than that of the young painter who begins near Fitzroy Square; and, as for the leading actor, he is *choyé* by bishops and great ladies—a distinguished funeral would be incomplete without his presence. This is as it should be; and that this is so is, in a great measure, owing to Mr. Irving. He is not only, as we have so often had occasion to point out, an actor of frequent genius, only occasionally at fault. He has, in his various capacities of tragedian, manager, man of affairs, man of society, done more for the profession of the theatre than has ever in the whole history of the English stage been accomplished by a single person.

#### MUSIC.

##### MDME. SAINTON-DOLBY'S VOCAL ACADEMY, ETC.

THE second of the three students' concerts took place at the Steinway Hall on Thursday afternoon, July 5. The programme contained two choruses for female voices composed by M<sup>me</sup>.

Sainton. The first, "Our Happy Home," is simple and flowing family music; the second, "The Glove on the Snow," with its tramping horses, martial hymns, and pathetic solo for contralto (sung by Miss A. Foster), is well planned and effectively developed. Of the two young ladies, M<sup>lle</sup>. Tenna d'Arbour and Miss Moody, we can speak favourably; the latter was very successful, and had, indeed, to repeat the last verse of an air with chorus from Smart's "Bride of Dunkerron." M<sup>me</sup>. Sainton chose for the second part of the programme Carl Reinecke's Cantata for female voices entitled "The Enchanted Swans." Andersen's charming fairy tale has been arranged as a poem by Karl Kuhn, and translated by L. Novra; the lines connecting the choral numbers were recited by Prof. Plumtre. The music is full of tuneful and therefore pleasing melody; in every bar one traces the hand of a skilful and experienced writer. The pianoforte part, to which are added some interesting accompaniments for violoncello, harp, and two horns, is showy and of considerable difficulty; it was played with great charm and delicacy by M. Leopold. The concerted music was admirably rendered, and was conducted by M. Sainton with his usual care and efficiency.

Mr. Charles Hallé concluded a very successful series of recitals at the Grosvenor Gallery on Friday, July 6. The selection of music, including two novelties, has been throughout of a high order. Mr. Hallé is fortunate in being able to secure the services of such artists as M<sup>me</sup>. Norman-Néruda and Herren Straus and Franz Néruda. Playing together, as they do, season after season, they obtain perfect ensemble and remarkable finish; and thus Mr. Hallé's recitals are known not only for the excellence of the programmes, but also for the excellence of the performances. At the last concert were given Haydn's Quartett in E flat (op. 71), Beethoven's Sonata in E (op. 109), and Brahms' Pianoforte Quartett in A; M<sup>me</sup>. Néruda contributed two solos by Spohr.

#### JUST NOW COMPLETE.

##### LETTS'S POPULAR ATLAS

Detailed Prospectus of LETTS, Limited, London-bridge, E.C.

Twelfth Edition, post-free, One Shilling.

**DR. WATTS ON ASTHMA and BRONCHITIS:** a Treatise on the only Successful Method of Curing these Diseases. By ROBERT G. WATTS, M.D., F.R.S.E., F.C.S., &c., 5, Balustrade-street, a wandish-square, London, W.

London: C. MITCHELL & Co., Red Lion-court, Fleet-street.

Crown 8vo, pp. 448, with Portrait, cloth boards, bevelled edges, price 6s. 6d.

**LIFE of JAMES MURSELL** PHILIPPO, Missionary in Jamaica. By E. B. UNDERHILL, LL.D., Hon. Sec. Baptist Missionary Society.

"Dr. Underhill has given us in this work one of the best biographies of one of the best and most honoured of modern missionaries." *Nonconformist and Independent*  
London: ALEXANDER & SHEPHERD, 21, Castle-street, Holborn.  
E. MARLBOROUGH & Co., 51, Old Bailey, E.C.

"A really remarkable chronicle of travel and adventure."—*Globe*.

Just published, 8vo, 6s., cloth boards.

## AMONG THE MONGOLS.

By the Rev. JAMES GILMOUR, M.A., of Peking.

With Map and numerous Engravings, from Photographs and Native Sketches.

#### NOTICES OF THE PRESS.

The *SPECTATOR*.—"There has been, if our experience serves us at all, no book quite like this since 'Robinson Crusoe,' and 'Robinson Crusoe' is not better, does not tell a story more directly, or produce more instantaneous and final conviction. No one who begins this book will leave it till the narrative ends, or doubt for an instant, whether he knows Defoe or not, that he has been enchanted by something separate and distinct in literature, something almost uncanny in the way it has gripped him, and made him see for ever a scene he never expected to see."  
The *GRAPHIC*.—"Mr. Gilmour is a man of sense. 'Among the Mongols' is delightful reading, and full of information about the habits of a people who are far better than their soil and climate."

LONDON: THE RELIGIOUS TRACT SOCIETY, 56, PATERNOSTER ROW.

SATURDAY, JULY 21, 1883.

No. 585, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*Poems and Lyrics of the Joy of Earth.*  
By George Meredith. (Macmillan.)

THIS is one of the most remarkable, perhaps the most remarkable, of the volumes of verse which have been put out during the last few years. But, indeed, the name of the author is a sufficient guarantee that so it would be; Mr. George Meredith is known to be little given to offering his readers that which is common.

Mr. Meredith is well known, by name, to the widest circle of readers—the novel-readers. By name, because his name is a label warning them not to touch. They know that in volumes which carry that mark they will not find the comfortable conventionalities and paste diamonds which make up their ideal of “life.” Worse than this, Mr. Meredith’s prose requires attention—an impertinent requirement on the part of a novelist. Everybody knows that we go to a novel in order that we may occupy a vacant mind without giving attention.

To a higher, and vastly smaller, circle of readers, Mr. Meredith’s stories—*The Ordeal of Richard Feverel*, *Emilia in England*, *Vittoria*, *The Egoist*—are known as creations, singular without being eccentric, but whose singularity is marked by an imaginative presentment rather than by any special attraction of the characters and events presented. There is an atmosphere of poetry about the doings of his personages which gives us a happy fairy-land sensation, even when, as is often the case, we do not much care for the doings themselves. The circle (a select one) of the readers of these novels, know that Mr. Meredith is a poet—in prose. Perhaps some of them may not know that he is a poet in the more usual acceptation of the term. Two little ventures of the usual “minor poetry” class, some thirty or more years back, had the inevitable fate of such volumes, came into the hands of but few, and were soon forgotten even by them. As Mr. Meredith does not include these poems in the list of his works which he has allowed to be given on the fly-leaf of the present volume, perhaps he is now unwilling to own them, and desires to have them regarded as “juvenilia.” Any comparison of the present George Meredith with the George Meredith who had not yet stamped his quality upon “*The Shavings of Shagpat*” would be waste of labour. Yet I could almost fancy that more than one of the pieces in the new volume are developments of germs deposited in the earlier epoch of thought.

What is true of a whole poetic career is

also true of any volume of collected pieces composed at long intervals. No one, not even a critic, is always at his best. But in poetry we may go further, and say that the best of any poet is so rare and costly that it is indeed “*paucorum horarum*.” Take, e.g., the six volumes of Wordsworth’s *Poetical Works*, and count the pieces—nay, rather, the lines—in which Wordsworth is at Wordsworth’s best. We may strike out everything written after 1809, the most of it being not only below Wordsworth, but absolutely unworthy of him. All that is instinct with vital power in Wordsworth might be contained in a volume of much less compass than Mr. Matthew Arnold’s *Selections*. A few sheets of letterpress would give us all that can live of Wordsworth—all except the Wordsworthian “Self;” and to distil this essence we must have the whole of the nine books of the “*Excursion*” and the whole of the fourteen books of the “*Prelude*.”

It is, therefore, no disparagement to say of the poems in the present volume that they are unequal in poetic merit. They all have the Meredithian quality, but in varying degrees of perfection. They are all out of the same vineyard, but of different vintages. To come to details. “*Love in the Valley*,” e.g., does not rise in general conception and design above the average level of the “minor poet” as we know him. For this reason it will probably be one of the most popular. It has also the ordinary fault of the modern English poetry—diffuseness, the beating out of a small particle of metal into too thin foil. Yet “*Love in the Valley*” is redeemed from commonness by single strokes which are not within the reach of everyday, as well as by a vigour of language which is Mr. Meredith’s own property among all his competitors. Take this stanza, descriptive of morning light:—

“Happy, happy time, when the white star hovers  
Low over dim fields fresh with bloomy dew,  
Near the face of dawn, that shows athwart the  
darkness,  
Threading it with colour, like yew berries the  
yew.  
Thicker crowd the shades as the grave East  
deepens  
Glowing, and with crimson a long cloud swells.  
Maiden still the morn is, and strange she is and  
secret;  
Strange her eyes; her cheeks are cold as cold  
sea-shells.”

I do not defend “bloomy” here said of dew. Mr. Meredith might have learned the meaning of “bloomy” from Milton, who uses it properly of the spray bursting into leaf in an English April. To apply “bloomy” to dew is too like that displacement of epithet which is one of the tricks by which the modern school of poets seeks to supply a spurious originality.

“*The Lay of the Daughter of Hades*” is also liable to the charge of diffuseness. And it has the more serious fault of being a versified treatment of a legend provided by the Greek mythology. Because the Greek mythology is the most poetical known to us, it is natural to conceive that it must be good “material” for a poem. It was still possible in Milton’s day, it was just possible for Gray, to vivify a classical myth. Even Gray only appeals to “*Delphi’s steep*,” &c., incidentally; he does not insist on the classic

theme. In the time in which we live, classical personages are too remote from the imaginative sphere of all but a score or two of Greek scholars to be helps to illusion. The nineteenth-century poetical reader knows nothing of Grecian Sicily. It is superadding another difficulty, which is superfluous, to one which is inherent in the nature of the case. We have to make a separate effort to get together the Greek imagery, in addition to the effort which all poetry demands of passing beyond the stereotype forms of every-day life to the spirit within them. *Skiageneia*, the daughter of Hades, is a thoroughly Burne Jones maiden, tall as a poplar, with a “throat” and a wan smile, with “redness that streamed through her limbs in a fitting glow.”

The piece which gives its character to the volume, and raises the whole above the average of the reproductions of Rossetti with which we are familiar, is the first, which is entitled “*The Woods of Westernmain*.” This piece seizes the imagination with a power which the vague and rather featureless “*Daughter of Hades*” does not possess. Many poets have signalled the romance that lies in forest depths, “the calling shapes and beckoning shadows.” No poetical forest has surpassed in wealth of suggestion “the woods of Westernmain.” In these woods is no wizardry; no supernatural agents are at work. But if you enter them with a poet’s eye and a poet’s sensibility you may see and hear that natural magic which surpasses all the fictitious tales of sorcerers, witches, wood gods, of Fauns and Dryads. The poem teaches, not didactically—for nothing is farther from its form or its thought than the inculcation of doctrine—how what we see depends upon what we are; how transcendent influences are only to be approached through the real—the transmuted by the soul of the seer:

“Even as dewlight off the rose  
In the mind a jewel sows.  
Look you with the soul you see’t.”

The doctrine is old enough; the psychology of religion and that of poetry agree in it. Keats’s Endymion, baffled in the search of the ideal, learns to find it in the real. In “the woods of Westernmain”—ordinary woods, peopled only by the squirrel and the snake, the green woodpecker and the night-jar—you may read the whole history of the origin and development of things, from the time “when mind was mud,” “earth a slimy spine, Heaven a space for winging tons.” It is wholly in your own power what you shall make of earth. As you choose to look, she is either a dust-filled tomb or radiant with the blush of morning. Gaze under, and the soul is rich past computing. You must not only look, you must put off yourself, sink your individuality, you must let her “two-sexed meanings melt through you, wed the thought.” Your rich reward will not only be in the power of understanding, but in a quickening joy, the “joy of earth” showered upon you without stint.

“Drink the sense the notes infuse  
You a larger self will find;  
Sweetest fellowship ensues  
With the creatures of your kind.”

In contrast with the pessimistic tone and

despairing notes of the modern school, Mr. Meredith offers "a song of gladness," and smiles with Shakspeare at a generation "ranked in gloomy noddings over life."

Such seems to be the drift of this remarkable lyric, remarkable rather for its expression than for its contents. Unfortunately, Mr. Meredith's healthy wisdom is veiled in the obscurity of a peculiar language which makes even his general drift doubtful, and the meaning of many score lines absolute darkness. Some writers, whom it is a fashion to admire, are obscure by twisting plain things into words that are not plain. They make platitudes into verbal puzzles. Mr. Meredith's obscurity proceeds from a better motive. He knows that poetry can only suggest, and destroys itself if it affirms. And as the moods he desires to suggest are remote from common experience, so also must the suggestive imagery be. Even the English language is inadequate to his requirements, and he tries to eke it out by daring compounds. The same resource tried long ago by Aeschylus was found to degenerate into bombast in a language which lends itself more readily to compounds than ours does. In Mr. Meredith's lines these compounds have seldom the merit of being happily formed or of condensing expression. If we allow that their use originated in the poverty of the existing language, the habit of employing them constantly and upon all occasions grows up from their trouble-saving convenience. They are stopgaps, and fill the place when the sense cannot be moulded into words proper without an expenditure of time which no modern writer will give. That the habit has settled itself upon Mr. Meredith's pen the following sample, taken from a very few pages, will show. We have—poppy-droop; bronze-orange; swan-wave; shore-bubble; rock-sourced; lost-to-light; instant-glancing; iron-resounding; spear-fitted; fool-flushed; ripple-feathered; dew-delighted; fountain-showers; stripe-shadowed; treasure-armful; circle-windsails; bully-drawlers; and so on without stint or limit. How many in the above collection, gathered at random, can be said to recommend themselves by their own elegance, or to be indispensable to the sense required, which most do but feebly express?

That I may not take an ungracious leave of a volume in which may be found so much to interest, I give a specimen of the sonnets, of which there are some twenty-three in the volume.

"EARTH'S SECRET.

"Not solitarily in fields we find  
Earth's secret open, though one page is there;  
Her plainest, such as children spell and share  
With bird and beast; raised letters for the blind.  
Not where the troubled passions toss the mind,  
In turbid cities, can the key be bare.  
It hangs for those who hither thither fare,  
Close interthreading nature with our kind.  
They hearing History speak of what men were  
And have become, are wise. The gain is great  
In vision and solidity; it lives.  
Yet at a thought of life apart from her  
Solidity and vision lose their state  
For Earth that gives the milk, the spirit gives."

MARK PATTISON.

*Lancashire and Cheshire Records Preserved in the Public Record Office, London.*  
Edited by Walford D. Selby. In 2 parts.  
(Publications of Lancashire and Cheshire Record Society, Vols. VII. and VIII., 1882-83.)

THE number of referential aids to research among the Public Records has been so continually increasing, since the official staff of the Rolls repository was settled on its existing footing, that the rough and hilly path once trodden by historical and antiquarian students has become comparatively smooth and level. The progress made in rendering the various classes of records accessible by means of calendars and indexes was already considerable before the accession of the present Deputy-Keeper; but its rate has sensibly accelerated under his régime. Mr. Hardy's efforts have never been more worthily directed than in throwing open the hidden treasures of the Duchy of Lancaster records, which, while they remained in his sole custody at Lancaster Place, he was unable, for want of an adequate staff of clerks, to make publicly known. The incorporation of these archives in the national collection, effected by her Majesty's liberality in 1868, which was followed a few years later by Mr. Hardy's promotion to the Deputy-Keeper'ship, at length afforded him the desired opportunity; and he has lost no time in turning it to account. Some idea of the invaluable materials which the Duchy records contain for the topographical history of Lancashire and the genealogy of its ancient families may be formed by consulting the elaborate compilations of Baines and Harland, Beck's *Annals of Furness*, and other works; but these writers necessarily confined their researches to such evidence as was relevant to their particular purpose, and would be the first to admit that they have left much ground unexplored. The records of the County Palatine, which were retained at Lancaster Castle until 1873, when they were removed to the Public Record Office, furnish subsidiary historical matter of no little value, besides the legal evidence which it is their final cause to preserve. Some of the recent Reports of the Deputy-Keeper have made these records also for the first time readily consultable. Only second in importance for both provinces of archaeology are the records of the Palatinate of Chester, transferred to the same repository nearly twenty years ago, but comprehensive calendars to which have only recently been finished.

The Council of the Lancashire and Cheshire Record Society has promptly availed itself of the advantages thus offered by entrusting Mr. Walford D. Selby with the compilation of the present volumes. No better choice of an editor could have been made. As the officer in charge of the Literary Search-Room at the Public Record Office, a function which he discharges with a kind courtesy that puts every student under continual obligations to him, Mr. Selby has enjoyed exceptional facilities for acquainting himself with all the newest aids above specified, as well as for mastering the technical difficulties that attend the application of ancient calendars and indexes to records which have undergone subsequent alterations of custody and arrangement. The knowledge and skill thus

acquired Mr. Selby has expended without stint, yet with judicious economy of space, in the preparation of this work. In the Introduction he clearly explains his plan of procedure, assigning the different reasons which have governed him in transcribing one calendar at length, condensing another, and merely indicating the contents of a third. The nature of the records to which the several calendars refer is in each instance elucidated by a prefatory note. In the case of two old calendars of great value Mr. Selby has prefixed a much-needed explanation of their scope and plan. The collection of references to the Patent Rolls known as *Palmer's Indexes* must prove hopelessly perplexing to an unassisted searcher, unless he be possessed of rare patience, or urged by a craving such as drove Byron to learn Armenian, "for something craggy to break his mind upon." By the help of Mr. Selby's verification of them, *Palmer's Indexes* are henceforth the guides they profess to be to the Lancashire and Cheshire enrolments. Of another heterogeneous collection of clues to the Duchy of Lancaster records, entitled *Great Ayoffe*, a still fuller interpretation is given; and Mr. Selby's Introduction contains an interesting biography of its industrious compiler. A pleasant spice of humour and some variety of illustration make this Introduction readable to many beside antiquaries.

The bulk of these two parts far exceeds the limits to which, I believe, the Council of the Record Society usually restricts its editors, so that Mr. Selby has ample excuse for the omission of certain available calendars which he notices, and would doubtless have desired to include had it been practicable. Those made by Agarde, Lowe, and other old Exchequer officers to their excerpts from the *Coram Rege*, *De Banco*, and Assize Rolls, and those of the Pleadings and Depositions on the Equity side of the Exchequer, the Evidences of the Court of Wards, and others which are already arranged according to counties, beside those not yet tabulated, would supply material for a supplementary part. So far as they extend, however, these volumes are as comprehensive as it was possible to make them, and copious Indexes of names and places render their usefulness complete. It is needless to say that a study of them is indispensable to any future historian of the topography or genealogy of either Lancashire or Cheshire.

The successful accomplishment of Mr. Selby's commission for the Record Society of these counties prompts an obvious suggestion. Since the field of exploration which the Public Records offer is practically unlimited, why should not a similar enterprise be undertaken by every other county archaeological society in the kingdom?

HENRY G. HEWLETT.

*Oliver Madox Brown: a Biographical Sketch.*  
By John H. Ingram. (Elliot Stock.)

THERE is no doubt that much modern biography is opposed in spirit to what we have been long accustomed to regard as perfect work in this branch of literature. The sensation experienced in passing from con-

temporary biography to one of Southey's, for instance, is remarkable. It is not only a pleasurable sense of that writer's genuine biographical habit, sound method, and chastened style. A careful and comparative analysis reveals the absence in his writings of most of the characteristics of modern biography. He does not regard all truths, however lawful, as expedient; his reticence is a virtue; and, above all, he reverences his subject. On the other hand, it is but fair to add that, having the misfortune to flourish before Zola, he does not pursue the exact truth, is palpably no idolator of mere "facts," and is supremely indifferent to the *document humain*. When the material for biography is scanty, and also has been previously manipulated, as in the present instance, two courses are open to the biographer. He can either adduce a few additional facts, more or less relevant, or he may supplement a simple biographical narrative with a critical study of his subject. In the case of Oliver Madox Brown the latter was the only reasonable course to pursue. It is impossible, however, to peruse Mr. Ingram's volume without a feeling more poignant than mere disappointment. Fraught with fascination to psychologist and critic as the writings of Oliver Madox Brown are, it is surprising that Mr. Ingram should have resisted the temptation of producing a study of them. As it is, he is content to do little more than reproduce the criticism of others, which here peats with sturdy iteration, varying the monotony of eulogium with a little extravagance of his own. He has embodied in his work the substance of the memoir prefixed to the two volumes of *Literary Remains* in 1876, which he has too studiously followed. In spite of its singular want of taste, that memoir possessed at least the merit of telling a simple story in a direct manner; but to all who are acquainted with Oliver Madox Brown's works, and who accept Mr. Ingram's book on the faith of its title-page, the present volume can only be a source of irritation.

"I have read *Gabriel Denver*," wrote D. G. Rossetti to the author, "and been much astonished and impressed by it. I really believe it must be the most robust literary effort of any imaginative kind that anyone has produced at the age at which you wrote it." Most readers will endorse this opinion, and will find their impression of the author's genius greatly increased on reading *The Dwale Bluth*. Yet the more the nature and quality of the genius of Oliver Madox Brown is considered, the more deplorable appear the efforts of panegyrists to gauge that genius by the standard of precocity. To do so is a positive injury to one whose genius is so incontestably manifested in his writings as to be perceptible to the most inattentive. It is something peculiarly individual and magnetic. It is a force to be felt, like poetry, "in a divine and unapprehended manner," and requires not the adventitious plea of precocity to attract attention. Mr. Ingram makes too much of this precocity. Trivial anecdotes and the most natural remarks of childhood are unduly magnified, or distorted into prophetic utterances. The poetry of Oliver Madox Brown is called "as marvellously precocious" as that of Chatterton. The sonnets upon which Mr. Ingram bases

this surprising estimate compare very favourably indeed with others in this volume, and one of them (p. 25) is strikingly precocious; but by the side of the Rowley poems their precocity and poetry become at once insignificant. Mr. Ingram is fond of comparisons, and they are frequently inept. He likens the description of the burning of the ship in "The Black Swan" to "the minute fidelity of a Defoe or an Edgar Poe." Without pausing to consider this strange conjunction of names, this is a singular recognition of Madox Brown's power. It would have been more just to him to have called attention to what is unlike Defoe and yet of transcendent merit in that wonderful description—its inconceivable grandeur and its superb perception of the elemental forces of nature. In discussing *The Dwale Bluth* Mr. Ingram displays a certain amount of appreciation, as is, indeed, unavoidable; but this is chiefly superficial. It is almost incredible that he who is so intent on instituting comparisons should have overlooked the remarkable and obvious influence of Hawthorne. The beautiful episode of the child Helen dancing in circles as the mists roll off the moors under all the horror of the thunder-storm is a fantasy quite in the manner of the great psychologist, while Helen herself is evidently suggested by Pearl. Again, while he follows the authors of the memoir closely, Mr. Ingram evinces little true insight when he remarks *en somme*, "What will chiefly strike the reader in the perusal of Oliver's work is the intimate and sympathetic knowledge of the life of children and animals which it so prominently displays." This knowledge is undoubtedly very remarkable, and highly characteristic of the author; but the reader's intelligence and imagination must be feeble indeed if he is chiefly impressed by it. He will recognise another species of knowledge, other powers, and an imaginative force far more striking. He will feel himself constrained by the charm of a magician who rules the elements. He will thrill with the vague weird sense of a spectral fear, a presence that fills earth and air with mysterious boding, indefinable, but inexpressibly fascinating. And in this weird atmosphere the *dramatis personae* of *The Dwale Bluth*—the homely Margery, the quaint figure of Oliver Serpolet, the fantastic Helen—are at once piquantly contrasted and harmoniously blended. It is unnecessary to waste much regret over the incompleteness of this strange romance; it is like Giotto's tower—more suggestive, and infinitely more pathetic, as it now remains.

J. ARTHUR BLAIRIE.

*Reminiscences.* By Lord Ronald Gower.  
(Kegan Paul, Trench & Co.)

THIS is a pleasant book, and mirrors a pleasant personality. It seems at first sight, perhaps, a little strange that a comparatively young man like Lord Ronald should publish his reminiscences, including observations about contemporaries and those recently dead, without any very obvious and special reason to justify such a step; and how far people may like their private talk to be published is perhaps an open question. But there is nothing here likely to give pain to anyone,

which cannot be said of some other memoirs recently printed; and persons of high social position are undoubtedly still interesting to many readers in England. Lord Ronald tells us a good deal about such persons, mostly his own relations, in an agreeable, gossipy way; and, moreover, he gives some information about others whose acquaintance he made, and who have a far more solid title to interest than mere social or territorial position. Though the writer evidently appreciates his ancestry, as (in spite of my own Radicalism) I hold that he has a perfect right to do, yet that he sets more store by personal qualities is evident, both from the tone in which he speaks of personally eminent men he has come across, and from the anecdote he tells about a painter-ancestor of his, Thomas Gower. This worthy, in order to show that he cared more for artistic skill than for advantages of birth, introduced into a portrait of himself a representation of a balance, with a pair of compasses in one scale weighing down his coat of arms in the other. And to show how thoroughly he agrees with him, his descendant has copied this device for a book-plate. There is a good deal here about Lord Ronald's family places, Trentham, Dunrobin, and Cliveden. But then these are show-places, well known to lovers of art-treasures and to sightseers in general. To my mind, there is nothing so uninteresting as a big show-place, except a description of one. But I may be singular in my opinion. There is less, however, of art criticism than one might have expected from the writer, who has been appointed a trustee of our National Portrait Gallery, and who has himself a very genuine talent for sculpture, if one may judge by his spirited Shakspeare monument.

A pleasant bit of reading, introduced *à propos* of the pictures at Dunrobin, is the charming letter of a most engaging little boy (age about ten), a Lord Strathnaver, to his father, then Earl of Sutherland, written soon after the Battle of Culloden.

"My dear papa, I wrote you before, and hoped for the honour of an answer. Mamma may tell you I can exercise very well, so now I want a commission. I can read the newspapers. I am glad of Admiral Vernon's meeting with the Spaniards (O, papa, our Spanish horse is sick). Papa, if I were big enough, you may tell the King I will fight very well. Mamma made a boy break my head at cudgell-playing, but though it was sore, I did not cry. [What a Volumnia and Coriolanus in embryo have we here!] She has given me a new Highland coat, and Jenny Dotts sewing very fine sarks to me. God bless you, papa. My services to James Anderson. Bettelkins gives hers to you. I am your affectionate son and obedient slave, Strathnaver."

Does not this letter, well comments Lord Ronald, read like a page from Thackeray's *Esmond*? Bettelkins is a fat little girl (he is describing the family group of father, mother, boy, and girl painted by Ramsay, son of the *Gentle Shepherd* Ramsay, the boy being writer of the above letter), "apparently about four years old, with hardly any clothes on her little body, but with a tame bird in her dimpled little hand." Our author says he has not read the *Gentle Shepherd*, and does not know anyone who has. I hope he will

forthwith repair the omission, for he is clearly an appreciative reader of good literature.

A charming feature of the book is the writer's frequent allusions to his mother, the late Duchess of Sutherland. Any kind mention of her from any quarter he lovingly reproduces. To her taste, as he points out, are due most of the beautiful features of the fine family places. The testimony borne to the rare excellence and gracious charm of her character by all who were acquainted with her knows neither abatement nor dissentient voice. Well can I remember, as a boy, asking to sit up later than my normal hour for going to bed one night when she came to dine with my father and mother in Cavendish Square, and retiring into a corner of the drawing-room to gaze my fill upon her gentle, yet truly superb and majestic, loveliness of face and form.

Lord Ronald tells us of his days at Cambridge, of his foreign travel, of his visit to Garibaldi at Caprera, and of the latter's visit to the Duke of Sutherland at Stafford House, of his return to Parliament, where (he naively remarks) he did not attend very regularly, because the debates were most uninteresting, and he had so many engagements to balls and dinner-parties. He got the Crown Prince to let him follow the German army for a while during the great war, in company with Dr. W. H. Russell. But he afterwards found himself in Paris, and witnessed some of the violent scenes that followed the fall of the Empire and the proclamation of the Republic. He has done some of the fashionable "globe-trotting," and received a very favourable impression of America and Americans, making sensible remarks on the commendable democratic independence of manner exhibited by our Transatlantic cousins.

In Paris he was introduced to M. Victor Hugo, and had two interviews with the great poet. He notes that M. Hugo did him the honour, in spite of his own protestations ("one of his grandchildren, a pretty little girl of six or seven, would run up to him and nestle on his lap"), of accompanying him to the door of the house on leaving. But Lord Ronald probably knows that M. Victor Hugo, besides being the greatest poet-dramatist and romance-writer of our generation, and a convinced champion of human, as distinguished from caste, rights, is also a French gentleman of long descent. In reviewing a gossip book of Reminiscences the present writer deems it no indiscretion to record here that he, too, has had the privilege of conversing with the patriarch and prince of poets in that small, though gorgeous, apartment in the Avenue d'Eylau.

But we do not, as a rule, get so vivid an impression of the "personages" with whom Lord Ronald has become acquainted as we do in the case of Lord Beaconsfield. Of him, indeed, we have an extremely bright and agreeable picture. He was evidently very fond of the author, and called him "dearest." "Talking of religion, he gave me almost the same answer as appears in one of his novels. 'I would be very ungrateful to Christianity, which has caused half the civilised world to worship a man, and the other half a woman, both of my race.'" Assuredly a most char-

acteristic and Disraelite aspect of a rather complicated subject! "'I have never kept a diary in my life,' said Lord Beaconsfield. 'The more's the pity,' thought I." Lord Ronald notes how the usually impassive face (so like a mask, it always seemed to me) filled with emotion in speaking of his wife. He was evidently very anxious about her, and, although occasionally flashing out into conversation with all his curious play of arms and shrugging of the shoulders, he was evidently much depressed at her state. His attention to her was quite touching, and Mary Anne, as he sometimes called her, was constantly appealed to. "'She suffers,' he groaned, 'so dreadfully at times. We have been married thirty-three years, and she has never given me a dull moment.'"

"Mr. Disraeli, as we passed through the churchyard, looked quite the lord of the manor, returning the bows and good-morrows of the parishioners, and patting the children on the head, asking the people about the crops, the markets, and their private affairs. He talked in anything but a Conservative sense as to the intolerable injustice of trying to keep the people out of one's parks, and saying that the Tory and Whig landed proprietors make their class odious to the people by such exclusion. When he had become Lord Beaconsfield, on occasion of the writer's second visit, he said, 'I am the unluckiest of mortals; six bad harvests in succession; this has been the cause of my overthrow: like Napoleon, I have been beaten by the elements; Bismarck and I were perfectly *d'accord*. Had the late Government lasted, we would have kept the democrats of Europe in check, but now all is over.' Bismarck he much admires and personally likes; 'but were he to come to England I should not ask to see him; there is no such thing as sympathy or sentiment between statesmen.' 'I have failed, and he would not now care to see me, nor I him,' he added rather bitterly. As to the prospects of his party, 'all becomes chaos,' he remarked, pacing up and down his room, and waving his arms, 'all becomes chaos when I am away.' As we stood in the porch, amid marble vases and busts, ferns and flowers, the post arrived, with it the *Times*, which contained Mr. Gladstone's letter, thanking the public for their sympathy for him during his illness. 'Did you ever hear anything like that? it reminds one of the Pope blessing all the world from the balcony of St. Peter's,' said my host. 'Life,' he said again, 'is an *ennui*, or an anxiety; for the self-made life is full of troubles and anxieties from fear of losing the position or wealth they have obtained; for those born with these advantages there is nothing to strive for, and life then becomes a mere bore, an *ennui*, and a burden.' He gave a description of how delightful were the dinners in old days at Mrs. Norton's over a public-house near Storey's Gate more than forty years ago, and of the wit and humour that then flowed. Lady Dufferin was his chief admiration, more beautiful than her beautiful sisters. 'Dreams! dreams! dreams!' he murmured, gazing at the fire, and smoking a cigarette he had accepted. 'I have not smoked, dearest, since you were last here.'"

This pleasant book will certainly be found useful not only in whiling away a leisure hour, but in affording material for some future historian of our times. Yet one rather dreads to think of the possible consequences if too many of our "gilded youth" were to follow Lord Ronald's example and take to writing their "Reminiscences"! But in this

instance the writer has reading, cultivation, and taste; he has something interesting to tell, and he has often succeeded in telling it agreeably.

RODEN NOEL.

*Records of the English Province of the Society of Jesus.* Vol. VII., Part II. By Henry Foley, S.J. (Burns & Oates.)

MR. FOLEY is an industrious compiler. It seems but yesterday that we noticed the first part of this volume, and now we have before us a second, containing nearly a thousand pages of close print. He reminds us of the students of his Order in the seventeenth century. We have the same painstaking industry, the same zeal, and the same desire to preserve for future use every fact, big or little, that relates in any way to the matter in hand. We do not make this last remark in any captious spirit, but in sincere admiration. We have lost so much valuable knowledge by persons who have had theories as to "the dignity of history," rejecting this or that fact or legend because they thought it trivial or that it would mar the perspective of their works, that we could forgive a much larger amount of matter of secondary interest than we can find in Mr. Foley's pages. In the Preface we have an apology for the insertion of some accounts of demoniacal possession and witchcraft. The writer says

"their narration may appear absurd in the eyes of some who have no true belief in the Supernatural; yet their retention is preferable to any omission from the original manuscript. The cases recorded are generally vouched for by credible eye-witnesses, and may be regarded as characteristic of the times, when such obsessions and the practice of the black art were very prevalent both in England . . . and on the Continent."

We have no desire to discuss with Mr. Foley the very large question as to whether a "true belief in the Supernatural" would incline us to give credit to these narrations. He has, we are quite sure, done well in retaining them. It is important to students of human thought and human progress to know how these things appeared to Englishmen who had been instructed in the old religion. Most of the stories of witchcraft that have come down to us from the sixteenth and seventeenth centuries are of a distinctly Protestant character. Students will, we are sure, be glad to have examples from another series. A curious instance is related of bells ringing without human agency. In this case the event is said to have taken place when a virgin consecrated to God—whether she was a nun or not we are uncertain—came to the spot where she was afterwards buried. Mediaeval literature contains many examples of this belief, which was certainly not extirpated by the Reformation, for Philip Henry, the father of Matthew Henry the Commentator, who was a Puritan of the strictest sort, mentions in his diary that on a certain occasion the bell of a church in Devonshire rung for three hours as a death-sign.

The annual letters here given furnish most interesting matter for study. They do not, perhaps, add materially to our knowledge of history in the narrow sense, but they show us what was the state of the country at the time

when persecution was raging. They are evidently the compositions of God-fearing men who were zealous for their faith, not of plotters against the State.

A writer who has devoted himself to the history of the Jesuit Mission in England cannot pass without notice the high-treason punishment which for so many years disgraced our country. It is a subject too disgusting and shocking to dwell upon at length. We are glad, however, that Mr. Foley has turned his attention to it, and given us, in the short compass of a note, a sketch of the development of this revolting custom. The writer has not succeeded in tracing it higher than the execution of Sir William Wallace. In the earlier time it appears to be almost certain that the victims were permitted to hang until they were dead.

We trust that this is not the last contribution of materials for history that we shall receive from Mr. Foley. We are already much indebted to him; but, unless rumour has exaggerated, the Order to which he belongs still possesses many unprinted documents of great interest. We are sure that they could not be entrusted to anyone who would edit them with greater faithfulness or annotate them with fuller learning.

EDWARD PEACOCK.

*La Navarre française.* Par M. G.-B. de Lagrèze. In 2 vols. (Paris: Imprimerie nationale.)

THE history of little Navarre is one of the most interesting of the minor States of Europe. It was in contact not only with several kingdoms, but also with several nationalities and races. Basque over the greater part of its area, it was Spanish on the South, and Gascon, or French, on the North; while its North-west frontier made its alliance or hostility for three centuries a powerful factor in the policy of English kings; and in the sixteenth century the question whether France should be Protestant or Catholic seemed to turn on the fortunes of its rulers. M. Basole de Lagrèze, descended on both sides from the ancient magistracy of Béarn and Navarre, passed his life in illustrating, by numerous works, the history of his native province. He possessed immense industry, and learnt in legal practice the habit of minute and careful research. The materials of this work have been collected from the archives of Pau, Pamplona, Madrid, Paris, and Copenhagen, in addition to numerous MSS. in private hands. He corrects some mistakes, and supplies omissions which escaped the research, of the late M. Paul Raymond. But, unhappily, he utterly lacks the historical insight which distinguished that excellent scholar. His style creeps on in a level dullness, which is almost exasperating, in short sentences which should, but never do, sparkle with epigram and light. Yet, with all their defects, these volumes are far more valuable to the historian than many more brilliant tomes. If they cannot be accepted by the general reader as a History of Navarre, they are a mine whence, in spite of their chronological chaos and confused arrangement, the student may dig out some most valuable ore.

Vol. i. is devoted to the geography and history, vol. ii. to the *histoire du droit*, of Navarre. Contrary to the usual case, but as may be expected from the above remarks, the latter is of vastly greater interest than the former.

The chapters on geography and ethnology leave much to be desired. Our author, without acknowledgment, adopts the conclusion of M. de Rochas as to the origin of the Cagots—that they are no peculiar race, but the descendants of families banished from society for taint of leprosy. He notices the Gypsy type in strong contrast with that of the Basque “blanc et coloré,” but he does not mention the mixture of the two in the *Cascarotao* of Ciboure and elsewhere.

We have mentioned the chronological chaos, which is especially marked in the whole of vol. ii., when analysing the *Fors* or *Fueros*. The reader has to reconstruct this as best he may. Sometimes the dates are altogether missing, or the citation all important to the interpretation of the fact is lacking; sometimes the writer's prepossessions peep out most naïvely, as when we are startled by the assertion (ii. 168) that “Marriages under the *ancien régime*, celebrated in the mosque or in the synagogue or in the *temple protestant*, were as legal and valid as those blessed by the priest;” and find in the note the date November 1787! The mention of marriage brings us to one of the most curious traits in the early legislation of Navarre, which it owes undoubtedly to Basque influence. Though so religious a people that there was a special gaol delivery to allow all to receive Communion three times a-year, and that absence from church for three consecutive days is taken as legal presumption of illness, yet neither Basques nor Navarrais allowed the undue intervention of the clergy in civil affairs. Marriage is a purely civil ceremony, and in early times was strictly binding on the man only in his own city. The clergy had no place in the election, nor in the councils, of the Sovereign. In the trials by judgment of God, if the priest would not bless the boiling water, &c., the mayor, or merino, or one of the umpires gave the benediction. No decretal clerk (*decretista*) could be an advocate in any court of justice. While Europe was convulsed with the quarrel between Henry II. and Becket, the *For* of Navarre had decreed: “If unhappily a clerk shall have dishonoured his office by committing murder or robbery, he shall be taken before the bishop, who shall be prayed to degrade him from his orders; and, when the bishop has withdrawn them, justice shall be done on him as a simple layman, and he shall have nothing further to hope for from the Church.” The laws as to the sanctity of the house, the *lar*, and the conditions of family inheritance carry one a long way back towards ancestral worship. That the kings of Navarre were the first constitutional kings in Europe is probably the fact; but M. Lagrèze most tantalisingly omits to quote the charters of the *Sanchos* in the eleventh and the *Thibauts* in the thirteenth centuries, in which they declare that “they can make laws only with assent of the clergy, nobility, and people.” In 1510, indeed, we have the Cortés declaring that “at no time was ever grant

made to the king without previous redress of griefs;” the right of petition is vigorously upheld, and even in late times “in matters of finance the opinion of the *tiers état* preponderated over that of the nobility and clergy.” There is no trace of a native slavery, or, indeed, of strict serfage (*adstricti glebas*), in Navarre. The slaves are prisoners of war and heathen, or Moors, and Jews. The villain seems always to have a right of quitting a cruel seigneur (of the Spanish *Behetria*); “he could change his lord for another, or become the villain of the king”—a right which did not exist elsewhere in the French Pyrenees. The relations of Moors and Jews to the rest of the population are exceedingly interesting. Our author claims to give a better text than that either of Amador de los Rios, or of Keyserling, of the long oath administered to the Jews, wherein they finally swore “by the tombs of thy King Maymon [Mammon], Astaroth, and Betala [Belial or Baal?].” In most points the laws are distinguished by humanity. Neighbours and matrons play a part analogous to that in early English laws. The early *fors* deal with caste composition in case of murder and wounds, and proceed gradually from purchase to dowry of bride in marriage. Great respect is paid to women. Violence in a lady's presence is severely punished. Curiosities abound. If an animal does injury, it is the beast, and not his owner, that suffers the penalty. But even the beast's finer feelings are considered: “if a dog walking with a lady dog, or with his sister, kill another dog, he is not considered guilty of *canicide*, as he would be in absence of the lady.” The enormous fine or penalty for stealing a cat, even after restoration, might make one almost believe the legend of Whittington. There was a great difference between the penalty for a theft committed in enclosed or unenclosed ground. The Navarrais determined the point, if doubtful, by placing a jackass on one side the boundary and a she-ass on the other, and seeing if they could join each other. In the injunction to the royal *sayon*, “Non debet portare nullis armis nisi uno bastone de cubitu uno in manu,” we have an early mention of the policeman's staff. At the funeral of a knight, a charger, with arms and jewels, was given to the offertory at the Mass. The king sometimes supplied this costly offering for a loyal subject. Is not this a link in the history of the charger led and arms borne at an officer's funeral? We must stop, and can assure our readers that these are only samples of matters of greater interest to be found in both volumes, but especially in the last.

WENTWORTH WEBSTER.

#### NEW NOVELS.

*Anno.* By Constance Fenimore Woolson. (Sampson Low.)

*A Fair Country Maid.* By E. Fairfax Byrrne. In 3 vols. (Bentley.)

*On Foreign Soil.* By M. Montgomery Campbell. In 3 vols. (White.)

*Here Below.* By Joseph Alan Scofield. In 3 vols. (Tinsley Bros.)

*Mine Own People.* By Louisa M. Gray. (Edinburgh: Macniven & Wallace.)

WE venture to say that *Anne* is one of the most remarkable works of fiction that has appeared for many years. It is remarkable for its own sake—for animation of plot and variety of character; and it is remarkable also as holding a place midway between the old American novel of incident and the modern American novel of analysis. Three complaints only, and those of a minor character, can be lodged against it. It is rather long; there are too many digressions; and the murder of Mrs. Heathcote, which clears the way for Anne Douglas's happiness towards the end of the story, is a very improbable occurrence. Lady readers, too, will probably have a fourth fault to find with the author: they will say she should have made Anne marry the strong and unselfish Gregory Dexter rather than the somewhat weak and indolent Ward Heathcote. That, however, is a matter of taste; and there is high authority for giving the Lauras of this world to the Pendennises rather than to the Warringtons. It would be difficult, indeed, to say which is the best and most original of the many characters which Mrs. Woolson's happy idea—of bringing Anne Douglas from the frozen frontier of the Union, with its dilapidated agency and its picturesque population, to the glare of New York—enables her to make the acquaintance of. Many readers of *Anne* will probably think most of her early friends, Père Michaux and Lois Hinsdale, the good angels of the Douglas family, such excellent friends and yet so great a contrast to each other; and of the little Franco-Indian gipsy, Tita, Anne's step-sister. Yet it may be doubted whether, although personally more likeable, their portraits are really better drawn than those of Miss Vanhorn, grimmest, proudest, and most unreasonable of the Knickerbocker aristocracy; Helen Lorrington, whom Miss Vanhorn shrewdly sums up as a "mermaid;" loyal Miss Teller; and kindly, managing, gently sarcastic "Tante." "The American Venus is thin," says Mrs. Woolson; but she has created Anne Douglas apparently to prove that the American Venus of the future will be the reverse of thin mentally not less than physically. Of the men who figure in the novel, Gregory Dexter, self-reliant, the prop of his State in the Civil War, is Eclipse; and the rest are nowhere. Besides being strong in character and in quiet humour, *Anne* is also strong in episode; and the War of the Rebellion is skillfully introduced, without being made too prominent. If the author can keep up to the high standard reached in this work a great future is before her.

Should not Miss Byrre have waited a few years, say till the beginning of the twentieth century, before giving to the public the remarkable tragedy she has entitled *A Fair Country Maid*—at all events, as a study from real life? Socialistic ideas may be spreading; but where is the country parish in England, at the present day, in which the leading spirits talk communism and something very like atheism? Yet this is precisely what Abel Greenhough, in every sense the hero of *A Fair Country Maid*, does. Nor are his

opinions so very different from those of Zackary Pearse, the dreamer and artist, or of the Rev. Saul Howell, eminent scholar and Dissenting minister; while John Morison, the brother of the "Fair Maid," supplements the theories of Prince Krapotkin with the practices of the Irish Invincibles. Not only is the story a little in advance even of our advanced times, but it abounds in violent incidents. Imagine two men, one of them a clergyman of generous enthusiasms and high culture, appearing at the same place, at the same time, with intent to murder the same man! It seems unnaturally cruel to poor Marjorie, too, to destroy her husband by sunstroke and her lover and cousin by a pistol-shot in one day. Still, *A Fair Country Maid* is a singularly powerful and fascinating story; it is written with scrupulous care, and it contains many passages of great beauty. It is full of striking portraits of all kinds and types, from Scrag, the fierce and bitter old Radical weaver, to the slender but spiritually valiant Lavinia Pearse. All the Morisons are well drawn; and Derrick Devonporte, the Squire, is, in spite of his affected name, so likeable and gallant a young fellow, and so open to conviction, that his tragic death comes as a rude shock on the reader.

*On Foreign Soil* is full of crudities; but, happily, there is nothing unwholesome in it. It is a queer compound of Agnosticism and Romanism, classical music and Schopenhauer, Schiller and "well-cut dresses of navy-blue cloth;" and when we find ourselves actually "on foreign soil," we soon get tired of the everlasting *loggia* and *borgo de pescatori*. Herbert Marley, with his oratorios and his variety of creeds, is an intolerable prig; and his Blanche Stapleton, who haggles over Schopenhauer, is worthy of him. The story is, however, told with animation, and, indeed, looks like a long letter from a quick-eyed girl, not yet out of her teens, enamoured of some of the fads of the day, and with a slight weakness for airing her German. The author's descriptions, especially of individuals, are sometimes by no means intelligible. Thus, in "He was an author of some repute, editor of a magazine for the airing of heretical opinions, a platform speaker, in short, a man who lived by his wits," the explanatory "in short" has either a cruelly sarcastic meaning, or no meaning at all.

There is abundant evidence in *Here Below*—a better title, by-the-way, would have been "Below the Table"—that Mr. Scofield has taken Dickens for his model; and his work certainly surpasses *The Pickwick Papers* in this respect, that it is even more saturated with alcohol. *Here Below* is true to nature in the sense of Cowley's anacreontic, that "an eternal health goes round" in the one as in the other. The plot is caused by liquor and is steeped in it. Bad men commit villainies when drunk; good men believe they have committed them because, being in a chronic state of intoxication, they are uncertain what they have done. Matthew Bernock and John Gurgoyne, who are the centres of whatever interest attaches to *Here Below*, stagger about from one public-house to another for

two volumes and a-half, when they "pull up" in different ways. When they are not quite drunk they are to be found discussing total abstinence, local option, and the premonitory symptoms of *delirium tremens* and paralysis with great vigour and earnestness, and generally over a few "generous glasses." Most of the "ladies" with whom Bernock and Gurgoyne associate are to be found behind the bars, or in the back parlours of pot-houses, as their "manageresses" or the relatives of their landlords; and one, at least, takes to tippling after marriage. The effect of the whole is undeniably amusing; and Mr. Scofield's public-house interiors are painted with a realistic vigour which recalls Jan Steen rather than Dickens. Some of the minor characters—such as Spike the boozy carpenter and his son, Harkles the publican, and Peevers the vulgar teetotaler, who is a flagrant example of gluttony—are so well drawn as to encourage the belief that if Mr. Scofield would confine himself strictly to studying low-class life, and eschew tirades against Pharisaism and painfully italicised arguments for and against the Permissive Bill, he might attain a not inconsiderable success. His middle-class and sub-middle-class characters, however—his Champfers, and Filpses, and Vaspers, and Gurgoyles, both Reverend and Bohemian—are altogether unreal and very disagreeable. The story of disinheritance, which it takes such a tremendous amount of brandy and ale to develop, is as confused as the mixture of these beverages can make it.

The plot of *Mine Own People* is of the slightest. It is in reality a study of two families, and of the different members of each; as such, it is executed with most commendable care. When first we meet Marian Grant, the Scotch girl whose fortunes this story tells, she is the half-friend, half-dependent of the Wentworths, a luxuriously brought-up English family. Misfortune has compelled her mother to part with her, in order to fill this position, at such an early age that she has forgotten all about her relatives. It is discovered, however, that the Hon. Otto Wentworth, the second son of that house, is dangerously attached to Marian; and his father and mother, Lord and Lady Ellersley, politely send her back to her Northern home. The contrast between the Grants, a painfully brought-up Scotch family, and the comfortable and unconsciously selfish Wentworths is admirably brought out; and the reality of the gossip and "society" of Forthborough, a typical Scotch country town, is beyond question. Every one of the Grants—the mother whom grief has made undemonstrative, but not unaffectionate; Anna, the eldest daughter, dutiful, reticent, a model wife for a missionary; Gretchen, unlucky but warm-hearted; Tom, the brusque, jealous, but loyal student; and, above all, poor Marian, with her tears and troubles in getting into the hearts of "her own people"—is a well-executed portrait. Miss Gray gives us, indeed, too much poetry and German of the kind affected by girls who have reached the "finishing" stage; and piety, at all events when it takes the form of familiar hymns, is not an agreeable element in a novel.

Still, these are introduced naturally enough, and should be considered, perhaps, as superfluities rather than blemishes. There is so much in *My Own People* that deserves praise, both from the artistic and from the ethical point of view, that exceptionally good work may yet be expected from its author.

WILLIAM WALLACE.

### HISTORICAL SCHOOL-BOOKS.

*The History of England for Elementary Schools.* (Cassells.) Of the making of historical school-books there is no end, and much study of them is verily a weariness to the reviewer. We can, however, award nothing but praise to the little work before us. Its information is as complete as its limits of space admit. The early chapters, in which an interesting sketch of prehistoric Britain may be found, are good examples of careful selection and arrangement; and on all the disputed questions in our history the author takes, as it seems to us, very sound and just views. No better introduction to a study of English history in more elaborate works could be placed in the hands of young readers. In the choice of the illustrations we might, if we wished to be severely critical, point out some eccentricities. Portraits of the Prince Consort, Lord Beaconsfield, and Mr. W. E. Forster find a place here, but we have sought in vain for the present Prime Minister.

*Chambers's Historical Readers.* Book IV. We have here the history of England from the Revolution to 1882; and the general plan of the book resembles that of its predecessors in the series, several of which have been already noticed in the ACADEMY. Poems on historical subjects mentioned in the text hold a prominent place, but we find it hard to understand the immediate application of all the quotations. Shirley's glorious verses on "Death the Leveller," printed at the close of the chapter on the termination of the Napoleonic war, would certainly leave the youthful reader under the impression that Shirley and Napoleon were contemporaries. The general style of the book is, however, to be commended, and the facts are accurately stated.

*Early England to Death of Stephen.* By J. G. Hefford. (Marcus Ward.) This is a very elementary work, and runs on old-fashioned lines. Some forty-three pages are devoted to the Britons; and Caesar, Cassibelan, Caractacus, Boadicea, and Agricola are given as important places as Alfred, Dunstan, and Edgar. The accounts of Cædmon and Bede are good features of the section devoted to the English Conquest. The language throughout is clear and simple.

*Senior Standard History Readers.* Books I., II., III. By the Rev. D. Morris. (Longmans.) This is a more elaborate series of handbooks than those noticed above, but the arrangement is not very attractive. Each reign concludes with paragraphs on "Death and Character" and "Miscellaneous Facts," of which the former is mainly constructed of lists of adjectives, such as "handsome," "generous," "treacherous," "cruel," and so forth, and the latter of the most heterogeneous information that was ever printed in the same page. Catalogues of "leading authors" are also given at the close of each period of history; but we have not noticed any reference to Richardson, Smollett, Fielding, and Gray, though Young, Rogers, Lingard, and Kemble find mention. Addison is similarly placed among poets, and excluded from the list of prose-writers of his age; and the author of the "Seasons" is called James Thompson. We notice that Vicarius, and not Vacarius, is

stated to have delivered law lectures at Oxford in Stephen's reign. The English style of the author is not always above criticism. He tells us that Guy Fawkes' conspirators bound themselves to secrecy "by partaking together the sacrament of the Lord's Supper," and that James I. "thought he had a right to his subjects' money without the bother of applying to Parliament." It is, however, only just to add that Mr. Morris has succeeded in crowding a vast store of information into his three little volumes, and for the most part this information is to be relied upon. The maps are also, as a rule, excellent. We should, nevertheless, strongly advise teachers in elementary schools to employ Prof. Gardiner's three little volumes, of which a new edition (with illustrations) has just been issued by the same publishing house, in preference to Mr. Morris's lengthier handbook, which is characterised throughout by irritating imperfections.

*Historical Readers.* Nos. 1, 2, and 3. (Philips.) Messrs. Philips have followed the example of their brother-craftsmen, and launched a series of historical readers to meet the new requirements of Board schools. The first of them bears the familiar title of *Stories from English History*, and is "designed not so much to instruct as to interest the younger children." No attempt is made to connect the stories together, and the teacher is expected to supply orally the missing links. The plan of the book gives it of necessity a very scrappy character. In the desire to make the tales as full of exciting incident as possible, the historical facts are often distorted almost beyond recognition. The account of the Battle of Crécy, under the title of "The Three Feathers," reads like an extract from a fourth-rate historical novel, and conveys little valuable information. We hardly think the style of the handbook is likely to appeal to the very young children for whom it is written. At any rate, the teacher will have to handle it judiciously. The two succeeding volumes, which embody a connected history of England from the earliest times to 1603, are disfigured by fewer sacrifices of historical truth to romantic embellishment. They make no attempt at novelty, and are written in a singularly vivid style. We have to make our old complaint that too slight a distinction is drawn between the importance on later English history of the Britons and Romans and of the Saxons and Normans; but these two Readers certainly deserve a high place among educational works of the kind. Less can be said for the numerous illustrations in the three volumes. The maps, however, are very good throughout.

*Historical Readers.* Books 1, 2, and 3. (Blackwood.) Prof. Meiklejohn, the editor of these volumes, is to be highly congratulated upon their many-sided excellence. The narrative is exceptionally full and clear. Admirable sketches of the lives of the Duke of Wellington and Lord Clyde appear in the third Reader, which brings our history down to the close of the Egyptian War of last year. The social development of the country is adequately treated; and the illustrative poems, which include Hawker's spirited amplification of the Cornish rhymes on Bishop Trelawney's trial of 1688, and Aytoun's "Execution of Montrose," are for the most part admirably selected. The typography of these books is exceptionally good; we strongly recommend them to all teachers who desire, as the motto of the series indicates, to lead their pupils without delay *per vias rectas*.

### NOTES AND NEWS.

THROUGH the strong feeling among the late Mrs. James Owen's many friends that some permanent memorial of her noble life and work should be founded in Cheltenham, where she did so much, it has been decided to collect money for a Friendless Girls' Home, to be built there and called after her name. No other memorial could be so suitable. The object nearest to Mrs. Owen's own heart was to bring help and rescue to those of her own sex who need it the most. Subscriptions are invited, and can be sent to the Rev. Dr. Kynaston, Principal of the College, Cheltenham.

MESSRS. LONGMANS have in the press a new Peerage by Mr. James E. Doyle. It will show the succession, dignities, and offices of every peer from the Conquest down to 1872, and will be illustrated with about fourteen hundred portraits, shields of arms, and facsimiles of autographs.

MRS. HAWES is compiling a Chaucer Birthday-book. It will be published this autumn.

We hear also of a Child's Christmas Story-book in preparation—one of the best Early-English Romances re-told in simple language, and illustrated.

AN Italian edition of Count Ugo Balzani's work on the Early Chroniologists of Italy, recently issued by the S. P. O. K., will be published shortly by Hoepli, of Milan.

To the articles that will appear in the forthcoming volume of the *Encyclopædia Britannica* we may add "Metal Work," "Mosaic," and "Mosque," by Mr. J. H. Middleton; and "Mural Decoration," by Mr. Middleton and Mr. William Morris. In future volumes, "Papacy" and "Reformation" will be written by Mr. J. Bass Mullinger, and "Plato" by Prof. Lewis Campbell.

MR. JOHN RUSSELL YOUNG, American Minister at Peking, is said to be collecting material for a History of China.

MR. A. J. BUTLER, of Brasenose College, Oxford, will contribute to *Cassell's Magazine* for August an article on "A Persian Orgy at Cairo," describing a curious and barbarous custom of which he was himself an eye-witness.

THE Wyclif Society's first publication, which was due last year, will not be ready till September this year; the double printing (once with German notes, once with English) of the nine hundred pages of which Wyclif's *Political Writings* will consist has taken so long in Germany that, notwithstanding Dr. Budden-sieg's best efforts, he has not been able to get his book through the press quicker. But next year the society's work will, it is hoped, be brought level with the subscriptions, as Mr. Reginald Lane-Poole's edition of the *De Dominio Civili* will go to the printer in October, and Mr. F. D. Matthew's edition of the *De Mandatis Divinis* will soon follow. The society's income is so small, and the charges for copying so heavy, that, unless the religious, political, and literary public give the society more money next year, in which falls the 400th anniversary of Wyclif's death, one volume a-year will be all that the society can produce. No more fitting tribute to Wyclif's memory could be found for his quadricentenary than the publication of his works still in MS. Is there no rich man who will carry out this scheme for the sake of our great early Reformer?

THE Browning Society will issue, next month, its first publication for its third year, 1883-84. This will be part iv. of its *Papers*, containing essays by Mr. Nettleship, Canon Westcott, Miss West, Mr. Revell, and Mr. Bulkeley, with the "Monthly Abstract" of the society's discussions, &c., and fresh "scraps" for Mr. Furnivall's "Browning Bibliography."

MESSRS. BLACKWOOD announce two new books about fishing—*Rambles with a Fishing-rod*, by Mr. E. S. Roscoe; and *Norfolk Broads and Rivers*, by Mr. G. Christopher Davies. The latter will also give some account of the decoys of East Anglia, and will have twelve full-page illustrations.

THE *Expositor* for August will contain the first of a series of papers on the last twenty-seven chapters of Isaiah, by Prof. A. B. Davidson, of Edinburgh. Archdeacon Farrar will continue his criticisms on the "Exegesis of the Schoolmen," giving some ludicrous examples of the futile speculations and disputes in which they indulged. The editor will contribute a paper on "Abraham's Gospel."

DR. W. RENDLE, the historian of Southwark, has written an interesting historical sketch of London Bridge, to accompany the etching from the late Edward Duncan's water-colour drawing of "Old London Bridge from Custom House Quay in 1820" for the series of *Etchings of Old Southwark* now being published by Messrs. Nichols.

A *propos* of the introduction—or, rather, the revival—of the Parcel Post on August 1, the next number of the *Antiquarian Magazine* will contain an article by the editor, entitled "A Very Old Parcel Post," in which it will be shown that there was a parcel post in operation under our Stuart and Hanoverian sovereigns.

MESSRS. WILSON AND M'CORMICK, of Glasgow, will publish next week a new edition of Walt Whitman's *Leaves of Grass*. We hear that the "good gray poet" is to form the subject of an article in one of the quarterlies.

THE new edition of Messrs. Gostwick and Harrison's *Outlines of German Literature*, about to be published by Messrs. Williams and Norgate, possesses one or two new features. There is a considerable addition of translations from German poetry into English; the philosophical disquisitions are somewhat relieved by excision; two new chapters give a brief account of the literary productions of Germany since the publication of the first edition ten years ago. Above all, in addition to the former Index of authors, there is now an Index of topics and of titles of books referring to their authors. The latter must prove useful to tyros in the study of German literature, who may know the name of the author of *Faust* or of the author of the *Robbers*, but who may be in doubt as to who wrote *Minna von Barnhelm* or *Die Leute von Seldwyla*, and other German works of merit little read in England.

As was to be expected, a second edition has already been called for of that curious book *Study and Stimulants*. The editor, Mr. A. Arthur Reade, has revised it throughout, and has added the experiences of several more notable personages. Our own opinion, we confess, coincides with that quoted from Mr. Herbert Spencer—that "experience is not such as to lead to any positive conclusions concerning the question of study and stimulants." The new edition, published in London by Messrs. Simpkin, Marshall and Co., will be ready in about a fortnight.

THE official illustrated Guide to the Midland Railway prepared by Messrs. Cassell and Co. is now ready; and, although the first large edition was more than subscribed for by the trade before the day of publication, the work is again at press, and a further supply will be ready in about a week.

A HUGUENOT society has been founded at New York, which has for its objects the collection of materials for the history and genealogy

of Huguenots in America, the formation of a special library, and the reading of papers.

THE sale of the third portion of the Beckford Library, which finished last week, realised a total of £12,852 for the twelve days, showing an average of considerably over £4 per lot. The grand total of the three portions now sold (leaving a fourth portion yet to come) amounts to £66,708.

THE Birmingham Free Library has determined to establish a lending section of its Shakspeare books, to consist of duplicates only.

THE Free Libraries Act has been adopted in Darlington by the large majority of 3,420 votes to 597.

ON Saturday last, July 14, a fountain in memory of the Gaelic poet, Dugald Buchanan, was opened at his native village of Strathyre, in Perthshire. The ceremony of turning on the water was performed by a grand-daughter of the poet, who died in 1768.

A CORRESPONDENT writes:—

"Your reviewer of Juan Valdes' *Commentary* (ACADEMY, July 7) should have mentioned previous English translations of some of his works, which, as even 'John Inglesant' tells us, were favourites with N. Ferrer, George Herbert, &c. I have also the privately printed edition of his *Trataditos* and *Los Psalmos*. He was really the St. Jerome of the Spanish reformation, with his translations of the Bible, and his suite of noble ladies at Naples, instead of at Bethlehem."

*Correction.*—In the ACADEMY of July 7, Count Mamiani was inadvertently spoken of as "the late." A correspondent tells us that he has just received a letter from Count Mamiani, who is quite well, and, despite his eighty-four years, continues to work with the vigour of a young man.

#### FRENCH JOTTINGS.

WE hear with great pleasure that the Institut has awarded its biennial *prix* of 20,000 frs. (£800) to Prof. Paul Meyer. No more worthy recipient of the honour can be found in France. M. Meyer's services in the cause of French antiquarian literature are known to scholars all over the world. Not only by his official work at the Ecole des Chartes and the Collège de France, but by his untiring researches in English libraries, public and private, his founding of the Old-French Text Society, his many admirable editions of rare MSS., M. Meyer has won the gratitude and esteem of all students of French literature.

In the list of decorations conferred on the occasion of the French national *fête* on July 14 there appears the name of but one man of letters—M. Leconte de Lisle.

ON July 16 M. Ferry, the French Premier, opened the session of the Conseil supérieur de l'Instruction publique, on which body M. Renan succeeds the late M. Laboulaye, as well as in the administration of the Collège de France. After a panegyric upon M. Laboulaye, he turned towards his successor with these words:—

"Nous saluons celui qui vient l'y remplacer. C'est aussi la science et la liberté qui nous l'envoient: la science des origines, la plus rare et la plus haute de toutes; et la liberté de l'esprit, fondement et source de toutes les libertés."

THE Académie française has awarded the premier *prix* Monthyon, of the value of 2,500 frs. (£100), to M. Larroumet, for his work on *Marivaux*.

SELECTIONS from Michelet's History of France are now being issued in the "Bibliothèque des jeunes Français" at threepence a volume. The epochs chosen are the Crusades, François I., Henri IV., and the Taking of the Bastille.

THE new volume of the "Bibliothèque inter-

nationale de l'Art" is *La Gravure en Italie avant Marc-Antoine*, by the Vicomte Henri Delaborde, Keeper of the Prints in the Bibliothèque nationale. The book has five plates and more than a hundred wood-cuts.

THE committee deputed to consider the question of Mont St-Michel have determined not to isolate it again, as proposed, by the demolition of part of the recently constructed dyke, but to alter the course of the dyke so as to reach the island at a point on the rocks now on the left of the dyke instead of between the tour de Roi and the tour de l'Escale as at present.

PARIS is enjoying a case, similar in some respects to our own Belt trial which is known as the "incident Corot-Trouillebert." It appears that M. Alexandre Dumas *fils* had bought from a dealer, for the sum of 12,000 frs. (£480), a landscape signed with the name of Corot. While in the gallery of M. Dumas, this picture was claimed by a certain M. Trouillebert as his work, on which the name of Corot had been substituted for his own. M. Dumas thereupon sent it back to the dealer, who returned the 12,000 frs. and passed it on to another dealer, on whose behalf he had sold it. The second dealer continues to expose it for sale as a Corot. So far, nothing much out of the common; but here arises the curious incident. M. Trouillebert commences legal proceedings against the dealer (M. Tedesco) to restrain him from representing his own work as being by Corot. In his defence M. Tedesco calls a number of the most eminent living painters of France—MM. Meissonier, Breton, Dupré, Stevens—who all agree that the landscape can be nothing but a genuine Corot after all.

#### EPIGRAMS.

XLVI.

*Keats.*

He dwelt with the bright gods of elder time,  
On earth and in their cloudy haunts above.  
He loved them; and, in recompense sublime,  
The gods, alas! gave him their fatal love.

XLVII.

*De Quincey and Ann of Oxford Street.*

Blown by concentric fate-gusts heart to heart,  
Radiating blasts of doom whirled them apart.  
Him helpless to weird lands the weird winds bore,  
And flung her bleeding 'gainst what rock-fang'd shore?

XLVIII.

*Shelley.*

'Twas some enamoured Nereid craved a storm  
Of Eolus, her minstrel to immerse  
In blue cold waves and white caresses warm:  
So the sea whelmed him, whelming not his verse.

XLIX.

*The Year's Minstrelsy.*

Spring, the low prelude of a lordlier song:  
Summer, a music without hint of death:  
Autumn, a cadence lingeringly long:  
Winter, a pause;—the Minstrel-Year takes breath.

L.

*Rochevoucauld Consistent.*

Sage Duke, thy creed who runs may read—  
*Men feign in every word and deed.*  
Therewith thy practice well agreed,  
For sure am I thou feign'dst thy creed.

LI.

*The Course of Music.—To Certain Contemporary Musicians.*

Through Formalism her feet progress—  
Reach Form,—yet still would onward press.  
There bid her tarry! 'Tis, I guess,  
But few steps more to Formlessness.

## LII.

*A Marginal Note on "The Tempest."*

The Truth is shackles and an iron door.  
In dreams alone we drink of liberty.  
For fetters whilst unfelt are bonds no more,  
And free they are who think that they are free.

## LIII.

*Thinkers, Past and Present.*

God, by the earlier sceptic, was exiled;  
The later is more lenient grown and mild:  
He sanctions God, provided you agree  
To any other name for deity.

## LIV.

*The Play of "King Lear."*

Here Love the slain with Love the slayer lies;  
Deep drown'd are both in the same sunless pool.  
Up from its depths that mirror thundering skies  
Bubbles the wan mirth of the mirthless Fool.

## LV.

*Interior of a Gothic Cathedral.*

A dream of nature's realised by man.  
Methinks it shall not end, it ne'er began!  
It bloomed a sudden rapturous rose full-blown,  
Whose perfume gladdened God upon His throne.

W. W.

## MAGAZINES AND REVIEWS.

IN the current number of *Mind*, Mr. H. Sidgwick continues his "Criticism of the Critical Philosophy." It is peculiarly interesting to watch so skilful and penetrating a critic testing the coherence of a system of thought so carefully elaborated as that of Kant. He appears to find the method of the "Kritik" beset with difficulties, starting with assumptions which it has no business to make, and leading to palpable inconsistencies. The attempt to discover an intelligible and consistent meaning for the term "object," as employed by Kant, is a good example of Mr. Sidgwick's method. The whole investigation bears the marks of careful reading and comparison of passages, and illustrates the writer's well-known subtlety. Mr. Karl Pearson reminds recent writers on Spinoza, including Mr. F. Pollock and Dr. Martineau, of the existence of a neglected work of Maimonides, the *Yad Hachazakah* ("Mighty Hand"), a perusal of which shows the influence of Rabbinical thought on Spinoza to have been much greater than has been commonly allowed. The most curious, perhaps, among many striking coincidences here brought to light is the doctrine of the universal concomitance of thought and extension. Mr. F. W. Maitland writes with shrewd critical insight, and with a pleasant mixture of respect and gentle banter, on Mr. Spencer's "Theory of Society." The article is a delightful example of a half-serious, half-sportive treatment of a subject fascinating the imagination by its grandeur, but beset with difficulties to the unimpassioned critic. The cleverness of the essay is perhaps best of all evinced in the final uncertainty of the reader's mind as to the real attitude of the writer towards the subject of which he discourses. A somewhat startling variety is given to the contents of the present number of *Mind* by the presence of an article headed "The Word," from the pen of Father Harper. Even the introductory note of the Editor hardly prepares the regular reader of *Mind* for the quaint juxtaposition of what is commonly regarded as sober philosophical analysis into the nature of conception and the functions of language in thought with familiar discourses about such sublime mysteries as the relations of the Three Persons in the Trinity and the intercommunion of angels. The philosophical part, if taken alone—though it puts some aspects of a well-worn subject in a somewhat new light—can hardly be called a fresh contribution. The writer has evidently thought out the thing for

himself; but, as often happens in such a case, through want of familiarity with the best treatment of his subject by his predecessors, he gives us, on the one hand, much that verges on commonplace, and shows, on the other hand, a defective grasp of the problem in its entirety.

THE *Theologisch Tijdschrift* for July confirms us in the view we have constantly taken of this ably conducted organ of advanced liberal theology. As a supplement to other critical periodicals it is indeed indispensable; and it is no small credit to the editors that they make no attempt to cover the whole circle of theological studies, but confine themselves to those which relate to the "burning questions" of the present day. Dr. Bruining, in an essay of forty pages, discusses E. von Hartmann's new philosophy of religion (*Die Religion des Geistes*), arriving at the conclusion that it is an unsuccessful attempt to combine Hegelianism with post-Hegelian ideas, and only resulting in the adulteration of Hegel's theory with alien elements. Dr. Prins takes occasion, from recent researches of Pfeiderer and Holtzmann (issuing apparently in opposite results), to examine anew the accounts in Acts xv. and Gal. ii., under the guidance of both the German writers. On the whole, Dr. Prins ranges himself on the side of Pfeiderer, who recognises the substantially historical character of the narrative in Acts, and accounts psychologically for the subjective colouring of the apostle's statement in his epistle. Dr. Blom, dissatisfied with his own and with all other previous explanations of 1 Pet. iv. 1, offers a new one, based on a comparison of Rom. vi. 1-14, which, he thinks, was known to the writer of 1 Peter. Dr. Oort reviews the Dutch translation of Prof. Robertson Smith's *The Old Testament in the Jewish Church*; he accuses the author of theological inconsistency, and makes one excellent point when he asks how Prof. Smith can draw a sharp line between inspired canonical and uninspired uncanonical books. Dr. Manssen reviews works in defence of the Christian conception of marriage *à propos* of G. Sand, Freytag, Mill, Hartmann, &c. Dr. Oort notices various books and pamphlets on Jewish subjects, including M. Benan's "conference" on the mixture of the blood in the Jewish race. Dr. Rauwenhoff gives a sympathetic notice of the opening lecture of the Praelector of German Theology at Paris.

## THE OXFORD HISTORICAL SOCIETY.

WE are glad to hear that the project of an Oxford Historical Society, so warmly advocated by the late J. B. Green, has now reached such a forward stage that its ultimate realisation may be regarded as almost certain. An acting committee has been formed at Oxford to arrange details and issue a full prospectus at the end of the long vacation. Meanwhile, promises of support have been received from many quarters; and there can be little doubt that an influential council will soon be constituted. It is proposed to ask the Duke of Albany to accept the position of president. Among those who have already signified their adhesion are the Bishop of Oxford, the Dean of Christ Church, Bodley's Librarian, the Keeper of the Archives, the two Professors of Modern History, Mr. James Parker, and Prof. J. E. Thorold Rogers. The names of non-residents include Mr. E. A. Freeman, Prof. S. B. Gardiner, Prof. W. W. Skeat, the Rev. M. Creighton, Dean Kitchin, and Mr. Andrew Lang.

The principles upon which the society is founded are contained in a couple of pages of rough notes, written by Mr. Green in May 1881. The history of the town is to be included, as well as the history of the university. Every period is to have its due share of attention, from the eighth to the eighteenth century. As

regards the matter to be published, Mr. Green suggested four classes—(1) what exists only in MS.; (2) books which have become rare or even difficult of access to ordinary scholars; (3) modern work of a valuable sort which has been practically lost from its form or periodical nature; (4) "collectanea" of passages from memoirs, &c., illustrating Oxford life at various periods. As regards the character of the publications, Mr. Green advocated the enlistment of some well-known writers to prefix introductions; and he insisted, above all, upon the importance of keeping the series broad and comprehensive, by choosing for illustration times in which Oxford came in contact with general history, and thus avoiding the character of a purely collegiate or academical society.

Among the materials which would require a moderate amount of editorial work, and might therefore be commenced in the earlier publications of the society, are the following:—The University Registers of matriculations and degrees, which begin before 1450, and are continuous from about 1570; Antony Wood's *Notes* for a history of the city of Oxford—the edition or adaptation of them by Sir John Peckhall in 1773 is careless and incomplete; the Chartularies of Osney Abbey and St. Frideswide's, now among the archives of the Chapter of Christ Church; entries affecting Oxfordshire and Buckinghamshire in the ecclesiastical registers of the diocese of Lincoln up to the time of the Reformation; Thomas Hearne's *Diaries*, extending from 1705 to 1735, contained in about 130 duodecimo volumes—extracts have been printed in 1857 and 1869; Hare's collections for a "Registrum privilegiorum Universitatis Oxoniensis," a collection of inedited papers relating to the siege of Oxford in the Civil War, now in the Bodleian Library.

The following reprints, among others, might be taken in hand:—The detailed description of the city of Oxford in Elizabeth's time printed in an Appendix to Hearne's *Textus Roffensis*, illustrated with reproductions of Nele and Bereblock's MS. *Topographica delineatio Collegiorum* (1566); Fiebertus's *Oxonienensis in Anglia academiae descriptio* (Rome, 1602), a rare work, the first separate account of Oxford; Nichols's *Progresses of Elizabeth and James I.*, so far as they concern Oxford, with the unpublished account of the Queen's visit to Oxford among the Harleian MSS; the list of Oxford writers before 1500 given by Pitsens, collated with Bale and Tanner and supplemented.

The above list might be extended almost indefinitely by reference to subjects which require considerable editorial work, such as Rawlinson's continuations of Wood's *Athenae Oxonienses*; Bryan Twyne's and Wood's MS. collections relating to the University, City, and County; the Oxford Press in the fifteenth and sixteenth centuries; the place-names of the neighbourhood as illustrative of the English settlements in the South-Midland Counties; the municipal history of the City, and "Dr. Richard Newton and University Reform in the Eighteenth Century."

Provided that at least 250 subscriptions of one guinea each are received by the close of the present year, it is intended to date the formal commencement of the society from January 1, 1884.

## THE SPANISH ACADEMY OF HISTORY.

THE Real Academia de la Historia of Madrid has just closed its labours for the session of 1882-83. The next session will begin on September 28.

The Academy has this year been chiefly busied in the fulfilment of the obligations contracted by it to the Congress of Americanists, to whom it offered the hospitality of its halls. The first of these—the ordering the

immense mass of invaluable documents and MSS. preserved in the "Archivos de las Indias" at Seville—is in good progress. By a royal decree these archives are now placed under the care of the Corporation of Archivists and Librarians, supported by the State. Officers, attendants, and the budget have been provided on a suitable scale. Foreigners will now be able to consult these documents at Seville—the richest and most authentic in Europe—without feeling compelled, as formerly, to give vent to well-merited complaints.

Moreover, the Academy had brought to Madrid the documents connected with the great law-suit between the families of Christopher Columbus and Alphonso Pinzon, after the death of the former. A thorough examination by a Commission has discovered the names of all the companions of Columbus except two. The evidence shows that Pinzon has been much calumniated. His constant cry was "Forward, Forward!" If Columbus was the head, Pinzon was the right arm, of the expedition. These results will be presented by Señor Fernandez Duro to the forthcoming Congress of Americanists at Copenhagen. His work will also appear in vol. x. of the *Memoirs* of the Academy, already in the press. The Academy has also delegated to the Congress Señor Fabié, so well known for his labours on the life and works of Las Casas; and Señor Rada, who, with M. de Rosny, has done so much for the interpretation of the symbolic writing of the Mayas (Yucatan), utterly overthrowing the system of Brasseur de Bourbourg.

The Academy dedicates a section of its monthly *Boletín* to the publication of inedited MSS. on American history; an important place is also reserved for Keltiberian, Semitic, and Latin inscriptions discovered in the Peninsula. The *Boletín*, which had fallen into arrear, has by great exertions been brought up to date. Six numbers have appeared since April; that for July was to be published on the 15th. On the resumption of the session the publication will be regular. F. FITA.

### CORRESPONDENCE.

#### THE ETYMOLOGY OF "ROLLOCK" OR "BULLOCK."

2 Salisbury Villas, Cambridge: July 16, 1883.

In attempting to trace back the history of this word I have not been very successful. It seems to be very seldom mentioned in dictionaries. Worcester gives the spelling *rollock*. Ash (1775) gives the spelling *rowlack*, and informs us that it is derived from *row* and *lack*, without attempting to explain what he means by *lack*. But if we begin at the beginning we obtain some light. The Anglo-Saxon word was *arloc*, pl. *arlocu*. In Wright's *Vocab.* i. 63, we find "*columbaria*, ar-locu." The sense is, literally, oar-lock, though *lock* is rather to be taken in the sense of "hole" than in the ordinary sense of *lock*, which is represented in Anglo-Saxon by *locæ*. The etymology is, however, just the same—viz., from *loc-en*, p. p. of the strong verb *lucan*, to lock, to fasten. Hence the Anglo-Saxon *arloc* is an oar-lock, oar-hole, or oar-fastening. The original rollocks were, I suppose, often mere holes in a boat's side; they are still, so to speak, half-holes or notches. Hence we get German *rudelock*, *rudergat*, an oar-hole; Low-German *rodergat*, *roergat*, a rudder-hole.

Now the Anglo-Saxon *arloc* became *orlok* in Middle English, a form which occurs at least three times in the *Liber Albus*, pp. 235, 237, 239; but, the word *lok* not being clearly understood (for we never used it with the common sense of hole, as the Germans do), the rollock was also called an *oar-hole*. For example, in a Nominal printed in Wright's Vocabulary, i.

239, we find "*Hoc columber*, are-hole," whereupon the editor has the singular and amusing note that this means "an air-hole, a small unglazed window." However, the Middle-English *are* is merely a Northern spelling of *oar*, as may be seen by consulting Barbour's *Bruc*; while the Low-Latin *columber* is an inferior spelling of *columbare*. There is a much later example in Hexham's Dutch Dictionary, where he translates the Old-Dutch *riemgaten* or *roeygaten* by "the oar-holes to put out the oars."

When we consider how common in English is the shifting of the letter *r*, I think it becomes extremely probable that the Middle-English *orlok* is precisely the same word as the later *rollock*; just as English *horse* is the German *Ross*. Further, I think that the form *rollock* is due to a changed pronunciation resembling that seen in Modern-English *durst* from Anglo-Saxon *durste*, Modern-English *burst* from Anglo-Saxon p. p. *borsten*, &c.; such change being extremely conspicuous in Modern-English *word*, *oven*, and *shovel*. Lastly, I believe *rollock* to be a pedantic spelling, due to an attempt to insinuate an etymology. The man who invented the spelling *rollock* probably never considered what was the sense of the latter syllable. It is one curious mark of popular etymology that it rests completely satisfied with explaining only half of a word. Hence, in *cray-fish*, *cause-way*, the inventors of such spellings felt quite sure about the *fish* and the *way*; as to the *cray*- and the *cause*-, they were not worth considering.

WALTER W. SKEAT.

#### THE DATE OF POLYCARP'S MARTYRDOM.

Trinity College, Dublin.

Since the publication in 1867 of Waddington's memoir treating of the date of Polycarp's martyrdom, there has been a constant succession of articles on the subject in foreign theological periodicals. I therefore venture to think that there may be some among the readers of the ACADEMY who will take interest in a few more words on the subject. Waddington's main reason for placing the date about a dozen years earlier than that previously received is that the martyrdom took place in the proconsulship of Quadratus, that Quadratus had been consul A.D. 142, and that, according to what has now been ascertained to have been the routine of appointment at the time, the interval between consulship and proconsulship would be from twelve to sixteen years, and could not possibly be so long as twenty-five. We must, therefore, put back the date from 167 to the period 154-58. So far Waddington has obtained general, though not universal, assent. He proceeds to determine the exact year by means of the notices of proconsuls in the orations of the contemporary rhetorician, Aelius Aristides. The argument then runs as follows:—(1) Julianus was proconsul May 145-46. (2) This was the second year of the illness of Aristides. (3) In the tenth year of the illness the proconsul was Severus, whose year, therefore, was 153-54. (4) The year after Severus, a friend of Aristides was proconsul. This friend must have been Quadratus, whose year, therefore, was 154-55. In this argument the steps (1) and (3) may be regarded as decisively proved; but (2) and (4) are each open to dispute. The conclusion of the argument, then, must be regarded only as made probable, not as demonstratively established. There is another argument, however, which seems to put the matter beyond doubt. Polycarp suffered on Saturday, February 23, but, of the years among which we have to choose, 155 is the only one in which February 23 was a Saturday. It will thus be seen that in order to fix the year of the martyrdom it is important to make sure that we have got the right day of the month. Now about this there is a difficulty; for we are not only

told that the day of the martyrdom was a Sabbath, but that it was a great Sabbath. And no one has been able to explain how February 23 should be a great Sabbath. The most plausible guess is that it was so because it coincided with the feast of Purim; but, not to mention other difficulties, that feast was held at the full moon, and February 23, 155, was not a season of full moon.

Let us, then, examine more closely the statement in the note to the martyrdom that Polycarp suffered on the 2nd Xanthicus. It is known that the Macedonian months were originally lunar, but that in later times they were made to correspond to fixed dates in the solar year. When this change had been made, Xanthicus was the sixth month counting from the autumnal equinox, and 2 Xanthicus corresponded to February 23. There is reason to believe that this change had fully established itself a hundred years after the death of Polycarp. But Polycarp's own time was one of transition. We learn from his contemporary, Galen, that in his time Grecian cities used the lunar months, but that the use of the solar months was general through Asia. Hence it has been commonly inferred that in ours, which is an Asiatic document, 2 Xanthicus must mean February 23. I will not enquire whether Smyrna might not have followed the usage of Grecian cities; for there is another important question which has been left out of consideration. When lunar and solar months were simultaneously current, is it likely that they were called by the same names? A moment's reflection will convince us that the ambiguity would lead to intolerable confusion; if, for instance, persons invited to attend at a commemoration in Smyrna on 2 Xanthicus were at a loss to know whether that meant a month commencing at the end of February, or else at the end of March or beginning of April. Actually I believe that the months beginning from the autumnal equinox were designated by their numbers, and that it was not until the use of the lunar months was quite discontinued that their names were transferred to the solar months. At least this appears to me to have been the usage of Aristides. When he speaks of solar months, he says, "the fourteenth day of the second month as we count it here." When he designates months by names, invariably, as far as I can make out, he means lunar months. And, further, it seems to me that in the note to the martyrdom—*μηνὸς ἑσθιωτοῦ δευτέρου ἡμερῶν*—the *ἡμερῶν* is to be taken as an indication that a lunar reckoning is followed. But the best reason for thinking that in the date of the martyrdom we are to understand the lunar month Xanthicus is that on this supposition all chronological difficulties disappear.

In the first place, Xanthicus corresponded to the Jewish Nisan; and, since the Jewish day commenced with the evening, the morning of 2 Xanthicus would belong to the first day of the Jewish ecclesiastical year, from which the reckoning of all the feasts began. Most naturally, therefore, would it be a great Sabbath, and there is no rival claimant for the honour; for Joest, as quoted by Steitz (*Jahrb. f. deutsch. Theol.*, 1861), is high authority for holding that it was only in very modern times indeed that the Saturday of the Passover season came to be honoured with that title.

But, in the second place, the date 23rd March, to which, as I shall presently show, we are thus led, has much intrinsic probability. The martyrdom took place at the end of the games celebrated on the occasion of the meeting of the *κοινὸν* of Asia. We have no independent evidence as to the time when these annual meetings were held; but the time of the vernal equinox is an exceedingly likely one. If we suppose the games to have begun, like the Roman Liberalia, on March 16, we should

have time for the events that occurred before the appearance of Polycarp, which took place just after the wild-beast shows were over.

These games must annually have been the great time of danger for the Christians; for then multitudes of heathen would be gathered together, with their religious passions in a state of strong excitement, and in a mood also to crave victims for the wild-beast shows. It seems to me likely that it was at one of these annual meetings that the martyrdom of Sagaris took place, which Eusebius tells us occurred at Laodicea on the 14th Nisan. Now the 14th Nisan of one year might easily fall on the same day of the solar year as the 1st Nisan of another year; and in point of fact, in 167, which I had thought a likely year for the martyrdom of Sagaris, the 23rd March is the fourteenth day of the lunar month. This seems to add something to the probability that we have rightly assigned the season of the celebration of the games.

As I understand the story told of Sagaris, it was the commemoration of his martyrdom the following year which gave rise to the Paschal disputes in Asia Minor. Christians coming together from various cities on his anniversary, Nisan 14, found that some were on that day keeping their Easter while others were still fasting. If I am right in this, my view is confirmed that the Asiatic cities used a lunar reckoning, for it is according to such a reckoning that the anniversary appears to have been kept. If it be asked how it could have been safe for Christians to come together to these anniversary commemorations, it must be borne in mind that the place of meeting of the Asiatic *κοινὸν* changed annually from city to city, so that the city which one year had been the point of danger might next year be the safest place in which Christians could assemble. One word more about Sagaris—namely, that we get a confirmation of Waddington's date for Polycarp's martyrdom from the order in which Polycrates enumerates the Asiatic martyrs "Polycarp of Smyrna; Thraseas who sleeps in Smyrna; Sagaris who sleeps in Laodicea." It is natural to think that the order is chronological. Now, the very latest year we can assign to the proconsulship of Servilius Paulus, under whom Sagaris suffered, is 167, because he became city prefect in that year. The martyrdom of Polycarp, therefore, must have been earlier; and twelve years is no unlikely interval if we suppose that, as Polycarp suffered one year when the games were celebrated at Smyrna, so Thraseas was martyred when the turn of Smyrna came round again, and Sagaris after that, when it was the turn of Laodicea.

By abandoning the date Saturday, February 23, we have lost one clue to recovering the year of Polycarp's martyrdom, but we get another in its stead. The year must have been one in which the lunar month Xanthicus began on a Friday. As an error of a few hours might falsify our results, I did not like to trust to my own calculation of new moons, and I owe the following list to the kindness of my friend Prof. Adams:—154, Sat. March 31, 6 p.m. Smyrna time; 155, Wed. March 20, 10.30 p.m.; 156, Tues. April 7, 7.50 p.m.; 157, Sun. March 28, 10.25 a.m.; 158, Sat. April 16, 10.50 a.m.; 159, Thurs. April 6, 3.25 a.m.; 160, Mon. March 25, 3.30 p.m.; 161, Sun. April 13, 11 a.m.; 162, Thurs. April 2, 1 p.m.; 163, Mon. March 22, 1.45 p.m.; 164, Sun. April 9, 8.15 a.m.; 165, Thurs. March 29, 6.40 p.m.; 166, Tues. March 19, 10 a.m.; 167, Mon. April 7, 11 a.m.

In order to use this table, we must remember that the first day of the lunar month would be the first day the moon was visible, which may be taken as about forty hours after conjunction. Thus, in 154, the conjunction taking place in the evening of Saturday, the

first day of Xanthicus would be Monday. It could not possibly be Friday, therefore that year is excluded. In 155 the conjunction takes place late on Wednesday evening, and the first day of Xanthicus would be Friday. Waddington's year, therefore, completely fulfils our conditions, and the only change my investigation makes in his result is to alter the month from Saturday, February 23, to Saturday, March 23. On examining the list, I can only find one other possible year—viz., 159, Saturday, April 8.

It remains to say a few words as to the Roman date now found in the note to the martyrdom, 7th before the kalends of March. The readings May or April instead of March are plainly conjectural alterations made in order that it might be possible for the "great Sabbath" to fall in the Easter season. I share the belief of those who think that the Pionius whose name appears as a transcriber of the martyrdom was that eminent member of the church of Smyrna who suffered about a hundred years after Polycarp, and who, in view of the then impending persecution, strove to brace the minds of his brethren by reviving the memory of their former martyred bishop. I accept his statement as true that he really did find a very old MS. of the martyrdom. Finding in it the statement that Polycarp suffered on the 2nd Xanthicus, he translated this, according to the usage of his own time, February 23, and fixed the date of subsequent commemorations of Polycarp accordingly. If I am right in thinking that in this matter Pionius made a mistake, we have all the stronger assurance of the antiquity of the date 2nd Xanthicus, and of the authenticity of the martyrdom which contained it; since its use of a different calendar proves it to be clearly much older than the time of Pionius.

If the annual commemoration of Polycarp only began in the time of Pionius, we are led to believe that in the very earliest times there was but one anniversary celebration of a martyr's birthday. That there was one cannot be doubted; and to all appearance the letter of the church of Smyrna relating the death of Polycarp was a circular letter inviting members of other churches to join them in the commemoration of Polycarp which it was intended to make the year after his martyrdom.

G. SALMON.

#### THE DERIVATION OF "SWEET WILLIAM."

Brackley: July 14, 1883.

The article referred to by your correspondent is from the pen of the lamented Richard J. King, of Crediton, and has been reprinted among his *Sketches and Studies*, an interesting volume published by Mr. Murray in 1874. In this reprint the writer cancels some of the conjectures he made in the article as originally contributed to the *Quarterly*, but the passage quoted in your last issue remains unaltered. In his *Fragments of Two Essays on English Philology* the Rev. J. O. Hare says: "Sweet William was dedicated to St. William, whose festival was on the 25th of June, so that the adjective *sweet* is probably a substitution for *saint*." But we have too many plants so named for their fragrance to admit of this unsatisfactory solution of the question. It is curious that in *Ger. Emac.*, p. 597, the various kinds of dianthus should be described under the heading "Of Sweet Saint Johns and Sweet Williams," not "Sweet Saint Williams." Phillips says: "Gerard calls them Sweet-Williams, but on what account they were so named we are left to surmise, unless we could persuade ourselves that they were so called after the greatest man of the age, William Shakespeare" (*Flora Historica*, ii. 50). This suggestion is curious in the present connexion, when the question of

etymology arises through the publication of *The Shakspeare Flora*. The whole subject is discussed at length in my *Flowers and Flower Lore*, p. 157. HILDERIC FRIEND.

#### A YORKSHIRE PROVERB.

Bottesford Manor, Brigg: July 14, 1883.

We have in Lincolnshire the saying "As throng as Throp's wife," but I do not call to mind ever hearing the continuation about her hanging herself with the dish-cloth—dish-clout it would be in our dialect. The proverb occurs in Laurence Cheny's *Ruth and Gabriel*, i. 73. It is used with us to describe a woman who is for ever busying herself about domestic matters, but whose house and surroundings are nevertheless always in a mess. We have a brother proverb to denote the extreme of idleness—"As lazy as Ludlam's dog that leaned his sen agean a door to bark." I do not think that Ludlam has ever been identified.

EDWARD PEACOCK.

Priestgate House, Barton-on-Humber:  
July 14, 1883.

The proverb belongs originally to Teesdale, its form being:—"As thrang as Thrap's wife as hanged herself i' t' dishclout." Like others of the kind, it probably dates from the period between 1350 and 1650. RT. BROWN, JR.

#### APPOINTMENTS FOR NEXT WEEK.

FRIDAY, July 27, 8 p.m. Quekett: Annual General Meeting.

#### SCIENCE.

*Ilchester Lectures on Comparative Lexicography.* Delivered at the Taylor Institution, Oxford. By Carl Abel. (Trübner.)

THESE lectures by Dr. Abel contain many ingenious remarks, and are full of pleasant reading. Moreover, the English in which they are written is so fluent and idiomatic that it is difficult to believe them to be the composition of a foreigner. One can only regret that the Slavonic element they contain is so scanty. With Dr. Abel's views on the *inversion* of language, and the proofs of it to be drawn from ancient Egyptian, I have here nothing to do. The demands of the Ilchester lectureship are strictly Slavonic, and to these we must look. When the author tells us that the Russian idea of liberty is mere licence, *as the derivation of the word which they use shows*, we are reminded of the admirable words of the late Dean Mansel, a very clear thinker, when he said:

"The etymology will, in nine cases out of ten, declare not the present meaning of the word, but either one that has become obsolete, or some secondary notion which may account for the imposition of the name, but which at no time formed, strictly speaking, any part of its signification."

Neither can I endorse the words of the learned author on what he calls the "Finno-Russian" language, when Geitler, one of the most eminent of modern Slavists, in his *Starobulharska Fonologie*, has given us good grounds for believing that Great Russian more closely resembles Palaeoslavonic than any other language of the group; and in this Johannes Schmidt agrees with him. As regards the Finnish words to be found in its vocabulary, anyone may judge for himself. They hardly

exist, except in the provincial dialects spoken round St. Petersburg. In the valuable Historical Grammar of Boulaev a Finnish element is entirely ignored. That the Russians have incorporated many Finnish tribes in the East and North goes without saying, as the French expression is, and would not be denied by any serious ethnologist now, whatever may have been the case in the last century. By-the-way, we should like to have Dr. Abel's authority for the anecdote about Trediakovski. It is not given in the ordinary Lives of that industrious scribbler. Is Dr. Abel thinking of the story of his having been beaten by Volinski, which was under totally different circumstances? Our author does not seem very definite in his views on Little Russian, many of the words which he cites being Polishisms; take the word *chmura*, "cloud," for instance, which is also Polish, and from that language, no doubt, the Little Russians got this signification.

The difference, also, between the language of Galicia and the Ukraine seems somewhat overstated. The works of Shevchenko, born in the government of Kiev, are enthusiastically read in Austrian Poland, and the first complete edition of his poems was published at Lemberg in 1866. Nor do I exactly agree with Dr. Abel in calling "Russianian" literature, as he terms it, "to a large extent a foreign letter-paper literature." He is only thinking of the Genevan press, but in the *Rouska Chilanka* of Barvinski (Lemberg, 1871) we get forty-one authors (from South Russia and Galicia), beginning with Kotliarevski, who died in 1838. We shall, no doubt, be able to make a more scientific study of Little Russian when we get the comparative Slavonic Lexicon which Prof. Jagić is working at, with the collaboration of many of the best Slavonic scholars.

At p. 102 one cannot be quite satisfied with Dr. Abel's rendering of the Russian proverb, *Kto yemou ne velit: svoya volya*. Surely *kto* here is not interrogative, but merely used indefinitely, as is often the case in Russian, and is equivalent to *kto niboud*, "anyone;" thus the sentence will simply be "does anyone not order him"—i.e., if anyone does not. The proposition is naturally expressed curtly, as all proverbs are; and *velit* must be the third person singular of the present tense of the verb, and not the infinitive, as Dr. Abel takes it to be, which would be *velyet*.

Again, it is difficult to accept the author's derivation of *khoroš* from *kras*, of *sloboda*, a well-ascertained word, from *slabi*, "weak" (!), and of *bar*, *barin*, as the "inverse" of *rab*. Is it not a contraction from *boyarin*, the root of which is *boi*, "war"? And why should we connect *glaz*, "eye," and *glas*, "voice"? Dr. Abel also tells us that *khokhli*, the nickname given by the Great to the Little Russians, signifies "irresolute and sly." One always heard (on native authority) that the word signifies "tuft" or "crest," and that they were so called from their way of wearing their hair *à la Polonoise*. Anglo-Saxon scholars in this country will not support the author in his derivation of Wiltshire from the Slavonic tribe of the Wilzen, although Schafarik first suggested it. It is from Wil-tun-scire, the shire of the town on the river Wily; and the

name of the people was Wil-sætas, and not Wilt-sætas. The word Wily may, perhaps, be found to be connected with some root like *wellian*, "to flow."

Finally, one must protest against the word Bulgaro-Sloveno-Slavonic on p. 49. It is too comprehensive and involves two opposite theories. It is clear that if the language is Old-Bulgarian it cannot also be Old-Slovenish.

It is ungracious to point out these flaws, as I cannot help considering them, for the book is very pleasant reading, and full of most ingenious suggestions. Dr. Abel is so anxious to be original that he sometimes allows himself to be carried too far. But, under all circumstances, much may be learned from the writings of a man who has bold and vigorous opinions, and is always suggestive when he deals with the psychological side of language. W. R. MORFILL.

#### CRITICISM OF EARLY CHINESE LITERATURE.

Peking: May 11, 1883.

WHILE making some remarks on M. Terrien de La Couperie's letter in the ACADEMY of January 20, 1883, I think it will be well also to state a few facts in regard to the present condition of criticism by native writers on the early literature of China.

I rejoice that eyes are now directed to Babylonian tablets with a view to learn how far they reveal any primitive traces of connexion between China and Babylonia. Thirteen years ago, in the first two chapters of my *China's Place in Philology*, I pointed out many resemblances between the religion, philosophy, and science of the two countries, and said, "It appears more consonant with the facts to trace the Chinese philosophy to Babylonia than to any other source." I think so still, and believe, as then, that brick-building, metallurgy, music, cloth-weaving, writing, and astronomy came from Babylon to China. It is, therefore, to me matter of satisfaction that my critic (ACADEMY, January 20), who has, what we have not here, access to collections of cuneiform inscriptions, is busied with this subject.

M. Terrien de La Couperie seems to deny the existence of ideo-phonetic compounds in ancient Chinese. Ideographic letters he will admit, since everyone allows that the characters for sun, moon, man, field, &c., are pictures of the objects. Primitive phonetic characters must be granted too, for an immense number of characters are written phonetically. What he disbelieves to exist are compounds partly phonetic and partly ideographic. But, although it is the case that in the Chow and Han periods radicals were added to many characters which were formerly simple, it is also true that in the earlier writing (Ku wen) the principle of compounding the characters existed to a very large extent. Thus, *jen*, "benevolence," is formed of the heart radical and *ni*, "two," as phonetic. So also, on the Shang vases, the inscribed characters, including *pau*, "valuable," *tsin*, "sleep," i. name of a vase, are written with radicals. In the vase called *Tse ming ting*, we have two distinctly formed compounds—*shé*, "house," and *kan*, "out."

M. Terrien de La Couperie denies one of my laws given in *Introduction to the Study of the Chinese Characters*, p. 189, and there proved by dialectic changes. He has found two examples out of about twenty collected by Jullien in his *Méthode*—two which are exceptional; and on the ground that there are these exceptions he denies the rule. But it was quite possible for Pali-speaking Hindu missionaries dictating to Chinese scribes, who

might not have a good ear, to fall into irregularities; and, if there are about eighteen cases of conformity against two of nonconformity, my critic must allow the rule to stand (see in Julien, pp. 105-11). The law is that the modern Chinese *h* comes in very many words from *g* or from *k*, or from *k* as aspirated; an *h* in the lower even tone must be *g* in old Chinese.

My critic says I have not studied the oldest orthography. But, in fact, I had the pleasure of detecting about 1855 the existence of rhyming finals in the phonetic characters, thus coming to the discovery that phonetics ending in *p*, for example, never mix with phonetics ending with another final letter. So with final *k*, *t*, *m*, *n*, and *ng*. Thus we learn what were the final consonants that existed when the Chinese were forming their characters. This gives to my orthography an antiquity which covers the whole ground of M. Terrien de La Couperie's speculations, and renders it unsafe for him to reject any proved laws. If the final consonants *p*, *m*, *t*, *k*, &c., kept their places from 2000 B.C. till after the Christian era, the initials probably did so too. They should not, at any rate, be displaced merely to suit the exigencies of a hypothesis.

I am glad to see that M. Terrien de La Couperie's attention has been drawn to Cochinese and to Siamese, for I pointed out the laws to which he refers between Chinese and Siamese in p. 117 of *China's Place*, and the chances of our obtaining safe results are greatly multiplied when the number of workers is increased. His laws were already known. The conclusion he now draws from them is scarcely warranted. The study of the Ku wen is of great importance, and promises to yield very interesting results. I feel thankful to Prof. Douglas for having drawn attention to the syntactical inversions of the Hsia calendar, and to him and to M. Terrien de La Couperie for pointing out the great significance of the Ku wen characters. The Shwo wen etymology is too one-sided, being under the influence of the Han physical philosophy. We must construct a new explanation of the characters on the basis of the Ku wen. There is no doubt on this point. The six principles of formation deduced by the Han writers are all there, but we need a book specially on the subject, made on philological principles and free from any Han one-sidedness. There is clear evidence in the Ku wen of the existence of ideographic radicals combining with phonetics to form compounds in the writing of the Shang dynasty; but, of course, it was more limited than afterwards.

I would suggest that the old title "Yellow Emperor" meant what it says, and is not likely to be a foreign proper name on that account, also that the Chinese have no such tribe-name as *Pak*. The phrase *Pak sing* really means "the hundred family names," and cannot be a phonetic equivalent for Bactria, as M. Terrien de La Couperie supposes. With regard to *Nai*, I would remark that this name is post-classical and separated by two thousand years from the man who is said to have borne it. Can we rely upon it to identify the personage to whom it belonged with an Elamite god?

The present dynasty in China has seen a succession of distinguished authors on classical criticism and philology. A large portion of their works are printed in the collection called *Hwang tsing king kiai*. They are more free from the influence of narrow system than the scholars either of the Han or of the Sung dynasties. Their criticism is more to be relied upon than that of the authors of either of those dynasties. If they have a failing it is in being too patriotic, leading them to disbelieve in the foreign origin of science and useful discoveries, and to attribute them to the influence of their own sages shining, like the sun, first in the East and after-

wards upon the West. The present Minister to England and France, Tseng how, is an excellent scholar and well acquainted with these critical works, and is especially an authority upon philology as studied by a section of the native scholars referred to during the last two or three centuries. Any European philologist or student of Chinese wishing the opinions of an extremely well-read native in the matters touched on in this letter and in the *Yi king* controversy will probably find the information Tseng how can give of considerable interest and importance. His father also wrote some papers on philological subjects.

J. EDKINS.

#### PRINCE L.-L. BONAPARTE.

IN reply to a question put to him in the House of Commons on Thursday, July 12, Mr. Gladstone spoke as follows. We quote from the report in the *Daily News* :—

"This question, though put by my hon. friend, and purporting to refer to a matter of fact, is very distinctly a challenge of a proceeding; and the difficulty under which I labour is that it is not possible for me within the limits of an answer to give to my hon. friend or the House all or any considerable part of the information which I have studied to acquire. My hon. friend will, therefore, be kind enough to suppose that what I say now will have reference to the heads upon which I shall be ready to enlarge upon the proper occasion. He asks what 'services Prince Lucien has rendered to the Crown and the country' to entitle him to a grant of £250 per annum. Now, according to the Act of Parliament under which these pensions are given on my responsibility, attainments in literature are considered as services to the Crown and the country. I have, however, been in the habit of imposing on myself a further limitation, because I am not sure that attainments in literature taken by themselves are quite enough to warrant me, according to the view I take of my duty, in giving these pensions. A man may have great attainments in literature, and may carry those attainments to the ground with him without doing any good to the world; but services to literature I conceive to be strictly services to the Crown and country within the meaning of the Act. But my hon. friend will say, What are the services to literature that Prince Lucien has rendered? I do not hesitate to say that, in my opinion, he has rendered very great services to literature indeed, and not only so, but precisely the very services to literature for which these pensions are specially intended. The services rendered by Prince Lucien are philological services, and philological services are services of a nature indispensable to the effective prosecution of the history of human thought, or the history of human affairs. Anyone with the slightest acquaintance with the subject will bear me out in what I say to that effect. But, at the same time, they are services which the public, considered as customers for works, do not remunerate, and I can give a most singular and remarkable illustration of that fact, which may be drawn from recent occurrences. At the present moment it is probably known to the House that there is in preparation an important extension of the dictionary of the English language. It is now being prosecuted upon a scale quite unknown to previous research, and now here we are dealing with a great philological work which does concern immediate utility; and yet, notwithstanding, it has been found impossible to find any publisher who would undertake the responsibility of producing this work. The expenses connected with it, and the risks of it, have therefore been undertaken—I think much to the credit of the body—by the University of Oxford. Well, if that is the case with regard to the construction of a dictionary, the House may very well consider what it will be with regard to the case of a gentleman who does not construct a dictionary, but who goes down to the minute investigation and collection of the original rudimentary facts out of which all the knowledge for a dictionary must necessarily be collected. That may give the House some idea of

what has been the work and services of Prince Lucien Bonaparte. This gentleman, who I may say is a British subject, has mainly devoted his life to the purpose of philological enquiry; and when he had considerable fortune, which I am sorry to say is not now the case, he has spent upon these philological enquiries sums, I apprehend, very much larger than the rather trifling amount which, beginning at seventy years of age, he can hope to derive from this pension. Not only in the collection of books, but largely in the printing and the gratuitous distribution of books to all students in philology, and to every great institution connected with philology, the funds which Prince Lucien possessed were largely and liberally expended. I am in hopes I have said almost enough. Suppose I were to take one particular instance. I believe there are no less than 160 of these operations of printing which Prince Lucien has executed in other and happier days at his own expense. Among them is the printing of the Gospel of St. Matthew in twenty-nine dialects and languages, for the accuracy of which he is personally responsible, and which represents absolutely his own work. Then he has printed the Song of the Three Children in eleven dialects of the Basque language, and also the Parable of the Sower in seventy-two European languages and dialects. Many years ago, I believe about thirty, he received a doctor's degree from the University of Oxford for these labours; and I believe there is hardly a country in Europe in which honorary distinctions have not been awarded to him. Well, now, the value of this 'considerable grant,' as it can be estimated for a man of seventy, is something under £1,600; and I have only to add that, while I do not shrink from any part of the responsibility of having awarded this pension, I am extremely sorry, and I am disposed even to say that I take some shame to myself, for not having awarded it at an earlier period."

#### OBITUARY.

WE regret to record the death of Mr. Edward Backhouse Eastwick, O.B., which took place at Ventnor, in the Isle of Wight, on July 14. Few men have led a more active life, or done harder work in the unremunerative domain of Oriental languages. He was born in 1814, and was educated at the Charterhouse (where his school-time extended from that of Thackeray to that of Leech), and at Balliol College, Oxford. In 1836 he received a cadetship in the Bombay Infantry, at the comparatively late age of twenty-two; but he never rose above the rank of lieutenant, and retired from the service in 1845. In that year he was appointed Professor of Hindustani at Haileybury. From 1860 to 1863 he served as secretary of legation at Teheran; and in 1866 the Marquis of Salisbury (then Lord Cranborne) appointed him his private secretary at the India Office. To enumerate all his published books on Hindustani and Persian would be tedious. Perhaps the most valuable work that he did was the compilation of Murray's Handbooks for India, originally published in 1859. For the purpose of a new edition he visited India in his old age, and travelled from one end of the peninsula to the other with the enthusiasm of a young man and the laborious accuracy of a Baedeker. These three Handbooks—for Madras, Bombay, and Bengal—will be his best monument.

#### SCIENCE NOTES.

MESSRS. LONGMANS have in the press a new work by Mr. Grant Allen, entitled *Flowers and their Pedigrees*. It will be illustrated with fifty wood-cuts by Mr. G. Pearson.

THE same publishers also announce an English translation of Prof. Kolbe's Text-Book of Inorganic Chemistry, edited by Prof. T. S. Humpidge, of the Aberystwyth College.

A DUEL took place the other day at Peeth between two noblemen, one a son of Count

Andrassy, which arose out of a quarrel about the truth of Darwinism. The supporter of Darwinism, we regret to hear, was seriously wounded.

Science proposes that the American Association for the Advancement of Science should appoint a committee to draw up a definite list of foreign journals of mathematics, physics, and the like which do not compete with any publishing firm in the United States, and then urge upon Congress the passage of a special Act putting such journals on the free list.

THE July number of Dana and Silliman's *American Journal of Science* opens with an interesting paper, by Prof. Joseph Le Conte, on "The Genesis of Metalliferous Veins." The writer holds that all veins, however they may differ among themselves, have been formed by deposits thrown down from subterranean waters, the most favourable solvent being an alkaline solution at a high temperature. He combats at some length the hypothesis enunciated a short time ago by Prof. Sandberger, which supposes that the material of veins is introduced by "lateral secretion" from the neighbouring rocks rather than by deposition from ascending waters. Prof. Le Conte's views have been mainly determined by his studies of the solfataric action now going on at Steamboat Springs and at Sulphur Bank, in California, as noticed some time ago in the ACADEMY.

THE number of the *London Medical Record* for July 15 (Smith, Elder and Co.) is entitled "Where to take a Holiday," and consists of a series of reports by medical men on home and foreign health-resorts. There is something not quite consistent with old-fashioned etiquette in such a proceeding; but we suppose that doctors, like everybody else, must swim with the tide. The public, at least, are not losers.

#### PHILOLOGY NOTES.

THE late Prof. E. H. Palmer left at his death in an imperfect state the MS. of his Concise Dictionary of the Persian Language, containing the English-Persian part. The work has been enlarged and completed by Mr. Guy Le Strange, and will be published, probably in October, by Messrs. Trübner.

THE sixtieth Annual Report of the Royal Asiatic Society, which has just appeared, continues to maintain those excellent features to which Mr. Vaux has now accustomed us. We have, first, full notices of Oriental scholars who have lately died; and next, a Bibliography, extending to one hundred pages, of all publications concerned with Oriental studies that have appeared in the past twelve months.

THE current number of the *Journal des Savants* contains an article by M. Renan on "The Legend of Buddha," from which we quote the following:—

"On a quelquefois comparé la relation du bouddhisme et du brahmanisme à celle du christianisme et du judaïsme. L'opposition entre les deux cultes hindous a été, en réalité, beaucoup moins tranchée que celle des deux religions sorties d'Israël. Le bouddhisme pourrait plutôt être comparé au franciscanisme (qu'on me passe ce mot) tel qu'il exista dans la pensée des franciscains exaltés, avec l'idée que François avait été un second Christ, fondateur dans le monde du règne de la pauvreté. Comme le mendiant bouddhique, le moine franciscain plaît aux foules, qui opposent sa sainteté aux allures profanes d'un clergé riche, devenu impopulaire. Comme la loi bouddhique, la règle franciscaine, dans la pensée des partisans de l'Evangile éternel, était destinée à devenir la loi de tous; c'était un ascétisme particulier, un Ordre aspirant à devenir une religion universelle. Si les franciscains exaltés avaient réussi à gagner par leurs missionnaires des pays entiers, comme firent plus tard les jésuites au Paraguay, ils y eussent

certainement établi leur légende des *Conformités*, et de telles idées auraient pu se retrouver à l'état de dogmes particuliers dans des colonies lointaines, tandis qu'elles auraient disparu de leur patrie d'origine."

#### FINE ART.

*The History of Wood-Engraving in America.*  
By W. J. Linton. (Bell.)

THE wood-engravers in America have entered upon a period of fierce productiveness, in which much good work has been done and much ignorant applause has been earned. A paralysis has stricken our critics, who, trained all their lives to walk in the valley of the shadow of dead endeavour, and deeply skilled in a kind of aesthetic osteology which they would call the History of Art, have not the clear sight to discern the law in obedience to which an art will move forward while it has in it yet unexhausted the vital principle of growth. The new science which attempts to measure the dynamic forces in society (suicidal or self-conserving) should extend its operations to art. The Americans till lately had nothing but praise. The *Saturday Review* was allowed to give to the world a foolish, exaggerated estimate of the work which was forward. The complaisant proprietors of the *Century Magazine*, reviewing at the close of 1881 their career of prosperity, delivered themselves of more desperate and ignorant absurdities upon the subject of their services to art than can be imagined or described. It was time that some competent man should come forward to tell us with authority what precisely was new and true in this much-talked-of revival. Certainly no one was better qualified than Mr. Linton.

I shall do an injustice to an excellent work if I may not be allowed before considering its contents to vent my spleen against the workman who fashioned, and the publisher who could permit, such a binding for a book as the tasteless undress in which it appears. There is no language of contempt in which one may hope to do justice to the complex demerits of its nasty and ill-considered frail *liaison* of mill-board and thin walnut-wood! (so thin that it may better be described, in chemical phrase, as a "precipitate," than, in common parlance, as a "vener.") It is not so cheap a book but that its recreant binder might "have hung a calf's skin" on its sides.

With its obnoxious outside our grievance ends. Mr. Linton's own work is excellently done. Himself a scarcely surpassable engraver, he is perfectly familiar as well with the best traditions of art as with the modern "departure." In the main, he is conservative of those traditions; but where in the movement there has been improvement he is certainly not slow to appreciate and acknowledge. Thus, while in general severe upon what he calls the "cross-line inanity," he is careful to admit that the cross line has its proper use, and gives full-page illustrations of his own work engraved almost entirely in the cross-line manner. He refers, of course, to the crossing of *white* lines; with "cross hatching" (black over black) he has nothing to do. Mr. Linton speaks sometimes so well, it is fair he should speak for himself.

"To what are we tending? I have carefully

examined, I believe, everything that has been done by this new school, whose works both grace and, I think, disgrace the pages of our two most enterprising, most liberal, and most deservedly successful magazines. I think I have not been slow in recognising talent, nor stingy in awarding praise. But how much of the talent is misapplied: for I can but call it misapplied when it is spent on endeavours to rival steel line-engraving or etching, in following brush-marks, in pretending to imitate crayon work, charcoal, or lithography, and in striving who shall scratch the greatest number of lines on a given space, without thought of whether such multiplicity of line adds anything to the expression of the picture or the beauty of the engraving."

"Says the engraver, or his work for him: 'Never mind the cloud or anything else of the picture! See how admirably I have imitated the crossing of the brush-strokes! Notice the shadows of the blobs of colour left where the palette-knife laid it on! You can tell at a glance which is brush-done and which is knife or trowel work.' Is that the purpose of engraving? Labour, even skilled labour, can be ill-bestowed. And if, after all this trouble about brush-marks, you have lost what drawing there was in the picture, missed the very spirit and grandeur of the landscape, while busied with those little sprigs of mint and anise in the corner, how shall your engraving be called *fine*, in any artistic sense, though it needs a microscope to enable me to count the lines? What wonderful eyes, what dexterity of hand, must have been in requisition! But, after all, it is not a *fine engraving*. Fine as an artist's word is not the same as in the proverb of the feathers. Fine feathers may make fine birds, but *fine lines only* will not make a fine engraving. The one is a French *fine*, thin, crafty, not exactly honest: from which are many derivatives, such as *finasser*, to use mean ways; *finasseur*, a sharper; *finasserie*, petty trick, poor artifice; *finesse*, cunning, &c. Quite other is the masculine *fin*, the essential; from which we get *finir*, to finish; and *finisseur*, a finisher or perfectioner. And the first *fine* is the very opposite of the old Roman *finis*, the crowning of the work. The artist does care for finish, that is, for the perfectness of his work; he is below the real artist, and will reach no greatness, whenever he can be content with the *unfinished*. But the word *fine*, the proper adjective for a great work, was taken, perhaps unaware, by poor engravers, careful mechanics without capacity for art, as a cover for their deficiencies; and, accepted by ignorant connoisseurs, now passes current, for the beguilement of trusting publishers and an easily bewildered public. So trick is admired instead of honest art workmanship."

A book so profusely illustrated and so closely critical should do something to clarify the public judgment. The wood-engraver practises an essentially idiomatic art. In reproducing works executed in another manner, he labours subject to the conditions imposed by his own. A translator's first qualification is a perfect command of the resources of his own tongue. If he does not know English, the wealth of his possession in French will nothing avail. It is the same with the engraver on wood. He, too, is a translator, and must learn the idiom of his art. If out of ignorance, or conceit of craft, he takes to imitating the *technique* of other arts, he transcends at once the true limits of his own, and ceases to be an artist. We think, with Mr. Linton, that in a great deal of such work as that of Mr. Juengling the painter's trick and very *imasto* are astonishingly

copied by the engraver; but that his cuts, not the less, are bad and an offence to an educated eye. Hardly anyone will be able to compare the engraved portrait (from a photograph), by G. Kruell, of William W. Chase (p. 68) with that of "The Professor," by Juegling (from a painting), without feeling that the former is at once a true "reproduction" and a good cut; and that the latter, however it may look like painting, is *not* painting, and is certainly a disorderly and graceless engraving.

Mr. Linton's book is for the moment specially interesting as a criticism. It has also permanent value as a history. The course of the art in America is traced from Alexander Anderson (born 1775), the father of the Transatlantic school, fairly down to our own day. The bulk of the book appeared in successive numbers of the *American Art Review* in 1880; a supplementary chapter brings it down to a yet later date. Mr. Linton has done excellent service to the art as a worker, and now, lastly, with his pen. His criticisms are always straightforward and sometimes severe. They are all good, and none unkind, and I trust he has made his peace with the pioneers of the "Modern School." ERNEST RADFORD.

#### THE WATER-COLOURS OF J.-H. ZUBER.

MESSRS. GOUPI, who have done so much to introduce the works of French painters in water-colour to the British public, have now made a very charming addition to their exhibition of the drawings by de Neuville and Detaille for the panorama of the Battle of Champigny. This consists of some fifty sketches of French scenery by an artist little known on this side of the Channel, M. J.-H. Zuber. We do not know how great his reputation may be in his own country; he has exhibited once or twice at the Salon; he is not a member of the Société d'Aquarellistes; but we know from the present exhibition that he deserves a wide reputation both there and here. He is a master of his materials, a fine colourist, and a landscape-painter of taste, feeling, and variety.

Most of these views are taken from the Riviera, a district difficult to paint on account of the brightness of its light and the vividness of its colour. Half-tints are scarce there. The extreme Impressionist will present it as a blaze of blue and red and orange—unbearable; the ordinary painter will seek to qualify the splendour with sombre olives and sallow canes, and will probably over-do it or under-do it, for it takes a real colourist to manage so many and so strongly contrasted hues. It is only a Costa or a Zuber who could give us such views of Cannes as "Le Coucher de Soleil à l'Hôtel Richmont" or "La Rade." M. Zuber seems to have felt intuitively the special properties of water-colour. He works in the spirit of the old English school of Cox and De Wint, of Turner and the late W. L. Leitch, almost its last survivor. That pure luminous quality which can only be gained by clean bright touches of transparent colour on white paper he seeks and finds. No other method can approach this for the suggestion of light and air. It needs a master hand and a master eye also to divine the right tints and place them surely at first and at once, for there are no steps backward in work like that of M. Zuber. Perhaps the most beautiful of all his drawings is one comparatively low in colour. We forget its name, but it will easily be distinguished by the woman in a reddish dress who is washing clothes in the foreground. Though low, the colour is as brilliant as a piece of mother

of-pearl, and as harmonious; the woman's dress, the beach, the sea, and the pale glowing sky beyond are all in exquisite keeping, and all, we may add, unforced and true. It has the appearance of elaborate finish, but a close inspection will prove that the perfection of effect is due not to the number, but to the rightness, of the touches.

Perhaps the just expressiveness of M. Zuber's brush is shown most plainly in a view on the Quay at Cannes, with some barrels and a boat with an awning under a strong sun. Its solidity and truth of presentation, its crisp, unhesitating touch and truth of colour both in light and shade, are qualities which it needs no expert to perceive. We have spoken of M. Zuber's variety, but we must leave our readers to test this, as we hope they will, for themselves. We will only call attention to two drawings of open pasture and breezy clouds that remind us of David Cox, and even more of a living master, Mr. Thomas Collier. These are "La Plaine de vieux Ferrette" and "La Ferme Isolée," both scenes in Haute-Alsace.

COSMO MONKHOUSE.

#### EGYPTOLOGICAL NOTES.

M. GRÉBAUT, who undertakes M. Maspero's professional duties during his months of absence in Egypt, has recently communicated an important paper to the Académie des Inscriptions on the metrology of the Ancient Empire and the measurements of the Great Pyramid. No building of antiquity has been so frequently and so carefully measured, and upon none have so many extravagant theories been based. These theories have received a rude shock at the hands of M. Grébaud, who, once more attacking the task begun nearly sixty years ago by Jomard, has made a metrological discovery of great value. The Pyramid of Khoofo, as we know, consists of some two hundred stages, or layers, of massive limestone blocks varying from two to five feet in depth, each layer receding about one foot from the edge of that next below it, so producing a sloping surface inclined at an angle of 51° 50'. These successive layers of masonry are of forty-one different heights, making an average of less than five examples of each height. They do not succeed each other, as might be expected, upon a regularly diminishing scale, but, on the contrary, are superimposed in what appears like the wildest confusion of haphazard. M. Grébaud, however, by simply tabulating these measurements according to their numerical succession, has discovered that they mount up according to an invariable ratio, and that they each time increase by a height equal, according to French measurement, to 13,535 millimètres. Now, this surface measure is equivalent to eighteen Egyptian "lines," so showing the Egyptian "line" to be equal to seventy-five millimètres ("Or, cette quantité représente dix-huit lignes égyptiennes; la ligne était donc de 0,00075"), seventy-five millimètres being the exact equivalent of the twentieth part of the Babylonian half-cubit. Here, therefore, M. Grébaud argues, we find ourselves confronted with the sexagesimal and duodecimal system, which would appear to be the most ancient known to man, and to which we are indebted for the division of the globe into 360 geographical degrees. M. Grébaud is thus led to conclude that the Egyptians of the Ancient Empire were not only acquainted with the terrestrial degree, but that their metrological observations were as exact, and their scientific instruments as precise, as our own.

Among his many important discoveries during the present year, Prof. Maspero has found a new copy of the Trilingual Stone of San, commonly called the Decree of Canopus. Fortunately, the new copy is singularly perfect, and supplies all the lacunæ and doubtful passages

which made the translation of the first specimen so difficult. Prof. Maspero has also forwarded to the Académie des Inscriptions copies of a large number of Greek inscriptions, one of which, engraved on part of a broken granite column, is reported to throw a new and very curious light upon the relations of the sexes, and the legal rules by which those relations were regulated, in Ancient Egypt. The column appears to have formed part of an altar; and it is hoped that the remaining fragment containing the rest of the inscription may yet be found. At Damanhour (the ancient Ptotho, the Hermopolis Parva of the Romans) M. Maspero has made yet another discovery of great historical interest—namely, the sarcophagus of Psammethichus II., which he has removed to the museum at Boulak. Hither he has likewise transported the magnificent granite sarcophagus of Queen Nitocris, originally found at Thebes by the Prince of Wales in 1872, where it was apparently reburied, to be found again in 1883 by Prof. Maspero. This Nitocris (buried, strangely enough, in Upper Egypt, while her husband was buried in Lower Egypt) was a daughter of Psammethichus I. and Princess Shap-en-Ap, and consequently a granddaughter of the famous Ethiopian Queen Ameniritis, whose beautiful alabaster statue is one of the gems of the Boulak Collection.

The interior decorations of the Boulak Museum are now all but completed. The Catalogue is far advanced, only that part which relates to the new Graeco-Egyptian Hall remaining to be numbered. Prof. Maspero, according to his last letter to myself, was to leave for Europe on July 10. He is probably now performing quarantine in some Italian port.

AMELIA B. EDWARDS.

#### CORRESPONDENCE.

GAINSBOROUGH'S VISIT TO KEW.

Ipswich: July 17, 1883.

I have recently made a "discovery" which I feel sure will be of interest to the admirers of Gainsborough, as well as to the art world generally. It will serve as a text out of which to forge another link in the history of this great painter.

I recently came into possession of a good-sized painting; and, on taking it out of the frame, I found a narrow strip of parchment on the edge of the stretcher with what is undoubtedly Gainsborough's autograph. Above and under the name is some more writing, but in another hand, so that the entire inscription on the parchment runs as follows:—

Painted in the year 1756

By Thos. Gainsborough.

He then left and went to Kew.

I can trace the picture back over a century to the possession of an influential friend of Gainsborough living at Sudbury. Fulcher's *Life of Gainsborough*—which is by far the best history of the artist—after speaking of the friendship which existed between Joshua Kirby and Gainsborough, says, "Mr. Kirby left Ipswich to settle in London about the year 1753." The suggestion is that Gainsborough, while on his way from Ipswich to London to visit his friend Joshua Kirby, painted this picture in the course of a break in the journey at Sudbury. That there was a close and lasting friendship between these two eminent Suffolk men is well known; and we read in the same history that it was Gainsborough's own wish to be "privately buried in Kew churchyard, near the grave of his friend Joshua Kirby," and that his wish was carried out.

I shall be glad to know the opinions of art critics on the subject. W. KING.

GIUSEPPE NASINI.

Castel del Piano: July 7, 1888.

This Castel del Piano, a small town situated on the Monte Amiata, which used to form part of the territory of Siena, is noteworthy as the birthplace of a once celebrated but now nearly forgotten painter, at a period when art had sunk very low in Italy. The main street, formerly called the Borgo, was recently named after Nasini, who, however much time and the critics may have maltreated his works and reputation since his death, will always remain the citizen who has redeemed his *patria* from obscurity. His house still bears on its weather-worn front the traces of a fresco by his hand, and is distinguished by a marble tablet, which records as follows:—

Qui  
Ebbero i Natali  
I due celebri pittori del Sec. XVII  
Cav. Giuseppe ed Antonio  
Nobile Nasini.

Il municipio nel MDCCCLXIX  
Questa memoria decretava.

Giuseppe Nicola Nasini was born on January 25, 1657, and died at Siena on July 3, 1736.

It is pitiful to read a passage from *La Storia della Pittura italiana* of Rosini, which says:—

"Were it permitted that Nasini should again return and dwell among us, with what marvel would he gaze at the sight of his name fallen so low among men, after having heard with his own ears that his works dazzled the universe."

The truth of this observation admits of no doubt, as the history of his principal work will show. About 1694 he completed the "Novissimi," or four last stages of man—"Death," "The Judgment," "Hell," and "Paradise"—the "capo-lavoro" that was said to have most spread his fame outside of Italy.

M. de la Lande, in his *Voyage en Italie*, writes that of all the pictures in the Palazzo Pitti none struck him more than those in question—"La verité et l'expression y sont au point d'inspirer le tressaillement; la belle Vierge de Raphael me semblait ne rien dire, en comparaison de ces sujets frappans." M. Cochin, another French writer, who is scarcely less enthusiastic, describes the paintings as full of fire and genius and fine composition. The Abate Lanzi, in his *Storia Pittorica d'Italia*, says that more than the rest the "Novissimi" deserve to be seen, and concludes a panegyric by asking what other Italian painter of that time could have produced such a work. In the *Etruria Pittorica* Nasini is compared to Dante in his powerful vision of the *Inferno*; and in the other scenes the author hesitates whether most to admire the poet or the painter in the abundance and varied conception of the figures.

One hundred years later (1795) the reigning Grand Duke of Tuscany, Ferdinand III., finding the large room in his palace known from these pictures as "La Sala dei Novissimi" encumbered by them, informed the chief magistrate of Siena that

"he could not give a better destination to such renowned works of art than in bestowing them on the Senesi, sure that they would hold them valued and dear for love of their compatriot who made them," &c., &c.

After a contest for possession between the partisans of the rival Siena churches of San Francesco and San Domenico, the victory remained to the former. An ornate and grandiose tablet lauds in Latin lines, beginning "Extrema rerum humanarum," the memory of the Grand Duke's great liberality.

Another hundred years have nearly rolled on, and the greatest work of Nasini has fallen more and more in the eyes of his detractors. Wishing to know what was being done in the way of the proposed restoration of the church of San Francesco, lately used as a barrack and now

empty and deserted, I wrote to the leading member of the committee, under the Archbishop of Siena, with an anxious desire to learn the probable fate of the "Novissimi;" and I give the words of his reply:—

"The immense pictures of Nasini [pittore barocco della decadenza] are still attached to the walls of San Francesco; and, having now resolved to restore this temple to its ancient form, we don't know what to do with these monster [sterminate] canvases. No gallery would accept them even as a gift."

This depreciated master lived too soon, or too late, for enduring fame. I possess a complete and lengthy list of his works in and out of Tuscany, and would fain hope that others will deal more gently with any examples they may meet with than Siena is disposed to do with its white elephant, whose chequered story I have attempted to write succinctly from the dilapidated street where the "shadow of a name" still lingers.

"Tout passe, tout casse, tout lasse."

WILLIAM MERCEUR.

#### PITHOM-SUCCOTH.

London: July 14, 1888.

Pyramido-mania has taken a new departure and developed Moeridi-mania, which is on the high road to annex the Ten Tribes and "our Israelitish origin," which I dare not put into sesquipedalian Greek. Mr. Cope Whitehouse, who finds everything in Lake Moeris, has, in a letter in the last number of the *ACADEMY*, converted it into Pithom. In other words, he tells us, on the authority of Saadia, that Pithom is the same as the Ooptic Phiom, the modern Faiyoom. Phiom means the sea or lake, and was applied to the district of Lake Moeris. Saadia was an original thinker, but no more of a critic than anyone else in the tenth century, or he never would have turned a district into a city, or done violence to the first rules of Egyptian etymology, for Phiom can no more be turned into Pithom than Cairo into Cattaro.

This ingenious writer accuses us of the Egypt Exploration Fund of selling our birth-right for a mess of pottage. "Should a truly catholic tradition," he writes, "taught in Calcutta and Cairo, in Rome and in Oxford, in the mosques of Mecca and the synagogues of Prague, be exchanged for 'a granite hawk' and 'a squatting statue'?" This appalling "quod semper, quod ubique, quod ab omnibus" is a pure fancy. The innocent fiction of Saadia is not taught at any one of these places, unless it be Prague, though I must beg pardon of my friends among the London Rabbins for the hesitation. But no doubt it is taught at Laputa and in the well-known educational establishments at Nephelococcygia and Barataria, and is much disputed at Weiss-nichtwo.

The reference to Succoth proves too much; it proves that Mr. Cope Whitehouse is entirely unacquainted with the standard book on Egyptian geography, Brugsch's *Dictionnaire géographique*, where there are many pages on Pithom-Succoth, not to mention the Faiyoom. This being so, I will not undertake to correct the textual blunders of his wonderful galiman-tias.

REGINALD STUART POOLE,  
Hon. Sec. Egypt Exploration Fund.

#### NOTES ON ART AND ARCHAEOLOGY.

THE new appointment at the British Museum has naturally directed attention to the anomaly which places our national art collections under so many different administrations. At South Kensington are the Science and Art Department, and also the National

Portrait Gallery. But in both these cases the circumstances are peculiar; and it would seem that nothing is possible there in the way of amalgamation. The case, however, of the National Gallery and the British Museum is different. Here we have an arbitrary division by which works, often by the same artists, which it is extremely desirable should be seen and studied together are not only under different management, but also separated by a considerable tract of London. If it be urged that Prints have certain points in common with Books, and are therefore appropriately placed in the British Museum, the same argument does not apply to the Drawings. It is not merely out of idle regard to uniformity of administration, but in the interests of art, and especially of the study of art, that we would urge upon the authorities the consideration of some scheme by which at least the Drawings now in the British Museum might be transferred to an enlarged National Gallery.

UNDER the title of *Five Great Painters*, Lady Eastlake will shortly publish with Messrs. Longmans a volume containing studies of Leonardo da Vinci, Michael Angelo, Titian, Raphael, and Albert Dürer.

MR. FALLOW, of Chapel-Allerton, is engaged, in conjunction with Mr. B. C. Hope, of Scarborough, in preparing for the Yorkshire Archaeological Society a book illustrating and describing the church plate of the county of York. The work will be printed by subscription, and will probably include the Edward VI. returns of church goods preserved among the national archives.

WE understand that Miss Margaret Thomas proposes to issue to subscribers a limited number of reduced copies in plaster of her successful bust of Fielding, executed for the Taunton Shire Hall. A good engraving of the bust appears in the *Magazine of Art* for this month, in illustration of Mr. Austin Dobson's article upon it.

As we have already stated, the annual meeting of the Royal Archaeological Institute will be held at Lewes from July 31 to August 6, under the presidency of the Earl of Chichester. The presidents of sections are—Gen. Pitt Rivers for antiquities; Mr. E. A. Freeman for history; and Mr. J. T. Micklethwaite for architecture. Excursions have been arranged to the battle-field of Lewes, to Pevensey, Rye and Winchelsea, to Battle (where Mr. Freeman will take the party in hand), to Mount Caburn and Hurstmonceaux, and to Shoreham, Worthing, and Arundel.

THE removal of the earth which had accumulated about the base of the west front of Lincoln Cathedral has for some time been in progress, and now that the work has been completed the effect is very striking. The area in front has been lowered between three and four feet, with the result of disclosing the original Norman plinth, which had been hidden for centuries. The spring of the shafts, mouldings, and arches can now be perceived. It is proposed to continue the work along the southern flank of the cathedral, and to lower the public road which runs round it. The base of the southern flank is buried below many feet of earth.

THE exploration of Assos by the American Institute of Archaeology is now finished, the period for which the firm was granted having expired. All that remains to do is to divide the objects that can be removed with the Turkish Government. A good piece of work has been accomplished, though it has led to no discoveries of the first importance. The inscriptions found are to be edited by Mr. Sterrett, of the American School of Athens.

M. IDRAO has succeeded in the competition

for the design for the statue of Etienne Marcel at Paris, and M. Steines in that for the statue of Ledru-Rollin.

WE have received from Messrs. Cassell the illustrated Catalogue of the National Academy of Design in New York, which, in the quality of its little wood-cuts, is equal to its European brethren. Among the best may be mentioned "The Letter," after G. J. Melchers (75); "Near Zaandam," after E. Swain Giffard (343); and "A Monastery Bibliothek," after F. L. Kirkpatrick (580). The example of appending to the list of artists information as to places of birth and artistic training is one which might be followed with advantage.

### THE STAGE.

MR. IRVING has revived "The Merchant of Venice" for a few nights; and he will play, on the occasion of his benefit next week, Frederick Lemaitre's great part in "Robert Macaire," and likewise, it is believed, the church scene in "Much Ado About Nothing." The brief revival of "The Merchant of Venice" has been singularly successful, whether considered from the point of view of Mr. Irving's performance or from that of Miss Ellen Terry. Shylock has been from the first one of the most interesting of Mr. Irving's Shaksperian impersonations. Whatever be its defects, or, rather, whatever be its errors, it has presented from the beginning the rich charm of a familiar character freshly studied and understood. Of old time, we were of opinion that Mr. Irving whitewashed the Jew a little too thoroughly, or at the least presented him too plainly in colours in which the audience has little choice but wholly to sympathise with him; but at present, if it is still inevitable to commiserate, it is yet possible to condemn him. The savagery of nature which alone permits his vindictiveness is, it may be, made more evident than in the earlier impersonations. If this be so, the impersonation receives an accession of force, while it loses nothing in picturesqueness. The Jew of Mr. Irving retains his old dignity; he has been studied with extraordinary accuracy—yet with the genius that knows at the right moment how to idealise—from the best models of Jewish physique, gait, and manner. The performance, while full of the signs of observation, betrays at the same time that play of imagination without which an actor can never be really great. Miss Ellen Terry's Portia is hardly less satisfactory. From the first it has been among the loveliest of her impersonations, and it has gained in strength since it was seen originally, years ago, at the Prince of Wales's. In appearance, Miss Terry is an ideal Portia. Her dignity and seriousness recall the best models of Venetian painting; a Veronese or Moroni, a Bonifazio at his finest, do but equal that tranquillity of splendour which Miss Terry suggests by the nature of her figure, her raiment, and her carriage. Bacon would here, indeed, have consistently claimed for her the highest of his three beauties—that of "decent and gracious motion." We are not among those who allow to Miss Terry all the attributes of an actress of the highest rank. To us, she is sometimes wanting in dramatic force; the furthest flights of her graceful fancy seem to us to fall short of the imagination of tragedy. Her "poetic realism," if it is more poetic than Mrs. Kendal's, is apt to be less real. The charm of her art may be equal to Mrs. Kendal's, but it has less capacity to excite and to stir. But whatever we find to be Miss Terry's relative defects, they are not apparent at all in Portia. Portia gives occasion for the splendour of her presence, for the grace of her badinage, and for the earnestness of her pleading.

THOUGH we hope to be able to speak next week of the new comedy at the Vaudeville, it is

evident that the theatrical season is drawing to a close. At the St. James's, "Impulse" is being performed for the last nights till the re-opening of the playhouse in the late autumn. At the Princess's, the extraordinary success of "The Silver King" cannot prevent Mr. Wilson Barrett and Miss Eastlake from seeking a few weeks' rest; the Adelphi is closed for the present, though it will shortly re-open with a revival of one of Mr. Boucicault's most popular pieces; Mrs. Bancroft has resigned to Miss Calhoun a part in "Fédora" which never suited her, and which even her admirable talent and discretion did not prevent her from misinterpreting; and, at the Gaiety, the theatre is deserted by its habitual company with very few exceptions, the boards being occupied by an American lady—Miss Lillian Russell—upon whom American favour has been largely bestowed. Altogether, things are on the wane. It is chiefly the lighter pieces that continue to draw. "Iolanthe" and "Rip Van Winkle"—those dramatic twins born within an hour or so of each other well-nigh twelve months ago—are among the few things that still prosper, that still hold the stage.

### MUSIC.

#### MUSICAL PUBLICATIONS.

*Mozart.* By Dr. F. Gehring. "The Great Musicians" Series. (Sampson Low.) The order in which this series of biographies is being published is certainly perplexing. To understand German musical art aright we ought to commence with Mozart and end with Wagner; but Dr. Hueffer, the editor, gives us the first last and the last first. With the exception of a few interesting, if not very important, details, Dr. Gehring has nothing new to tell about the great composer's life and works; his little volume may, however, prove acceptable to those who have not the leisure to read Jahn's three volumes in their original or translated form. Such a sentence as "It is nice to compose, it gives one much to think," such a word as "dissillusionment," and other passages remind us that the writer is a foreigner; but the book ought to have been carefully read through, and many little inaccuracies, especially with regard to the spelling of proper names, removed. Dr. Gehring in mentioning Mozart's compositions seems to have had no settled plan; hence the general result is unsatisfactory. At times he gives the number of works according to Köchel's catalogue, and rather minute details; at other times he passes over important works without any notice. There is not even a general summary at the end of the book. His account, too, of Benda's duodramas is somewhat inexact; and surely the Doctor's knowledge of Biblical history is at fault when, in comparing Herr Albert at Munich trying in vain to find admirers of Mozart with Lot, he speaks of the latter as "searching for ten righteous men in Sodom"!

*The Musician: Guide for Pianoforte Students.* By Ridley Prentice. Grade 2. (Sonnenschein.) In this Second Grade the author continues the good work commenced in the First. Among the pieces analysed we find twelve by Beethoven, four by Mozart, and twenty-five by Schumann from the "Album" (op. 68). Mr. R. Prentice has no new theories or plan of analysis, but a pleasant, attractive, and very suggestive mode of guiding students. The simplicity of the language may be foolishness to some; but, to others who know the difficulties of giving instruction, it forms one of the chief charms and merits of the little book. It is intended principally for teachers, who are requested to amplify the explanations when necessary. Mr. Prentice thus wisely imparts the spirit rather than the letter of the law. There are several corrections which

should be made in a second edition. For example, on p. 7, 17 seems at first to refer to "The Little Wanderer" rather than to bar 17 of "Spring Song;" there is a little confusion in the description of the Beethoven Bagatelle on p. 9; and on p. 61 the name of Mozart's friend ought to have been written Dussek, especially as Mozart has been contrasted with J. L. Dussek on p. 59. The anecdotes by which Mr. Prentice seeks to enliven his book are not always quite satisfactory. For instance, it may have been a *tour de force* on Bennett's part to play his "Capriccio" at Leipzig without music; but surely it was a *tour de négligence* to hand over the MS. score to the publishers without writing in the pianoforte part.

*History of the Violin Family.* By Carl Engel. (Novello.) Mr. A. J. Hipkins, in a short Preface, informs us that the author went to his rest before the last revision of this work. Mr. Engel was, however, so great an authority on matters relating to the ethnology and history of musical instruments that the present volume, even though deprived of his finishing touches, is one of interest and great value. He devotes one chapter to the *crywth*, the old instrument of the Welsh people; another to *crowd*, the fiddle of the Anglo-Saxons; and a third to the *rotte*, so frequently mentioned in mediæval literature. Then follow accounts of the *chrotta*, *rebab*, &c., and lastly the viol and violin. The writer calls attention to the remarkable fact that our present instruments have remained unaltered in construction and outward appearance during a period of nearly four hundred years.

*C. Welch, M.A.: History of the Boehm Flute.* (Rudall, Carte and Co.) In a pamphlet by Boehm on the construction of flutes, noticed in the ACADEMY, the author explained his relations with Gordon, and showed that he was fairly entitled to be regarded as the inventor of the so-called Boehm flute. In the little book now under review the whole question is again brought forward; and, though of course there is considerable repetition of matter, there are fresh letters, documents, and articles which will interest all who trouble themselves about the Boehm-Gordon controversy.

Secretary.

G. J. MURRAY, Esq., 20, Cockspur-street, Charing-cross, London, S.W.

THIS Union is formed to maintain the ancient marriage law of the land, and in particular to resist the legalisation of marriage with a wife's sister.

Its efforts are directed to organising committees throughout the United Kingdom; to diffusing information by lectures, publications, and otherwise on a subject on which public opinion has been much misled; to encouraging petitions to both Houses of Parliament; and to directing the attention of the Legislature to the true bearings of the question. A Ladies' Committee has been formed to assist the Union.

The whole principle on which the marriage law of this land is based is involved in the acceptance or rejection of the Deceased Wife's Sister Bill. In all countries where the marriage law has been relaxed in this one particular other relaxations have, after some lapse of time, been adopted; in some countries not only may a woman marry her sister's husband, and a man marry his brother's wife, and his wife's niece, or, as in the State of New York, his wife's daughter, but in others a man is freely permitted to marry his niece by blood.

As the operations of the Union are very extensive, subscriptions and donations are earnestly requested.

It will be obvious that the publications circulated by this Union, although the arguments and considerations contained in them point to the same conclusion, represent in particulars only the mind of their respective authors.

## TRÜBNER & CO'S NEW PUBLICATIONS.

### THE QUATRAINS of OMAR KHAYYAM.

The Persian Text with an English Verse Translation. By E. H. WHINFIELD, M.A., late of the Bengal Civil Service. Post 8vo, cloth, 10s. 6d. [Now ready.]

## LITERATURE.

*A Dictionary of Christian Biography.* Edited by William Smith and Henry Wace. Vol. III. (John Murray.)

THIS important work has now advanced within measureable distance of completion, though it may be doubted whether another volume will prove sufficient, considering how heavy are some of the letters still awaiting treatment. The first article which calls for notice is a very careful one on the "Hexapla," by Dr. Taylor, Master of St. John's College, Cambridge, whose competence as a Hebraist enables him to put the chief textual facts clearly before his readers, though for one or two points we might have got more from Mr. Field, whose specialty this subject is. Mr. Fremantle's "Hieronymus," while respectably executed, requires to be supplemented for bibliographical purposes by Prof. Ramsay's article in the *Dictionary of Greek and Roman Biography*, and is far too perfunctory in dealing with Jerome's considerable position as a Biblical scholar, as also with his letters, viewed as *mémoires pour servir*. But the estimate of his character is just, on the whole. Chancellor Cazenove's two Hilarys, of Poitiers and Arles, belong to a higher and more finished type of scholarship; and it is interesting to compare his treatment of the episode of Chelidonius of Besançon, in the second of these papers, with Mr. Gore's handling of it as it appears in his notice of Leo the Great. Another extremely valuable item is Prof. Salmon's "Hippolytus Romanus." Several years ago he contributed a paper on the Chronology of Hippolytus to the journal *Hermathena*, which contained some useful suggestions on the evidence it affords as to some obscure points in the early annals of the local Roman Church; and on the present occasion he returns to the subject, and also discusses carefully the problems put forward by Dr. von Döllinger in his brilliant essay, *Hippolytus und Kallistus*. Mr. Plummer's account of the Ecclesiastical Historians is somewhat meagre, and needs amplification, though it is trustworthy so far as it goes. Mr. Barmby's "Honorius (Pope)" scarcely provides the student with sufficient materials on which to base a judgment upon that Pontiff's relation to Monophysism, on which much light has been thrown by Mr. Le Page Renouf. But he makes amends almost immediately in his "Hormisdas," where he summarises very happily one of the most intricate and driest episodes in all ecclesiastical history—that concerned with the forced submission of the Eastern bishops to the Formulary of that

Pope, thrust on them for political ends by the Emperor Justin, though we miss the key to the conduct of the latter, which was simply his desire to secure an ally in the Pope for that meditated reconquest of Italy which was actually effected under Justinian I. by the arms of Belisarius. From Mr. Stokes, a scholar of much promise, there is a very convenient summary of the Iconoclastic controversy, which, however, might have been slightly expanded from Dupin with advantage in treating of the Second Council of Nicaea. There is a misprint, by-the-by, just at this point, Card. Pitra's name being spelt "Petra." Canon Travers Smith devotes a very careful and useful paper to St. Ignatius, and pronounces, after a survey of the controversy, for the substantial genuineness of the famous and long-disputed epistles—a conclusion which, though not unattended by difficulties, is at any rate the least perplexing one. The "Irenaeus" of Prof. Lepsius is another valuable contribution to the Dictionary, going into the subject at a length proportioned to its real importance rather than to any merely popular estimate, and giving a convenient outline of the Gnostic controversy as it stood in the second century. Prof. Leathes has done better in his notice of Isidore of Seville than in any literary effort we have seen previously from his pen; but it is not substantially an advance on Prof. Ramsay's article on the same subject, for, while a little fuller in bibliography, it is silent on the political aspects of Isidore's life. Mr. Lupton's "Johannes Damascenus" is a painstaking and, on the whole, a commendable article; but there is not enough attention given to his treatise *De Fide Orthodoxa* in view of its importance as having formulated Oriental theology, doing for it almost what Peter Lombard and St. Thomas Aquinas did for Latin divinity; and there seems a lack of first-hand knowledge respecting it. "Jordanis," by Mr. Dyke Acland, though not a very long article, and concerned with but a minor personage, is a very favourable example of the Dictionary, being scholarly and instructive. In Dr. Edersheim's "Josephus" the reader will find what is probably the most convenient monograph on the subject—one on which criticism is far from having said its last word. Mrs. Humphry Ward has done excellent service by her contributions in this Dictionary to the obscure and difficult history, ecclesiastical and civil, of Visigothic Spain, as in the articles on Julian of Toledo, Leovigild, and Martin of Braga. One of the finest items in the work is the all but exhaustive article by Mr. John Wordsworth on the Emperor Julian, which presents him impartially, and with full justice done to the nobler side of his complex nature. It is a pity, however, to have left unquoted the remarkable tribute of Prudentius to the memory of the last great foe of Christianity in the Empire:

"ductor fortissimus armis,  
Conditor et legum, celeberrimus ore manique,  
Consultor patriae, sed non consultor habendae  
Religionis, amans tercenta millia divum.  
Perfidus ille Deo, quamvis non perfidus Urbi."

Another article, upon a similar scale, on the Emperor Justinian I., by Prof. Bryce, is of much value, and a marked advance upon the earlier one, by two hands, in the *Dictionary*

of *Greek and Roman Biography*. "Justinian II.," on the contrary, is not so good an article as its precursor in that work. Mr. H. S. Holland, a rising scholar and theologian from whom we are justified in looking for considerable results, is well to the front here with his "Justin Martyr." Mr. Ffoulkes, in his "Lactantius," takes a little too much for granted as to the degree of preparation with which the average reader will consult this Dictionary. Excellent in itself, and showing first-hand acquaintance with the subject, the article might be more helpful to those who do not know much of the literary position and claims of Lactantius. Mr. Gore's "Leo the Great," already referred to, is less popular and more judicial than the biographical sketch he prepared for the S. P. C. K., which erred a little in the direction of eulogy of one who, eminent as ruler and as theologian, yet had few scruples in pushing the claims of his chair, and, if unselfish personally, was officially one of the most ambitious men the world has ever seen. Mr. Stokes describes the important *Liber Pontificalis* adequately in an article which ought to have followed the "Liber Diurnus" in the *Dictionary of Christian Antiquities*. "Liberius," by Mr. Barmby, is carefully and fairly done, and does not press polemical conclusions too far, as is sometimes the case with writers on the subject. There is less in this volume from Canon Stubbs than we should have been glad to see, most of his work being confined to assisting Canon Raine in the ungrateful labour of disinterring a number of obscure and unimportant Anglo-Saxon names; but here and there there is an entry, such as his "Lullus," which usefully clears up difficulties. Mr. Stokes is instructive, but a little too brief, in dealing with Manes and the Manichaeans. So subtle and pervading a form of thought as Manichaeism, powerfully affecting Christianity to the present hour (and not least through the influence of St. Augustine, who never got it out of his veins, even when combating it most emphatically), needed ampler exposition. Mr. Stokes is helpful also in his "Marcion," though here, too, we desiderate a somewhat fuller handling of the interesting problems connected with Marcion's use of the New Testament. Dr. Cazenove's article on St. Martin of Tours is noticeable, apart from its general excellence, for some sensible and philosophical remarks on the attitude of mind in which a modern reader should approach the supernatural element in biographies of this class. Under "Mithras," another of Mr. Stokes's scholarly articles, we should have liked some discussion of the singular rite of *taurobolia*, one of the most remarkable of heathen ceremonies, and unfortunately omitted from the *Dictionary of Greek and Roman Antiquities*. "Montanus" is another of the excellent contributions for which we are indebted to Prof. Salmon, in which he incidentally remarks on the serious limitation that the triumph of Montanism would have imposed on Christian thought, if every new revelation had been taken as defining doctrine, as in truth has been the case more than once in our own time in various Christian bodies. Dr. Badger's "Muhammad" is a learned and useful paper, exhibiting much study; but it is perhaps not

captious to say that it assumes in places too much the shape of a mere review of Sir William Muir's biography, with which the consulters of a dictionary are not directly concerned. The last item necessary to specify is Prof. Salmon's on the Muratorian Fragment, wherein he puts forward a view at present confined to himself, but for which he argues in a fashion which will gain him some adherents—that the fragment belongs to the time of Pope Zephyrinus, sixty years after the date currently received.

In the strictly theological articles, too much has been entrusted to Prof. Swainson, whose papers are not very helpful, and do not compare favourably with those by Mr. Swete on similar topics, seemingly from lack of grasp and clearness. Much of the most unpretending, but by no means the least laborious or useful, part of the work is due to Mr. Hole, from whom we have many of the obscurer entries, which involve, as a rule, far more trouble in getting at the facts than is the case with personages of importance, where a plethora of materials is often the chief inconvenience to be encountered. This instalment, on the whole, does not merely sustain the level attained in the former volumes, but raises the average merit of the work in virtue of the exceptional value of some of the articles.

RICHARD F. LITLEDAL.

*George Sand.* "Eminent Women" Series.  
By Bertha Thomas. (W. H. Allen.)

A LIFE of George Sand for English readers is by no means an easy book to write. On the whole, Miss Thomas has succeeded far better than we had any right to expect. The arrangement into chapters and periods is fairly reasonable, though the literary history of George Sand does not permit us to trace the steady development so much as the oscillations of genius. What we cannot understand is the singular awkwardness of style, which at times looks almost like that of a foreigner who is not quite at home in her English. Thus we find, "As an actress into many a favourite part, so could she throw herself into her favourite characters;" or, again, "Finally the position M. de Lamennais had taken up as the apostle of the people further enlisted her sympathies in his cause, which made religious one with social reform, and amalgamated," &c. Nor are we prepared as yet to recognise such words as "environment" and the rest of the Herbert Spencerian vocabulary in a non-scientific style. Beyond this we have no serious fault to find, save that, even when she quotes George Sand's own confession—"When I begin a novel I have no plan, it arranges itself whilst I write, and becomes what it may"—she utterly fails to notice the singular defect (singular in such a writer) of all the longer romances—their want of persistent continuity. Here George Sand has herself spoken the last word. She takes up an idea, plunges in *modias res*, and exhausts it in a hundred delicious pages. She then vacillates amid tiresome conversations, emotional analysis, and such like for another hundred, till she hits upon some new, usually inconsequent, and often very inferior idea for her *dénouement*. Hence

many of her books—for instance, *Mauprat* and *Consuelo*—are each two stories separated by a sort of *παράβασις*. No novelist so soon captivates, or so soon fatigues, the fancy. And yet when after a few months we take up another of her books we feel the old charm as freshly as ever.

Miss Thomas is discreetly indulgent to M<sup>me</sup>. Dudevant's weaknesses, probably more out of regard for her readers than for her heroine. Still, we think that a plain word as to her actual relations to de Musset and others would not have been out of season. Putting her husband on one side, as perhaps we may, we cannot help saying out that these love affairs were a flagrant outrage on the *rôle d'une mère* to which she was so volubly devoted. Of the de Musset controversy she says quite enough. It is, in fact, a stupid, contemptible story, and equally so in both versions. With the later phases of the dispute Miss Thomas seems unacquainted, or that it is to be revived, I think in 1910, when de Musset's sealed papers in the Bibliothèque nationale will be opened—among them, no doubt, George Sand's letters, which he rather basely caused to be copied by his sister before returning them. Though Paul de Musset, without the least evidence, branded as a forgery the letter published by Louis Blanc in his *Homme libre*, where Alfred says, "Nous sommes deux comètes qui se sont rencontrées pour se broyer," the sentence well expresses the vain, self-deluding, professional nature of their attachment. Even so late as 1881 a fresh disclosure seemed imminent, when M. Maurice Sand was publishing the *Correspondance* of his mother, had not M. Troubat, the literary legatee of Paul de Musset, intervened by a threat of retaliatory indiscretion. It were well if both parties would thus continue to imitate the comets.

As a Life we doubt whether we need more than Miss Thomas has given us, if even so much. She trusts little, but still far too much, to the *Mémoires* and to the *Histoire de ma Vie*, which are both rich in innocent make-believe and amiable attempts to repair the lapses of a confessedly bad memory. For instance, the silly tale of her infantine religion, an attempt to combine the Christian and Greek graces (by a child of ten!), the woodland altar, at which the sacrifices were the release of captive birds and butterflies (who, by-the-by, captured them?), and what Miss Thomas seems to think the curious coincidence of similar fibs being told of the youthful Goethe. In short, we have here the real M<sup>me</sup>. Dudevant, a very good, and therefore a very inconsistent, woman, whose head was often turned, but never for long; who, thinking herself an influence, was constantly being influenced by others, and seldom for the better. Her manliness, repulsive enough in some phases, is refreshing in her perfect friendship and sympathy with her son, to whom she was rather a father than a mother. As to her political career, looked at from the point of view of to-day, she had no cause to blush deeper than Lamartine, Ledru-Rollin, and the other wisacres; and the revolution of '48, engendered, born, and brought up in vanity and conceit, could hardly suffer much by the meddling of a woman. At least George Sand came to her senses sooner than

the other *parleurs*, and she never lost them again like Jules Favre and his party. But, indeed, her vagaries, if a little self-conscious, were never self-seeking; and in her wildest rhapsodies we miss the monotonous bray of the French political ass: "La France, La France." A true patriot all the same, she sought rather the happiness of humanity than the glory of France, or, in other words, of herself. She was very silly, but not to her dishonour.

On the whole, we should accept Miss Thomas's estimate of the various novels even of the Socialistic series. Everywhere she gives proof of careful reading and judicious reflection. Of the Pastoral stories she speaks with deserved admiration. George Sand felt and understood the country life as no other French writer has done. This, more than anything, has led to the absurd idea that her genius was English in quality, which it certainly is not. But, in a way the English especially can appreciate, she does somehow contrive to give a marvellous impression not only of details, but of the very atmosphere of the scenery and tone of the life she loved so well. Who that has used a Guide-book has not found that it guides only to the desert, and that the thousand little Paradises open only to those who search for themselves? But knowing well that glorious central heart of France she has painted, and even now writing these lines in the remote recesses of the Ardennes, I am more and more struck to find how familiar each place she has described seems even at the first view. True, she magnifies, exaggerates, idealises; but none the less she imparts the *cachet*, the peculiar individuality which the landscape of every country possesses.

The moral power of her work it is hard to estimate. Equally hard is it to say what she could not have done had she done less. Possibly she reached in *Mauprat* her limit of vigorous originality; in *La petite Fadette* and *Le Moine d'Angibault*, of genial pathos; and of intellectual dignity in *Consuelo*. But here I cannot but think her inferior to M<sup>me</sup>. de Staël in spite of her miserable defects. Some time ago Mr. Creighton compared very admirably the characters of *Consuelo* and *Romola* as types of Venice and Florence. Strange that he did not add *Corinne*, the Roman poetess, who far more than the other two embodies the glories, the weaknesses, the sorrows of her city. *Consuelo* was but a child of the people, like George Sand's mother. *Corinne* is a higher spiritual type. After all, the great-granddaughter of Saxe was far more *bourgeoise* than the child of Necker, who is always the *grande dame* by education, if not by race.

E. PURCELL.

*The Sutherland Evictions of 1814.* Former and Recent Statements respecting them examined. By Thomas Sellar. (Longmans.)

Most people who take an interest in the land question of the Highlands have heard of the notorious case of the Strathnaver evictions. In 1807 the Marquis of Stafford began, and afterwards continued energetically to carry out, his scheme for the improvement of Sutherland. From time to time, as leases fell in,

the sub-tenants were removed from the interior to the coast, where, with the sea before them, they would no longer have to depend entirely for subsistence on an ungrateful soil, and their holdings were thrown into sheep pasture. In 1814, following out this policy, a Mr. Patrick Sellar, then factor to the Marquis of Stafford, removed some tenants from a farm in Strathnaver, which he himself had taken. He was afterwards accused of having carried out the evictions with great brutality, of having destroyed property belonging to the tenants, and of having occasioned the death of several sick persons. On these charges he was brought to trial in 1816, when a jury, with the approval of the judge, unanimously acquitted him. In the following year the Sheriff-Substitute of Sutherland, who had been instrumental in getting up the prosecution, wrote a letter to Mr. Sellar, acknowledging that the statements contained in the precognition which he took in Strathnaver "were to such an extent exaggerations as to amount to absolute falsehoods." The affair, however, was not allowed to sleep. Many years afterwards there appeared in an Edinburgh newspaper a series of letters by a certain Donald MacLeod on the Highland clearances, and the charges against Sellar were repeated with much violence of language. These letters have been lately reprinted by Mr. Mackenzie, the editor of the *Celtic Magazine*, and have been quoted as authoritative by Mr. Wallace in his *Land Nationalisation* and by Prof. Blackie in *Altavona*. Believing MacLeod's allegations to be "absolutely false," Mr. Thomas Sellar has written this vindication of his father.

The book contains a short introduction on the policy of the Sutherland clearances, a statement of what happened in Strathnaver, a review of the trial, and a criticism of later writers, together with a detailed examination of MacLeod's allegations. In the Appendix are reprinted the report of the trial, and Mr. Thomas Sellar's correspondence with Mr. Mackenzie, Mr. Wallace, and Prof. Blackie. If the purpose of the book was to convince the world that the jury acted rightly in acquitting Mr. Patrick Sellar, probably nobody will question that it is successful. The charge of culpable homicide was obviously untenable and was withdrawn; and on the evidence as to real injury and oppression it would appear, perhaps not so obviously, that the factor kept within the law. The witnesses for the prosecution did not agree, though it is not clear why Mr. Thomas Sellar accuses the chief witness of perjury.

Further, it will be readily conceded that neither Mr. Mackenzie nor Mr. Wallace nor Prof. Blackie has given a fair account of the case. Mr. Mackenzie, in particular, who is timid, unorthodox, and biassed, has done his cause much harm by compiling very badly what he calls a History of the Highland Clearances. But if Mr. Thomas Sellar goes another step, and asks us to believe that the evictions in Strathnaver were not barbarous and cruel—that, in carrying them out, Mr. Patrick Sellar displayed any trace of the character for sympathy, feeling, and humanity with which his witnesses credited him—we refuse to assent. And the evidence to the contrary need not be sought from MacLeod.

We have only to read the story of the evictions as told by Mr. Thomas Sellar himself. The very dates might have prevented him from writing a book which can bring him only the barren satisfaction of having shown that his father did not break the law.

As to MacLeod's letters—and this is of more importance than the personal question—Mr. Sellar has corrected, but has not discredited, them. They are wild and exaggerated in tone, and must be read as evidence against Highland landlords and factors with care and suspicion; but they bear every sign of being the record of actual recollections. It would be interesting to find out something more about MacLeod than is at present known. The style of the letters makes one curious to know who actually wrote them. Mr. Sellar can tell us nothing, for he comes so fresh to the subject that he never heard of them till last year; and he does not even relate with fairness MacLeod's own account (p. 55 and note). One thing more has to be said about Mr. Sellar's book. He is very free in his accusations of disingenuousness; yet between disingenuousness and the carelessness which leads a writer to misquote his opponents in nearly every instance it is hard to distinguish: see pp. 54 and note, 55 and note, 59 (where in a sentence from Sismondi, to which a wrong reference is given, and which is otherwise misquoted and misinterpreted, a phrase essential to the meaning has been omitted), 70 and note (where the references to the misquotations are misplaced), 76 (evidently quoted from Wallace, not from the original), 87, 91. G. P. MACDONELL.

*The Sonnets of John Milton.* Edited by Mark Pattison. "Parchment Library." (Kegan Paul, Trench & Co.)

It was a happy thought to include in the dainty "Parchment Library" series an edition of Milton's English and Italian sonnets; and it would have been difficult, if not impossible, to find a more capable editor than the Rector of Lincoln College. Mr. Mark Pattison has not only the thorough knowledge of Milton himself which is indispensable to the full elucidation of utterances which are for the most part so intensely personal as these poems, but he has, moreover, that intimate acquaintance with the laws of sonnet construction, and with the requirements and potentialities of one of the most fascinating but most exacting of poetic forms, which is equally demanded by the nature of his task. It is, indeed, difficult to say which pages in this little volume are more interesting to the literary student—those which deal directly with the work of Milton, or those in which the writer for the moment forgets Milton and gives us his contribution to sonnet criticism pure and simple.

Perhaps only those of us who have been drawn to the study of the voluminous literature of the sonnet, and who know how difficult it is to add to it anything which shall be at once fresh and not fantastic, will appreciate to the full the discriminating labour represented by Mr. Pattison's introductory pages; but their learning, their lucidity, and their freedom from dogmatism will be apparent to every reader. It would, perhaps,

be too much to expect that the views expounded should win the universal assent even of those who are unwedded to theories of their own, though Mr. Pattison guards himself from extravagance by so many allowances and reserves that it will be difficult for even the most belligerent critic to find material for a quarrel. I cannot, however, help thinking that there is a certain waste of power in formulating so elaborate a code of sonnet law as Mr. Pattison has provided—there are no fewer than nineteen canons—when the code is supplemented by such frank admissions that the canons are of unequal validity, and when also we have to face the fact that it subjects to outlawry so many English sonnets which are admittedly of the highest rank. To take a single example from among those specially dealt with in this volume, it will be seen that Milton's greatest sonnet, that "On the Late Massacre in Piedmont," violates four out of the nine rules headed "Material," and any legislation would be to some extent discredited by such an act of successful defiance. If, however, Mr. Pattison's laws of form and matter are intended simply as "counsels of perfection"—as embodying an ideal of sonnet structure—there is nothing to complain of; indeed, no lover of the sonnet can fail to be grateful for an analysis which takes sonnet criticism out of the region of personal whim into that of recognised law.

Some interesting pages of the Introduction are devoted to a discussion of possible explanations of Milton's deviation from the Petrarchan model in his general neglect of the lesser pause at the end of the fourth line, and the greater pause at the close of the octave. Mr. Pattison conclusively contends that Milton could not possibly have missed this characteristic of the Petrarchan sonnet, and that he was not likely to abet the anarchists by deliberately ignoring it, but thinks it

"on the whole more probable that Milton's attention was not called with equal emphasis to the subdivision of thought as it was to the invariable arrangement of the rimes in the Italian masters."

This seems just, for in the Petrarchan sonnet the scheme of rime is certainly more obvious than the intellectual structure; and it is possible that with Milton the impulse of thought or passion was at times too strong to be confined within the less keenly apprehended barrier. It is noteworthy that the deviations from perfect Petrarchan orthodoxy are found in those sonnets where the flood of feeling runs strongest (the address "To Cromwell" may serve as one of several examples), and that Milton approaches Petrarch most nearly when the emotion, being less vehement, is more under artistic control. Certain it is that in this matter of intellectual form the sonnet which is, perhaps, the most blameless—"Captain, or colonel, or knight in arms"—is the one which has the most of artifice and the least of spontaneous impulse.

Of the scholarly and interesting notes I can only, in the space allotted me, speak in the most general terms. They are just what such notes should be—always useful, because always elucidatory, and never either trivial or far-fetched. As a matter of course, Mr. Pattison has been largely anticipated by the elaborate annotations to be found in the

*Treasury of English Sonnets*, edited by Mr. David M. Main, whose insight and industry have never yet received their due meed of praise. But there is much that is new; and, where Mr. Pattison fails to notice some interesting parallelism or deleted MS. reading which has been pointed out by his predecessor, the probable reason is his unwillingness to do again what has been well done once. In places where the one thing needful is a knowledge of the relation in which the sonnets stand to the environment of Milton's life and to the total mass of his work in verse and prose, the latest editor easily distances all his competitors; and I feel I am guilty of considerable temerity in venturing to differ from even one of his verdicts. Mr. Pattison is of opinion that the reference, at the close of the Cromwell sonnet, to "the hireling wolves, whose gospel is their maw," is not specially aimed at the Presbyterians, but is merely a general expression "of Milton's abhorrence of payment for spiritual ministrations." Of course this may be so, but the commonly accepted interpretation is certainly the more obvious one. The sonnet was written in opposition to certain "proposals" which represented the views of the Presbyterian party; and it was surely more natural that Milton should concentrate his blows upon the foe of the moment than that he should waste his strength in anything so polemically ineffective as an expression of his broad antipathy to a paid ministry.

Mr. Pattison is clearly right in fixing upon the impressive sincerity of Milton's sonnet work as the peculiar quality which gives to it enduring power and charm. He says truly that

"The effectiveness of Milton's sonnets is chiefly due to the *real* nature of the character, person, or incident of which each is the delineation. Each person, thing, or fact is a moment in Milton's life, on which he was stirred; sometimes in the soul's depths, sometimes on the surface of feeling, but always truly moved. He found the sonnet enslaved to a single theme—that of unsuccessful love, mostly a simulated passion. He emancipated it, and, as Landor says, 'gave the notes to glory.' And what is here felt powerfully, is expressed directly and simply. The affectation of the Elizabethan sonnet, its elaborate artifice, is discarded, and replaced by a manly straightforwardness. It is a man who is speaking to us, not an artist attitudinising to please us."

At a time when, in the field of poetry, the artists are so many and the men so few, we have an additional reason for echoing Wordsworth's exclamation: "Milton! thou should'st be living at this hour. England hath need of thee." J. ASHCROFT NOBLE.

*Life on the Mississippi.* By Mark Twain. (Chatto & Windus.)

THIS pleasantly written and profusely illustrated volume is an English reprint of an American book the first portion of which appeared several years ago. It describes, with all the dry humour and often graphic power of Mr. Clemens, his experiences as an apprentice-pilot on board the great steamers plying between New Orleans and St. Louis in the far-away days to which the Southerner

refers so sadly as "befo' the wah." The second section, which forms a sequel to the first, narrates a visit to the old scenes twenty-one years after the author had left "the river." The result is a singularly interesting work, though probably the earlier chapters will prove of most lasting value, for the later ones are more personal, and often needlessly padded with anecdotes and reminiscences which, however diverting, have a very remote, if any, connexion with the narrative.

The fun in Mr. Clemens' *Tramps Abroad* is frequently forced, and sometimes quite unsuited to the subject in hand. His American experiences have rarely this fault; the writer seems to feel the ground he is treading more secure, and his broad pleasantry is in better keeping with raftsmen, back-woods settlers, and gold-diggers than with monks, mountains, kings, cathedrals, and other sanctities of old-fashioned Europe. The descriptions of the Mississippi, its steam-boat captains, mates, and pilots, the broad-horns and their rough crews, the ague-shaken settlers roosting on fences while the "river was out," and the ways of the great valley of the vast American river as they existed before the war are in his best style. Half-a-century ago, the Mississippi Valley was the favourite field for English tourists; for in times where Concord coaches over corduroy roads were the only means of penetrating the continent, the river and its tributaries, covered with palatial steamers, were among the easiest highways through the centre of the United States, or its then farthest civilised boundaries. Marryat, Mrs. Trollope, Basil Hall—all the little army of literary visitors—have much to say about the Mississippi. Later travellers scarcely ever mention it, for they are so eager to rush West that, except where they catch a glimpse of it and the Missouri on their rapid run for the Rocky Mountains, the Father of Waters is strange to their note-books. The railways, in like manner, ruined the old steam-boating times, and humbled the pride of pilots—whose pride was the pride of kings—and even made the captains and mates regard ordinary passengers as of the same flesh and blood with themselves. The rise, decline, and fall of these potentates is told with admirable effect; and, leaving out of account a little characteristic exaggeration here and there, with minute fidelity. Now and then, an expert in American *facetiae* will detect a very old friend, disguised for the occasion; but these familiar faces in no way detract from the freshness of a volume which does not contain a dull page.

The book is indeed the best account of social life on the Mississippi with which we are acquainted. But it possesses an additional merit which possibly the author may disclaim—it embodies a clear and, take it all in all, very accurate account of the physical features of the river, its shiftings, and general vagaries. Specialists will, of course, turn to Humphrey and Abbot's stern tomes, or to the Reports of the Commission which is fast making piloting on the Mississippi as prosaic and easy as it is on the Elbe or the Thames; but less exigent people, whose thirst for knowledge is quenched with something less than quartos, may safely take "Mark Twain" for their guide. The illustrations are rough, but graphic; and the book is altogether so good that we regret to

see that the ardour which is lavished in scarlet and gold is unequal to the production of an index. ROBERT BROWN.

*Bramshill: its History and Architecture.* By Sir W. H. Cope, Bart. (Infield.)

THE ranks of those stately manor-houses which form one of the glories of our land have been sorely thinned of late by the irreparable ravages of fire. Clevedon, Stanford, Ingestre, to name but the most grievous of these disasters, have in rapid succession been destroyed. To students of our national architecture such losses are very serious; and it is earnestly to be hoped that those historic mansions which have as yet escaped the clutches of Moloch and of man may have their features set on record, before it is too late, as faithfully and as skilfully as are those of Bramshill in the pages of this admirable work.

Sir W. Cope, already known as the author of a History of the Rifle Brigade, disclaims, in a modest Preface, any general knowledge of archaeology; but, while prudently availing himself of the assistance of such specialists as Mr. Eytton for Domesday, Col. Chester for genealogy, and especially Mr. Fergusson for architecture, his own minute study of his theme would do credit to any archaeologist.

The two chief points of interest in Bramshill are the tradition that it was built for Henry Prince of Wales, the ill-fated idol of his people; and the instructive adaptation which it presents of a fourteenth-century mansion to the requirements of the Jacobean period. In that critical spirit which is, all too rare, Sir W. Cope accepts with caution the tradition about Prince Henry. The chief evidence in its favour is the crowning ornament above the present entrance, which appears to represent the Prince's coronet and feathers. This ornament might, indeed, have suggested the story; but, if it does represent them, it can hardly otherwise be accounted for. Now, though Sir William has his doubts about the feathers, it is a singular fact that this very Prince of Wales is said to have been the first to group the plumes within a circlet, in the way they are here represented, circlet and all. But as to the coronet, on which Sir William would rather rely, it is not, as he imagines, that of a Prince of Wales, for it is not surmounted by the single arch, but by the double one of the Royal crown. This raises a curious question. During the reigns of the first two Stuarts the arches of the Royal crown were themselves doubled. Have we here a proof that the coronet of the heir underwent for the time the same process? It would seem, at least, a plausible hypothesis. We shall see that this tradition is of some importance, for, if true, it will explain much that is obscure in the plan of this remarkable pile.

The original house was erected about 1350 by one of the Foxley family, probably the Constable of Windsor Castle and inspector of the works then proceeding there under William of Wykeham. Sir W. Cope has made the interesting discovery that in the remaining vaults of this earlier house the design is "exactly similar to the vaulting and

piers of the rooms now used as the steward's room and servants' hall at Windsor." Lord Daubeney, the favourite of Henry VII., would seem to have resided here in the early years of the sixteenth century; and Sir William is probably mistaken in his suggestion that, as the Foxley house "is described as a 'lodge' in 1595, the greater part of it was most likely irremediably out of repair if not in ruins" (p. 18). "Lodge" was at this period a term applied to the cottage of the "Palliser" or park-keeper; and, indeed, in this very lease the word is mentioned in conjunction with the park. It could not have been applied to the manor-house of the Foxleys. This latter, in Mr. Fergusson's words, "was built round a court-yard, measuring about one hundred feet by eighty." And he sets before us in a striking passage the problem involved in its conversion:

"The architect attempted to convert an 'inside' house—one surrounding a court—into an outside one—one in which all the windows looked outwards—by pushing back the two subordinate wings till they nearly met. The curious part of the business is why he did not do this completely. . . . Perhaps it was that a new invention is never at once pushed to its logical conclusion. Some superstition may have shrunk from the idea of a house wholly without an internal court. . . . All that can be said is that, on the whole, it is a very tolerably successful transformation, but only as a transition example, that, so far as I know, was never attempted before, nor copied afterwards; but exactly therein lies its exceptional interest."

We have surely here a most suggestive phase in the evolution of the English mansion. The *motte*, with its wooden tower, succeeded by the donjon-keep, was early abandoned, at least in peace, for those dwellings which lined the inner face of that battlemented wall of the base-court which had replaced the stockaded rampart. The central tower soon passed away, the "survival" of a lawless age, but in the base-court there was the germ of the "inside" house—the *domus crenellata*—with the fortified entrance to its court, and its windows looking inwards for security. When, in brighter days, these precautions grew obsolete, a radical change became necessary. But the influence of the old tradition was too strong to be shaken off forthwith. A compromise was hit upon by which the new manor-houses were built round three sides of a demi-court, as if the old model had been cut in half and divided into two separate houses. The projecting wings thus obtained were, from the first, obvious "survivals;" and, as such, they gradually shrivelled up till they shrank into the body of the mansion, from which there then sprang the lateral wings, which secured, at length, an unbroken front.

It would seem, bearing this development in mind, that Mr. Fergusson, though right so far as he went, failed to grasp, in its entirety, the ingenious conception of the architect. The careful researches of Sir W. Cope have revealed the foundations of projecting wings, thrown out from both sides of the north-east and south-west fronts. Now this is precisely what we might expect, for such wings were the essential feature in the style then evolved. It is clear that the architect—Thorpe, it is suggested—resolved to retain the two end, or principal, fronts that

he might utilise them as the bases of separate demi-courts, in accordance with the new style, while he turned the old connecting wings literally inside out, raising their new fronts on the foundations of their former inner walls. The house thus planned would, on its outside lines, have had a length of 260 feet and a breadth of more than 120 feet, and it would, moreover, have presented on each face the recessed front of the Jacobean style.

It is satisfactorily established by Sir W. Cope that the wings on the south-west front were completed, but subsequently destroyed, while those on the opposite side were barely commenced; also, that the old gatehouse on the latter front was to have been utilised for the new entrance, which, however, for some unexplained reason, was eventually placed on the south-west front. We can hardly doubt that, taken in conjunction with the untimely fate of the Prince of Wales, the two facts explain each other. Sir William tells us that

"the death of the Prince at the close of the year 1612—the year Bramhill was completed—renders it certain that it never was his residence."

But Bramhill, in fact, *never was completed*. It is difficult, therefore, to resist the conclusion that building operations were abruptly stopped by the death of the Prince of Wales; and that the architect, not being allowed to complete his north-east front, transferred his entrance to that which had been completed, contenting himself with that graceful tower which he had raised in front of the ancient hall, and which had doubtless been destined to receive in its niches, unfilled to this day, a statue of the youthful prince.

But, while the architectural portion of the work is the most important, the accounts of the famous tapestries designed by Rubens, of the *Troco* lawn, and of "the oak chest"—or, rather, chests, for

"another chest has taken the place of the genuine one in the fancies of house-visitors and the narration of servants, and has now been immortalised as 'the chest' in the pictures of a distinguished photographer"—

are full of interest. Though Sir William propounds an ingenious theory in support of the legend of his chest, he may be reminded that Bramhill is not the only seat which rejoices in a similar heirloom.

Sir William and his friends have sought in vain the meaning of the term "the Cheney hanging," which he declares "must remain a mystery." Some wainscot was fashioned after it for Lord Zouche, at Bramhill, in 1615. Now, as "hangings" were then wrought with the badge or crest of the families to whom they belonged, and as Lord Zouche's grandfather had married a Cheney, there can be little doubt that this hanging was so named from being wrought with the well-known Cheney badge.

J. H. ROUND.

*Traditions de la Haute Bretagne.* Par Paul Sébillot. (Paris: Maisonneuve.)

M. SÉBILLOT, who has already published so many Breton popular tales, now produces two neat Elzevirian volumes on the traditions and

general folk-lore of the *pays Gallot*. His legends are for the most part taken down from oral recitations, and when he quotes he is careful to quote good authorities. The first chapter is concerned with traditions about prehistoric monuments, the third with fairies. On the whole, the evidence of this book does not make much, in my opinion, for the theory that the fairies are a fading memory of an early race, Euskarian or what not. Fairies are too constantly found in the folk-lore of races, as Red Indian and Maori, and Indo-Aryan, where there are no Euskarians in the background; and the Breton fairies, though they occasionally live in tumuli, have but a slight and casual connexion with prehistoric monuments. The anecdotes about fairies are so like those current in Scotland and Ireland that we might look for a common Celtic source if the Nereids of modern Greek belief did not appear in similar adventures.

The superstitions about animals are extremely interesting to a mythologist. In all mythologies gods, beasts, and men are much on a level; and, the more early and unpolished the mythology, the more do animals fill the rôles afterwards assigned to men or gods. One may explain this by the fact that savage races nowhere draw a line between animals and men, and the legends conceived by savages remain fixed in the religious traditions of civilised peoples. M. Sébillot's book shows us the Breton peasant still very much in the savage imaginative condition, attributing to animals the power of speech, human intelligence, and miraculous gifts. Consequently, there is nothing strange in the prominent human actions of animals in Breton legend. One curious detail deserves special notice. The moon is, in the myths of very scattered races, mixed up with the rabbit or the hare. In Sanskrit, Prof. Max Müller says, the moon is called *sasanka*—i.e., "having the marks of a hare." In Mexico (*Sahagun*, vii. 2) the moon has also the marks of the hare or rabbit, because one of the gods struck the being who became the moon across the face with the dead body of a hare. The Hotentots, on the other hand, make the moon smite the hare on the face with a piece of wood. In Berry a rabbit, shot with an enchanted bullet, cried out, "La lune est morte! la lune est morte!" (Rosquet and George Sand, quoted by Sébillot, ii. 49). Where is the English story of the man who told his wife that he had heard a number of cats cry, "Renaud is dead," whereon his own cat said, "Then I am king of cats," and vanished? M. Sébillot gives the Breton form (ii. 48). Cats talk as freely in Brittany as wild dogs in Australia. M. Sébillot's chapters on the folk-lore of plants and animals are a useful supplement to M. Rolland's large work. His chapters on "Revenants" should be read by the members of the Society for Psychical Research. Here, too, are werewolves in great plenty, and stories of men who have a strange power over herds of wolves.

M. Sébillot's book is most interesting and valuable to the mythologist who does not disdain peasant myths, but holds that they are a degree nearer the earliest surviving myths than the legends of the Olympic or Indo-Aryan creeds.

A. LANG.

## NEW NOVELS.

*Tyrants of To-Day.* By C. L. Johnstone.  
In 3 vols. (Tinsley Bros.)

*By the Gate of the Sea.* By D. C. Murray.  
In 2 vols. (Chatto & Windus.)

*A Fallen Foe.* By Katharine King. In 3 vols.  
(Hurst & Blackett.)

*Estcourt.* By Lord James Douglas. (Bentley.)

*A Misquidit Lassie.* By Percy Ross.  
(Macmillan.)

*Tyrants of To-Day* is a curious book, not less curious because its author has "put a name" to his authorship of some other curious books which were themselves, if we mistake not, published anonymously. The subject of these for the most part was Russia and Russian Nihilism. The subject of *Tyrants of To-Day* is rather European anarchism and its secret societies in general. The book is a novel only in form. A few personages, somewhat of the lay-figure character—the orphan daughter of a French colonel, who, after an honourable but humdrum existence, marries a Scotch colonel; the unacknowledged son of a German prince, who falls into the toils of the secret societies, is all but assassinated for failing to carry out their behests, and finally dies of wounds received at Sedan; an arch agitator, Herr Rindt, who may or may not be intended for a portrait; and two or three "supers"—make up the *dramatis personae*. But it would hardly seem that the author has intended to arouse much interest in his characters as such. They are chiefly instruments for the exhibition of the tyranny of secret societies, which is shown with some knowledge, but not in any very striking or novel fashion. Prince Saxe, or somebody else, makes the not improbable assertion that the agents of the societies are always on the watch for unsuccessful students at the German universities. Happy England! Who ever heard of a Nihilist seizing the moment when an Oxford undergraduate was bewailing the testamur that is not, or gnashing his teeth at the greater woe of an honorary fourth?

Mr. David Christie Murray (who seems to be writing with a rather dangerous rapidity) has produced in *By the Gate of the Sea* a rather slighter book than those which he usually turns out. He tells us, indeed, unless we have misunderstood the passage, that he meant it to be slight, and rather a study of certain phases of human self-torment than a complete picture. We are inclined to think that as such it is rather out of proportion. It is too long for a mere study, and not long enough for a finished picture. There is, however, not a little merit in the conception of the chief figure, Arthur Tregarthen, a cross-grained and crotchety person of honour and virtue, who wrecks his worldly prospects by a piece of quixotic chivalry, ruins his happiness by suspecting his wife without due enquiry, and finally ends in a kind of lethargy of solitude and fantastic study. The companion sketch of the wife, who aids in making her husband and herself miserable, first by unnecessary concealment, and then by needless refusal to explain, is perhaps less good because the nature of the subject is less clearly brought

out. We see why Tregarthen did as he did clearly enough; not so clearly why his wife did as she did. The chief of the minor characters, a conceited but amiable bard, though a tolerably hackneyed personage, is treated with some humour; and the whole book is pleasantly written.

There was a time when better work might have been expected from the author of *The Queen of the Regiment* than *A Fallen Foe*. The faults of the book do not lie merely in the author's abuse of the privileges of ignorance which are allowed to lady novelists, though this abuse is sufficiently glaring. That the lawsuit between Alan Loftus and his cousin, Lady Guinevere Penryn, is conducted in a manner and with results wholly unintelligible is perhaps less surprising than that Lady Guinevere, being a ward in Chancery, "the Chancellor" is introduced as Sir Richard Baines. Miss King, in her distribution of honours, is perhaps guided by a remembrance of her school-days to the effect that Sir Thomas More once held that responsible and dignified office. Another of the characters appears alternately as Lady Goldhawk and Lady Grace Goldhawk. However, a reviewer who objects to such trifles as these must be either a tyro or else a martinet. If Miss King had written an interesting book we should have allowed her, with only gentle upbraiding, to call the Archbishop of Canterbury the Rev. Mr. Benson. But it is not an interesting book. The heroine might pass if there were something more about her. But the hero, Alan Loftus, is an ill-conditioned and ill-mannered person whose ill-conditions and ill-manners are not displayed with any art; the story languishes and fails to attract the reader, and none of the minor characters redeem the defects of their majors.

Lord James Douglas' novel is one of which, while it is not very easy to say much definite good, there is no reason whatever to say any harm. The author would appear to have taken the late Major Whyte Melville for his pattern, and he very certainly might have taken a worse. There is much betting and racing, a little hunting, a duel, and a good deal of fighting in the war of 1870. The book is by no means badly written; and the story, though it has no great complexity nor any very definite plot, moves easily enough and takes the reader very fairly with it.

We are unable to discern why Mr. Ross should have called his book *A Misquidit Lassie*. The father of Antoinette Raynor, who is the heroine and presumably plays the title-part, certainly has a deer-forest in Inverness-shire; but we are expressly told that Antoinette has no Scotch blood in her, and on the whole, we venture to suggest, as preferable, *A Vulgar Girl*. This would be strictly descriptive and very accurate. Miss Raynor exceeds in unladylikeness most young women whom we have met in fiction and (we are happy to say) all young women whom we have met in life. Nor is she in the least an amusing hoyden. She thinks it funny, after disturbing the sport of an unhappy Scotch laird whom she has never seen before, and making the very feeble joke that he may fine her five shillings for trespass, to present him

the next time they meet with a bag containing that sum in halfpence. She treats a German lover of hers, who is himself harmless, though foolish, and who receives the readers' warmest compassion, very much as a lively housemaid would treat, or may be supposed likely to treat, an amorous footman; and she informs a luckless young lady, almost a stranger, who happens to be her guest, that, "if she does not sit down, she will knock her down." This will perhaps be enough for Mr. Ross's heroine. For Mr. Ross, it is probably sufficient to say that he seems to think a "son of Anak" in some way synonymous for a sportsman, that his humour lies in such things as calling one of his personages the Honourable Mr. Timoncroesus, and that he introduces one of the most tolerable of his characters—a young lady represented as familiar with the best modern society—as saying "Good afternoon, Miss Raynor; I was so anxious to make your acquaintance that I put off the many and various duties that attend ladies on their arrival to spend the autumn in the wilds." And so the story leaves to speak of Mr. Ross and his book.

GEORGE SAINTSBURY.

## CURRENT LITERATURE.

*About Yorkshire.* By Katharine and Thomas Macquoid. (Chatto and Windus.) Numberless as are the books which have been recently written on Yorkshire, there is yet room for this one to treat with graceful style and much appreciation of natural beauty the chief abbeys and picturesque castles of that great county. It cannot be cited as a guide-book, for it is not by any means exhaustive. For variety of scenery and architecture no other county can be compared with Yorkshire. A pedestrian always returns to it with the more eagerness after every raid that he has made among its dales. This is exactly the book which such a one will value, enabling him in after-years to refresh his recollections of historic or romantic spots, and aid memory with the bold, characteristic woodcuts drawn by Mr. T. Macquoid. And if anyone be so unfortunate as to be ignorant of the riches of Yorkshire both in mediæval remains and picturesque scenery, no better book could be put into his hands to "insense" him, as the natives say, with a longing to see their county. The authors travelled leisurely, turning off here and there, as the fancy took them, from the beaten track, and not alarmed at the great extent of wild country which stretches away to the lake mountains in the north-west corner of the county. Few people ever find their way to Bolton Castle, but it is well described in these pages and figured in one of the best drawings of the book, which preserves its massive grandeur while suggesting the stormy skies and widespread moors which surround it. Perhaps sufficient justice is scarcely done to the apartments of Queen Mary here, where the visitor can still realise in all its vividness the episode of Christopher Norton, so graphically related by Froude, inasmuch as the rooms yet remain much as when the Queen left them. Mrs. Macquoid dwells upon the minute accuracy with which Scott, in "Rokeby," paints the wild-flowers of the district. It is upon record that he carefully gathered and made notes of them. Mr. Henderson has forestalled the authors in the curious legend connected with the Hand of Glory at Stanmore. All who know Selby church will agree with their remarks on its neglected state, and will long to see it more reverently cared for. The graceful ruins of Kirk-

stall, near smoky Leeds, are artistically depicted; and we are glad to see due homage paid to Whitley, one of the most picturesque towns in the kingdom. Some of the peeps at "becks" and "forces," with their wealth of ferns and greenery, show what unexpected pleasures are in store for those who are planning a holiday ramble in Yorkshire. Easby and Jervaux, Fountains and Rievaulx, are daintily sketched both with pen and pencil. *About Yorkshire* is a charming book for every lover of the nooks and corners of England.

*An American Four-in-Hand in Britain.* By Andrew Carnegie. (Sampson Low.) We are thankful to the English publishers for giving us the opportunity of reading this book, which ought to be taken advantage of by all who relish good nature and native shrewdness. No other phrase will characterize Mr. Andrew Carnegie than that he is a "jolly good fellow." Born at Dunfermline, he emigrated to America as a boy, and seems to have made his fortune rapidly as an ironmaster in Pennsylvania. He comes back to England and to Scotland as an ardent republican, though with no unkind feelings towards the inhabitants of the old country. His trip in a four-in-hand from Brighton to Inverness, which attracted some notice at the time, forms the subject of the present book. But the real interest of it consists not so much in the scenes visited as in the character of the writer. We have here a genuine American, none the less genuine because not native born, describing England, not with the literary pen of a Washington Irving, or a Hawthorne, or even a Burroughs, but as it appears to a plain business man from the other side of the Atlantic. It is pleasant to know that those like us most who know us best. But it is yet more pleasant to read of the enjoyment Mr. Carnegie himself derived from his tour, and of the high spirits displayed by all of his party. Such a sustained course of joviality is rare to meet with in these days, and still more rare to read about. "Laughter holding both its sides" is contagious; and we owe it to Mr. Carnegie to say that we have derived more enjoyment from his straightforward pages than from many books of far higher literary pretensions. Let our readers get the volume and try.

*Nature near London.* By Richard Jefferies. (Ohatto and Windus.) Mr. Jefferies' fame is well established, as may be inferred from the fact that the public has readily taken some nine volumes from him within a considerably less number of years. No one will grudge him the success due to an inventor in popular literature. But he must beware of over-stocking his market. His present book, though it might have sufficed to make the reputation of another writer, is a variation upon its predecessors rather than an advance. We trust that the ordinary Londoner is not so altogether ignorant of his surroundings as to require to be taught that he can find wild nature within twelve miles of Charing Cross. Yet both Mr. Jefferies and the editor of the newspaper in which these sketches first appeared doubtless know their public. To those, then, who have not yet discovered the rural delights that are to be got by a short walk from town this volume will be a revelation. Needless to add that as Mr. Jefferies has a keen eye, so also has he a ready pen. The combination of these two gifts constitutes his real claim to popularity. That he can sometimes presume upon his audience the following passage will show (p. 125):—

"By the roadside I thought I saw something red under the long grass of the mound, and, parting the blades, found half-a-dozen wild strawberries. They were larger than usual, and just ripe. The wild strawberry is a little more acid than the cultivated, and has more flavour than would be supposed from its small size."

*Sandringham, Past and Present.* With Some Historic Memorials of the Norfolk Coast. By Mrs. Herbert Jones. (Sampson Low.) Mrs. Jones has taken advantage of what she calls the present "Royal" associations of Sandringham to compile a gossipy book about the history of the coast of Norfolk. Sandringham itself introduces Anthony Woodville, second Earl Rivers, Peter Anthony Motteux, the translator of Babelais, and the Countess D'Orsay, perhaps better known as Lady Harriet Cowper. In the later chapters we have Isabella of France (Queen of Edward II.), Sir Cloudeley Shovell, Sir Edward Coke, and no less a Norfolk worthy than Pocahontas. Out of such materials it was not difficult to make a book. And we must do the authoress the justice of saying that she has shown not only a sound knowledge of authorities, but the yet rarer merit of discretion in using them. If it were not for a certain exuberance of diction—most conspicuous, and perhaps most excusable, in the chapter on Nelson—we should have nothing but praise to give this book. It is handsomely got up, and contains an *intaglio* of Nelson which is said to have been never before published.

*In the Country: Essays.* By the Rev. M. G. Watkins. (Satchell.) We have delayed too long our notice of this book, but now hasten to make amends by saying that nobody can take a more pleasant companion with him on his summer holidays. Mr. Watkins does not attempt to conjure with any novel charm. We do him no wrong when we say that his manner recalls to us some of the *Prose Idylls* of Charles Kingsley. He loves Devon and Scotland, fishing in river and sea, old ballads and the yet older poets of Rome and Greece. Where all are uniformly good, we have ourselves been most attracted by the paper on "Ottery St. Mary"—a corner of England most grateful in itself, and rich in memories of Raleigh and Coleridge.

*Lancashire Gleanings.* By William E. A. Axon. (Manchester: Tubbs, Brook and Chrystal; London: Simpkin, Marshall and Co.) Mr. Axon must be well known to many of the readers of the ACADEMY as an industrious student in the byways of history. Manchester can boast not a few antiquaries and bibliographers; but we doubt if it has any by whom its many libraries have been more diligently ransacked. In this volume, which is handsomely printed and furnished with a copious Index, Mr. Axon has collected forty odd papers, linked together by some association with the county of Lancashire. Such a book scarcely affords occasion for criticism. Most of the papers are very short, and the interest of all is chiefly local. But, as an example of good work in a department where the materials are almost unlimited, we can heartily recommend *Lancashire Gleanings* both as pleasant reading in itself and as worthy of imitation by others.

*Winter Sunshine.* By John Burroughs. (Edinburgh: David Douglas.) This is, we believe, one of the series of "authors' editions" of contemporary American literature that Mr. Douglas is publishing, though it comes to us in a different binding. The title is the title of the first chapter only, and by no means appropriate to the whole book. This naturally divides into two parts, the first dealing with country life in New York, the second describing a visit to England. Though we cannot claim to be fully qualified to judge, we must confess to having found more interest in the first half. Like Mr. George Cable, whose *Old Creole Days* was recently noticed in the ACADEMY, Mr. Burroughs is at any rate a genuine American, and has something fresh to tell to the English reader. It is enough to point to his account of the local method of hunting foxes, which we forbear to reveal. Whether Mr. Burroughs

deserves the name of a second Thoreau, may, however, be doubted. When a foreign writer (and for the present purpose he is a foreigner) has thus won our confidence, it is pleasing to find that, when he turns his criticism upon ourselves, we come out of the ordeal so well. Mr. Burroughs is nothing if not truthful; but it is hard to believe that in London he found

"no loudness, brazenness, impertinence; no oaths, no swaggering, no leering at women, no irreverence, no flippancy, no bullying, no insolence of porters, or clerks, or conductors, no importunity of boot-blacks or newsboys, no omnivorousness of hackmen. . . . Street cries of all kinds are less noticeable, less aggressive, than in this country."

If indeed all this be true, we shall die contented without having seen, or rather heard, New York. Yet we should like to eat a pocketful of apples there with Mr. Burroughs.

THE Rev. J. Cave-Browne, Vicar of Detling, near Maidstone, has just issued an interesting Supplement to his *History of Lambeth Palace*, which has recently passed into a second edition. In his new volume, of less than one hundred pages, Mr. Cave-Browne deals with "Mediæval Life among the Old Palaces of the Primate," and gives a clear and accurate summary of the history of the possessions of the See of Canterbury. Commencing, of course, with Canterbury Palace, the author traces the histories of the following archiepiscopal palaces and manor-houses:—Lyminge, Saltwood, Aldington or Allington, Charing, Wrotham, Wingham, Maidstone, Otford, Ford, Knole, Tenham, Gillingham, Bishopsbourne, Bekesbourne or Levingsbourne, Slyndon, Mayfield, Mortlake, and Croydon. Messrs. Blackwood and Sons are the publishers.

THE last addition to the "Thorough Guide" series, founded and edited by Mr. Baddeley and published by Dulau, is *The Eastern Counties*, by Mr. U. S. Ward. Having made use of Mr. Ward as a companion in Devon and Cornwall, we are prepared to trust to his guidance in a new field. He knows at first-hand what he writes about, and possesses the supreme gift of avoiding idle padding. The present volume is a small one; but we venture to say that it contains everything that will be wanted by the ordinary tourist. The maps are all they should be; so is the Index; only we could have spared from our knapsack the twenty odd pages of advertisements at the end. The time-tables of the G. E. R. at the beginning need no excuse.

#### NOTES AND NEWS.

PERHAPS the handsomest book that has issued from an English press in recent years is the *Life of Don John of Austria*, on which the late Sir W. Stirling Maxwell spared no labour of research, and his representatives have spared no expense. It appears in two folio volumes, in an edition of only 115 copies, at the price of twenty-five guineas. That such a book should be published in such a style is not inappropriate; but the general public will be glad to hear that another edition may shortly be expected in a more accessible form.

DR. RICHARD MORRIS hopes to finish his edition of the *Cursor Mundi* for the Early-English Text Society next year. The completions of the *Merlin* and *Holy Grail* Romances will wait for Prof. Gaston Paris's Introduction to his edition of Mr. Alfred Huth's unique MS. of *Merlin* for the Old-French Text Society.

WE hear that Signora Linda Villari, wife of the historian, and herself known to the English public by her novel *In Change Unchanged*, published by Messrs. Macmillan some years ago, has completed a new novel called *Camilla's Girlhood*.

MR. R. B. ARMSTRONG hopes to issue in

November part i. of his History of Liddesdale, Ekedale, Ewesdale, Wauchopedale, and the Debateable Land, from the twelfth century to 1630. The Appendix to this volume contains seventy documents, arranged in chronological order down to 1666. The selection has been made from private charter-chests, MS. collections in London and Edinburgh, and rare printed works. It comprises charters, rent-rolls, excerpts from accounts of the Lord High Treasurer, bonds of manrent, bonds for re-entry of prisoners, lists of Scottish borderers under English assurance, interesting letters, and a military report on the West March of Scotland and Liddesdale by an English official. The work will be handsomely illustrated with facsimiles of the curious and interesting drawings in water-colour of Cardoness Tower, Kirkcudbright, Carlawerock Castle, and Annan. Beside these chromo-lithographs, there will be a plate of arms of the Lords of Liddesdale, another of the clans of the district, the arms of Lindsay of Wauchope, and the seals of John Armstrong and William Elliot. The smaller illustrations give representations of towers, ecclesiastical remains, sculptured remains, monumental slabs, crosses, &c. The edition will be limited to 275 copies quarto and 105 copies on large paper.

THE third volume of the *Old Testament Commentary for English Readers*, edited by the Bishop of Gloucester and Bristol, including the books of the Old Testament from 1 Kings to Esther, and containing contributions by Canon Barry, the Rev. C. J. Ball, the Rev. W. B. Pope, and the Rev. R. Sinker, will be published early in August by Messrs. Cassell and Co.

MESSRS. CHATTO AND WINDUS will in the future be the publishers of Mr. Edward Walford's series of annual shilling books, the *Peerage, Baronetage, Knightage, and House of Commons*, of which new editions are nearly ready; and also the *Handbook of the Charities of London* of Mr. Herbert Fry.

MESSRS. WILSON AND M'CORMICK, of Glasgow, will publish next week a new novel called *Inchbracken*, a study of Scottish provincial life in the Disruption times, which we understand is written by Mr. Robert O'leland.

THE next number of the *Antiquarian Magazine* will give a facsimile of Lord Nelson's last frank, addressed to Lady Hamilton from sea after he left Portsmouth, a week or two before his death at Trafalgar.

THE August number of the *National Review* will contain an article on "The Scientific Novel and Gustave Flaubert," by Mr. Hugh E. Egerton, and "A Defence of Sport," by Mr. Richard Jefferies.

To the August issue of *Merry England* Mrs. Lynn Linton will contribute an article on "Scandal." The frontispiece will be an etching of the Royal Courts of Justice by Mr. Tristram Ellis.

MR. J. POTTER BRISCOE'S *Curiosities of the Belfry* is now in the hands of the binders, and will be issued to subscribers shortly. The same author's *Stories about the Midlands* will be published next month.

A CORRESPONDENT of the *Literary World* (Boston, U.S.) draws attention to the following, as throwing light upon the title chosen by Mr. Browning for his last volume. In the biographical sketch appended to "Paracelsus" is a foot-note (*Poetical Works*, 1868, vol. i., p. 197)—"A standing High-Dutch joke in those days . . . as may be seen by referring to such rubbish as Melander's *Jocoseria*, &c." While we are upon the subject of the name, we may as well record that the article on this very jest-book in the February number of *Blackwood*, which attracted so much attention not only for its opportuneness, but also for its intrinsic

merit, was written by the Rev. Dr. J. Dowden, of Edinburgh.

THE public library of Mauchline, the little Ayrshire town so closely associated with the name of Burns, was until last week without a copy of his poems. This omission has now been remedied, and it is proposed to establish a "poets' corner" in the library.

THE fourth edition of the Hebrew translation of the New Testament by Prof. Delitzsch, consisting of 5,000 copies, having been exhausted in little more than a year, a fifth edition has just made its appearance. The text is substantially that of the preceding edition; but it has been throughout carefully revised by its indefatigable editor. In connexion with it Prof. Delitzsch has also published (in English) a little brochure entitled *The Hebrew New Testament of the British and Foreign Bible Society: a Contribution to Hebrew Philology* (Leipzig: Dörffling and Franke), illustrating the difficulties encountered by him in his work of translation, and indicating the grounds which led him, in particular cases, to the renderings which he ultimately adopted. For the Hebrew student, we may remark, this version of the New Testament is of extreme value, both philologically and exegetically; and the brochure to which we have referred may be regarded in the light of an introduction calling attention to some of its more prominent features.

AMONG French announcements we notice the following:—A posthumous work on M. Victor Hugo by Paul de Saint-Victor, edited by his daughter; *Souvenirs of Lamartine*, by M. Ch. Alexandre, his friend and private secretary; a book about Gambetta, by M. Coquelin aîné; and a prose translation of Shelley's "Cenci," by Mme. Dorian, with an Introduction (written in French) by Mr. Swinburne.

OUR readers will learn with pleasure that Señor Miquel y Sampère, the editor of the long interrupted *Revista de Ciencias Históricas* of Barcelona, will shortly revive it, so far at least as to bring to a conclusion the works already commenced therein.

*Correction.*—In the ACADEMY of last week, by a palpable blunder, next year was called the 400th anniversary of Wyclif's death. This should of course have been "800th." Wyclif died in 1384.

#### AMERICAN JOTTINGS.

MESSRS. HOUGHTON, MIFFLIN AND Co., of Boston, will publish in the autumn a complete edition of the works of the late William H. Seward, in five volumes. Four of these appeared thirty years ago, and have been long out of print. The fifth volume, which is entirely new, will be entitled "A Diplomatic History of the War."

MESSRS. ROBERTS BROS., of Boston, announce illustrated editions of the following:—Gray's "Elegy," with thirty designs by Mr. Harry Fenn, mostly sketches taken at Stoke Pogis; Miss Jean Ingelow's "High Tide;" Card Newman's "Lead, Kindly Light;" and Lord Houghton's "Good Night and Good Morning," with illuminations and etchings by Mr. Walter Severn.

THE New York *Tribune* is printing as a *feuilleton* a new novel by Mr. Edgar Fawcett, entitled "An Ambitious Woman."

IN the many universities (or colleges) of the United States the religious difficulty is avoided for the most part by making the foundations frankly denominational. But a similar subject for dispute seems to be provided by political economy. Most of the professors of this subject are free-traders, as might be anticipated. The professor at Cornell is a free-trader; but a

second teacher has recently been appointed, with the subordinate title of "lecturer," to present the protectionist view. At Williams College, in Massachusetts, where the professor is also a free-trader, fourteen graduates have signed a protest against the tendency of his teaching, and more especially against the acceptance by the college of a political economy prize offered by the Cobden Club. The governing body again propose to evade the difficulty by establishing an alternative course of protectionist lectures.

THE *Critic* of July 14 is an especially good number, unless we are unduly prejudiced by the return to the original practice of signing all the longer articles. Prof. W. D. Whitney reviews Dr. Abel's *Ilchester Lectures*, and Mr. Hjalmar H. H. Boyesen the English translation of Düntzer's *Life of Schiller*. Mr. John Burroughs returns to the subject of "Emerson and Carlyle," with a leaning in favour of the latter that we should not have anticipated. Mr. Charles G. Leland writes a notice of the late Prof. E. H. Palmer, which ends with these words:—

"He was generous to a fault, and surpassed all men whom I have ever known in hiding his sorrows from his greatest intimates, and in sharing his joys with all."

#### EPIGRAMS.

##### LV.

"How weak are words—to carry thoughts like mine!"  
Saith each dull dangler round the much-bored Nine.  
Yet words sufficed for Shakspeare's suit when he wooed Time, and won instead Eternity.

##### LVII.

This waking life, a solid-seeming shore,  
The immaterial tides of slumber lave;  
And dreams are phantom ships, careering o'er  
That shallow counterfeit of death's deep wave.

##### LVIII.

*An Alleged Characteristic of Goethe.*  
'Tis writ, O Dogs, that Goethe hated you.  
I doubt:—for was not he a poet true?  
True poets but transcendent lovers be,  
And one great love-confession poesy.

##### LIX.

*Switzerland: Dawn and Evening.*  
She looks o'er covering lands from her wan throne,  
And beckons the far morn to hasten nigher.  
Aloft on brows of silver silence lone  
She wears the sunset for a golden tiar.

##### LX.

*Suggested by a Rock, having the Likeness of Immense Human Features.*  
The sea-fowls build in wrinkles of thy face,  
Giant that mark'st not them nor Time nor me.  
Kings fall, gods die, worlds crash;—at thy throne's base  
In showers of bright white thunder breaks the sea.

W. W.

#### MAGAZINES AND REVIEWS.

THE July *Livre* opens with a notice, by Mr. Ashbee, of the Index Society, which is naturally of more interest to French than to English readers. But a really important paper on some unpublished correspondence of the Bonapartes follows, and the third article of the original portion also deserves mention. This is a notice (with a facsimile) of a somewhat *gaucio* fragment of poetry in the handwriting of Racine. The writer, M. Achille Duvau, thinks that it is authentically the poet's. We do not know any reason, so far as subject goes, why it

should not be the work of his unregenerate days; but in style it seems to us as unlike him as "L'Ocasion Perdue et Recouvrée" is unlike Corneille.

THE *Revue historique* for July has the beginning of a study by M. Fustel de Coulanges on "L'Immunité mérovingienne." M. de Coulanges makes a careful investigation into the exact meaning of early grants of immunities, with a view of tracing the origin of local jurisdictions. M. Dardier calls attention to a little-recognised historian, "Jean de Serres," 1540-98. He examines the sources of de Serres' information and the value of his writings for the history of the religious wars in France. M. de La Blanchère publishes a series of documents from the archives of Montefortino, which has recently changed its name to Ardena de' Volschi. These interesting documents tell the story of the destruction of Montefortino in 1557 by the orders of Pope Paul IV. It is a vivid contribution to the history of the Papal States.

IN the *Nuova Antologia* for July 1 Prof. Villari writes on "Thomas Henry Buckle," whom he treats with much appreciation. Sig. Boglietti, in a paper on "Ugo Bassville at Rome," gathers together the facts relating to the life of a man who would be forgotten if it were not for Monte's poem "Bassvilliana," in which the poet recants his first passing sympathy for the ideas of the French Revolution.

AN excellent lecture on Feudalism, by Don Manuel Pedregal, is reported in the *Revista Contemporánea* of June 15. He deduces its origin mainly from Roman sources, considers it superior to all systems which had preceded it, and shows that it was more widely spread in Spain than is usually supposed. A paper on "Grammatical Studies," by F. F. Iparraguirre, proposes a new method of classification by suffixes and affixes, but fails in not noticing their historical development in each idiom. Two short pseudonymous articles in the numbers for June, called "Yankee Sketches," are the most severe strictures on society in the United States that we have seen. There is said to be no affection in the family life of any class, and no culture; education is valued simply as a means of more quickly gaining wealth. Vicente Tinajero concludes his admirable "Moallakas" with a general review of Arabic poetry of the era of Mahomet. A lecture on "The General Idea of Organisms," by Señor Maestro de San-Juan, deals mainly with the transformations of life from vegetable to animal.

### NOTES FROM MELBOURNE.

Melbourne: June 4, 1883.

THE University of Melbourne has received a handsome bequest from a rich Western district squatter named Wyselaskie—a Swiss brought up in Scotland. He has left to that university £12,000 for bursaries, £20,000 to endow professorships of divinity in connexion with Ormond College, and £10,000 to the college itself. He has likewise left a large sum to the Ladies' Presbyterian College and to the parish in Scotland where he was brought up.

The enterprising Melbourne student, Mr. George Ernest Morrison, who lately walked across Australia from Normanton to Melbourne alone and unarmed, has now taken his departure on an exploring expedition to New Guinea. He has been there once already; and he describes the climate of the interior, so far as he penetrated, as most agreeable and salubrious, owing to the height of the tableland, which seems to form the interior, above the sea. He intends to collect specimens of the dialects spoken in the island.

### CORRESPONDENCE.

#### THE FALL OF THE DUKE OF ALBANY.

Bamf: July 20, 1883.

Scottish historians, from Buchanan to Hill Burton, appear to have agreed in telling the world that, on March 21, 1425, James I. arrested in Parliament at Perth, not only the ex-Regent, Murdoch Duke of Albany, with his second son, Alexander, his secretary, Allan Otterburn, and Sir John Montgomery, but also a supposed batch of at least twenty-two others, including the Earls of Douglas, Angus, and March and representatives of most of the leading families in Scotland. The list includes the names of the Constable of Dundee, the Sheriff of Angus, and, in fact, all the territorial magnates of that district. The fact is that the list in question is

that of the gentlemen knighted by James at Soone, in the previous year, on his coronation-day. The mistake of supposing that these men were arrested at Perth has arisen from taking a parenthesis in the *Scotichronicon* for part of the text:—

"Et in die nono parliamenti rex arrestari fecit dominum Murdacum ducem Albanie ac etiam dominum Alexandrum filium juniorem ejusdem quem die coronationis suae praecinxit in militem cum vigniti sex aliis videlicet Archibaldum tertium comitem de Douglas,"

and so on. Having given the list of those knighted at the coronation, which he had not given before, the writer reverts to the arrests, and goes on, "Quo etiam die arrestavit dominum Johannem de Montgomery et Alanum de Otterburn," &c. He then tells us what befell the four men arrested, but not a word does he say of any trial or liberation of the men included in the parenthetical list (*Scotichronicon*, ii. 482, ed. Goodall).

In the *Liber Pluscardensis*, 370, 371, and the *Extracta e Variis Croniciis Scotie*, 227, 228, the facts are given without ambiguity. The names of the gentlemen knighted—the same list as that in the *Scotichronicon*—are given in the proper place under the coronation. The men arrested in 1425 are given as the four above-named.

Of the men thus supposed to have been arrested, I may notice that one was killed on May 3 following, fighting for King James against some of Albany's faction. Another, Sir Walter Ogilvy of Lintrather, was all the time treasurer of the King's household (*Exchequer Rolls of Scotland*, iv. 379). J. H. RAMSAY.

### SOME GATHERINGS FOR THE "BIBLIOTHECA PISCATORIA."

London: July 21, 1883.

Few, if any, are so well aware as Mr. Westwood and Mr. Satchell that in all probability some appropriate matter, though slight it may be, still remains unrecorded in the *Bibliotheca Piscatoria*. In the preliminary announcement prefixed to their recent Catalogue—a work that has received and that merits nothing but praise—we are asked for assistance in the shape of corrections and additions to be used in the preparation of supplemental lists. Notwithstanding this request, I imagine there are some who, like myself, feel that there can be so little, comparatively speaking, to add to what has already been told that it is hardly worth while glancing over one's shelves in search of new matter. But, bitten by the love of collecting, and then, when a wet day comes, reaching down a book here and a book there, you find yourself almost unconsciously gathering up your notes and comparing them with those of former winners. And thus the following have been thrown together for what they are worth, and not as indispensable additions to the *Bibliotheca Piscatoria*.

Looking back to classical times, it is noteworthy that there is a lack of clear and confident opinion on the value of the only English translation of Oppian's *Halieutica*. The truth is, quoting from the words of an able and learned essayist on the life and writings of Oppian:—

"To the mere English reader the works of Oppian have been made known but very partially and imperfectly by a translation of the *Halieutica*, edited at Oxford in 1722. The two first books were translated by Mr. Diaper, and the remaining three by Mr. Jones. The latter speaks with the zeal of friendship of Mr. Diaper's translation, and, though he allows that he has somewhat paraphrased the author, believes 'that he has nowhere deviated from his sense and intention.' The great fault of the translation is undoubtedly its verbiage, and which the beauty and spirit of the original are buried. In one passage, twelve lines are employed

to render three of the original; and, in another, no fewer than thirty to represent nine. But this is not to translate. Though a single grace or illustration may be admitted by a translator, provided it be done rarely, and in the true spirit of the original, such licentiousness should never be tolerated. It turns beauty into deformity, and sinks the sublime to the bathos."

There is a quaint old treatise of the fifteenth century that has hitherto been omitted from the lists of fishing-books. It is *De partibus aedium* of Francois Marius Grapaldus, a poet laureate, who was chosen to no mean employment because of his "eloquence and beautiful shape." The first, though not the best edition, was printed at Parma, about 1494, by Angelo Ugoletto. It was printed in round characters, and is a very early example of the old Roman type. The book went through numerous editions, and is interesting to fishermen on account of its containing some twelve pages devoted to the "Piscina." Conrad Heresbach's work on husbandry is spoken of in the *Angler's Note Book* as being "now a very rare book indeed," but I suspect there are a few more editions of the original beside those mentioned by Mr. Westwood and Mr. Satchell. Bosgoed's list includes an edition printed at Cologne in 1571, and I have another edition printed at the same place in 1573. Neither of these is noticed in the new Catalogue.

Passing to our own fishing literature, there is just a word to be said about the first edition of Penn's *Maxims and Hints for an Angler*, published in 1832. Up to the present time it has only been incidentally noticed under the entry of Jesse's *Gleanings in Natural History*, to which it was appended. If it has not been attributed to Jesse, Penn has not as yet been recognised as the author. In other words, the *Maxims and Hints for an Angler*, first published in Jesse's *Gleanings*, have not been identified with those afterwards published under the name of Richard Penn. The name of the late Bishop of Oxford should not be omitted from the roll of angling essayists. It was he who contributed the article on Mr. Knox's *Autumns on the Spey* that appeared in the *Quarterly Review* for April 1873. It may be useful to bear in mind that there is a second edition, on large paper, of Couch's *Fishes of the British Islands*. This edition, which was published by Messrs. Bell and Sons a few years ago and is still in print, is a reprint of the first, without alteration in the text or plates. The following three pamphlets that should perhaps be catalogued are selected from some others that might also be registered:—(1) *Orders heretofore devised and agreed upon by the Right Honourable the Lord Mayor of the City of London, and Conservator of the River Thames and Waters of the Medway, and River Lee, for conservation and preservation of the River Thames, and of the Brood and Fry of Fish therein* (Sir Robert Ducey, Mayor, 1630); and subsequent orders. From the first of these it will be seen that 250 years ago a good stock of fish in the River Thames was regarded with little less importance than in the present day. (2) *The Heavenly Observatory; or, the Ocean spiritually considered*, by William Curtis, M.A. (1727)—an example of fishing spiritualised. (3) *A Plan of an Universal Fishing Company in Ireland* (1773).

Acts of Parliament and Parliamentary papers are not pleasant reading, to say the least; but undoubtedly the most important feature of the new *Bibliotheca Piscatoria* is the enumeration of those relating to our fisheries. *Magna Carta* is conspicuous by its absence; for it should not be forgotten that the most valuable fishery rights in this country have their origin in a period prior to the date of the Great Charter of King John and the second and third

confirmations of it in the reign of his successor. By these were prohibited the right of conferring a free fishery, or the exclusive right of fishing in a public river—a right that was looked upon as one of the flowers of the prerogative.

Since Howitt's delightful books of the country have been brought within the precincts of the angler's library, it may be observed that there are at least three editions of *The Rural Life of England*, and that there is an attractive and inexpensive reprint of *The Boy's Country Book*. Copies of the latter are still to be had from Messrs. Nelson, by whom it was published in 1880. But this is not the season for bibliography. We should away to the river-side,

"and give ourselves up wholly to the influence of the season; to angle, . . . and dream by the ever-lapsing water, in green and flowery meadows, for days and weeks, caring no more for all that is going on in this great and many coloured world than if there were no world at all beyond these happy meadows, so full of sunshine and quietness."

OSMUND LAMBERT.

#### SWIFT'S GIDDY FITS.

London: July 28, 1883.

In the *ACADEMY* for June 25, 1881 (p. 475), I pointed out, in a short letter, that the "giddy fits" with which Swift was troubled for the greater part of his life, and which have been such a puzzle to his biographers, were, in all likelihood, due to the disease named after Ménière. The symptoms are deafness and sickness, as well as giddiness, from all three of which there will be found good evidence that Swift suffered, if the journal to Stella and the letters to other correspondents be turned over.

Now, in the following year, six months after this publication, there appeared in the January number for 1882 of *Brain* an article which opens with these words:—"During the past autumn I received a letter from a gentleman engaged in literary work, requesting my opinion on the 'mysterious disease' of the great author and wit." The article then goes over the same ground that I had done, proving in the same way, by quotations, the existence of the three symptoms of giddiness, deafness, and sickness, the only difference being that in the one case as many pages are devoted to the subject as in the other were given lines.

Directly after the publication of the article, I wrote to Dr. Bucknill, who was at once the author of the communication and the editor of the journal in which the communication appeared, pointing out to him that I had anticipated all that he had said as to Swift and Ménière's disease. In reply, he assured me that he had not seen my letter to the *ACADEMY*. Since February 1882, therefore, I have been waiting for some public sign from Dr. Bucknill. I can find nothing in *Brain* since that date. Something, it is true, may have been published elsewhere; but it is not unreasonable to have thought that, in that case, my attention would have been drawn to it.

In the meantime, we have all been praising Dr. Bucknill for the great skill which he has shown in detecting the disease under which Swift laboured for so long, as well as for freeing Swift's memory from an absurd imputation. Mr. Craik quotes Dr. Bucknill, and decrees him a vote of thanks; while in the current number of the *Quarterly* the reviewer tells us that Dr. Bucknill has come to our assistance, and shown us the true cause of Swift's symptoms. None has given a word to the earlier publication in the pages of the *ACADEMY*, which would seem, in all likelihood, to have been the force which first set this ball rolling.

J. WICKHAM LEGG.

THE "QUARTERLY REVIEW" AND "GULLIVER." London: July 28, 1883.

In the article on "Dean Swift in Ireland" in the new number of the *Quarterly*, I find at p. 44 a note directing attention to the fact that Swift was indebted for his description of the storm at the beginning of the "Voyage to Brobdingnag" to Samuel Sturmy's *Mariner's Magazine*, 1679. The note in question commences thus:—

"As this most curious appropriation, to which our attention was directed by a slip in a scrap-book in the British Museum, has wholly escaped Swift's biographers and critics, and has not, so far as we know, travelled beyond the scrap-book, we will transcribe the original and the copy, giving them both in parallel columns."

Then follow extracts from both *Gulliver* and the *Mariner's Magazine*.

As this note is not unlikely to convey a false impression, it seems to me necessary to state that in the British Museum Catalogue, under the heading "Swift (Jonathan)," there is the following entry:—"Swift's Description of a Storm, in the Voyage to Brobdingnag [proved by E. H. Knowles to have been copied from Sturmy's *Mariner's Magazine*]. Kenilworth, [1868.] s. sh. fol." On examining this "s. sh." (small sheet, not "slip"), I find parallel columns agreeing for the most part, though not in some subordinate particulars, with the extracts given in the *Quarterly*. The sheet bears the name "E. H. Knowles," and states at the bottom that it was "Printed at the 'Advertiser' Office, Castle End, Kenilworth." It is probable, therefore, that the sheet was a reprint from the *Kenilworth Advertiser*. The fact of Swift's indebtedness to Sturmy is no doubt important; but it was due to the original discoverer that the name given on the sheet, and the place of publication, should have been stated by the writer in the *Quarterly*. Of the criticism of *Gulliver* contained in the *Quarterly* article I forbear now to speak. THOMAS TYLER.

#### THE RIVER TRISANTON.

Guildford: July 19, 1883.

As Mr. Bradley has alluded, in the *ACADEMY* of July 14, to my identification of the Arun with the Tarant, I should like to say that I base it on the passage in Dallaway's *History of Sussex* (vol. i., p. cliii.), where he says that the ancient Saxon name for the upper waters of the Arun was Tarent. I am confident I have seen the same on old maps, but have not at present found the reference. Probably the Darent in Kent derives its name from the same root.

RALPH NEVILL.

#### SCIENCE.

*Catholicon Anglicum*: an English-Latin Word-book, dated 1483. Edited by S. J. H. Hertridge. (Early-English Text Society and Camden Society.)

THE above work professes to give the list of Middle-English words and phrases, explained in Latin, which is contained in Lord Monson's MS. No. 168, with such additions as occur only in a MS. of like character, which is preserved in the British Museum, bearing the press mark: Addit. MS. 15562, and is designated by Mr. Hertridge as A.

A few weeks before its publication Mr. Hertridge presented the writer of the present article with a copy. This enabled me to ascertain, first of all, that the editor had not made such use of the Additional MS. as might have been expected; and when I found inserted, on p. 94, the word *corpora* as a

various reading from this MS., whereas it really has cor A (i.e., *corrupta*, or *corripitura*—i.e., short a), it appeared to me that such a misleading was suggestive of other errors.

I mentioned to Mr. Furnivall what I had seen; and, when, a few weeks afterwards, the book was issued, it was accompanied by a note in which Mr. Herrtage alludes to the misreading *corpora*, which I had pointed out, and further explains that he had regarded the Latin portion of the work as of secondary importance, and that his business had lain mainly with the English words, &c.

Lord Monson, when I asked him for the loan of his MS., in order to see how far the printed text could be trusted, refused at first, not unreasonably pointing out that it had only just been returned to him after an absence of sixteen (!) years, and, having been published, he did not care to part with it again. But, after some explanations, his lordship most kindly complied with my request. I have now collated the printed edition with the MS.; and I must state, to my regret, that the *Catholicon Anglicum* issued by the Early-English Text and Camden Societies is so disfigured by serious errors that it would be better if the book had not been published at all.

Mr. Herrtage had, however, to contend with great difficulties. The Monson MS. is dated 1488 by the scribe himself. For a MS. of this period it is wonderfully well written; large letters, clear ink, the English in red, the Latin in black. But, like most MSS. of that late period, it has a good many traps for an editor who has little experience of MSS., reads carelessly, or is insufficiently acquainted with English or Latin. The *f* and *l* (e) are used indiscriminately; so also the *c* and *t*. The *a*, when written *a* (not "a"), does not differ, in many cases, from *o* or *e*, nor can *e* be always distinguished from *o*, nor *o* from *a* or *e*. The strokes of *m* can be read any way (*m*, *ui*, *ni*, *iu*); the *n* and *u* cannot be distinguished at all. And when *i* happens to come together with *m*, *n*, or *u*, or *m* with *n* or *u*, or when they all come together in one word (say *minimus*), there is a perfect whirl of strokes. It is true the *i* was intended to be always marked with a diagonal line or dash over it; but in nearly every case the scribe wrote this dash not over the *i*, but over the letter which precedes or follows it, so that when *i* is followed or preceded by *m*, *n* or *u*, and the dash is placed over one of their strokes, the perplexity is increased. Nor did the scribe always carefully control the number of his strokes, and very often either omitted one or two, or wrote one or two more than was necessary. For instance, for *Gunner* he wrote quite distinctly *Gummer*. Puzzles of this kind are found in abundance in almost all MSS., even in the writing of our own day. We know of a vast number of amusing misprints and clerical errors which arose from misread strokes, letters, dots, &c. Foreigners imperfectly acquainted with English are often greatly embarrassed by indistinct English writing, and Englishmen imperfectly acquainted with (say) German, by a hastily or carelessly written German letter. It is unnecessary to say that the fault often lies with the ignorance of the reader, not always with the writing. In the same way

we have evidence that the scribe of the Monson MS. was not a trained Latinist, and that the work from which he copied puzzled him in somewhat the same points as his work might puzzle a copyist of the present time. For instance, we see him write: "a Lyke sange, *venia*." It is clear from this that he was unacquainted with the correct word, *nonia*, and, misreading the first *n* of his example for *v*, wrote (for clearness' sake) *v* himself. The scribe misread his original or corrupted the spellings of words in numerous other instances, and I think it due to Mr. Herrtage to say that he has, in many cases, corrected the scribe. Beside these difficulties, the two MSS. present one greater still. The marks of contraction found in them, though not differing from the usual ones, do not always serve to indicate the precise letters omitted, but merely to show that some letter or letters have been omitted. For instance, a little curl resembling a roughly written *a*, or a Greek  $\omega$  placed on its right side, which usually indicates an omitted *ra*, here stands for *-dia*, or for *-ripitur*, or *-repta*, &c. It is clear that MSS. of this kind must at once perplex persons who are acquainted only with such elementary instructions as are given, for instance, in Prof. Skeat's *Specimens of English Literature*, p. xv.

As we have now a faint idea of the difficulties in the Monson MS., which are scarcely less in the Additional MS., we may turn to the printed edition. We are told in the Preface that the MS. was copied (some eighteen years ago) by an ordinary copyist for an intending editor. "Various circumstances" induced this gentleman to transfer his task to another, who, in his turn, was also "forced" to relinquish his intention. It may safely be presumed that these two gentlemen, having realised to some extent the puzzling nature of the MS., wisely abstained "from putting it in hand." At length Mr. Herrtage came forward. Unfortunately, he appears to have been hurried on by the "Committee of Management" of the Early-English Text Society, who impressed on him the urgency of the publication of this book, which had been in hand for so many years. The committee also seem to have told him that the Latin portion of the work was of no importance, as in this country we only cared for Early English; and that, for this reason, he could omit all the grammatical explanations of the Latin portion which are found here and there in the MS., as *hic haec hoc* to mark the gender, *us a um* to indicate adjectives.

Mr. Herrtage's notes make it clear that, in spite of the demoralising influence of such suggestions, he has devoted a marvellous amount of energy and labour to the work. It is true a good many of the words so elaborately explained and illustrated by him could scarcely be expected to be as obscure to others as they appear to have been to him; it is also true that in his notes he sometimes explains words which are mere misreadings, as, e.g., under *Calderon*, where he prints *enium*, and says that "enium is of course for aheneum or aeneum, a vessel of brass," whereas the MS. has simply *enum*. Nor must we forget that some other notes are mis-

leading, as under *Restoratye*, which the MS. explains by *algebra*, which induces the editor to say, "Surely the strangest definition of a restorative ever given;" whereas a reference to Du Cange (the Henschel edition, not the compendium of M. Maigne D'Arnis\*) would have shown him that *algebra* does mean a restorative. But, on the whole, his notes, if used with caution, will prove a boon to students of Early English.

Unfortunately, Mr. Herrtage's text is in a sad condition. This will at once be understood if I point out a few of his errors. In the very first line the Monson MS. has "Aa, eya, sodes, amabo, mē cor." The two last words, with their marks of contraction, mean, "media [vocalis or syllaba] corripitur"—i.e., the middle or central vowel or syllable (of *amabo*†) is shortened. Mr. Herrtage, not understanding this, printed *meum cor*, and, strange to say, adds a note, "Cor meum. My sweetheart. Plautus.' Riddle's Lat. Dictionary." On p. 37, col. 1, l. 6, we find "ephebi animale, fornix, corus." We may well ask what did the editor understand by these words? The MS. has "ephebian, indeclinabile, fornix, cis, i corripitur"—i.e., ephebian, indeclinable, fornix (gen.) cis, i (of fornix) is shortened. The strokes of *n*, *u*, &c., referred to above, are frequently misread—e.g., under "arrowe" we find *armido* for *arundo* (=harundo); under "company," *comitina* for *comitina*; under "desspice," *poripendere* for *parvi pendere*; under "deuylle," *leuathan* for *leviathan*. Apart from the stroke difficulty, there are other wrong readings, which, with a little care and collation of the Additional MS., might have been avoided. For instance, on p. 19, col. 2, l. 3, we find *imembrana*. But the Monson MS. has distinctly *imēbrana*, which ought to have been printed if the MS. had been faithfully followed; but the Additional MS. would have enabled the editor to give the true reading, as it has *hominum membrana*.

Confusion between *f* and *l* appears often—e.g., p. 24, l. 16, *fatagare* for *satagare*; p. 41, col. 2, l. 8, *fura* for *sura*. Here *M* has *fura*, but *A* *sura*. Though the MSS. often confuse these two letters, the editor should

\* The use of compendiums, or of old and obsolete dictionaries, for editorial purposes is to be deprecated. Prof. Skeat used the D'Arnis Compendium of Du Cange's *Glossarium* exclusively in the compilation of his Dictionary, not always to the advantage of his work. For instance, his note under *margrave*, that *graphio* meant an exactor of taxes, and was so used in A.D. 1061, is from the Compendium, though he calls it Du Cange. The use of the real Du Cange might have furnished him with a better chronology; at any rate, the word appears already in a quasi-Latin dress in the *Lex Salica* (commencement of sixth century). Strange to say, Prof. Skeat seems so pleased with this Compendium that he recommends it in his List of Authorities (where only three other books are recommended) as "an excellent and cheap Compendium in one volume." Cheap it is, perhaps; but excellent!

† It is perhaps not superfluous to remark that this shortness of the penultimate of *amabo* (when used as an entreaty in conversation) is not pointed out either in Forcellini, or Lewis and Short, or White and Riddle. It is distinctly indicated as long in Cooper's *Thesaurus*. But there can be no doubt as to its having been regarded as short in the Middle Ages, as appears from a list of short and long vowels in a *Barum Missal*, printed in 1526, which Mr. Bradshaw showed me when I asked him for information on this point.

have given in all cases the right word, even if he had done so in a foot-note. This *f* and *f* difficulty has also affected an English, or let me say Anglicised, word. On p. 21, col. 2, l. 1, we read: "A Barsepay (*Barfray* A), fustibulum." The word is nowadays written belfry; its etymology and history are not obscure, but have yet been recently discussed at great length in *Notes and Queries*, and the discussion was closed by an etymology worse than any yet proposed. Mr. Hertridge's *Catholicon* will add to the confusion; his *s* is a mis-read *f*, as the Monson MS. has unmistakably *barfepay*. In this case the place where the word is written in the alphabet might have guided the editor, even if the MS. had been wrong. Though the *p* is distinct, we may safely assume that the work from which the scribe copied had *-fray*, as an *f* (if the top stroke is not written long enough) followed by *r* may easily be mistaken for *p*. On p. 190 the editor prints *houfe*, which is according to the MS., but the word coming between *s* words it is clear that *s* was meant.

It is unnecessary to give more examples. Mr. Hertridge would have produced a better book if he had not been hurried on, if he had not omitted anything from the MS., and especially if he had collated the Monson with the Additional MS., not in a perfunctory way, but word for word. As it is, the only thing that can be done is to prepare a list of the errors (which I hope to do shortly), and distribute it among the members of the Early-English Text Society.

Few, I think, will agree with Mr. Hertridge in his appeal (evidently suggested by the committee of the Early-English Text Society) to Germans to re-edit the work. Surely it would be better to train men in this country for work of this kind! It is somewhat strange that the committee of one of our chief philological societies (counting among its members Profs. Mayor and Skeat) should consider Latin of secondary importance. What could be more important to English philologists than classical and mediaeval Latin? Yet it is not impossible that the committee's opinion is shared by a good many others in this country. Hence, perhaps, the little attention paid to mediaeval Latin. We have only one attempt to make the mediaeval Latin of English books accessible to those who care for it—viz., Prof. Mayor's Glossary to the third and fourth books of Bede's *Historia Ecclesiastica*, published five years ago. It is so excellent that one could wish for another instalment from the same able hand, and that all Latin authors, registers, cartularies, &c., were edited in the same way. The *Catholicon Anglicum* might have been the second attempt, and no special efforts were required for this purpose; a correct text and an index at the end were the only two things necessary. The works published by the Master of the Rolls are not edited for philological purposes; their glossaries only register the curious and out-of-the-way words, or those not found in Du Cange. And as it is "the plan of this [the Master of the Rolls'] series to bring the spelling into accordance with common usage" (see Canon Robertson's *Materials for the History of Thomas Becket*, Preface, xxxi.),

the compilation of a glossary from these altered materials would scarcely be of any use. For an adequate treatment of the chronological etymology of English we want a register of a vast number of words not yet recorded in any dictionary, but used no doubt in the Latin of mediaeval authors. No work illustrates our wants in this respect better than Prof. Skeat's Dictionary. I am not going to find fault with that work, which is one of great industry and extensive reading, and is compiled with a due perception of what we want; some of the articles may even be called masterpieces. But the want of proper materials for words derived from Latin (including mediaeval Latin) is observable on almost every page. I will only mention three instances. (1) Under "hermit," the author is reduced to refer to "Piers Ploughman" (a work naturally included in his own reading) for the Low-Latin *heremita*, as it is not given in any dictionary except the little-known Diefenbach Supplement. Yet *heremita* was the general, *eremita* the exceptional, form in mediaeval authors. Matthew Paris used the former exclusively; already Bede has *heremitica* vita (Prof. Mayor's Gloss.), not to speak of Eusebius exclusively using *heremus*. It is rather curious that Forcellini is aware of the forms *h-*, but gives no instances. (2) Under *febrilis* Prof. Skeat was obliged to say that the Latin word was not in White and Riddle. Nor is it in Lewis and Short, and Forcellini only records it from the Gloss. Philoxeni. I find it used by Matthew Paris, and we may safely presume that every mediaeval author of note used it. (3) Prof. Skeat correctly derives *escheat*, through the French, from the Low-Latin *excadere*, which he says is found in a document of 1229. This date is correct as far as our registered materials go; but as the quasi-Latin *escaeta*, *excaeta*, &c., appear, even in our scanty materials, considerably earlier than the date mentioned, and these words are, in their turn, traced back to still earlier French forms, all derived from *excadere*, it is clear that we must look for this parent-word far beyond the date recorded. I could easily give more examples, but it is unnecessary. Prof. Skeat has, fortunately, had the courage to give his dates. However wrong they may be (and with the materials at hand they could scarcely be otherwise), we know now the limits of his chronology, and future lexicographers will be able to supplement him if they have the materials for doing so.

J. H. HESSELS.

#### CORRESPONDENCE.

DR. ABEL'S "ILCHESTER LECTURES."

11 Matthaei Kirch Strasse, Berlin:  
July 23, 1883.

I venture to count upon your goodness in permitting me to say a few words in reply to Mr. Morfill's notice of my *Ilchester Lectures* (ACADEMY, July 21).

1. The statement attributed to me by Mr. Morfill that "the Russian idea of liberty is mere licence, as the derivation of the word which they use shows," does not occur in my book. I, on the contrary, devote several pages to the interpretation of the Russian concept from the actual meaning of its representative terms in modern times. Throughout the book I follow the same rule, defining significations from use, and treating derivations as something distinct.

For example, p. 96: "But, whatever its derivation, *svobodry*, in its historical acceptation, plainly bears the sense of 'politically free.'"

2. Mr. Morfill misunderstands me as to what he says I call Finno-Russian. It escapes him that Karamzin coined the term, and that its linguistic application by me refers to the alteration of Slavonic significations by the Slavified Fin, not to the introduction of Finnic words into Slavic.

3. Mr. Morfill says, "The word *chmura*, 'cloud,' is also Polish, and from that language, no doubt, the Russians got that signification." My reply is that the word *chmura* does not stand alone in Little Russian, as loan-words necessarily do. I count thirteen derivatives from the same root—several of them unknown to the Poles—in Little Russian, and therefore I am justified in considering the word as part of the original stock of the language until the reverse shall have been proved by historical evidence. If all the Little-Russian words occurring in Polish, but missing in Great Russian, are to be regarded as taken from Polish, a very considerable portion of the Little-Russian language dates from the Sarmatic invasion.

4. What I transcribe *velit*, Mr. Morfill renders *velyet*. From considerable experience, I can assure him that my transcription approximates more closely than his to the original sound, though of course this cannot be absolutely rendered in English characters.

5. Mr. Morfill objects to my adopting Schafarik's etymology of "Wiltshire," which word—referring to Wil-saetas—he reads Wil-t(un)-shire, not Wilt-shire. The old Slavonic patronymic being preserved in the three several forms of Wind, Wilt, and Wil (cf. Wolin, otherwise called Waltzin; Wil-na on the Wilia, just as Wil-ton on the Wily, &c.), Mr. Morfill's statement that Wil-t(un)shire is the only correct reading does not invalidate the attribution to that locality of a Slav element.

6. Mr. Morfill "would like to know my authority for the anecdote about Frediakowski." I have much pleasure in referring him to the writings of M. Henry Martin.

C. ABEL.

#### EARLY CHINESE LITERATURE.

London: July 23, 1883.

It is a great satisfaction to me to learn that Dr. Edkins recognises the value of the Ku-wen or oldest Chinese characters, which I was the first to discover. As rightly surmised by him, these characters have special principles of formation and composition. But I do not think it useful (if it were possible) to attempt to expound them here, as I have already done so with the necessary proofs in a work on "The Origins of Chinese Civilisation" which Messrs. W. H. Allen and Co. have in the press. I will only state that not one of the characters quoted by Dr. Edkins is an ideo-phonetic compound, as he supposes them to be.

When I said that Dr. Edkins has not studied the oldest orthography, I thought it clear that no other orthography could be implied by my words than the Ku-wen. We all know that with the help of T'wan yü tsai's works, which were not known in Europe, Dr. Edkins has largely studied the rhymes of old Chinese poetry. But these rhymes exist not in Ku-wen, but either in the Chuen style or through the transcriptions of Han scholars. Therefore they cannot be considered as proofs of the oldest orthography, inasmuch as their original texts, excepting a few pieces of the *Shi-King* and fragments of the *Shu-King* and of the *Yü-King*, were all written later than the eleventh century B.C. The Han scholars have done their utmost to recover the old rhymes. With their con-

venient ideo-phonetic characters, they have handed down rhymes for the larger part of the verses. But often these exist only according to the pronunciation of their time; and nothing proves that they always represent the old rhymes. It happens, also, that when Dr. Edkins' "laws" are applied to the restoration of rhyming finals they are sometimes found to be worthless, as shown by Dr. Chalmers (*China Review*, vol. vi., p. 172). However, as they appear to be right in many cases, there must be some truth in them; if they fail, this arises, as I have already said, partly from the fact that Dr. Edkins has erroneously supposed many ideo-phonetic compounds to be older than they are in the evolution of Chinese writing.

In the many genuine cases where the finals have been satisfactorily proved by the rhymes, or might be so proved, nothing shows that the initials can be inferred as well as the finals. Dr. Edkins thinks that they can. But then he must be ready to support these two propositions:—that all the groups and compound characters are ideo-phonetic, and also that the groups do represent simple words. Now I think that both are equally untenable. We must make use of the experience of the past, and avoid the difficulty which has hindered former researches in collateral studies. In assuming as a principle that all the determinatives are silent, Egyptologists and Assyriologists had laid down from their decipherments languages which cannot be spoken—Egyptian and Akkadian. So far as the latter is concerned, the most advanced scholars do not maintain this view beyond a few characters only, whose pronunciation seems to have been occasionally dropped at a very early period. Egyptian phonology is still in a backward stage, and is now only beginning to advance on a similar path; but, so far as I can judge, the same progress is sure to be made in this quarter also by further researches. The multiplication of silent characters is a matter of evolution and decay in a writing composed of phonograms and ideophones. Returning to the Chinese, I have advanced so far in my study of the Ku-wen, or oldest characters, that I am able to state that their groups and compounds do not always represent simple words, and that they are not all compounds of phonograms, nor of ideophones and phonograms. I think the fact established by my book, where it is shown by the principles of formation. Studied by the help of my disclosures, the oldest parts of the *Shi-King* have yielded the most interesting results for the knowledge of the archaic language.

I think it would have been better for Dr. Edkins to reconsider his proofs before arguing from Buddhist transcriptions that *h* in lower even tone must be *g* in old Chinese, as I am obliged to repeat that *there is no such a law*. The *g* of the Hindus is rendered in Julien's *Méthode* (pp. 105-11) by Chinese *h* in four cases only, not twenty, as Dr. Edkins asserts; and, of these four, two are in his favour and two against him. On the other hand, there are about one hundred cases (pp. 116-33) where *g* is rendered by *k*, which dispose of the supposed law altogether.

Dr. Edkins affirms that *Pak* in the expression "*Pak sing*" means "hundred." But this is not the received Chinese opinion, according to which it means "numerous," "many," "all" (see *Khang-hi Tse tien*, s. v.); and this would be not unconnected with the meaning of the ethnic *Bakh* as proposed by Pott, Haug, &c. As I have not alleged that *Pak* was a tribal name (though it occurs twice in the family name), I shall not say anything about the reply of Dr. Edkins on this point. He still thinks that Hwang-ti means "Yellow Emperor," which is the rendering of the ideographic char-

acters (though it might have been used only phonetically). To this I only object that all the Chinese names are translatable, because of the meaning in all the characters, inherent or attributed. Besides, *Nai* (old *Nak*) or *Nang*, the denomination of Hwang-ti, is known to us from the traditions gathered at the time of the Han dynasty (after the learning of the books); but this is the case with almost all the other traditions of ancient China, excepting the classics, and I do not think that any doubt has ever been cast upon this fact. Moreover, as I find the same character written *Nak Khon* in Ku-wen, I think that I am justified in holding the title to be an old one. Dr. Edkins seems to believe that I propose to identify the fabulous Chinese Emperor with the Susian god *Nak Khunte*; but this is not the case. I identify the name—a very different thing, and, I think, quite within the limit of probability, as it was so used by the rulers of Susiana. I may add, as confirming my identification, that in the Chinese legends *Nak Khunte* (modern *Nai Hwang-ti*) is said to come from "Sho-den" or "Sho-dzen," a name unknown in Chinese geography, but singularly like "Suzun," the capital of the kings entitled "Nak-Khunte" in the inscriptions of Susiana.

I have nothing to say about a law of change between Siamese and Chinese, which I have never claimed for myself, as I have been acquainted with it almost from my school-days. It was known years before Dr. Edkins quoted it in his *China's Place in Philology*.

Dr. Edkins was more safe in his earlier than in his later studies. His first paper—"On Ancient Chinese Pronunciation" (1855)—was a revelation; taken together with the first part of his excellent *Mandarin Grammar*, it deserves consideration from all Sinologists. But his later researches—"A Connection of Chinese and Hebrew," with laws of change, &c. (twelve articles in the *Chinese Recorder*, 1871-72), and "The Celtic, compared with the Hebrew, Chinese, and Mongol" (the *Phoenix*, 1871), followed by such books as *China's Place in Philology* and *Introduction to the Study of Chinese Characters*—I beg leave to think uncritical. The amount of truth in these latter works is too often obscured by the great number of misconceptions and slips of the pen (?). Dr. Edkins has carried his first discoveries beyond justifiable limits. I must express my regret at being obliged to speak thus plainly. We are all liable to make mistakes, especially when treading unbeaten tracks. Because my studies go farther back than his, I do not see why he should feel aggrieved. The great services he has rendered to Chinese philology are fully admitted, and we of the new school still hope much from him. Should Dr. Edkins give us his valuable assistance in China, instead of wasting time on secondary points which hitherto I am unable to concede, more useful work would be done, since we agree on the main questions.

As regards modern Chinese scholars, and the present Minister in this country, Tseng hön, in particular, I may say that I had the pleasure of being introduced to him by my friend Mr. Fung ye before his departure for Russia and the publication of my paper on "The Oldest Book of the Chinese," but after the appearance of Dr. Legge's translation of the *Yh-King*. He told me that he had spent several years upon the mysterious classic, and was satisfied that it could not be understood without a deep study of the ancient characters; he added that he once began such a study, but had not hitherto had leisure to continue it. This was a great satisfaction to me, as it is just what I had undertaken before my discovery of the true nature of the contents of the *Yh-King*.

TERRIEN DE LA COUPERIE.

## SCIENCE NOTES.

THE long-established magazine of popular science, entitled *Science Gossip*, will from this date be published by Messrs. Chatto and Windus.

THE islands of the Tenimber group, including Timor-laut, which lies to the east of Timor, and between New Guinea and Northern Australia, were explored a year or two ago by Mr. H. O. Forbes, partly under the guidance of a committee of the British Association, by whose funds he had been assisted. The ethnological report which he sent home is published in the August number of the *Journal of the Anthropological Institute*. A number of objects of ethnological interest accompanied the report, and were transferred to the British Museum. Some of these are described by Mr. O. H. Read in an Appendix to the paper. A vocabulary of the leading words used in Timor-laut and in the Ke Islands is also published in connexion with Mr. Forbes's anthropological report.

WE have received from Messrs. Macmillan a second edition of *The Elements of Embryology*, by Dr. Michael Foster and the late Prof. E. M. Balfour. It is edited by Messrs. Adam Sedgwick and Walter Heape. The volume possesses a special interest, owing to the fact that it was actually in hand when Prof. Balfour met with his untimely death. It was originally set forth as part i. of a more extended work, for it dealt only with the history of the chick; but Prof. Balfour intended to add some account of the mammalian embryo. He had only passed for press part of the first portion, however, before his fatal journey to Switzerland; and the task of carrying out his intention with respect to the mammalian embryo devolved, accordingly, upon the two editors. They have performed it in a very able and satisfactory manner, and have turned out the whole as a book specially adapted to the needs of medical students, who will find in it all that is most essential for them to know in the elements of vertebrate embryology.

## FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs) handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—Geo. REES, 115, Strand, near Waterloo-bridge.

*Laoköon*. By R. Kekulé. (Stuttgart: Speman.)

APART from the general interest which must always attach to the *Laoköon* group from the brilliant investigations of Lessing and Goethe on its relation to literary versions of the legend, every now and then something happens to bring it specially to the surface. Not long ago Goethe's notion that one of the sons—the elder of the two in the group—must be viewed as possibly escaping with his life, was found to be confirmed by an expression of Arktinos of Miletos in his *Iliupersis*, to the effect that *Laoköon* and only one of his two sons perished. This was the occasion of an admirable article by Brunn in the *Arch. Zeitung* (1879, p. 167), in which, as in the present memoir of Prof. Kekulé, the wonderful beauty of the analysis made by Goethe is duly demonstrated. They do not say absolutely that the sculptors of the group had followed the version of the legend as given by Arktinos, but merely that they must have had it in view. Again, the Gigantomachia on the altar-frieze of Pergamos, now removed to Berlin, presents various points of com-

parison with the sculpture of the Laoköon a consideration of which must help to decide the date of the latter. Prof. Kekulé has undertaken this task; and to say that he has accomplished it with the lucidity of exposition which comes from a firm grasp of all that is essential, and a determined leaving out of the question of all that is secondary, is only to say what every reader must admit. He has succeeded in showing that the date of the Laoköon group may be placed at a little before 100 B.C.

There is, however, one question which he has left unexhausted, not that it affects injuriously his conclusion; I refer to the much debated phrase of Pliny that the sculptors had executed the group *de consilii sententia*. Latin authorities maintained that the *consilium* here could only mean a "board;" and, as there seemed to be no possibility of any other board in the matter than one instituted by the Emperor Titus, in whose palace the group stood, great offence was taken by those who were convinced that the sculpture had been executed long before the time of Titus, as, indeed, we now know it to have been. But they offered no explanation satisfactory to Latin scholars, though they knew that the sculptors were Rhodian artists, that the group had in all probability been conveyed from Rhodes to Rome, and that concerning the sculptors of another famous group in Rhodes—the so-called Farnese Bull at Naples—Pliny had made a ludicrous mistake. These sculptors, Apollonios and Tauriskos, had described themselves according to the formula familiar in Rhodian inscriptions as "by nature" the sons of So-and-so, but "by adoption," καὶ ὑιοθεσίαν, the sons of So-and-so. Pliny, unacquainted with the Rhodian formula, makes out that they were uncertain of their parentage! Why not, then, look for some other Rhodian phrase which would apply to a work of sculpture, and would bear the translation of *de consilii sententia* by a writer not familiar with Rhodian usage in such matters? An exact equivalent is the γνώμη or γνώμη προστατῶν familiar in the heading of Greek inscriptions from Rhodes and its neighbourhood. It is probable that Pliny had found on the plinth of the Laoköon, either these words or the variation of them which occurs on an inscribed base from Knidos (Newton, *Hist. Disc.* ii. 749, No. 31), where the god Hermes is made to say,

ἐνὶ Νεοπολιτῶν προστατῶν ἀφικόμενος  
Ἐρμῆς Ἀφροδίτῃ πατέρα, ἀλλὰ χαίρετε.

It is only right to say that G. Wolff (*Arch. Zeit.* 1864, p. 200), and I believe also Otto Jahn, had proposed to explain the words of Pliny as indicating a public decree of Rhodes at the instance of which the group had been made. My explanation has the advantage of giving the phrase which Pliny had translated, and of showing that he was not unlikely to have stumbled as to its local signification.

In the arguments as to the date of the Laoköon group, the question has often turned on a series of inscribed bases of statues found in Italy and bearing the name of a sculptor, Athanodoros, with such indications of his parentage as to show that he was the same as the Athanodoros who, with his father and

brother, made the Laoköon. Opinions have varied in regard to the character of the writing in these inscriptions, and it is therefore a valuable service that Prof. Kekulé has here rendered in collecting and publishing facsimiles of them. The forms of the letters, compared with inscriptions from Pergamos, yield a date of about 100 B.C.; and this, Prof. Kekulé maintains, would be the date yielded by the Laoköon when compared as a piece of sculpture with the colossal reliefs from Pergamos. By photographic illustration, he contrasts the head of a giant from the Pergamos frieze with the head of Laoköon, and shows easily that the latter is of a later age. In two more plates he compares the figure of Laoköon with that of the young giant in what is called the Athena slab of the Pergamos frieze. A. S. MURRAY.

#### CORRESPONDENCE.

THE NIOBÉ OF SIPYLOS.

Queen's College, Oxford: July 20, 1883.

The origin and approximate date of the famous image of Niobé on Mount Sipylus may be considered to be at last settled. The inscription attached to it, which was first discovered by Mr. Dennis and subsequently copied by him and me, proved it to be a monument of the Hittite domination in Asia Minor; and the recent discovery by Dr. Gollob of another Hittite inscription, as well as the cartouche of Ramses II. in badly executed Egyptian hieroglyphs, further shows that I was right in assigning it to the fourteenth century before our era. My reasons for doing so were based partly on my Hittite speculations, partly on the extraordinary resemblance of the figure to the sitting image of Nofretari, the wife of Ramses II., carved in a niche of the cliff a little below Abu-simbel. It was difficult not to believe that the latter had been seen by the Hittite sculptor of "Niobé."

We may now, therefore, take it for granted that the image in which the Greeks, as early as the days of Homer, saw the weeping Niobé, and which must consequently have been already weather-worn and rain-stained, was really the likeness of the goddess of Carchemish carved on the cliff of Sipylus by Hittite conquerors in the time of Ramses-Besostris. Now, it is curious that, in spite of all the controversies which the "Niobé" has excited, no one has yet noticed that this conclusion of modern research is actually implied in a fragment of Xanthos, the Lydian historian. The fragment is given by Müller (*Fr. Hist. Græc.* i. 39) from the thirty-third chapter of the *Erotika* of Parthenios of Nikaea. The words of Parthenios are as follow:—

"The story of Niobé, too, is told differently to the usual legend. For they [Xanthos, Neanthos, and Simmias] say that she was not the daughter of Tantalos, but of Assaön, and the wife of Philottos, and that she suffered the following punishment because of her contention with Leto about the beauty of her children. Philottos was slain while hunting, and Assaön, overcome by love for his daughter, wished to marry her; but Niobé refused, and after summoning her sons to a feast, burnt them, and then, overwhelmed by the misfortune, cast herself from a lofty rock. As for Assaön, when he became conscious of his crime, he killed himself."

Philottos will be the Lydian name of Attya, and it is possible that Sandan or Sandön may lie concealed in Assaön. A. H. SAYCE.

THE NATIONAL SOCIETY FOR PRESERVING THE  
MEMORIALS OF THE DEAD.

Belle Vue Rise, Norwich: July 22, 1883.

The work of copying the monumental in-

scriptions in the cathedral, churches, churchyards, and closed burial-grounds in the city of Norwich is rapidly progressing, and will be extended to the county. The transcriptions are partially complete for the cathedral and the churches of St. Martin at Palace, St. Peter at Mancroft, St. Giles, and St. Stephen's; and wholly completed for St. John's, Timberhill, and St. Helen's churches and churchyards, the Old Meeting House, and Quakers' burial-grounds.

All the inscriptions are being copied so far as they are legible, and will be supplemented by drawings of all coats of arms. The importance of this undertaking to historians and genealogists cannot be over-estimated, and their value as supplementary to parish registers needs no demonstration.

In the church of St. Helen the name of ATTLESEY occurs as follows:—

#### SLAB 1.

Edward Attlessey, sen., dyed October 27, 1693, aged sixty-seven.

Edward Attlessey, jun., died December 21, 1741, aged forty-five.

#### SLAB 2.

Edward Attlessey, died August 14, 1694.

#### SLAB 3.

Prudence, wife of Edward Attlessey, died August 22, 1694, aged seventy-one. [This stone is broken into three pieces.]

#### SLAB 4.

Wm. Attlessey, son of Edwd. and Prue. Attlessey, died September 1, 1706, aged forty-seven years.

Pagraft Attlessey, his wife, died September 30, 1748.

Mary Attlessey, daughter of Willm. and Pagraft Attlessey, died September 12, 1749, aged sixty years.

#### MURAL TABLET 5.

Peter Attlessey, Esq., Alderman, Sheriff, and Mayor, died February 4, 1729, aged sixty-six.

Anne, his wife, died September 26, 1728, aged seventy-five.

Edward and John, their sons.

#### SLAB 6.

Edward Attlessey, son of Peter Attlessey and Anne his wife, died June 1698.

#### MURAL TABLET 7.

Mr. Peter Attlessey, Merchant, died January 23, 1750, in his sixty-third year.

Mrs. Jane Attlessey, his widow, died March 16, 1753, in her sixtieth year.

Mr. Peter Attlessey, their only son, died August 9, 1746, in his eighteenth year.

#### SLAB 8.

Edward, son of Peter Attlessey, jun., died 1719.

#### SLAB 9.

Nicholas Attlessey, son of Edwd. and Prue. Attlessey, was buried February 24, 1718, aged fifty-four years.

Sarah, his wife, was buried October 14, 1725, aged sixty-four years.

Martha, daughter of the above and wife of Wm. Attlessey, died November 30, 1735, aged thirty-nine years.

Sarah Attlessey, daughter of Wm. and Martha Attlessey, died December 23, 1748, aged twenty-two years.

#### MURAL TABLET 10.

Anne, youngest daughter of Peter Attlessey, Esq., and Anne his wife, the late wife of John Barker, died December 4, 1733, aged forty years.

Sarah, eldest daughter of Peter Attlessey, Esq., and Anne his wife, ye widow of Philip Dyball, died September 9, 1735, aged forty-five years.

Philip Dyball, late husband of Sarah Dyball, departed this life December 28, 1718, aged twenty-eight years.

Anne, daughter of Philip and Sarah Dyball, died February 25, 1731, aged fourteen.

Philip, their son, died November 18, 1716, in the first year of his age.

There is a second stone to Philip and Sarah Dyball and Anne their daughter.

Who were these Attelays? is the name uncommon? is the Christian name *Pagraft* known elsewhere? and are not the words "was buried" in the cases of Nicholas Attelsey and Sarah his wife peculiar? WM. VINCENT, Secretary.

#### NOTES ON ART AND ARCHAEOLOGY.

To the announcement, in Monday's *Standard*, that the Royal Institute of Painters in Water-Colours has taken studios in Great Ormond Street for its newly founded schools, and will open them in the autumn, we are able to add some particulars. The schools will be limited to male students under the age of twenty-five years. For ladies there will be at present no sufficient accommodation; it has therefore been decided that ladies' classes cannot be held. The instruction, as has been stated; will be entirely gratuitous, but it is, of course, not directed to those who present themselves unskilled, the object of the schools being, as we understand, rather to enable persons of gifts and acquirements to perfect themselves in their art than to increase the number of would-be artists. In addition to the subscriptions among members of the Institute necessary for the foundation of the schools, Mr. Nettelford has promised liberal aid, and prizes will probably be offered by other private persons. We need hardly express our approval of the efforts thus being made to encourage the English art of water-colour.

We are glad to learn that Mr. W. Thompson Watkin, encouraged by the reception that has been accorded his *Roman Lancashire*, has decided to bring out a companion volume dealing with the Roman occupation of Cheshire. Many years of preparation have given him a mastery of the subject; and the issue of the book within a twelvemonth may, we believe, be expected. The announcement was received with great satisfaction by Dean Howson and the other members of the Lancashire and Cheshire Antiquarian Society who were assembled at Chester on Saturday last.

We understand that the series of illustrations to the articles on "Children's Life in India" in the August number of *Little Folks' Magazine* have been specially drawn by Mr. Herbert Johnson, who accompanied the Prince of Wales during his visit to India.

THE little exhibition of drawings, sketches, studies, and photographs from studies by the late Dante Gabriel Rossetti, still on view in the one room somewhat ambitiously styled "The Rossetti Gallery" in Old Bond Street, has gained considerably in attractiveness since it was first opened. Small as the collection is, it contains not a few gems, many of which are none the less beautiful because they are unfinished. Some of the portrait-heads (including several of Mrs. William Morris and a peculiarly delicate and expressive water-colour study of Mr. Swinburne) are especially interesting; while the superb "Lucrezia Borgia" over the mantelpiece is alone worth going to see, were it only for the masterly painting of her white-and-gold brocade dress and the subtle "counterpoint" of red in the background, where a scarlet poppy, emblematic of death, is placed in juxtaposition with a flask of red (and poisoned) wine. Rossetti's first chalk cartoon for "Mary Magdalene at the Door of Simon the Pharisee," the exquisite pencil design for "Fazio's Mistresses," the original pen-and-ink study for the head of the crouching girl in "Found," and the unfinished "Giotto painting the Portrait of Dante" are all fine and characteristic examples of a great artist whose works will always be difficult of access and rare.

AN exhibition of drawings by Modern Masters is to be held at Paris next year by the Association des Artistes-peintres, Dessinateurs, &c. We wish something of the same sort could be set on foot in England, and have often regretted that the Black and White Society has not included in its exhibitions more studies and designs by English painters of the first class. Such works are often instructive, bringing us nearer to the mind of the artist than finished pictures. The latter (except, perhaps, those of the Impressionists) should be rigorously excluded from such an exhibition.

THE Essex Archaeological Society is following the example lately set by the publication of Mr. Ferguson's *Church Plate of Cumberland*. A letter has been addressed to the clergy and churchwardens throughout the county, making enquiry as to the number and description of the pieces of plate belonging to each parish. The 145 replies which have been received—a small portion only of the whole—show that the church plate of Essex is at least equal in interest to that of Cumberland. The plate of which particulars have already been received commences as early as *temp.* Elizabeth. With regard to the church plate of Cumberland, a curious find has just been made at Carlisle. While looking through a general store in that city, Mr. J. Jackson found a finely moulded paten, which has been identified with that mentioned in the *Church Plate of Cumberland* as having been lost from Kirklington church. It is of block tin, and is inscribed "Kirklington, 1732." It is nine inches in diameter and three inches high. It bears the maker's name "Grant," and the Hall marks.

#### THE STAGE.

##### THE TWO PLAYS AT THE VAUDEVILLE.

DURING the late summer and early autumn season the management of the Vaudeville bids adieu to its highest aspirations; in other words, it defers till it may be October the resumption of the fame which this theatre has made as the home of the elder comedy. "She Stoops to Conquer" will eventually be played in fitting succession to "The Rivals;" but meanwhile there is an interval, and it is occupied by modern work. They play two pieces, both of which are worthy of some attention. Neither piece is absolutely new, yet neither is too familiar. "An Old Master," by Mr. H. A. Jones, has been performed before—at the Court, if our memory serves us. "Confusion," by Mr. Derrick, a writer whose name is new to us, was played for a single afternoon a few months ago. It was recognised as being very funny—about as funny as bold—and it was clear that if it were put into the bill in the evening it would compel laughter for many weeks. It is of the nature of farcical comedy. Mr. Wyndham, we suppose, would have been glad to have had it for the Criterion. Since it is described as original, we have no desire or expectation of tracing its origin to those pieces at the Palais Royal and the Variétés with which it has at all events close kinship. Has not the Vaudeville discovered in Mr. Derrick an English writer with the fertility of invention that is generally characteristic of the French, and a writer who can deal adroitly with decidedly risky themes? We will say a word or two about his piece to begin with, and will then pass on to "An Old Master."

An article in a philosophical Review has lately informed us that the most original of

living novelists evidently considers that Love is the main concern of Life. Mr. Thomas Hardy's conviction—if such it be—is manifestly shared by the whole of the *dramatis personae* in Mr. Derrick's bright, but somewhat disquieting, production. Mortimer Mumbleford and his young wife, Rose, have loved; James, the butler, and Maria, the housemaid, now love; Christopher Blizzard and Miss Lucretia Tricklebury are about to love. Thus is the verb conjugated. But, in Mr. Derrick's entertaining comedy, the loves of one are constantly being mistaken for the loves of the other; and a baby, whom the spectator is informed is the offspring of James and Maria—whose affections the Church has long privately sanctified, but who would lose their situations if they did not pass as single people—is now supposed to be the child of the mature Blizzard by some early and imprudent connexion, and now held to be sufficient evidence that young Mrs. Mumbleford's girlhood was not all that it ought to have been. Thus is Mr. Blizzard's scarcely girlish sweetheart made suspicious and uncomfortable, and thus does momentary indignation possess the breast of Rose's young husband. The confusions attendant upon these false surmises make the comic interest of the piece. The chief machinery employed for the purpose—and it is employed with the utmost ingenuity—consists of a puppy and of a telegram. The puppy is continually referred to in terms of endearment such as might be applied to an infant; and the telegram, which is really addressed to the butler's wife to summon her to her child, who is sick, is erroneously considered by some to have been directed to young Mrs. Mumbleford, and by others to the elderly Blizzard. We do not like the theme. We shall not be accused of prudishness, yet we may be suffered to consider it as ugly and awkward. But, this being said, we are as free to avow that it is handled with curious dexterity, that the treatment incites to continuous laughter, and that the acting of Messrs. Glenn, Groves, and Frederick Thorne and of Miss Larkin, Miss Emery, and Miss Kate Phillips is all that it is possible for it to be. Late in the piece, too, Mr. Lestocq presents a good bit of character-acting as one Dr. Bartholomew Jones. But the chief success is made—and the chief opportunity for success is enjoyed—by Mr. Frederick Thorne and Miss Larkin. Mr. Frederick Thorne plays the butler with a hundred expressions of comic horror and dismay; and Miss Larkin—the impersonator of Miss Tricklebury—as usual, portrays the vivacious yet scarcely captivating wiles of an elderly spinster bent upon changing her condition, but affecting a degree of puerile modesty and maidenly ignorance to which the healthy and the scientifically educated young woman of the period makes no claim. Miss Larkin, as an actress, possesses the speciality of the lady of hardly uncertain age who will, above all things, be coy, and yet is enamoured, and who seeks to renew, at fifty-three or thereabouts, the romance of youth. In such positions, as every London playgoer knows, Miss Larkin is inexpressibly funny.

"An Old Master," which they play from 8 to 9 o'clock, is on no account to be

missed. It bears to be thought about afterwards much better than does the longer and more boisterous entertainment which follows it, and this in spite of the fact that the circumstances it narrates are only a little less improbable than those which make the staple of "Confusion." A youthful baronet is nowadays so well advised that, if he stays in a fishing-village, he avoids falling too profoundly in love with the daughter of its schoolmaster. And the young woman of the day, whether she be the daughter of a village schoolmaster or of one in more exalted place, does not, in five minutes' pique, give up a good engagement to be married because her lover carries in a locket the portrait of another young woman who may be his sister, or his cousin, or his mother years ago. In Sir Rupert's case—with which we are now dealing—it was the portrait of his mother; and it bodes ill for the tranquillity of his married life that his sweetheart, Miss Penrose, got excited about it so easily. But yet we will excuse both improbabilities—both the man's engagement to marry and the girl's hasty breaking-off of the match—because, along with these, we have, first, on the writer's part, a delicate and discriminating little study of the mixed emotions which possess a worthy old fellow who knows that his daughter will marry well, and so well that there may be a gulf between them, and, secondly, on the actors' part, a refined and capable performance of father and child. Mr. Thomas Thorne is the father. His acting of Tom Pinch in "Martin Chuzzlewit"—to name no other part—had sufficiently proved his capacity for scenes of gentle pathos, restrained not only by the narrow limits of the situation, but likewise by the narrow limits of the character, by his humble timidity and awkward diffidence, by a certain loveable modesty which here and there may prevent the obscure and the unendowed from throwing upon the world the noisy evidence of their troubles. The old schoolmaster, as represented by Mr. Thorne, refrains from expressing to the full either his joy at the thought that his daughter may stay or his sorrow at the fear that she may go. The actor's art, and the effects that are seemingly within the range of his temperament, permit him to delicately suggest more than he can ever desire to actually accomplish. Not for him the passion torn to tatters, "to very rags," but the sentiment, daintily nurtured, gently preserved. He expresses with some subtlety the feeling that hesitates and is poised between hope and apprehension. Nor could he be better seconded, in efforts happily measured, than by Miss Emery, whose pretty impulsiveness and whose unforbidding *hauteur* are wholly youthful, and therefore wholly transient, and whose evident mobility of expression is exercised between limits which reach neither, on the one hand, to the exalted nor, on the other, to the appalling. The whole performance—Mr. Thorne's and Miss Emery's—is subdued and refined. It is of the sort that is so near to every-day nature that it is like to be the pit-fall of the well-bred amateur. The amateur thinks he can do just that, and do it easily, but he proves to be dull rather than natural, and not so much tender as tame.

FREDERICK WEDMORE.

## LITERATURE.

### TWO BOOKS ON EMERSON.

*Ralph Waldo Emerson: a Biographical Sketch.* By Alexander Ireland. Second Edition, largely Augmented. (Simpkin, Marshall & Co.)

*Emerson at Home and Abroad.* By Moncure Daniel Conway. (Trübner.)

THE impressions received by many persons—well known and less known—from the life and conversation of Emerson are recorded in the work first-named. It has indeed been already noticed in the ACADEMY, but (like Bacon's Essays), "enlarged to almost as much again as it was before," it may well be reckoned a new book. The earliest of the memorials of Emerson, it is still in some respects the best, as a comprehensive varied presentment of his character and peculiarities—a many-flowered garland woven by the same kind and cunning hand that graced with immortelles those earlier graves of Lamb, and Hazlitt, and Leigh Hunt—or (shall we rather say?) a porch painted with many warm touches of glowing colour to set off the figure of the modern Stoic.

In Emerson's case there is no need for the special pleading which in our day has revived the once obsolete cant about the privileges of genius. A nursling of Puritan discipline, upright, self-contained, and self-sufficing, he carried the moral traditions of his ancestry into the intellectual field wherein he laboured without haste or rest, in solitude or choice society. To meet such strain and worry of every day as penetrated the fence elaborately set about his life, he had good store of bland indifference; cushioned thereby against jolts and jars of petulance, fatal to philosophic thought and calm. "Nobody ever saw him out of temper, or even ruffled." His interest in others, always benevolent, was never absorbing, so that he easily escaped the troubles of excessive personal sympathy. As he was quite popular and accessible, his fame attracted "admiring friends and enthusiasts from every quarter." He in no way set himself up for adoration, but did not shun worship, save of the coarse and compromising sort. As Concord was a shrine to which devout and faithful pilgrims resorted, a certain spirit of devotion was requisite, if the oracle were not to remain dumb or give no full response. The experience of Frederica Bremer was in this regard instructive—one dares not say amusing. Her admiration was deep, her appreciation keen; but she was not quite a worshipper, and this "secret antagonism easily called forth his icy, Alp nature, repulsive and chilly." But she acknowledges the impossibility of "quarrelling

with him, though one may quarrel with his thoughts, with his judgments;" and she finds his distinctive characteristic in his "nobility." His mere presence was "so agreeable to her that though enjoying his conversation she did not invite it"—a sure sign of friendly feeling. Her testimony is evidently on faith and conscience. Every word is genuine and tells. She felt that she was never at her best with him—"prevented by his cool, circumspect manner from getting into my own natural region." But any annoyance on this account was annihilated in the memory of his serenity—a remarkable testimony; yet thus to isolate it is hardly fair, for in Mr. Ireland's book it is one of many, selected with a keen eye to the omission of surplage and to the justice of the final impression. Short of personal acquaintance, nothing surely could better tell us what manner of man Emerson was than this book. To the same end three portraits are given. They certainly do not bear out the remark, "My portraits oscillate between the donkey and the Lothario." In early manhood and in middle life, it is a keen Yankee face of no uncommon type. The tender expression, under the mellowing influence of age, reminds one of Cardinal Newman.

Mr. Ireland's own contributions are in his own style, praise sufficiently significant to his former readers. With him we are never far from the ancient wells of English undefiled. True to his earlier devotion, he ends with the fine lines of Daniel, on the man who at such a height hath built his mind that

"whatsoever here befalls,  
He in the region of himself remains."

In these verses he finds a forecast of the "marble self-possession" and "grand self-dependence" of Emerson.

Mr. Conway, too, culls a thousand fragrant posies from the mythologies of East and West to adorn the shrine of the Sage and Saint of Concord—but with a difference. By him, Emerson is set forth as a new Messiah, with all the latest American improvements; and this not as a chance outburst of exaggeration, but with a recurrence and persistence that must bore the agnostic as much as it irritates the Christian reader. To brand Christianity itself with the fatally degrading appellation of "orthodoxy" is now so common as to be vulgar, and therefore to be shunned by all really superior persons; such, for instance, as that Emersonian who, when a fellow-auditor asked of some passage in the master's lecture on Plato what connexion a certain sentence had with its predecessor and what connexion it all had with Plato, made answer, "None, my friend, save in God."

Moreover, this determination to use Emerson's head as an efficient battering-ram against the walls of the Celestial City is scarcely fair to Emerson himself. At the outset of his career, he only sought to go his own way, not respecting tradition of any sort. He was his own standard; "looking within he felt no need to look up." His humility—so much insisted on by his biographer—was in this relation that ordinary form of the virtue which may be defined as "pride with a discount off"—not a heavy deduction in his case. The Lord's Supper was "not suitable" to him, "and that is reason enough why I should abandon it." In the same

spirit he afterwards said, "We must do without Christ;" and consistently refused the customary honour to His Name. Native indifference (and a rooted dislike to that shutting-up of the thoughts we call conclusion) kept his tolerance from becoming identified with that contempt to which it was constantly approximating. At the close of his life the same moderating tendency is manifested, this time in the opposite direction. He checked Mr. Conway (the latter tells us) in some crude utterance, and was duly set right by his disciple for this condescension to Christian childishness. Besides, his eminent social tact warned him off possible frictions and obstructions. He was chafed at the betrayal of his utterances anent the poetry of Swinburne and of Whitman—"the publication was the damnable thing." He might not have been wholly pleased at the record of his opinion that Christianity was the "inheritance of donkeys," in which (naturally) he "could not feel interested." Strange comment on all this lies in the fact that the loving friends around his grave could find no more fitting, free, final utterance of their sorrow and their hope than the burial service of the Church of England.

Polemic apart, Mr. Conway's book is highly interesting in its connected view of Emerson's life and works, the particulars of his descent from the old Puritan families, the sketches of (and by) contemporaries, and such episodes as the Brook Farm venture and the freaks of the Boston Transcendentalists. The record of the friendship with Carlyle—in which the Atlantic, surely, was also the Pacific—is pleasanter reading than those "Reminiscences" that hastened the fall of the Chelsea Dagon and "shamed his worshippers"—some of whom retaliated by a liberal kicking of their shattered idol.

Mr. Conway's style has a certain exaltation. It is even a little light-headed at times. On the first half-page there is this sentence:—"The love of a Madonna is in his own interpretation"—an enigma which (to me at least) remains unsolved. The context as to King Arthur, Enoch, St. John, and the Wandering Jew gives little help. And at the end the plain facts of the narrative are veiled, as by a euphemistic haze, till a decidedly disagreeable effect is produced. We are told that "the anaesthetic in use for mitigating maternal pangs did its office in the hands of Emerson's nearest kindred in softening for his age the pangs of its new birth":—

"When the pain came upon his body . . . a brother's art had provided the anaesthetic draught of which the mythical Lethe seems a dream. The prophet of love and science by their hands passed painlessly into the elements which henceforth will be gentler because he has lived. . . . The physician brought his draught to the bed of pain against all the protests of dogmas which translated blind elements and cherished the curse of nature."

Emerson's influence was that of the Dawn. His clear Phosphor lamp aroused many a thinker to hopeful labour in the "wood of particulars," as Bacon phrases it. "Within his doors," says one, "it was always Morning." There is a list (p. 277) of illustrious sleepers awakened by him, who, in their turn, awoke their fellows. The triumphs of

physical science caught his imagination. In these matters he was guarded against the danger of "invoking the oracles of his own mind" by a careful training and a lifelong interest in material discovery. Bacon's other warning to such Light-bringers he heeded not. Man was the last and choicest of creatures. As in the microcosm of his body, he sums up all the conditions of living matter, from the merest rudiment to the most perfect form, he is in a sense the creator and the world. All the Past had led up to him, and his thoughts shall mould the Future. In such exaltation the modest examination of the secrets of nature has ending, and the suppressed egotism of the sage its expansion and revenge. He has already ascended and is the highest.

Emerson's popularity was due not merely to his lofty personal character, but to the cheerful optimism of his teaching. He distrusted all authority, and it was his misfortune that authority in his day found its symbol in slavery. He bade each man trust in himself with all his heart. Such a message can be rightly received only by those who, emancipated from the numbing spell of custom, prejudice, and routine, straightway proceed to the better land of higher obedience, not wandering into the wilderness, where, in barren freedom, every will and whim may run its idle course. To such the impulse imparted has its automatic check, the spoken doctrine its reserves that "go without saying." Such fit audience will always be few. Emerson himself is never final. The incisive exaggeration on the right is speedily redressed by a like extravagance on the left. The matter in hand is the main point—that the "Cynthia of the minute" may be fixed for that minute. The caricature is a momentary effect, but the true impression is permanent. For if Emerson's main business was to stimulate, prompting ever-renewed experiment, his character was essentially cool and conservative—"a central calm subsisting at the heart of endless agitation." But, passing from him to his disciples (such, at least, as Mr. Conway may represent), we leave this temperate clime. The influence, working by the double charm of swift suggestion and persuasive personal appeal, has ceased. The suave, patient, urbane suspension of belief has been exchanged for sharp negation, and we find how easily the vague condenses into the narrow, like the genius conjured into the leaden vase. Phrases, originally independent as American citizens, are brought into the bondage of a Pyrrhonism, as dogmatic in its proscriptions as the most zealous Little Bethel. The new Puritanism—without Christianity—is a straiter sect than the old.

To take for granted, as Mr. Conway does throughout, that the resources and development of Christianity are exhausted, is surely a presumption in both senses. To proclaim that worship must be rendered, if at all, at the shrine of the unknown God, may be in a different but more effectual way than the bigot's to shut the gates of mercy—human mercy—on mankind. The works of Christianity are around—*circumspice*. Its atmosphere invisibly, insensibly sustains us. The works wrought by an enthusiasm of humanity as disinterested as any later time can boast

were seen on a large scale not quite a century ago. When to the poor, in mind or station, this other gospel is preached, with its doctrine, that "prayer is a disease of the will and belief a disease of the intellect," that evil "is but arrested development," sin "a fossil word," and the Devil himself the "Great Second-best," what may not be expected? The "Fénelonian orgies" of philanthropy culminated in that confused horror that M. Taine has, for the first time, fully set forth. And of the newer cultus the end is not yet. The Emersonian optimism admits of an easy translation into the vulgar tongue as "All right, go a-head," a faith and hope soon kindled. Some of its professors might, in favouring circumstances, experience such charity as bade Lavoisier mount the scaffold quickly, since the Republic had no need of science—"if there be knowledge, it shall vanish away." "The consequences of things will be what they will be," and every day the truism is an unheeded warning. How many Frenchmen of 1783 foresaw 1793? How many would have believed the *Prophétie de Cazotte* had it been actually spoken? But there are other influences at work, and "we know not what's resisted." For my part, I will withstand the temptation to facile prognostic.

R. C. BROWNE.

*The Duke of Berwick, Marshal of France 1702-34.* By Lieut.-Col. C. T. Wilson. (Kegan Paul, Trench & Co.)

THE life of the Duke of Berwick is but another name for a history of the wars in which the French nation was engaged for more than thirty years. This English-born soldier, who fought without compunction against the country of his birth and against the prince for whom he had gained the crown of Spain, served in every part of Europe where the needs of France called him. It was in Spain that his great victory, the victory of Almansa, was won; and it was in Spain that, after two months of incessant contest, he completed his most difficult task, the reduction of the brave Catalans. The citadel of Nice was captured by the army under his command, and he led through more than one campaign the forces which protected the Alpine frontier of France. He was in Flanders when the town and citadel of Lille passed into the hands of his uncle Marlborough; and when the dashing Villars was wounded at Malplaquet the calm and cautious Berwick was summoned to take his place. A career like this is a fitting theme for one who, like Col. Wilson, has practical experience with the tactics and contests of actual warfare, and it is evident in every chapter of this volume that the heart of the historian is in his task. The operations of Berwick's campaigns are described with the accuracy which comes from scientific knowledge, and such striking incidents in his life as the protracted siege and ultimate capture of Barcelona are brought home clearly to the mind of the reader. If there is occasionally an inclination to describe at unnecessary length the struggles in the battle-field or the intrigues in the palace, in which the Marshal took little share, the digressions at all events serve to

complete the history of his adopted country in the hour of its greatest danger. Once or twice the gallant author disturbs the equanimity of the critic with such expressions as "beating drums, braying trumpets, clashing cymbals, colours flying;" "God bless ye, little Fitzjameeses! Adieu, Hamilton, Perth, Caryl, and the rest;" or "Hark! the bray of trumpets; away, then, with intriguers' muttering." But these slight annoyances must be forgotten in consideration of Col. Wilson's enthusiasm and diligence. It is a work of honest labour, and a valuable addition to the literature of the epoch.

Fortunately for the fame of Berwick, the primary responsibility for the operations against his uncle was never placed in his hands. Had the command of the French army in the Spanish Netherlands been entrusted to his care, his fate would probably have been the same as that of its other leaders. The skilful disposition of his forces with which he defeated the objects of the Austrian general on the borders of Piedmont, and the plan of campaign which he adopted against Lord Galway, would probably have been ineffectual against him who was never defeated in a battle and rarely foiled in a manoeuvre. Although the Duke of Berwick spent the greater part of his life in actual warfare—he assisted, according to Col. Wilson, in twenty-nine campaigns, in fifteen of which he led armies—he was present in but six battles, and only commanded in chief in his memorable victory at Almansa. His genius was rather for Fabian tactics of delay than for hard fighting in hand-to-hand contests, and the French King was well advised when he selected him to conduct the operations of an army which was called upon to defend the South-eastern portions of the kingdom by a drawn battle only as the *dernier ressort*. If Villars and Berwick differed in their plans of warfare, they had in common the quality of ruling the disaffected with firmness and yet with prudence. When the former returned to the Court of Versailles from the work of pacifying the discontented Protestants of Cevennes, the duty of completing the task was assigned to his friendly rival. When the city of Barcelona was surrendered to the Duke of Berwick, he issued peremptory orders to his troops that the city should not be sacked, and his orders were not disobeyed. His object, as expressed in his own words, was "to preserve for the King of Spain a flourishing city which might prove of great service to him in the future." A still more arduous duty was assigned to him in later years—it was the labour of arresting the spread of the pestilence which ravaged the towns of Marseilles and Toulon at that fearful crisis when Pope wrote that "nature sickened and each gale was death."

An ample share of the genius of the Churchills for acquiring honours and emoluments was inherited from his mother by the Duke of Berwick. A more ingenious scheme for transmitting titles to children than that described by Col. Wilson on p. 252 could not have been devised by the wit of man. The Duke believed that some day a revolution might return the Stuarts to the throne of England, and with this conviction in his mind he obtained the sanction of

Louis XIV. to the exclusion of his eldest son from the French peerage which was conferred upon the father. His desire was to secure for his first-born the title of Berwick in England, for his second son a dukedom in France, and for the third a grandeeship in Spain. More daring thoughts even than these may have passed through his brain. The Pretender was still unmarried; and, if he died childless, there was no obvious claimant for the throne to enlist the support of the Jacobites in his favour. It was "l'âge d'or des batârdz;" and it may have occurred to the marshal and to his ambitious wife that under certain circumstances, quite within the bounds of probability, the eldest-born son might occupy a more exalted position than a dukedom in the English Peerage. A greater slur than this rests, as Col. Wilson acknowledges, on the character of Berwick. His reputation had been chiefly acquired on the battle-fields of Spain; he was idolised by its natives, and had been decorated with the highest honour which its monarch could bestow. Nevertheless, when war broke out between the two countries of France and Spain he did not hesitate to give his enemies occasion to triumph by accepting the command of the troops which were sent across the Pyrenees to besiege the fortress of St. Sebastian. There is, moreover, cause for lamentation over his differences with Vendôme. The failure of the French campaign in the Netherlands was intensified by the constant disagreements of its three leaders, Vendôme, Berwick, and the Duke of Burgundy. The operations which the first and greatest of these three generals suggested might have been carried out in their completeness had not the Duke of Burgundy been encouraged by the support of Berwick. The weakest side of the marshal's character was shown during those weary months while the Dutch and the English were engaged in besieging Lille. Its strength was displayed in those campaigns in Spain and in Dauphiny which Col. Wilson has so fully and so faithfully described. W. P. COURTNEY.

*Old and New Edinburgh: its History, its People, and its Places.* By James Grant. Illustrated with Numerous Engravings. In 3 vols. (Cassells.)

MR. GRANT needs to be forgiven much of literary defect and *gaucherie*; and he will be forgiven, because he loves his subject much. As a writer he is the inferior of Robert Chambers, of Daniel Wilson, and of Mr. R. L. Stevenson, who have, from such different standpoints and with such dissimilar pens, treated of the beauties and memories of Edinburgh. Even as a manufacturer on a large scale of that dubious literary hotch-potch known as prose-poetry he cannot be regarded as the equal of the late Mr. George Gilfillan, whose portentous gorgeousness was relieved, if not justified, by genuine moral and literary enthusiasm. Mr. Grant's portraits of Edinburgh worthies recall the extravagance and want of proportion that mark obituary notices in a provincial newspaper. He sings the praises of commonplace magistrates, third-rate actors, and the bewigged wits of the

Parliament House almost as energetically as he does those of "all the learned and all the *literati*." Sometimes, too, Mr. Grant's statements are suspiciously indefinite. The late Sir James Simpson, of obstetric celebrity, may have been "the good, the wise, and the gentle;" but why does Mr. Grant not tell us exactly what was the discovery "concerning chloroform" that he made? The "glorious university" of Edinburgh may deserve all that Mr. Grant has to say in its honour; but, if so, why should he not supply some more definite information about the salaries attached to its chairs than that they are "not inferior generally to those in the other universities of Scotland"?

Mr. Grant's enthusiasm and industry, however, are such as to make the reader of his new volumes overlook such weaknesses as we have pointed out, as well as his want of method and certain small inaccuracies of statement, which might be quoted. Such labour as he has here given us the fruits of must have been a labour of love, or it would never have been undertaken. Every street, square, wynd, close is made to give up its historic secrets to Mr. Grant, who spares neither personal pains nor the patience of his readers in unfolding them. Persons fare quite as well as places. The history of every man and woman who has ever had anything to do with Edinburgh is here detailed in full, from the Queen's Maries and the Regents Mar, Murray, and Morton, to the late Miss Catherine Sinclair and Dr. William Chambers.

The best way, indeed, to get profit and pleasure out of this work is to turn to the Index, take subjects at random, and proceed to the letter-press for what is said about them. What with the amplitude of Mr. Grant's descriptions, and the wealth of excellent illustrations supplied by the publishers, these volumes constitute a complete cyclopædia of Edinburgh and its neighbourhood. The environs of Edinburgh—Leith, Cramond, &c.—are, indeed, better described than the city itself, Mr. Grant's style in dealing with them being less stilted than usual.

WILLIAM WALLACE.

*The Medical Language of St. Luke: a Proof from Internal Evidence that "The Gospel according to St. Luke" and "The Acts of the Apostles" were written by the Same Person, and that the Writer was a Medical Man.* By the Rev. William Kirk Hobart. (Dublin: Hodges, Figgis & Co.)

It must be admitted that an apology is due to Dr. Hobart for leaving his elaborate work so long unnoticed, but probably he will be willing to consider a tedious convalescence after a severe illness a valid excuse for the delay. The object of the volume is sufficiently set forth in the title-page, and is amply carried out (perhaps most persons will think with unnecessary fullness) in the 291 pages devoted to the examination of (1)

"words and phrases employed in the account of the miracles of healing, or of those of an opposite character, which show that the writer was more circumstantial in relating these than the other Evangelists, that he was also well acquainted with the diseases which he describes,

and that in describing them he employs language such as scarcely anyone but a medical man would have used, and which exhibits a knowledge of the technical medical language which we meet with in the extant Greek medical writers; and [2] words and phrases, employed in the general narrative not relating to medical subjects, which were common in the phraseology of the Greek Medical Schools, and which a physician from his medical training and habits would be likely to employ" (p. xxx.).

The unnecessary fullness that has been mentioned above is shown in the prodigality of the examples of the medical use of a word, which Dr. Hobart found it necessary so far to restrict that they should not in any case exceed *ten* (Pref. p. viii.); and also in the number of words (especially in the second part of the work) which he claims as "forming part of the ordinary phraseology of Greek medical language" (p. xxxi.). In fact, the collecting together this large number of non-medical words merely because they are to be found in the Greek medical writers will scarcely be considered by most persons to add much to the force of his argument. For instance, what can it signify if *πλημμύρα*, which (as Dr. Hobart correctly says) "was used to express excess of the fluids of the body, flooding" (p. 55), is found in the Third Gospel (vi. 48) in the sense of a *flood of water*? or if *διερχομαι* "was much employed in a medical sense" (p. 213), and also "thirty-two times by St. Luke and but twelve times in the rest of the N. T." (the italics are Dr. Hobart's), chiefly to express *passing through a country, &c.*? To take another word, almost at random, Dr. Hobart says (p. 149) that "*ζεύγος* is peculiar to St. Luke, and is the word used in medical language for a pair of nerves, arteries, veins, muscles." This is not quite correct; \* and, even if it were, it is not easy to see why a person should be considered an anatomist because he talks of a "yoke of oxen" as *ζεύγος*, especially when the same expression is found in the LXX. (3 Kings xix. 19; Isa. v. 10).

These instances might be multiplied almost indefinitely, as, e.g., *προσάναβηθι ἀνώτερον*, "go up higher" (p. 147); *ὑπερῶν*, "an upper room" (p. 185); *κατάβασις*, "the descent" (of the Mount of Olives) (p. 147); *συνέπεισθαι*, (Sopater) "accompanied him" (p. 245); and the argument derived from them is about the same as to suppose that, if a writer has occasion to use any of the words, draught, mixture, extract, essence, powder, spirit, tincture, &c., &c., he must necessarily be a druggist.

The medical language of St. Luke has been noticed in detail within the last ten years by the Rev. Dr. Belcher (*Our Lord's Miracles of Healing*, 1872) and by Dean Plumptre (*Expositor*, 1876); but probably too much has been made of it. Indeed, the Dean has gone so far as to imagine that St. Paul's language was influenced by the professional phraseology of St. Luke—a phenomenon which, if true, is probably unique, and such as has not occurred in the case of any other physician either in ancient or modern times. Perhaps Freind, in his *History of Physio*

\* "*The word*" implies the *sole* word, or, at any rate, the *most usual* word; but in Galen's principal anatomical work (*De Anat. Admin.*) the word *σύνζυγία* occurs much more frequently than *ζεύγος*.

(part i., p. 222), has summed up the whole matter when he says that

"St. Luke, in his profession as a physician, and no doubt merely because he was one, when there is occasion to speak of distempers or the cure of them, makes use of words more proper for the subject than others do."

This statement (which is all the more valuable because it is not exaggerated) he illustrates by various passages; and he also attributes the superiority of St. Luke's style of writing to his familiarity with the works of the Greek physicians.

However, for the subject-matter of a book to be *overdone* (if one may use the word without being supposed to be a cook, or at least to have lived with cooks all one's life) is a fault on the right side; and Dr. Hobart's work certainly contains a great amount of information hardly to be found elsewhere. The full, plain, and accurate references also deserve to be particularly noticed, forming, as they do, a favourable contrast to those in Dean Plumptre's paper mentioned above. A few passages in Dr. Hobart's book are all that can be here mentioned.

The phrase "full of leprosy," πλήρης λέπρας (v. 12), is illustrated (p. 5) by the expressions in Hippocrates, "full of the disease" and "full of yawning," but scarcely by the words "full of pus" and "full of blood" in the same author. P. 6: St. Luke's use of παραλελυμένος (v. 18), instead of the more popular and non-medical word παραλυτικός, is one of the points noticed by Freind, and is illustrated by Dr. Hobart by passages from Hippocrates, Aretaeus, Dioscorides, and Galen. P. 16: Dr. Hobart points out that θεραπεία (ix. 11) was "the usual word in the medical writers for medical treatment, &c.," not necessarily *healing*, which is ἰασις (p. 23). He might (without going very much out of his way) have mentioned that the distinction between the two words in this verse is not preserved either in the Authorised Version or in the Revised, or in any translation (probably) except the Vulgate, which has "et qui cura indigebant, sanabat." P. 28: Dr. Hobart well illustrates the "wine and oil" used by the Good Samaritan (x. 34) by passages showing that they were used not only as internal medicines, but also as external remedies for sores, wounds, &c. P. 42: there is an interesting note on σκωληκόβρωτος, "eaten by worms," the word used to describe the death of Herod Agrippa I. (xii. 23), mentioning that this is probably the only place where the word is used in the case of disease in the human body, but that Theophrastus applies it to a disease in plants. Dr. Hobart also mentions that σκώληξ "is used both of worms in sores and of intestinal worms" (though the latter are almost always called ἐλμυνθες).\* P. 81: the note on ἀγωνία will be especially interesting to those persons who have the good fortune to possess a copy of the Rev. Dr. Field's *Otium Norvicense* (1881). Dr. Hobart's and Dr. Field's notes should be taken together; and then probably most persons will be of opinion that it would

hardly be advisable to add in the margin of St. Luke xxii. 44 (as Dr. Field suggests, p. 56), "Gr. a great fear;" inasmuch as, even if "fear, more or less intense, is the radical idea of the word," it certainly is not the only sense in which it is used as a mental affection. Dr. Hobart quotes one passage from Aretaeus in which it is used in connexion with the passage of a calculus.\*

When it is added that Dr. Hobart has given at the end of the volume an interesting and convincing note on the "probability of St. Paul's employment of St. Luke's professional services," it will be seen that he has produced a work of great value of a special kind, and such as few persons but himself in the present day could have executed.

W. A. GREENHILL.

*British Angling Flies.* By M. Theakston. Edited by F. M. Walbran. (Ripon: Harrison; London: Sampson Low.)

THIS is an honest attempt by an excellent observer (who has been dead for several years) to reduce the natural history of trout-flies to something like order, and to give the best dressings for them as artificial flies. Theakston published his book in 1853, and it had the honour of being praised for its usefulness in Kingsley's *Chalk-stream Studies*. It is only fair to say that the author knew little about literary English, if he knew much about flies. Mr. Walbran has left the text much as it was, so that the reader still smiles as he comes to a fly's wings "laying horizontally" over its shoulders, or another which "has small jumped-up shoulders;" but he is quick to forgive, for a very short inspection of these pages shows that, if the author was ignorant of author-craft, he was an observant, accurate, born angler. To use the style of the egotistical Richard Franck, who, though moonstruck, was yet an admirable angler for his time, this little book is "calculated for the meridian of Ripon." The clear streams and rocky banks of the Yorkshire and Border rivers require inconspicuous, spider-like, wingless flies. These Theakston describes at length, while Mr. Walbran adds notes, furnishes alternative dressings, and the like. Old anglers are amused to find no less than ninety different flies fully described, whereas a tithe of these are more than sufficient for a practised fly-fisher; but tackle-sellers must live, and young anglers must purchase experience.

This book is entirely practical; there is not a Latin name in it from cover to cover. The author divides the trout-fisher's flies into seven classes—browns, drakes, duns, spinners, house-flies, beetles, ants. The unscientific nature of this classification is obvious to anyone who has looked into Ronalds—still more to the student of Pictet's admirable monograph; but, as a rough-and-ready system for the man who merely wants to catch trout and grayling, it answers well enough. Theakston invented

names for his assortment of trout-flies—red drake, black spinners, and the rest of them—but the ordinary terms of anglers are also appended, so that the book will suit other districts than Northumbria. If there should still be any difficulty in identification, the many excellent drawings, by one of the author's daughters, of the natural flies, their caddis-cases and *larvae*, will effectually dispel hesitation. Mr. Walbran has added some useful hints on grayling fishing and on the different Yorkshire rivers, which seem to the point, and must prove useful to the wandering angler. We wish, indeed, that he did not write about the mossy banks near Bolton Abbey being "stellated with primroses;" but this is a trifle when Theakston sets us such a riddle as "the cottage holmster, tanned and trained, pockets his fishing-book."

In spite, however, of all this book's obscurities of local English and affected fine writing, the angler will find it a capital guide to his flies. Indeed, Ronalds and Theakston are almost the only authorities to which he can turn for the natural history of trout-flies. It goes for granted that every lover of nature who wishes to know something about the entomology of his stream will find room for these books on his shelf of angling works. Better still, Theakston's little book can be thrust into the pocket, and will be invaluable to the fisherman when he halts for luncheon and wishes to examine the flies which are then porting on the water. M. G. WATKINS.

*A Glossary of the Dialect of Almondbury and Huddersfield.* By the late Rev. Alfred Easter. Edited by the Rev. T. Lees. [English Dialect Society.] (Trübner.)

THE author of this Glossary was a former head-master of the Almondbury Grammar School, who died in 1876, leaving the work transcribed for the press as far as the word *Nar*. The remaining portion has been compiled, from Mr. Easter's notes and from other sources, by the editor, who acknowledges important assistance received from Prof. Skeat. Mr. Easter states in his Preface that he had for more than a quarter-of-a-century been in the constant habit of making memoranda of local words and anecdotes, the characteristic humour of which, though not himself a Yorkshireman, he was evidently quite able to appreciate. The Glossary, although lacking the benefit of the author's final revision, is decidedly one of the most satisfactory works of its class. The vocabulary, however, might probably be considerably enlarged; and the indication of the pronunciation is far from being adequate. The latter defect is the more to be regretted, as it appears that the present work is to be the only representation, so far as the society's publications are concerned, of the very remarkable group of dialects spoken in the West Riding. A Hallamshire Glossary was stated some time ago to be in preparation, but no mention of it occurs in the programme of future work contained in the last Annual Report.

The dialect-speaking class in the Huddersfield district extends to a much higher social level than in most other neighbourhoods, and the purity of the native idiom has therefore been little impaired by contact with more

\* Dr. Hobart's quotations are so extremely accurate, and the printing so excellent, that it is quite a curiosity to find a typographical transposition of the words quoted from Dioscorides (p. 43, ll. 9, 10).

\* Dr. Hobart quotes from Galen (and correctly, according to the printed text, tom. ix., p. 382, l. 2), *δριγισθέντων ἢ φοβηθέντων ἢ αγωνισάντων*. But, as Galen is speaking of πάθος ψυχικόν, the obvious correction of *ἀγωνισάντων* must have occurred to him.

refined forms of the English language. The dialect possesses an uncommon degree of philological interest, and is remarkable for its vigour and quaint expressiveness. The merit of euphony will perhaps scarcely be claimed for it by its warmest admirers. Its phonetic system is, in its main features, identical with that which prevails over the greater part of the West Riding. It is somewhat curious that (except in the case of the short *u*) the sounds given to the vowels are not more primitive than those of the cultivated dialect, but the contrary. Such pronunciations as *caa* for *cow*, *taum* for *time*, and *hole* for *hall* exhibit the completed working out of the tendencies which have produced our modern English vowel-sounds. It is noteworthy that the West Riding pronunciation strictly preserves the distinction between the Anglo-Saxon *á* and *o*, which are confounded in "standard English." The equivalent of *á* is *ooa*, as in *stooan* and *rooad* for *stone* and *road*, while the *o* (when it becomes a long sound) is rendered by *oi*, as in *ooil* for *coal*, and *hoil* for *hole*.

In a few points the pronunciation used near Huddersfield differs strikingly from the general West Riding usage. One of these peculiarities is the change of *vn* into *m*. Some traces of this habit may be found in other dialects, but here it is carried out with almost perfect regularity. Boys play at "odd and *aim*"—i.e., odd and even; seven and eleven are *sa'em* and *ela'em*, oven is pronounced as *oo'm*, and Stephen as *Ste'em*. This would suggest that the local name Bumroyd, which Mr. Easther explains as "bottom-royd," may possibly be *boven-royd*, analogous to the Anglo-Saxon name *Bufa-wuda*. Another point is the substitution of *w* for *qu*, as *wartern* for *quartern*, *weme* (here glossed as "quiet, tidy, &c.") for Anglo-Saxon *geweeme*, and *wick* for "quick" in the sense of alive. The last-mentioned word is used elsewhere—e.g., in the Peak of Derbyshire, where there is a secluded hamlet known by the expressive name of "Bury-me-wick." The local pronunciation of *x*, now nearly obsolete, coincides most curiously with that used in Modern Dutch. Mr. Easther gives the pronunciation of *box*, *fox*, *ox*, *axe*, *eix*, as *bouse*, *fouse*, *ouse*, *ay-ees*, *say-eece*. The actual sound seems to be a sharp *s*, preceded by a "voice-glide," representing a vanished aspirate. It is very strange that the Anglo-Saxon initial *á* is represented in the Huddersfield pronunciation sometimes by *ya* and sometimes by *wo*. Both forms are found in various parts of England, but their co-existence in the same neighbourhood seems to indicate a mixture of two different dialects. This inference is confirmed by the duplicate forms *hoo* and *shoo* for *she*, and *t'* and *th'* for the definite article. A peculiarity which seems hard to explain is the prefixing of *y* in the pronunciation of such words as *out*, *our*, *how*, which become *yat*, *yahr*, and *yaa*. The question "how many?" is strangely distorted into "yamdy." In connexion with the subject of pronunciation it may be mentioned that Almondbury is called Oambury by vulgar persons, but, if you wish to be considered "polite," it is absolutely necessary to say Aimbury. Perhaps it was this analogy which was followed by a butcher of the

neighbourhood, of whom Mr. Easther tells that in common company he pronounced the word *calf* as *cofe*, but when calling at the parsonage was careful always to refine it into *caif*!

The words of Scandinavian derivation in the Glossary are numerous, but are mostly such as are found in all the Northern English dialects. One or two, however, seem to be less general, as "*scorn*" for *ridicule*, and "*steven*" (pronounced *sta'em*), to give an order for goods. A magistrate is still said to "*deem*" an offender to a fine. Among other lexical curiosities of the dialect are "*caitiff*," meaning a cripple; "*jubberty*" (i.e., *jeopardy*), used for a misfortune or difficulty; "*shackle*," for *wrist*; and "*prial*," a *pair-royal* or triplet. "*Cleam me a butter-shauve*" is the translation of "*spread me a slice of bread and butter*." "*Kelt*," a slang term for money, and "*frow*," explained as "*a coarse woman*," look as if they had been picked up from some wandering German or Dutchman.

Nearly every page of the Glossary contains some reference to local customs or superstitions. One of the oddest things of the latter kind is the belief in the "*padfoot*," a sort of goblin in the form of a huge sheep or bear, "*with eyes as big as tea-plates*," of whose appearances several graphic descriptions are quoted. Of witchcraft Mr. Easther has a good many stories to tell. One eminent professor of the black art was honoured "*on state occasions*" with the strange title of "*Diabolion*," but was more commonly referred to as "*Old Di*."

The editor explains that the numerous etymological notes signed by Prof. Skeat were furnished merely for Mr. Easther's own information, and that their publication is owing to a misunderstanding. The mistake must certainly be reckoned fortunate. No doubt the society is well advised in generally discouraging etymological speculation on the part of its contributors; but it is not desirable that this rule should be observed where Prof. Skeat is concerned. From two of the Professor's etymologies I am constrained to dissent. He compares *royd*, "*a clearing*," with Old-Norse *rjóðr* (gen. *rjóðrs*), which does not correspond phonetically. The real etymon is no doubt the cognate and synonymous *roð*. The derivation of "*oss*" from the French *oser* seems extremely improbable. Not to mention other objections, the words are too far apart in meaning. "*To oss*" means to give a practical sign of an intention, the notion of "*venturing*" being by no means necessarily implied. HENRY BRADLEY.

THE UNPUBLISHED WORKS OF MANZONI.

*Opere inedite o rare di Alessandro Manzoni.*  
Pubblicate da Ruggero Bonghi. (Milan: Rechiedei.)

IMMEDIATELY after the death of Manzoni (who was so severe a judge of his own writings and so slow to publish) everyone not belonging to his own family lost no time in printing any composition of his, however fragmentary, which they could discover. From this there resulted a posthumous Manzoni literature scattered in books, magazines, and newspapers, published without care and

at haphazard. Sig. Brambilla, a relation of Manzoni's, thought it therefore desirable to collect whatever MSS. of the poet he could acquire for a final edition of his posthumous works, to be confided to the care of Sig. Bonghi. No better choice of an editor could have been made, for, besides being one of the most powerful minds of Italy, Sig. Bonghi was much beloved by Manzoni himself, with whom for many years he lived on terms of familiar and almost filial intimacy. He has indeed bestowed great care and diligence on his task, of which the plan is excellent. Leaving entirely on one side, as already complete and separate, the works published during Manzoni's life and with his consent, he gives us all the rest, prefixing to each composition or fragment a short account of the MSS.—often autographs—from which it was printed, and examining with much insight the poet's mood at the moment of inspiration. This first volume is entirely composed of poems, for the most part juvenile and not very numerous, which do not greatly add to Manzoni's reputation, though in all we find traces of his poetic power and of his originality of thought. This fact is recognised by the editor himself, and happily expressed by him when he frankly admits that

"these writings were not sealed by Manzoni's approbation in the maturer days of his life and art; and to-day, if he could, he would not oppose their republication less resolutely than he did when living. It would certainly be an act of piety to obey his wishes in this respect, but they have not been obeyed. After his death a general search was made, for every line traced by his pen, every phrase written or pronounced by him, and everyone who had the good fortune to find any hastened to give it to the world."

We look forward with a far greater interest to the inedited prose writings which will appear in future volumes. The real interest of this first volume appears to consist in the various readings which are to be found in the MSS. of those poems already known to us, and in which we can trace the clashing of thought with language in the inspired mind of the poet. As an example, I give here (marking with italics the rejected phrases) the first lines of his famous Ode to Napoleon from the facsimile prefixed by the editor to this volume.

<i>"Ei fu come al terribile Segnal della partita Tutta si scosse in fre- mito La salma inorridita Come agghiacciata [or gelata] immobile Dopo il gran punto sta."</i>	<i>"Ei fu: siccome im- mobile Dato il fatal [mortal] sospiro Stette la salma [spo- glia] immemore Orba di tanto spiro, Tale al tonante an- nunzio Muta la terra sta Trema [Tace] la terra e sta Così [Tace] percossa attonita La terra al nunzio stà."</i>
---	--

This facsimile of the entire Ode is doubtless the most important of all those here given, but the others are interesting also, and from my own recollection of Manzoni's autographs I can recognise their fidelity. Moreover, for those who care for such studies of comparison, the various readings of the "*Inni Sacri*" and of the tragedy of "*Adelchi*" are likely

to prove attractive; and in this latter composition we see how a true poet may have the good taste and courage to suppress whole pages of really beautiful verse in order to avoid spoiling the proportions of his work.

As I have already said, Sig. Bonghi has edited this volume with great care and diligence, but some typographical errors have escaped him which it will be well to attend to in a future edition. And I would also suggest that a careful consideration of the facsimile of the Ode to Napoleon does not seem to bear out the date of July 17, 1821, as the one prefixed by Manzoni to the Ode. I read it rather as the 18th, and would refer to that date what Sig. Bonghi tells us in connexion with its composition:—"It is traditional in his family that the news [of Napoleon's death] reached him while sitting on a bench in his garden; and shortly afterwards he rose, shut himself up in his study, and wrote the poem." UGO BALZANI.

### SOME BOOKS ON POLITICAL ECONOMY.

*Political Economy.* By Francis A. Walker. (Macmillan.) This is an English edition of a comprehensive treatise on political economy by this well-known American economist. The work is one which should command a good deal of attention. With the merits of brevity and clearness it combines those of forcible statement and original thought. In a condensed yet readable shape, it presents all the chief doctrines hitherto ascertained in political economy, and summarises with great fairness the arguments on both sides on those points which are matters of debate rather than doctrine. In the main the author is orthodox, as orthodoxy is understood here. He is a pronounced free trader, or, as he would prefer to call it, "free producer." He is forcible in exposing the fallacies of the explanation of hard times by general "over-production" and "under-consumption," which he says would more appropriately be accounted for by "under-production," which is the result of "partial over-production" on certain lines. This partial over-production he attributes to the mistakes which arise between producer and consumer owing to the specialisation of industry and the extent to which division of labour is now carried. It is to the magnitude of the evils which such mistakes involve, and the necessity of avoiding them, that he traces the growing importance of what he calls the *entrepreneur* class, by which "vile Gallicism" he designates the employers of labour. In his view, the capitalist and employer are, in theory, if not in fact, two different persons. "Profits" being divided into "interest on capital," "remuneration for risk," and "wages of management," he gives the two former to the capitalist proper, and the latter, which he assimilates to rent rather than wages, to the *entrepreneur*, or, to use the English word still used in private Bill legislation, the "undertaker." He regards business capacity as being like land. Some of it results in loss, or absence of gain. Those who have such capacity, or want of capacity, represent the lowest limit of fertility in cultivated land which pays no rent. Then come the successive degrees of capacity up to that of the Vanderbilts or Brasseys; and profits proper represent the difference in value between their respective capacities and that of the "no-profits" incapacity, just as the rent of land in Middlesex represents the difference between its fertility and nearness and the infertility of the most distant or worst land which sends its produce to the English market. There is,

therefore, in theory, no conflict between the *entrepreneur* and the working-man. What is taken as profits in no way diminishes wages, any more than rent (for here the author is a strict Ricardian) enters into the price of agricultural products. In theory, therefore, strikes are not only criminal, but utterly idiotic. They attempt to get a share for working-men of what does not, and cannot, belong to them—the "rent of genius." But it is to be noted that the author gives a modified approval to strikes regarded as a species of insurrection, which have been in the past, and may still be in the future, as necessary in industry as revolutions in politics. It is also to be noted that he gives a modified approval to "co-operative production." However, for the latter to be successful, the body of combined labourers must have the genius of the *entrepreneur*; "but not a single instance is on record of a body of labourers having yet exhibited this capacity, and . . . I see nothing which indicates that, within any near future, industry is to become less despotic than it now is." This may or may not be so; but, if it is possible, as the author contemplates, for associated labourers to gain anything by strikes, or even, by co-operation, "to manage business as ably, strongly, and shrewdly as private employers," and so "to dismiss the *entrepreneur*, abolish his function, and keep his gain to themselves," what becomes of the essential difference which he recognises between "profits" and "wages"? It may be questioned whether business capacity is, like cultivable land, a strictly limited monopoly. At all events, it may rightly be looked upon as only a special form of labouring power. The wages of all skilled labourers may just as well be treated as the "rent of genius" as may the wages of the special kind of skilled labour called management. The wages of the lowest kind of labourer, just sufficient to keep body and soul together, may be represented as the equivalent of land whose products only just repay the expense of cultivation, all excess of wages being, like rent, measured by the superiority of their receiver to the lowest wage-receiver. But, if so, the difference between wages and profits disappears; and the "rent of genius" and the "wages of management" are seen to be only two modes of expressing the same fact, of which the former brings out one point into new relief, but the latter more accurately embraces the whole facts, and more adequately expresses the relation between the one class and the other. "Interest on capital" has been happily called "the wages of abstinence," but there would be no greater gain of clearness in discussing the relations between labour and capital by treating "interest" as "wages" than there is in treating profits as rent. The main attraction of this treatment seems to lie in its being a pacific solution of the conflict between employer and employed. But, in the present state of imperfect competition, that conflict exists; and, if political economy ignores it, or tries to get rid of it by the use of an analogy which is no more than a metaphor, then, as the author is fond of saying, "so much the worse for political economy." We have not space to follow the author in his well-balanced arguments on bimetalism, in which the heretical view is made to prevail; nor in his essay on the "unearned increment" of rent, as to the remedy for which he is equally at variance with the rhapsodic "Georgics" of his now noted fellow-countryman and the more measured utterances of Mill; nor in the blows he inflicts on "a body so inanimate as the wages fund theory." It is enough to say that, whether his views on these and other topics of economists are orthodox or heterodox, they are always ably stated and defended, and serve to throw new light on the matter in hand.

*Protection to Young Industries.* By F. W.

Taussig. Instructor in Political Economy in Harvard College. (Cambridge, U.S.: King.) This little book is another American product, being a prize essay written at Harvard University, and displays more research than is usually found in such works, though it is more than usually timid in its conclusions. By tracing the general growth of manufacturing industry in the United States from 1789 to 1838, with a more special sketch of the growth of the cotton, woollen, and iron manufactures, he conclusively shows that they grew in spite of, and not because of, protective legislation.

"The restrictive period (that of the Napoleonic wars in Europe and the war between England and the States) may indeed be considered to have been one of extreme protection. The stimulus which it gave to some manufactures perhaps shows that the first steps in these were not taken without some artificial help. It is shown that the intentional protection of the tariffs of 1816, 1824, and 1828 had little effect."

But the book may be safely commended to any colonist who still believes in the doctrine of protection for young industries, not only as a demonstration that no argument in its favour can be drawn from the industrial history of the States, but as a strong argument against it. Anyone but a writer of a prize essay to be adjudged upon in New England would draw a much more emphatic conclusion than that given above from the facts which are clearly and forcibly stated in the body of the work.

*Readings in Social Economy.* By Mrs. F. Fenwick Miller. (Longmans.) This book, which is divided into "stages" and "lessons," is designed for elementary schools, and it is possible that it may not only be used in elementary schools, but that some of the children may be got to understand it. But, from some experience of the results of lectures in political economy as revealed by university local examinations, it is to be feared that the number will be exceedingly small, and that the time expended would have been more usefully devoted to some less abstract study. There is a goody-goody tone about the book which it seems has necessarily to be adopted in books "for the young," but which seems also admirably adapted for increasing that callousness to being preached at, and to the preaching, which is early developed in the most well-drilled and virtuously disposed young persons. Even an elementary school-girl would surely write on being told that "we must add trustworthiness to our list of the industrial virtues which aid production, and which we must strive to cultivate in ourselves, commencing while we are young." If, however, we have "to commence while we are young" to study political economy, we could not perhaps do better than to do so with Mrs. Miller's book. It is clear, and, on the whole, not too much above the heads of the young, though we suspect a young lady in a Board school would be not much enlightened as to her social duties by being told that woman's mission is to use "dexterity, tact, and refinement in superintending, preparing, and arranging the food, &c., and all the domestic comforts and recreations without which manly strength is ill-prepared to cope with the physical hardships and trials that properly fall to its share." The chapter on strikes savours too much of the Church Catechism and the doctrine that it is the duty of "the poor" to be content with the wages which God and the farmer have given them; while, in so far as it implies that strikes are and have been necessarily and always evil or useless, it is misleading. Moreover, it is mainly founded on a strict application of the "wages fund" theory, which, in her Preface, Mrs. Miller rather throws over. If she had thrown the theory over altogether, and expressed the lesson drawn from it in somewhat more qualified terms, she would

have been more in accordance with facts, and the lesson would have been all the better.

*Socialism and Communism in their Practical Application.* By the Rev. M. Kaufmann. (S. P. C. K.) This is an interesting little sketch, though too short to be exhaustive, of the chief attempts at communism, from that of the early Christians to that of the Oneida Perfectionists and the New York Phalanxes. The history of such attempts has always been the same. Under capable leaders, while inspired with the enthusiasm of the pioneers, they have been successful for a time; but eventually, as enthusiasm waned, sometimes through success, sometimes through hard times, the community has broken up or died out. The fullest and most interesting part of the book—that on the various American experiments in Socialism—is little else than an analysis of Mr. Nordhoff's work, which deserves to be more widely known. The book concludes with an eloquent discourse in favour of the Rochdale pioneers and co-operative production. But we venture to think that the author is mistaken in thinking that the spread of co-operation will be most effectually aided by "true enthusiasm" and "religious fervour." Enthusiasm is a bad ground-work for business; and religious fervour, as the sketch shows, generally degenerates into religious animosity. Co-operation must look for success to the steady pressure of educated self-interest.

*Tenant's Gain not Landlord's Loss.* By Joseph Shield Nicholson. (Edinburgh: David Douglas.) This essay on the land question in England and Scotland seems to have been mainly called forth by the agitation of the Highland crofters. After an exalted discussion of economic principles, and a lengthy refutation of Mr. Henry George, the writer draws some very commonplace conclusions, which are much in accord with those previously expressed in Mr. Chaplin's Bill, with regard to what should be done to give compensation for improvements. Like most people who have given any serious attention to the matter, he is convinced that "the existing law is grotesquely unfair to the tenant, and indirectly injurious to the landlord." He accordingly wishes to give compulsory compensation in every case where the improvement does not "change the character of the subject" of hire, but the landlord is to have the "option of making the improvements." But, for some reason or other which remains unexplained, except by the fact that they have an "exceptional case," the crofters may "change the character of the subject" by reclamation of waste land or otherwise without the landlord's consent, and demand full compensation, unless absolutely forbidden by the landlord to proceed with the improvement. But, if this is just in the case of the crofter, it is hard to see why it is not just in the case of any other tenant; and why the universal test should not be, Has the improvement added to the letting value of the holdings? ARTHUR F. LEACH.

#### NOTES AND NEWS.

WE hear that Mr. Joseph Knight—who is "Sylvanus Urban" of the *Gentleman's Magazine*, and has for many years been well known as a dramatic critic—is the new editor of *Notes and Queries* in succession to the late Mr. Turle.

PROF. SKELEY has written the article on Napoleon for the new volume of the *Encyclopædia Britannica*. In consideration of the importance of the subject and of the writer, a quite unusual amount of space has been allotted to the article.

MRS. OLIPHANT'S *Sheridan* in the "English Men of Letters" series, which has been so long expected, is now announced for August 15.

LORD RONALD GOWER is editing a *Life of the Queen*, by Sarah Tytler, which Messrs. J. S. Virtue and Co. will publish. It will be illustrated with many steel-engravings.

MESSRS. VIRTUE are also preparing for publication an illustrated volume on *Social Life in Egypt*, by Mr. Stanley Lane-Poole, embodying the results of his recent visit to that country.

A NEW volume of essays may shortly be expected from Vernon Lee, containing the results of an elaborate study of the Renaissance begun immediately after the completion of *The Eighteenth Century in Italy*. The first-fruits of that study are to be found in two articles in the *Contemporary Review* for 1879, and in a paper on "The Portrait Art of the Renaissance" which appeared in the *Cornhill* last May. In addition to these, there will be essays on the outdoor poetry of the Middle Ages and the Renaissance, on the imaginative aspects of Renaissance art, on the influence of Italy upon our Elizabethan playwrights, and on the precursors of the *Vita Nuova*—the common aim being to trace the ancient and mediæval influences running through all. The volume will be called *Euphorion*.

THE Clarendon press has now in type a good deal more than the 352 pages which it proposes to give for the first part of the Philological Society's new English Dictionary, edited by the society's president, Dr. J. A. H. Murray. Part ii. will thus be well on its way before part i. appears in September for the October market.

DR. MURRAY still needs the help of some specialists in chemistry and other sciences who will each undertake the technical terms of his science. In Anglo-Saxon and Teutonic words he has now the very worthwhile help of Prof. Sievers, of Jena. In Old-French words Prof. Paul Meyer and M. Ulrich give their valuable aid. To a suggestion that the first part of the Dictionary should contain a list of the books read for it, Dr. Murray answered

"that it would be a matter of four hundred pages. It must be put off till our last part. The reading for the Dictionary has now gone on for twenty-five years, and the number of books extracted from for it, if not read throughout, will surprise people."

THOUGH Mr. Gladstone has gracefully acknowledged in Parliament the public spirit shown by the Delegates of the Oxford University Press in bringing out the Philological Society's Dictionary, yet money help is urgently needed to render the position of the editor and his assistant secure. Were the work American, it would be sure of the support of some of those many liberal merchants who have sown colleges and libraries over their land; but, being English, the Dictionary has not yet attracted from any donor the cost of a pack of hounds or even of a four-in-hand.

PROF. WESTCOTT's edition of the *Epistles of St. John—Greek Text, Notes, and Essays*—will be published by Messrs. Macmillan very shortly.

DR. COPPINGER's account of the voyage of the *Alert*, promised for the early part of this year, is now passing through the press, and will be issued by Messrs. W. Swan Sonnenschein and Co. on September 1. The book will be illustrated with a large number of wood-cuts from sketches by the author, and photographs made on the spot by Mr. F. North.

A COLLECTION of *Letters of the Martyrs*, comprising a selection of representative epistles, is announced for immediate publication by the same firm.

WE are informed that Messrs. Cassell and Co. will shortly publish, both in serial form and also

in volume, a new edition of Mr. W. Robertson's *Life and Times of John Bright*. The book, which originally appeared in 1878, has now been enlarged to double its former size; and it is said to contain a good deal of information supplied to the author by Mr. Gladstone.

AN enlarged edition of Mr. R. C. Hope's *Dialectal Place-Nomenclature*, containing upwards of one hundred and fifty new pages, will be ready in about a week.

ON Saturday last, Messrs. Sotheby's sale-room witnessed a struggle of almost Homeric fierceness over Lord Devon's Caxton. As the book—Lydgate's metrical *Life of Our Lady*—is one of the printer's rarest productions, of which the only two perfect copies, besides Lord Devon's, are in the British Museum and the Bodleian, it was expected to bring a good price; and the expectation was realised when Mr. Quaritch emerged from the battle minus £880, but plus the precious volume. Even at such a cost we congratulate the conqueror. The *Boke of Seynt Albons*, which was sold immediately after the Caxton, vindicated its rank as a rare book of English interest by attaining the price of £600; but would probably have gone much higher, notwithstanding some small imperfections, if the internal condition of the volume had not suffered. The paper seemed to have been injured in the first place by damp, and afterwards by injudicious washing, so that it no longer looked or felt like the original substance—a circumstance peculiarly unfortunate in such a book, as the only point in which the schoolmaster of St. Albans could be held to have excelled Caxton was in the fine quality of the paper which he used. In that respect Mr. Popham's copy of the *Boke*, sold last year at Christie's, was much superior to Lord Devon's.

THE Countess von Bothmer's *Aut Caesar aut Nihil* seems to have attracted a great deal of attention in America, where it has been published by Messrs. Harper for twenty cents (10d.). The English price is 21s. for three volumes. It need hardly be added that no pecuniary advantage comes to the author from her Transatlantic popularity. The hardship is almost too common for notice; but it is impossible for anyone to feel pleased when thus exploited for another's profit.

THE latest Browning Society formed is at the Antipodes. The Principal of the Presbyterian Ladies' College, Mr. Harper, an old Browning student, and his friend, Mr. Toppe, have founded the Melbourne Browning Society. The Professor of Mental Philosophy in Melbourne University, Mr. Lawrie, Dr. Jamieson, and several men and women of distinction in the colony have joined the society, which, at its first meeting, on June 2, had papers on Browning's "Rabbi ben Ezra" and "Grammarian's Funeral," and full discussions of each and of the poet's theory of life followed. The society has opened well.

A MOVEMENT has been started to promote a testimonial to Mr. Martin Tupper, the author of *Proverbial Philosophy*, who is stated to be "in circumstances the reverse of affluent." Subscriptions are invited from America and the colonies, as well as from England. A committee has been formed, with Lord Headley as chairman, and Mr. G. Hawkes, 9 Victoria Chambers, Westminster, as hon. secretary.

IT is stated that the memorial to the late Sir George Jessel, subscribed for by members of the London University, will take the form of a replica of Mr. Collier's portrait, any surplus being devoted to found a Jessel prize.

THE college at Dundee, founded by the munificence of the Baxter family, is to be opened next October with an inaugural address by Lord Rosebery.

THE third volume of the *Ensayo sobre la Historia del derecho de Propiedad*, by Señor G. de Azcarate, has just appeared. This volume, which deals with the actual conditions in Europe, with a chapter on the "Cuestion de Irlanda," we hope to notice more at length.

THE second volume of the new edition of Prof. S. R. Gardiner's *History of England*, which Messrs. Longmans have issued this month, covers the period 1607-16. In the Preface Mr. Gardiner says:—

"The transcripts of Spanish despatches which Mr. Cosens has kindly allowed me to use have been found to be even more valuable than I had expected, and have enabled me to add considerably to my knowledge of the relations between the King and the Spanish Government. My own copies taken at Simancas, with some others from various sources, have been deposited in the Museum Library, and will be found in Additional MSS. 31111-12."

#### FRENCH JOTTINGS.

THE grand prix de Rome for painting has been awarded to M. Baschet, a pupil of Boulanger and Lefebvre; second prizes were given to MM. Friant and Lambert, both pupils of Cabanel.

THE new volume (ix.) of Gambetta's *Discours et Plaidoyers politiques*, published in Paris this week, contains a speech delivered at Valence on September 18, 1878, which has never before appeared in print.

GEN. LE FLÔ, the former French ambassador at St. Petersburg, is said to be writing his Memoirs.

FATHER CARLOS SOMMERVOGEL, of Strassburg, is engaged upon a bibliography of all the works published either anonymously or under pseudonyms by members of the Society of Jesus from the foundation of the Order down to the present day. The work will be published, in two large volumes, by the Société bibliographique de Paris.

MDME. HENRY GRÉVILLE's new novel, just published by Plon, is entitled *Angèle*.

THE last addition to the series of cheap reprints of French classics which is being published by Garnier is Furetière's *Roman bourgeois*, edited with notes and a biographical sketch by M. François Tulou.

A LITTLE while ago attention was attracted in France to an *éloge* upon Montesquieu by Marat, which gained a prize from the Academy of Bordeaux in 1782. The MS. of a similar prize essay by Robespierre has now been discovered at Metz. Its subject is to controvert the proposition that children should be held responsible for the faults of their parents. In style, it is described as slight and poorly written. It concludes thus:—

"Je suis loin de trouver en moi les grandes ressources, mais je n'en ai pas moins osé vous présenter mon tribut; c'est le désir d'être utile, c'est l'amour de l'humanité qui vous l'offre [*sic*]."

A BILL has been introduced into the French Chamber by a certain deputy, M. Rivet, which seems worthy of consideration, in connexion with a Bill which recently passed our own House of Lords, but has been abandoned in the Commons. It proposes to give illegitimate children a right to bear their father's name, and also to maintenance by him. But it would not call for notice in this place if it had not given occasion to M. Alexandre Dumas fils to write a characteristic pamphlet, vehemently supporting the proposal, under the title of *La Recherche de la Paternité* (Calmann-Lévy). With reference to the easy argument that men would then be at the mercy of designing women, M. Dumas replies:—

"Ce sera aux jeunes hommes d'éviter le commerce

des jeunes filles à marier qu'ils ne voudront pas épouser. Ce n'est pas plus difficile que d'éviter les voitures, surtout quand il y a tant de trottoirs."

*Polybiblion* for July contains an elaborate review of Mr. Warren's *Leofric Missal* by the abbé Martin.

M. PAUL MEYER, director of the Ecole des Chartes, writes to correct a statement in the ACADEMY of July 14, that "not a single member of the Académie des Inscriptions has reached seventy"—which statement, we may add, came from *Le Livre*. The truth is that M. L. Quicherat, the Latin lexicographer, was born in 1799; M. Desnoyers, the historian and geologist, in 1800; M. Rossignol, the Greek scholar, and M. Regnier, editor of Greek, Latin, and German Classics (Hachette) and author of the *Etude sur la grammaire védique*, both in 1804; M. de Wailly, the editor of *Joinville*, in 1805; M. Renier, the epigraphist, in 1809; J. J. Derembourg in 1811; MM. Hauréar and Miller, both in 1812; M. Ravaisson, Keeper of the Antiquities at the Louvre, in 1813.

#### ACKNOWLEDGMENTS.

WE have on our table the following pamphlets:—

*Can English Law be taught at the Universities?* an Inaugural Lecture, by Prof. A. V. Dicey (Macmillan); *The Education of our Industrial Classes*: an Address delivered at Coventry by J. Norman Lockyer (Macmillan); *Technical Instruction*: the Introductory Address by Philip Magnus at the Opening of the Finsbury Technical College (Longmans); *The Overstrain in Education*, by R. A. Armstrong, reprinted from the "Modern Review" (James Clarke); *Caesarem Appello*: a Letter to the Rev. Benjamin Hall Kennedy, in Reply to Criticisms on the Interpretation of Rom. ix. 5 in "The Speaker's Commentary," by Edwin Hamilton Gifford (Bell); *The Study of Beauty and Art in Large Towns*: Two Papers by T. C. Horsfall, with an Introduction by John Ruskin (Macmillan); *The York Building Company*: a Chapter in Scotch History, read before the Institutes of Bankers and Chartered Accountants, Glasgow, by David Murray (Glasgow: MacLehose); *New Facts relating to the Chatterton Family* (Bristol: George); *Mediaeval Sermon-Books and Stories*, by Prof. T. F. Crane, read before the American Philosophical Society; *A Lost Function in Romance*, by Carol Bryce (New York: Putnam); *The Plough and the Dollar*; or, the Englishry of a Century Hence, by F. Barham Zinke (Kegan Paul, Trench and Co.); *The Reform of the English Land System*, by the Hon. George C. Brodrick (Cassells); *Free Trade and Protection*, by O. E. Wesslau (Elliot Stock); *What Parliament should do for the Farmers*; or, Constitutional Reform of the Land Laws, by T. B. Woodward (Stanford); *The Enhancing Value of Gold and the Industrial Crisis*, by W. S. Reid (Effingham Wilson); *A "Nutshell" History of Ireland*, from the Earliest Ages to the Present Time, by A. M. Sullivan (Sampson Low); *Famine-Stricken Tiroconail*: a Personal Narrative of the Distress in Glencolumcill, by Marcus J. Ward (Belfast: The Philo-Celtic Society); *The Battle of the Moy*: How Ireland gained her Independence in 1829-94 (Sonnenschein); *Letters on Ireland* to the "St. James's Gazette," by the Hon. Leopold Agar-Ellis (Stanford); *The Kilmahnam Treaty*; or, Lessons in Massacre (of the Truth), by the Author of "Letters to my Son Herbert" (Tinsley Bros.); *The Transvaal and Bechuanaland*, by Dr. G. B. Clark (Juta, Heelis and Co.); *India in Six, and Australia in Sixteen, Days*, by W. Campbell (W. H. Allen); *The Agricultural Depression at Home, and the Resources of the Canadian New North-West*, by John Pearce (Sell); *Ireland Not the Hibernia of the Ancients* (Peebles: Watson); *Alfred Jesusbury* (Griffith

and Farran); *The Patent Bills of 1883: Private Aims and Public Claims*, by R. A. Macfie, of Dreghorn (Edinburgh: T. and T. Clark); *Instructions in the Art of Modelling in Clay*, by A. L. Vago (Simpkin, Marshall and Co.); *Laud and Tail*: an Ecclesiastical Study and Review, by A. Churchman of the Diocese of Canterbury (Parker); *Justin's Use of the Fourth Gospel*, by Edwin A. Abbott, I. and II., reprinted from the "Modern Review" (Speight); *Evolution Explained and Compared with the Bible*, by W. Woods Smyth (Elliot Stock); *My Prosecution under the Public Worship Act*: a Statement laid before the Archbishop of Canterbury, by the Rev. W. R. Enraght (Simpkin, Marshall and Co.); *The Testimony of a Dew-drop to its Creator*, with Some Observations on the Philosophies Akin to Atheism of the Present Day, by H. Noel (Nisbet); *Christ and Criticism*: the Witnesses Examined and Cross-Examined, by H. Sinclair Paterson (Shaw); *Humour and Irony of the Hebrew Bible*, by the Rev. Dr. Chotzner (Harrow: Wilbee); *The Church*, by A. Layman (Ridgway); *What is Religion?* a Vindication of Free Thought, by C. N., Annotated by Robert Lewins (Stewart); *Reasons Demanding an Answer*: an Inquiry into the Basis of what is commonly called Christianity (W. P. Collins); &c., &c.

#### FOUR POPULAR SONGS OF ITALY.

##### VENETIAN.

###### I.

CURSED luck, to love; to be alone the lover!  
Then, then, the fancy flies heaven-high; high  
o'er us:  
She flies high o'er us; high as the sun above her:  
Cursed luck, to love; to be alone the lover!

###### II.

All night upon my bed I toss and languish:  
For thee, my girl, I get no snatch of slumber:  
The very bed-clothes on my bed in anguish  
Wail and make clamour; that I find no slumber.

##### TUSCAN.

###### III.

O swallow, swallow, with the sea beneath thee;  
How fair thy feathers shine, how free they  
hover!  
Give me one feather from thy wings, I prithee;  
Fain would I write a letter to my lover.  
And when I've written it and made it charming,  
I'll give thee back thy feather, swallow darling:  
And when I've written it and gilt it over,  
I'll give thee back thy feather, free sea-rover.

###### IV.

O love, you pass, singing, while night is sleeping;  
I, wretched I, lie on my bed and listen:  
I to my mother turn my shoulders, weeping;  
Blood are the tears that on my pillow glisten.  
Beyond the bed I've set a broad stream flowing;  
With so much weeping I am sightless growing:  
Beyond the bed I've made a flowing river;  
With so much weeping I am blind for ever.

J. A. SYMONDS.

#### OBITUARY.

##### HEINRICH VON FERSTEL.

Taylor Institution, Oxford.

HAVING not seen any notice in the ACADEMY from a more competent pen, may I be permitted, lest it might undeservedly escape the attention of some of your readers, briefly to record the death of the eminent architect, Heinrich von Ferstel, which happened at Vienna on July 14, just one week after he had celebrated with his family his fifty-fifth birthday? If only as the ingenious architect and "Baumeister" of that noted jewel of modern Gothic art, the "Votiv- oder Heilands-kirche" at Vienna (worthily described some years ago in the ACADEMY by Mrs. Mark Pattison), which had

occupied the best part of his life for nearly a quarter-of-a-century, and was consecrated four years ago, he would be fully entitled to retain for ever a name in the history of monumental art. Yet he gained, moreover, a wide and deserved reputation by those numerous and magnificent private palaces, as well as public museums and institutions, by means of which Vienna, his native city, has obtained quite a new aspect. Towards the last, his energetic mind was especially occupied with the inner decorations of the stately new university buildings at Vienna, erected after his designs. It is hoped by all friends of art that those fresco-paintings by which he ardently desired to see the arcades of this his last creation embellished will be realised according to his wish.

H. KREBS.

### MAGAZINES AND REVIEWS.

THE last part of *Anglia* (Heft 2, Bd. vi.), though small, gives several interesting notices. The principal article is by Dr. W. Schumann, who adds another to the critical examinations already undergone by Dr. B. Morris's edition of the thirteenth-century *Story of Genesis and Exodus*. H. Löschhorn's sketch of Dr. J. Koch's essay on the *Legend of the Seven Sleepers* and E. Peters' of Dr. A. Wagner's recent edition of *Visio Tnugdali* call attention to the contents of those works; and F. H. Stratmann delivers himself on Prof. Kolbing's excellent edition of *Sir Tristram*. Perhaps the article of greatest interest to the English reader is that by Prof. Wülcker on Frau E. Mentzel's *Geschichte der Schauspiel-kunst in Frankfurt-am-Main*, from which he abstracts, chronologically, the appearances on the Frankfurt stage between 1591 and 1652 of English players, the Earl of Worcester's company, with the names of the pieces they played. The authoress obtained these and many other details for her History from the municipal archives of Frankfurt. It is curious that one of the players, who is conjectured (we are not told why) to have been the "scholar among them" who wrote a *Comedy of Abraham and Lot*, acted by the company in 1593, bore the name of Thomas Sackville or Saxfield, at the very time when his famous namesake, part author of *Gorboduc*, was Lord Buckhurst, and high in office at home.

### MODERN MYSTICISM.

*Letters from a Mystic of the Present Day.\**  
(Elliot Stock.)

THE small volume before us is one to which it is not easy to do justice in a notice of this kind. It owes much of its peculiar charm to the fact—which, at the same time, renders it difficult to give any systematic account of it—that it consists of extracts from letters written on various occasions during some years of intimate friendship, without thought of publication, and bound together rather by the absorbing interest of the writer in one subject than by any intended connexion or system. The subject, however, as suggested by the title, has its own sufficient unity; and the choice and arrangement of the extracts have been made with such remarkable skill that there is no sense of any want of continuity. Indeed, for our own part, we think that no systematic exposition of the writer's views could have had anything like the value of these strange flashes of light, struck out from time to time by the accidents of life, and the difficulties of others, in their collision with a mind and heart

saturated with that "inner light" which is its own evidence, and gifted with a radiant power of expression which makes even its fancies an illumination.

The writer's views are, in many respects, peculiar. We should be sorry to attempt to measure the degree of their divergence from "orthodoxy" according to any received standard still available. We should even be sorry to be called on to attempt a serious description or discussion of them. Not that we do not think them in many respects deeply valuable and fruitful, but that the fragmentary form in which they appear, corresponding with the vastness and mystery of the subjects in question, would make any attempt to gather them into a system unjust and idle. Their great value arises from the fact that they are revelations of certain aspects of truth as actually seen with the eyes of a writer in whom a passionate tenderness and a sincerity equally passionate have combined to wring out a solution of the confused and awful problem of this life of ours. His solution lies in a fresh, if not a wholly new, interpretation of the "Christ-revelation," as the power by which "the great tribulation" is transformed into a process for bringing every human spirit into a true consciousness of its own Being, as one with the Father—into a share in the fully developed consciousness of the Son of Man. He feels, with an intensity which carries the reader along with it, that, unless the true relation of the human to the Divine Spirit be an eternal fact, the revelation of it could have no meaning and no power to save; and he boldly declares the coming in the flesh of Jesus Christ to be the sign and manifestation, not the cause, of the Divine forgiveness. To his vision sin and sorrow are, in their nature and essence, transitory—shadows to be of necessity dispersed by the beams of the Sun of Righteousness. To him the "solidarity of the race" and the "hidden ramifications of life force" by which the members are upheld and nourished appear to be matters of immediate perception and daily experience rather than of speculative opinion. The writer is, indeed, a genuine mystic, and avows his own habitual practice of "quietism," which he regards as the only true spiritual "method," though his natural temperament, as appears to be often the case with mystics and quietists, is so ardent that his writing suggests the idea rather of dancing flames than of still waters.

The following extracts will give some idea of the pervading tone of thought of the letters, though not of course of their range:—

"The important point to grasp is, that Jesus of Nazareth 'brought life and immortality to light.' He declared in His own person that which is true of each member of the race—viz., that the life of God is a sacrifice for sin in every one of its members. And He, Jesus of Nazareth, by His maintenance of this declaration, maintained the birthright of mankind, and inherited the blessing predestined for the race, which inheritance constitutes Him its Elder Brother, the Lord of the universe, in virtue of which Lordship He empowers each one of its members to know and stand in his true Being or Birthright, and thus brings them into His glory. The incarnation opens out what is for ever true, being the pledge and the means whereby in our consciousness we can receive it. The Lord's life and death are a pledge and picture of the Eternal Truth, and a means whereby the blessing of this truth is ministered to our consciousness."

In another letter, speaking of the successive steps by which "Christ is formed in us," the writer says, with regard to the final phase:—

"Then comes the tasting of death for every man with the Lord Jesus, when, free from all weakness of heart, which is selfishness, and all weakness of will, which is infirmity, we shall dive under the burdens of others, and fulfil the law of our new life. Yoked to them, we shall uplift and bear the

weary and heavy-laden to their rest, and so on, until Christ shall be formed in every member of the body, and shall be All in All. It is when this mortal shall have put on immortality that shall be brought to pass (Oh! blessed vision and blissful occupation in its light!) the Gospel truth, that death is swallowed up in victory. Christ then will not only be formed in us, but in some joyous way, more blessed than we can conceive, Christ will be formed by us in the powers of the glorified body which has entered into the joy of its Lord." . . .

"When we are very tired we must 'shiver;' but we can and do warm one another when we strengthen in one another the conviction that we are all in solidarity with Him, who is the Wisdom, Love, and Power of the Universe, and are instruments in His hands for the bringing of all into the rest of the eternal sunshine. It is in the self-disownment which the light of His countenance produces, that Rest is found; and so, though outwardly one lives in the city of confusion, yet inwardly one is in the Jerusalem, and by its law of Love may carry an olive-branch of Hope and Peace to those who are overwhelmed with the confusion of this disorder." . . .

"Surely, Christianity is the response which follows the recognition of Love and its beneficent purposes of universal beatitude. In that atmosphere the heart beats freely and fully, for it is the Hope that saves. We ought to breathe the Hope before we attempt to deal with the distresses of life; then should we be armed with the sympathy that is powerful, and not merely with the sympathy that is the recognition of a common woe." . . .

"Only by looking at the eternal while we deal with the transitory, can we deal with the transitory in any way that is beneficial." . . .

"Other religions have talked of God as a Father as well as a King; but have they sounded the depths of Parental sacrifice on behalf of the offspring, as the Christian religion has done? Have any really presented us with an idea of Parental love in any way comparable with the Christian, either in effectiveness of power, or in width of embrace?" . . .

"I am quite sure that the evidence to the Christ will become less and less historical, and more and more spiritual or personal: by 'personal' I mean through living persons awakening the spiritual consciousness in others by the power of the awakened consciousness in themselves." . . .

"Whatever seems to be a better aspect of the Gospel than that which we at present have, must command our love and belief; we need not fear. If for a time we do wander off the narrow way in thought, we shall come back and shall be blest with a deeper, intenser knowledge of the truth. We must ever remember that the truth far transcends our present apprehension of it." . . .

"Regeneration can hardly yet have taken place for the individual, until he repudiates his sins, as no part of his true self. Anyone standing in the inward man will shrink from all association with that which belongs only to the outward, the garments spotted with the sin. Every time I identify a man with his sins as if they were the outcome of his being, I crucify Christ. Sins are the manifestation of defective consciousness and conditions." . . .

## CORRESPONDENCE.

## HORACE WALPOLE'S COPY OF THE PORTLAND MUSEUM CATALOGUE.

Hembury, Bristol.

At the sale of the Bedford Library last summer I bought lot 1676, which is thus described in the Catalogue: "Catalogue of the Portland Museum, frontispiece & bust of the Duchess, Horace Walpole's copy with numerous MS. notes in his handwriting (one of 4 pages, holograph, signed), 4to, 1786." I venture to send a description of the book, and copies of some of the notes, which, though trifling, may yet have interest to collectors and such as have purchased at the Strawberry Hill sale. The ink with which they are written still glitters with the pounce Horace Walpole used.

SPENCER GEO. PERCEVAL.

At the commencement is the Strawberry Hill book plate. On the opposite fly-leaf are inserted the newspaper advertisements of the sale. Above is written "The Duchess of Portland died July 17<sup>th</sup> 1785, aged 71."

Underneath the frontispiece is written, with corresponding numbers on the objects in the plate: "1 The Vase. 2 The Jupiter Serapis. 3 The Carp of Chelsea porcelaine."

On the title-page, after "By Order of the Acting Executrix," is written "Lady Weymouth, eldest daughter of the Duchess."

At the bottom of the page—"2000 Catalogues were sold before the Sale began."

Facing the commencement of the Catalogue is a plate which I have not seen in any other copy, representing the bust of the Duchess, on a table, with curtain to the left. Underneath is engraved "From y<sup>e</sup> original Bust by Rysbrake." At the right-hand corner "I. Barlow fec." At the bottom of the plate is printed

"Published April 18<sup>th</sup> 1786 by G. Humphrey, No. 48 Long Acre."

Lot 431. A most beautiful group of carp, of the fine purple ground, decorated with pea-green scroll leaves. After this is written "It is of Chelsea China & was given to the Dfs by Lady Weymouth. Mr. King has another." On the outer margin is written "27-0-0."

Lot 484. A tortoiseshell box, curiously inlaid with gold, and mounted in ditto, with a picture inside of Mary Queen of Scots, after which—"This is one of those imaginary portraits of Mary which I have mentioned to have been painted by Lens for Duke Hamilton." On the margin—"14-14-0."

At the bottom of the page is the following note in reference to the snuff-boxes:—

"Lord Oxford used to give his Countess a new Snuffbox on their birthdays, Wedding days, &c., & She used to wear three a week by turns. There were about 170 in this Sale, & being made in the reign of Anne, George 1<sup>st</sup> & 2<sup>nd</sup>, were void of taste & very ugly."

Lot 504. An engine-turned ivory box, after which—"probably turned by Lord Mounstuart 0-15-0." On the margin of the page, against the lot, "Mr H. Walpole."

Lot 1146. Two very fine horses in bronze, "from Lady Eliz. Germaines Sale; prob: by Fanelli." On the margin—"14-3-6."

Lot 1385. Specimen of the hair of Mary Queen of France, &c. Beneath the description is written

"I have some of the same hair, set in a locket."

Lot 1764. Three very curious sea-green ("blue")reed-pattern perfume pots "10-10-0." On inside margin purchaser's name—"Mr H. Walpole."

Lot 2365. A fine blue composition box in gold "3-3-0." On outer margin—"bought by Mr H. Walpole."

Lot 2410. A remarkable curious-shaped box, representing a musical instrument, of the gold japan. "This the Dfs valued the most of all her Japan, and I think cost 60 guineas" "24-14-6."

Lot 2696. Twenty-three portraits and views from Mr. Walpole's cabinet—"not true."

Lot 2807. A most curious collection of drawings, by Holbein, of knights in armour, &c., beautifully coloured and exceeding scarce—"was Mr. Wests." Against this lot the price "8-8-0."

Lot 2809. The original drawings of birds by Albin, most beautifully coloured after nature, 202 in number on vellum, 2 vols.—"Bought by Robson bookseller & sold to General Fitzwilliam."

2916. A large portfolio, bound in "Russia," &c., &c., "by Mr Talman."

2917. A second volume of ditto of equal beauty and elegance.

Lot 2918. The works of Hollar, &c. "385-0-0." On the outer margin—"bought in, but afterwards sold to Lord Somers for 300£."

Lot 2933. A portrait of Madame De Savigné, a portrait of a General, enamelled, and a circular portrait of Ceres "22-1-0." On the inner margin—"doubtful & bad."

Lot 2934. A very highly finished portrait of a gentleman—"It is Enamel & concave, & bold as oil" "1-11-6." On the inner margin—"bought by Mr H. W."

Lot 2940. Two miniatures, in a locket, gold enamelled, &c., against which, on the margin, is the price, "44-2-0," and below, "cost the Dfs 42-0-0."

Lot 2943. The portrait of Lady Frances Cecil, Countess of Cumberland, &c. On margin—"10-0-0." Below is the following note:—"I have a duplicate which the Duchess gave me."

At the bottom of the page is the following note in reference to lot 2931: A frame containing 30 circular portraits, &c., finely modelled and coloured by Holbein "38-17-0." "They are Draughts men of box coloured & not by Holbein; I have above 30 similar which did not cost above 2 guineas."

Immediately underneath is the following note in reference to lot 2941, against which, on the margin, is the price, "84-0-0":—

"This is not the Duchess de la Valiere, nor was painted by Petitot. It was offered to me for about 12 guineas, and I wd not buy it, nor was it then named. The Possessor then christened it & sold it to the Duchess of Portland, I don't know for how much but I know it is not worth five guineas. Lot 2934 which I bought for such a trifle, because it had no name, is one of the finest enamels in my Collection & very different from anything I ever saw in Enamel."

Lot 2946. Two miniatures of Milton and his Mother, &c., "34-2-6." On outer margin—"I do not believe it Milton."

Lot 2950. Queen Elizabeth's Prayer Book, "106-1-0." On outer margin, "bought by the Marquis of Carmarthen. The Duchess of Portland gave 21 guineas for it at the Sale of James West Esq."

Lot 2951. A very fine illuminated Missal, &c. (the Bedford Missal), "213-3-0." On outer margin—

"It was bought by Edwards the bookseller. The King had intended to buy it & give it to Eton College as having belonged to their Founder & had given an unlimited Commission for it, but his Commissioner thought it too dear and let it go & Edwards would [sic] not sell it again."

Lot 2952. A most beautiful Missal, &c., "169-1-0." Underneath the MS. price, on inner margin, the correction "Anjou" for ALANCON. On outer margin—"bought by Mr Horace Walpole. Mr. Udny assured Mr W. he had seen six more by the same hand, but none of them so fine or so well preserved."

Lot 3953. A glazed frame containing a specimen of a curious species of enorinus, &c. On outer margin—"15-15-0" under which is written, "It was bought by Dr John Hunter." At the bottom of the page—"This Enorinus cost the Duchess forty guineas."

Lot 4147. A very curious Rosary, &c., "46-9-0." On outer margin—"It cost the Duchess 39 guineas at the Sale of James West Esq."

Lot 4148. A most remarkable fine ditto, &c. "81-18-0." On outer margin—"It cost the Duchess 50 guineas."

Lot 4151. A small chimera of fine antique mosaic, "13-2-6." On outer margin—"This was S<sup>r</sup> W. Hamiltons & was bought by Mr Townley."

Lot 4152. A precious fragment, &c., "47-5-0." On margin—"This article and the three that follow were also S<sup>r</sup> W. Hamiltons."

Lot 4153. A cameo, &c., "236-5-0." On outer margin—"bought by the Duke of Portland."

Lot 4154. Jupiter Serapis, "173-5-0." On margin—"bought by Mr Horace Walpole." At the end of the description of the head is written, "It was a meer head; Mr Damer has since added to it the bust in bronze."

Lot 4155. Portland vase, "1029-0-0." On outer margin—"bought by the Duke of Portland." At the bottom of the page is written,

"As the Duchess paid 2000£ for the Vase, the Jupiter, the Augustus & the Hercules & the Duke bought the Vase and the Augustus for 1265, & as the Jupiter & Hercules produced but 220£ the Vase & Augustus really cost the family 3045£."

Supplementary Catalogue of Cameos and Intaglios, &c.

Lot 23. A very curious Ivory Comb, "0-18-0."

On outer margin—"bought by Mr. H. Walpole."

At bottom of page, in reference to lot 35—"This, with some other curiosities in the Polemberg Cabinet was engraved by Vertue on two plates."

Lot 66. A steel sword hilt, most beautifully chased, with six portraits, "of Princes of Orange," a chased steel knob, and a scabbard end. "It had probably belonged to K. William," "3-10-0."

At the end of the Supplementary Catalogue is inserted H. W.'s crest book-plate, and on the opposite fly-leaf a MS. summary headed "Produce of the Portland Sale." At the end of the book is inserted the note of four pages holograph, as follows:—

"Robert Harley Earl of Oxford, Lord Treasurer to Queen Anne, began collecting books & MSS at great expence. Robert Spencer, Earl of Sunderland formed a Library of printed books at the same time; and their competition raised the price to a great height [sic]. Robert, the second Earl of Oxford, continued to have the same passion, but with an additional taste for all sort of curiosities. The Dispersion of the Arundelian Collection furnished Lord Oxford with many precious rarities. His Library of books and prints grew so vast, that he built an extensive Gallery at Marybone to receive them. But the expence of that Earl and his Countess, [tho She was Heiress of the last Cavendish, Duke of Newcastle & inherited a very considerable portion of his Estate, the major portion of which however had been adjudged after a litigation to her Cousin Thomas Holles Pelham, Duke of Newcastle, whom her Father had wished her to marry] was so great, that on the Earls death, his magnificent collection was sold, except what he bequeathed to his Widow; & his Collection of Hollar's Works, and a rich cabinet which will be mentioned hereafter, which he left to his only child Lady Margaret Cavendish Holles Harley, wife of William Bentinck, second Duke of Portland. The pictures, Statues, Busts, Bronzes, Coins, Medals, & various other curiosities, were sold by Auction. The MSS [except what were purloined by one of the Executors] were bought by Parliament for the British Museum. The Library of Printed Books, with an immense collection of English Tracts, was bought by Osborne of Gray's Inn, bookseller, for thirteen thousand pounds. The Prints, that man bound richly in Russia Leather gilt; but by blending good & bad prints together to get off the bad, those volumes sold for little more than the Bindings had cost. The Books however indemnified Him.

"The Duchess of Portland inherited the Passion of her Family for collecting. At first her Taste was chiefly confined to Shells, Japan & Old China, particularly of the blue & white with a brown Edge, of which last sort She formed a large Closet at Bulstrode; but contenting herself with one specimen of every pattern, She could get, it was a Collection of odd pieces.

"The Countess Dowager of Oxford, her mother, retired, on the Earl's death, to her paternal seat at Welbeck, where She assembled a prodigious Collection of portraits of her Ancestors, and had reserved the fine Miniatures, Enamels, & Vases of Crystal & all which She left as Heirlooms to her Daughter and her Descendants.

"On Lady Oxford's death, the Duchess of Portland exchanged Welbeck with her Son the Duke for Bulstrode, which She repaired & borrowed the principal Miniatures for her life, to be restored afterwards to Welbeck.

"Inheriting from her Mother at least eight thousand pds a year, She laid out a great part of it every year in her Menagerie & flower-garden at Bulstrode, & in indulging her taste for Virtue, sparing no expence to gratify it, for about thirty years, her own purchases costing her not less than threescore thousand pounds. Prints of Hollar, to compleat his work, She bought at any prices. On the death of St. Luke Schaub the Duchess began to buy pictures which She did not understand, & there & in other instances paid extravagantly, as well as for other articles to her taste. Latterly She went deeply into Natural History & her collection in that Walk was supposed to have cost her fifteen thousand pounds. For one Winter, very few years before her death, She

engaged Dr Solander to range & catalogue her Shells, fossils, Insects &c.

"For the three or four last years of her life She checked her purchases; but some two months before her Death, She was tempted by the celebrated Barberini Vase, imported by the noted Virtuoso St. William Hamilton, Minister of Naples, who had purchased it & the head of Jupiter Serapis in basalt, of Byers a Cicerone at Rome. The Princess of Palestrina, Mother of Prince Barberini, had during her Son's Minority, to pay her gaming debts, Sold these curiosities to Byers for 500£ & Byers had resold them to St. William as it was also said for 1000£. The Duchess gave 2000£ to St. William for them, a fine Cameo of Augustus & a fragment of an Intaglia of a Hercules.

"The Duchess dying in 1785, ordered her Collection to be sold for the benefit of her second Son Lord Edward Bentinck, & her Daughters the Lady Viscountess Weymouth & the Countess of Stamford.

"The Collection was accordingly sold in May & June 1786, in a Sale of thirty-eight days, [to which was added one Days Sale by the Duke, her Son of some indifferent cameos & intaglias & other articles from the Polemberg Cabinet & which day produced but 560£]

"The Produce of the Auction was Ten thousand, nine hundred & sixty five pounds, ten shillings & sixpence.

"But the disproportion between the large Sum which the Duchess had expended, and the produce of the Sale, was not near so great as it seemed. Several of the most valuable articles in her Collection were not exposed to Sale. The enamels & Miniatures as I have said, were entailed on the Duke. Her most valuable jewels She had distributed between her Daughters & Granddaughters on their marriages, as a pair of solid Emerald drop-earrings to her Daughter, Lady Weymouth, & a toilette of gold Filigraine to her Granddaughter the Countess of Aylesford. To her Friend Mr. Delany She had bequeathed an exquisite portrait of Petitot in enamel by himself, which her Grace had bought in Ireland for forty guineas of a Grandson of that Painter; & also Raphaels Min: from the royal Collection, two Min: (different) in water-colours, also called by Raphael, but certainly not, and an enamelled Snuffbox. The pictures at Bulstrode, the blue and white China, a fine Commode of blue and white Seve [sic] China mounted in ormolu, a Marble Shock-Dog, said to be by Bernini & which the Duchess had bought at the Sale of Dr Ward, author of the Drop, all these her Grace bequeathed to her Son the Duke & likewise the Ebony Cabinet, the drawers of which were painted by Polemberg & which from the value of the rarities it contained was called the Ten thousand pd Cabinet & had been the legacy of her Father. One of those Curiosities did not belong to the Cabinet, but to the Duke of Portland himself, being the pearl earring worn by Charles 1<sup>st</sup> at his Execution, attested by his Daughter Mary Prins of Orange, & given to the Earl of Portland by King William. The other most precious articles were, a small antique Vase of Agate with heads of rams in alto relievo; the Dagger of Henry 8<sup>th</sup> set with jacinths; Profile of Queen Elizabeth in cameo by Valerio Vicentino; very fine head of Cardinal Mazarin in enamel by Petitot; ditto larger of Prior by Boit; Archbishop Sheldon large & capital by Cooper; Seal of Charles 2<sup>nd</sup>, when Prince of an entire Emerald, a very large Sapphire & an uncommonly large Topaz; besides other articles. I believe there was also left to the Duke a small Moonlight by Elsheimer, which cost the Duchess an hundred & twelve pounds—as the Holy Family supposed a Duplicate by Raphael of that at Versailles, & for which the Dis gave 800£ as she did 500£ for a View of Antwerp by four different Painters, both from St. Luke Schaub's Collection were also left at Bulstrode to the Duke.

"Hor. Walpole."

#### MONUMENTAL INSCRIPTIONS IN NORFOLK.

Selhurst, S.E. : July 30, 1883.

Mr. W. Vincent's news as to the vigorous progress he is making in copying all the Norwich inscriptions is very welcome to all inter-

ested in the history of Norfolk. As I see that he announces also an intention to go on with the county afterwards, and as workers are too scarce to waste labour by doing work twice over, I may point out that I have copied, and am now printing, every inscription in the Hundred of North Erpingham (2,509 in all); that Mr. Walton N. Dew is copying, and will print, all Holt Hundred; and that I hope to complete Tunstead Hundred this autumn. The current part of the *Norfolk Antiquarian Miscellany* will contain inscriptions from Edington, Swaffield, Hoveton, and Stokesby. Atlesey is another reading of Atlesea, and Pagraff of Pagrave. WALTER BYE.

#### CAT FOLK-LORE.

July 31, 1883.

In Mr. Lang's review of Paul Sébillot's *Traditions de la Haute Bretagne*, in the last number of the ACADEMY, he asks where the English form of the tale about the "King of Cats" is to be found. There is a version in the "Fragments" at the end of Southey's *Doctor*, p. 682. I have an indistinct recollection of another form of the story, different from that given by Southey. In this the pall-bearer of the dead "King of Cats" speaks to the man, and says, "So-and-so, go home and tell thy cat that ——— is dead." I have forgotten the name given; it is much longer than "Renaud." The rest of the story is like that quoted by Mr. Lang. MINNA HALFDON.

#### SCIENCE.

*Proverbes et Dictons du Peuple arabe: Matériaux pour servir à la connaissance des dialectes vulgaires. Recueillis, traduits et annotés par Carlo Landberg. Vol. I.—"Province de Syrie: section de Saydâ." (Leyden: Brill.)*

It is only in quite recent years that the importance and significance of the modern dialects of Arabic have been recognised. Formerly, it was considered that the omission of certain refinements of speech, and the dropping of certain terminations, sufficed to convert classical into vulgar Arabic. A short experience in the East is enough to convince anyone of the error of this view. Classical Arabic, the Arabic of dictionaries and grammars, is a conventional and artificial book-language, a crystallised perpetuation of a single dialect or group of dialects, a language deliberately arrested and slain at a certain point in its growth. Modern Arabic is a living and growing tongue, varying in every province, presenting everywhere forms and idioms unknown to the classical language, and full of valuable materials for the student of Semitic philology and modes of thought and expression. Dr. Spitta, whose presence will always be missed by frequenters of the library in the Darb el-Gemmâmiz, was the first to treat of a modern Arabic dialect in a scientific manner; his Grammar of the Egyptian spoken language is a model of method, accuracy, and thoroughness. He has found an able second in Dr. Landberg, whose collection of Arabic proverbs promises to be of no small service to the student of Arabic as a whole. His Preface is an eloquent defence of the modern language, of which he constitutes himself the champion.

"On néglige beaucoup trop l'étude scientifique de la langue vulgaire, suivant en cela la routine

des orientaux. Elle est cependant belle, riche et d'une importance suprême pour la philologie sémitique. J'espère que le temps est passé où on ne la considérait que comme un mauvais jargon indigne d'être l'objet des études du savant professeur, qui ne devait illustrer son nom que sur les anciens poèmes et les grands ouvrages historiques. Pourtant, on est bien loin encore de lui avoir assigné la place qui lui revient dans les langues sémitiques. On le regarde un peu avec dédain en Europe. . . . C'est pour cette fille délaissée d'une grande mère que je me pose en champion."

Dr. Landberg is perfectly right in saying that the modern language is rich and expressive, and it is impossible to exaggerate the advantages which will accrue from a thorough study and analysis of it. It is here that one feels afresh the cruelty of the fate which deprived scholarship of the aid of Prof. Palmer. No one could have brought a keener observation or a more intimate experience to bear on this department of Arabic research. No one understood the Arab mind and the resources of the modern Arabic tongue better than he did. Dr. Landberg, however, has lived long among the people, has associated with all classes, and has spared no pains in noting the peculiarities of their speech and searching for the meaning of their dark sayings. Whenever he heard an Arab quote a wise saw or pertinent proverb, he immediately noted it down, and made the person who said it, or a bystander, explain it on the spot. In this way he has collected some three thousand proverbs, and has appended to each of them a short story or instance in which its application is explained. To the proverb and its illustration he adds notes on the peculiar idioms and forms occurring in either; and these notes will be found to form a very interesting commentary on the manners and customs of the people, since the names of goods, utensils, articles of dress, and the like are carefully explained, and their mention often leads to short essays on various phases of Mohammedan life. The great merit of Dr. Landberg's work is that it is not in any way worked up or refined. He takes the proverbs and their explanations from the lips of the common people; he neither polishes their style nor cleanses their obscenity; but bravely prints the often crude and disgusting adages, in which the naturalism of the East sees pregnant truths, in all their naked ugliness. This is the only way of dealing with popular sayings, and fastidious people must bring their own disinfectants. There is, however, much that is striking and pointed in these proverbs, and they frequently give one a remarkable insight into the people's mind.

The present volume is only an instalment of a much larger work. It contains two hundred proverbs of the town and district of Saydâ, of which El-Mukaddeey said, "There is no better speech than that of the people of Baghdad, and none worse than that of Saydâ." This verdict Dr. Landberg indignantly controverts, and, though certainly the dialect is vile enough to classically trained ears, it is not worse than many others. And, after all, the main point is not that the dialect is chaste or corrupt, but that it is the actual speech of a certain district in the present day. Vol. ii. is to deal with

the proverbs of Damascus and Haurân, vol. iii. with the Metawelis, Kesruwân and the Nusayriyeh; vol. iv. with Homs, Hamah, and Aleppo; vol. v. with the Syrian Bedawy dialects. Thus Syria will occupy five stout volumes. Then will follow Palestine, the Nejd, Hijâz, Yemen, &c.; so that the natural term of the most industrious scholar's life may be said to be tolerably provided for. Each portion of this great work will be an unmistakeable gain to Semitic philology. The glossary alone at the end of the present volume is worth the price of the whole book.

Dr. Landberg is a little severe on previous collectors of proverbs, like Meydâny, Freytag, and Burckhardt. He seems to imagine that because they collected their proverbs from books, and not orally, these proverbs are merely literary exercises; and that, because many of them are not known to be spoken in the present day, they never were spoken at all. This position seems unreasonable. Proverbs such as those referred to are not invented by authors, though they undoubtedly were somewhat polished by their collectors; they were once common phrases in the mouths of the folk. And, again, that a proverb may fall into disuse is an established fact. At the same time, there can be no dispute that Dr. Landberg's collection possesses a value distinct from those of his predecessors, and his proverbs have a genuineness and popular smack about them that give them a peculiar interest.

STANLEY LANE-POOLE.

#### CURRENT SCIENTIFIC LITERATURE.

*Conservation of Solar Energy.* By C. William Siemens. (Macmillan.) This volume contains a reprint of Sir Wm. Siemens' original paper on the Conservation of Solar Energy, communicated to the Royal Society early in 1882, and a number of criticisms and discussions to which that paper gave rise. Some of these appeared in letters to *Nature*, others—e.g., those of MM. Hirn and Faye, as well as Sir W. Siemens' rejoinders—were published in the *Comptes-rendus* of the French Academy. The widespread interest which has been taken in the new theory, and the fact that fresh evidence will probably be brought forward and fresh discussions follow in connexion with it, are a sufficient justification for the republication of these papers in a collected form. The question has often been asked, What becomes of the enormous quantity of energy emitted by the sun which is apparently wasted in space? All the planets taken together absorb but an infinitesimal fraction of solar radiation; and of the rest, which is not so absorbed, we can give no account. The doctrine of the conservation of energy forbids us to suppose that it is lost. What, then, becomes of it? Sir W. Siemens' theory suggests a solution of the difficulty, a solution at once ingenious and well considered. It is a shrewd guess at truth. According to this theory, stellar space is not vacuum, but is filled with gaseous matter in a highly rarefied state. The sun, whatever may be his interior constitution, is enveloped by gaseous shells or atmospheres of enormous thickness, gradually diminishing in density with increasing distance from the centre. Moreover, the sun rotates on his axis; and, in consequence of the centrifugal action thereby developed, there is, on the whole, a feebleness of attractive force on the gaseous particles in the equatorial than in the polar regions, and currents must be produced. The sun will

therefore act like a fan, a continuous inflow of matter from space taking place upon the polar surfaces, accompanied by an outflow into space in an equatorial sheet. We see, therefore, that there will be in the course of ages a cycle of changes, in consequence of which a particle of matter which leaves the solar surface to-day will return again after years or centuries. We know that compound bodies like carbonic acid and aqueous vapour can be decomposed into their elements at a sufficiently high temperature. Also that in the leaflets of plants, ordinary sunlight is capable, in conjunction with chlorophyll, of decomposing these bodies. Sir W. Siemens is of opinion—and his experiments, though up to the present not numerous, bear out his view—that ordinary sunlight can dissociate carbonic acid and aqueous vapour in vacuum tubes, provided the exhaustion be carried sufficiently far. The aqueous vapour and carbonic acid in stellar and interplanetary space, which must be at a pressure far below that ordinarily produced in our vacuum tubes, are, therefore, in a suitable condition for being dissociated by solar radiations which they absorb; and the observations of Capt. Abney and Prof. Langley indicate that absorption does take place in the space which separates our atmosphere from that of the sun. We can thus understand how oxygen, carbon, hydrogen, &c., which leave the sun in chemical combination with each other, may return in a more or less elementary condition. As they approach the sun their pressure becomes greatly increased, and their temperature consequently rises; presently they burst into a flame, and by their combustion maintain the solar energy. They constitute the sun's fuel. In order that combustion, as imagined by Sir W. Siemens, may take place, it is absolutely essential that the temperature of the photosphere be below 3000° C., because it has been shown experimentally that under ordinary pressures, oxygen, hydrogen, and carbon will not combine with each other above this temperature. The author has given reasons, founded on experiment and analogy, for assigning a temperature of about 2,800° C. to the photosphere. Such are, briefly stated, the main features of Sir W. Siemens' theory. Its fundamental conditions are:—(1) That aqueous vapour and carbon compounds are present in space; (2) That these gaseous compounds, while in a state of extreme attenuation, are capable of being dissociated by radiant solar energy; (3) That these dissociated vapours are capable of being compressed into the solar photosphere by a process of interchange with an equal amount of re-associated vapours, this interchange being effected by the centrifugal action of the sun himself.

"If these conditions could be substantiated, we should gain the satisfaction that our solar system would no longer impress us with the idea of prodigious waste through dissipation of energy into space, but rather with that of well-ordered, self-sustaining action, capable of continuing solar radiation to a very remote future."

*Flora of Hampshire, including the Isle of Wight.* By F. Townsend. (L. Reeve and Co.) In no department of botanical literature has there been a greater improvement during recent years than in the local floras. An admirable example was set in Trimen and Dyer's *Flora of Middlesex* published in 1869; and of the new style we have seen no better illustration than the one before us. Mr. Townsend is well known for his wide and accurate acquaintance with our English native plants. The flora of Hampshire is a remarkably rich and interesting one; and he has evidently studied it with great care. Instead of the bare list of localities which comprised all the information contained in our older county Floras, we have, first of all, a treatise on the topography, climate, and geological features of the county, which is divided

into twelve botanical districts founded on the river basins; and this division is illustrated with a coloured map. There is in addition a coloured drawing of the interesting *Erythraea capitata*, a "find" of the author's on Freshwater Downs, "probably an almost unique example of the occurrence in England alone of a species once widely distributed, but now almost extinct." The book should be in the hands of everyone interested in the flora of the old royal county.

*Ants and their Ways.* By the Rev. W. Farren White. (Religious Tract Society.) Mr. White has gathered together in this short volume the most valuable results obtained by Sir John Lubbock, Dr. McCook, and others, and has added to them several interesting observations of his own, to which, perhaps with parental fondness, he attaches a little too great relative importance. No subject in natural history is better fitted for popular treatment than the habits and manners of these most marvellous among the social insects; and Mr. White is able to set forth the main facts about their formicaries, their slave-making instincts, their harvesting, their honey-gathering, and so forth in a very agreeable and attractive style. The book will make a good school-prize, and cannot fail to interest any intelligent boy to whom it is given. It has the merit, rare in works of this character, of having been written by an original observer, who speaks upon ants with the authority justly derived from first-hand knowledge.

MESSRS. CLOWES AND SONS have sent us a large number of little books issued by them as the official publishers of the International Fisheries Exhibition. Though similar in outward appearance, they form two distinct series: (1) handbooks, and (2) reports of conferences. Of the first series we have already received *The Fishery Laws*, by Prof. F. Pollock; *Zoology and Food Fishes*, by Mr. G. B. Howes; *British Marine and Freshwater Fishes*, by Mr. W. Saville Kent; and *The Unappreciated Fishes*, by Mr. W. Saville Kent. These vary much in size, and some have illustrations; but all are published at the uniform price of one shilling. The second series include papers on the "Herring Fisheries of Scotland," by Mr. R. W. Duff; "Oyster Culture," by Prof. Hubrecht; "Principles of Fishery Legislation," by Mr. G. Shaw-Lefevre; "Culture of Salmonidae," by Sir James Gibson Maitland; "Fish Transport and Fish Markets," by Mr. Spencer Walpole; "The Food of Fishes," by Dr. Francis Day; "Fish Diseases," by Prof. Huxley; "Economic Condition of Fishermen," by Prof. Leone Levi.

THE Rev. H. Wood has just brought out an opportune little volume, *A Season among the Wild Flowers*, illustrated with numerous woodcuts (Sonnenschein). It follows the progress of the season through spring and summer, and describes simply, but accurately, many of the chief natural orders of our flora, with numerous genera and species.

#### THE SCOTTISH METEOROLOGICAL SOCIETY.

THE half-yearly meeting of the Scottish Meteorological Society was held on Thursday, July 26, at Edinburgh. We extract from the Report of the Council the substance of the passages regarding two important undertakings which the society has set on foot—a permanent observatory on the summit of Ben Nevis, and a zoological station at Granton, near Edinburgh:—

"The expenses incurred in making the observations on the top and slopes of Ben Nevis during the summer months of 1882 amounted to £231, to meet which the society has been aided by grants

of £100 from the Meteorological Council, £50 from the British Association, and £50 from the Royal Society of Edinburgh. During the present summer, observations have been resumed under the direction of the council. Mr. Wragge is unable this year to undertake the work of observing, as he is obliged to go to Australia; but the services of Mr. W. Whyte and Mr. Rankin, two of his former assistants, have been secured, and the work proceeds in a very satisfactory manner. As it is essential that each morning's observations be transmitted to London shortly after they are made, so that they may be used in framing the daily weather forecasts, carrier pigeons (as suggested by Mr. Scott) were obtained, and are in course of being trained to carry the observations from the top of the Ben to Fort William for transmission by wire to London. The council are happy to be able to inform members that the necessity of employing this toilsome method of making the observations on the top of Ben Nevis will soon cease, the appeal by the council to the public for funds to build an observatory on the Ben having been so cordially responded to that the council now feel themselves in the position of being able to proceed at once with its erection. A commencement has been made by the formation of a bridle-path to the top of the Ben from a point about four miles distant. The building itself is expected to be commenced early in August. Plans have been prepared and approved. Estimates will be taken forthwith, and nothing will be left undone to secure that as much of the observatory will be completed before the first week of November as will afford the necessary accommodation for three persons passing the winter in that elevated situation. The War Office has furnished tents for the accommodation of the workmen. Arrangements are being made for laying a wire between the observatory and Fort William. The observations it is proposed to make during the coming winter will be nearly altogether eye observations, designed with the view of ascertaining the main features of the climate of the top of the Ben—a knowledge of which will guide the directors in equipping the observatory with the automatic and other instruments required during next season. At the general meeting of the society held about a year ago, it was resolved to appeal to the public for a sum of at least £5,000. In carrying out this resolution a sum of £1,600 was raised in large subscriptions; and thereafter a wider appeal was made to the general public, in which it was stated that the smallest sums would be received. This appeal has been responded to in a most gratifying and cordial manner, and the subscriptions now amount to upwards of £4,400."

Mr. John Murray, of the *Challenger* expedition, read the Report of the committee appointed to consider the allocation of a sum of about £1,600, being the surplus profits of the Fisheries Exhibition held at Edinburgh in 1882. It contained the following recommendations:—

"(1) To continue and extend the river observations and the observations made by the district fishery officers through the Scottish Fishery Board, and to discuss all observations made to the end of the fishing season of 1883 which are yet undiscussed. (2) To obtain the assistance of a few naturalists in making observations at several of our chief fishing centres and principal inland lakes. Prof. Herdman has consented to reside at Loch Fyne for a month, and to arrange for observations for a year. Mr. Hoyle is, in like manner, to go to Peterhead, and Mr. Boddard to Eyemouth. Rev. Dr. Norman has, during the present month, been engaged in examining a large number of the Scottish lochs. Instructions have been drawn up for the guidance of these gentlemen, and a sum not exceeding £50 has been placed at the disposal of each of them for the expenses immediately connected with the investigations. (3) It is proposed to enclose the Granton Quarry, which has an area at high water of about ten acres and depths varying to sixty feet, so as to regulate the inflow and outflow of the tide in such a manner that, while admitting abundance of sea-water at each tide, fish and other animals will be prevented from escaping out

of the enclosure. This will be done by means of stakes and wire and other kinds of netting. The quarry will then be stocked with all kinds of fish and marine invertebrates. When it is desired to separate fish or other animals for special study, this will be done by means of floating or fixed wire and wood cages. A barge, about sixty-four by twenty-seven feet, of great stability, will be moored in the enclosure; upon this will be built a house with laboratories, work-rooms, and a library; it will also be furnished with a small windmill to pump up sea-water into a tank on the roof. The water in this tank will be conveyed by pipes to the various tiled tables, glass jars, and aquaria of the establishment. A small cottage will be built on the shore for the accommodation of the keeper and the engineer, with one or two spare rooms. A steam pinnace for the purpose of dredging and making observations in the Firth of Forth and the North Sea will be attached to the station. A naturalist will be appointed, whose duty it will be to make continuous observations and experiments, assisted by the engineer and keeper. There will be ample accommodation for four other naturalists to work at the station and carry on investigations; and, so far as the accommodation will permit, British and foreign naturalists will be invited to make use of the station free of charge. Towards the carrying out of this scheme the Duke of Buccleuch has consented to grant a lease of the quarry at a nominal rent, with permission to erect a cottage on the shore. A gentleman who takes a warm interest in the progress of research in Scotland has offered £1,000 to construct the barge with laboratories and work-rooms. Mr. John Henderson has undertaken to provide the plans and specifications of the barge and laboratories gratuitously. Mr. J. Y. Buchanan has promised to fit up one of the rooms of the barge as a chemical laboratory suited to the requirements of the station. Mr. Thomas Stevenson, the society's secretary, has agreed to give his professional services in enclosing the quarry gratuitously. Mr. John Anderson, of Denham Green, has undertaken to provide the station with a salmon and trout hatchery. Mr. Murray will himself furnish the laboratories with apparatus, and will place his large zoological library at the service of workers. In these circumstances the committee, believing that this scheme deserves their hearty support, recommend for the year ending November 1, 1884, a grant from the fishery fund not exceeding £300, and £250 for the two subsequent years, towards the expenses of the station."

#### CORRESPONDENCE.

##### THE ADVENTURES OF A PAHLAVI MS.

Oberammergau: July 30, 1883.

In the ACADEMY of February 6, 1875 (p. 142), Prof. Max Müller related the adventures of some fragments of a Pahlavi MS. before they found a final resting-place in the library of the India Office. The MS. was a polyglot, in loose sheets, containing the Pahlavi, Pāzand, Sanskrit, and Persian versions of the *Shikand-gamāntk Vijār*, arranged in parallel columns; and it had been brought from Surat by Mr. Romer, who supposed it was a copy of the *Bundahish*. Two fragments of this MS. were given by him, in 1836, to Prof. H. H. Wilson, and two more to Mr. Norris; and these four fragments, containing pp. 32-143 of the MS., were finally deposited in the library of the India Office in 1875.

I am now able to state that a fifth fragment of this MS., containing pp. 16-31, was formerly sent by Mr. Romer, through Mr. Poley, to the late Prof. M. J. Müller, and is now in the Royal State Library at Munich. It is appended to a fragment (pp. 1-16) of a Pahlavi-Persian *Bundahish*, in Od. Zend 10 of that library, which explains Mr. Romer's error as to the name of the whole MS. The Parsi Dastur at Surat had given him the first fifteen pages of the *Bundahish*, instead of the same pages of the *Shikand-gamāntk Vijār*, and had thus led Mr. Romer to suppose that the whole MS. was a copy of the *Bundahish*.

This polyglot MS. is too modern to be of any great critical value; but the combination of so many versions makes it a rarity, as only one other similar MS. is known to exist, and that is supposed to be at Surat. The five fragments mentioned above contain about eight-ninths of the extant Pahlavi text, but only one-sixth of the whole Pāsand-Sanskrit version of the work. And, as it is probable that Mr. Romer possessed the remainder of the MS., so far as the end of the Pahlavi text, it is very possible that a sixth fragment, containing pp. 144-59 of this polyglot work, still exists somewhere in Europe.

E. W. WEST.

#### CHINESE AND SIAMESE.

Oxford: July 28, 1883.

From the correspondence published in the ACADEMY, it appears that M. Terrien de La Couperie and Dr. Edkins have no misgivings as to a close relationship between Siamese and Chinese. It seems to me unsatisfactory to determine relationship between any two languages by comparing words with each other. If the words belong to things of daily life, religion, &c., they may have been borrowed. We have to look for some syntactical affinity in monosyllabic languages. Now, the laws as to compounds are different in Siamese and in Chinese. In compounds in Chinese, just as in the Aryan languages, the defining word or words always precede the word or words they define. In Siamese (as in the Semitic and other languages) the defined member of the compound precedes all the defining ones. Whether the order of the words as preserved in Siamese and in the Semitic languages is the original one, and whether this order can be traced in all languages, I will not here discuss; but I hope to do so soon in another place and in another context. I now wish only to enter my protest against too rashly determining relationship between languages.

O. FRANKFURTER.

#### SCIENCE NOTES.

THE Rolleston memorial fund, amounting to £1,200, has now been transferred to the University of Oxford, and accepted by them for the institution of a prize, to be awarded every two years, for original research in any subject comprised under the following heads:—Animal and vegetable morphology, physiology and pathology, and anthropology, to be selected by the candidates themselves. The period during which this prize may be obtained by a candidate is limited to ten years after the date of matriculation; and, with a view to render the prize as widely associated with Prof. Rolleston's name as possible, it is open to the members of both Oxford and Cambridge.

HERR HARTLEBEN, of Vienna, announces a Bibliography of the Electric Sciences from 1860 to 1883, which is to be published in his *Electrische Bibliothek*. It is compiled by Herr Gustav May.

In the last number of the *Bulletin* of the Anthropological Society of Paris are three remarkable memoirs descriptive of the brains of MM. Asseline, Assézat, and Coudereau—the first members of the "Société mutuelle d'Autopsie" who have been subjected to *post-mortem* examination. Hitherto the French anatomists have obtained their knowledge of the brain from the study of subjects who have died in hospitals, and whose previous life and intellectual history were absolutely unknown. They therefore look forward to much good from the new society, inasmuch as it will afford them opportunity from time to time of examining the cerebral anatomy of individuals with whose mental capacity and moral character they have

been familiar. Such an opportunity as that afforded by the dissection of Jeremy Bentham in our own country is exceedingly rare. Until a large number of brains of well-known persons shall have been carefully studied, it will be obviously desirable to withhold from attempting any generalisation.

#### PHILOLOGY NOTES.

MR. GLADSTONE has written the following letter to Dr. Ginsburg:—

"The state of the small fund now under my control permits me to offer you the sum of £500 in aid of the expenses of producing your important work [the *Massorah*]; and I am very glad to have an opportunity of thus setting on it a mark which is presumptively one of public approval, though indeed you stand little in need of fresh marks of what has been already so well known to you."

MR. ROBINSON ELLIS is at present staying at St. Gallen, in Switzerland, where he finds much to interest him in the Stifts-Bibliothek, which contains some MSS. of the eighth and several of the ninth century. He has also paid a visit to Avenches, the Roman Aventicum. Excavations are still carried on here during the winter, and fresh objects are continually being brought to light. Mr. Ellis was taken over the excavations by M. Caspari, a local antiquary of distinction, who showed him the remains of a Saracenic wall, said to be unique in Switzerland and France; also a large marble block recently discovered, belonging to the (so-called) temple of Apollo, which contains, besides some fine mouldings, three heads, one of a child almost perfect and another of an old man.

THE first series of the "Sacred Books of the East," published by the Clarendon Press under the editorship of Prof. Max Müller, is now approaching completion. Out of the full total of twenty-four volumes, nineteen have already appeared, though not quite in the order of their numbering. The remaining five volumes, which are in the press, will be parts ii. and iii. of the *Upanishads*, translated by Prof. Max Müller himself; the *Upanishads*, by Georg Bühler; the *Saddharma-pundarikā*, by H. Kern; and the *Ākāraṅga-Sūtra*, by H. Jacobi.

MESSRS. MACMILLAN announce in their "Classical Library" an edition of the *Phædo* of Plato, edited by Mr. R. D. Archer-Hind, of Trinity College, Cambridge.

DR. E. WOELFFLIN's project of publishing an "Archiv für lateinische Lexicographie und Grammatik," to which we have before made reference, has received the support of the Munich Academy, so that the continuance of the work for at least three years is assured. It is intended to provide the materials, and to formulate the principles, for a final *Thesaurus Linguae Latinae*, including the ancient Low-Latin. The first *fasciculus*, now in the press, will contain only essays of a general character, including one by Dr. Groeber, of Strassburg, on the origin of the Romance languages. The publisher is Teubner, of Leipzig.

HERR E. SEELMANN will shortly publish a book upon the Pronunciation of Latin, with reference not only to the ascertained facts of history, but also to physiological principles.

DR. G. KÖRTING is engaged upon an Encyclopaedia of Romance Philology.

#### FINE ART.

##### ART BOOKS.

*Sketching from Nature.* By Tristram J. Ellis. "Art at Home" Series. (Macmillan.) These sound and brightly written pages on sketching form one of the best volumes hitherto published in this useful but unequal series. At first sight the subject seems scarcely suited

to a set of books on "Art at Home," but this in no way affects the merit of the volume. Mr. Tristram Ellis is less (in the sense of "less often") at home in England than most artists; but he is perhaps more, as well as more often, at home elsewhere, and can make a residence out of a tent and a studio in the shade of a tree. If anyone knows what are the difficulties of sketching from nature it is surely he; and a certain amount of traveller's skill is a desirable equipment for all who sketch in the open, even though their "walks abroad" do not extend beyond the neighbourhood of an English village. A book of this size upon such a subject is necessarily little more than a collection of hints; but in writing, as in painting, it is not the number of touches, but the suggestiveness of them, that tells, and the art to omit is of as great value in one kind of composition as in the other. Mr. Ellis could scarcely have given more effective information in so small a space; and we can recommend his book not only to those who are beginning to sketch, but to those who have no intention of beginning. Everyone who has not already mastered the elements of sketching will be able to read with pleasure and profit the short and lucid chapters in which he has not scrupled to set down for the benefit of others the lessons he has learnt from experience. As examples of terse and clear writing, we may instance those on "Perspective," "Composition," "Figures," "Values," and the short note on "Simplicity." The illustrations are from sketches by Mr. H. S. Marks, R.A., and Mr. Ellis himself; and, if we have any fault to find with them, it is that they are too finished. They are like wood-cuts from pictures rather than sketches, and do not at all suggest the touch of sketching materials. As lessons, however, in composition, selection, perspective, light, tone, and other important elements of the subject under treatment they are admirable.

*The Art of Michelangelo Buonarroti in the British Museum.* By Louis Fagan. (Dulau.) This is another of Mr. Fagan's helps to students. It consists of a descriptive catalogue of the drawings by Michelangelo in the British Museum, accompanied by a chronological summary of the facts of his life, a short account of the former owners of the collections from which the drawings are derived, and lists of the portraits of Michelangelo and of the books relating to him to be found in the great national Museum. It is needless to say that a work of reference of this kind, well arranged and faithfully executed, will be a great boon to all students of the great Florentine. The little illustrations with which the text is interspersed vary in quality, but they will serve to refresh the memory, and also for purposes of rough comparison between a study in the Museum and a finished work elsewhere. Mr. Fagan is responsible for these illustrations, and also for the creditable steel-engraving after a well-known portrait of Michelangelo which forms the frontispiece.

*Luca della Robbia, &c.* By Leader Scott. "Great Artists" Series. (Sampson Low.) In this little book Leader Scott continues her survey of Italian sculptors commenced in the sister volume on Donatello and Ghiberti. Like all the author's works, the present is carefully and pleasantly written, and its value is increased by her intimate acquaintance with most of the sculptures described. There is little room for critical disquisition in a volume of such slight dimensions, but the generalisations are always intelligent, and we find few opinions expressed with which we are inclined to disagree. To those who are unable to consult such larger works as that of Mr. Perkins, Leader Scott's more summary account will be of much use, and may be accepted as a safe guide, so far as it goes. At the same

time, we can scarcely help protesting at the attempt to compress into so small a space the lives and works of such men as Mina da Fiesole, the Della Robbias, Benvenuto Cellini, the Majani, Verrocchio, Jacopo della Quercia, and a dozen more. This, however, is not the author's fault, who has performed her difficult task with much judgment and fidelity.

*Recherches sur les Collections des Richelieu.* By Edmond Bonnaffé. (Paris: Plon.) The first of the Richelieus who were collectors and lovers of art was the great Cardinal, who filled the "Petit Luxembourg," and then the "Palais Cardinal," his country house at Rueil, and his splendid *château* at Richelieu with treasures of art of all kinds; next came his niece the Duchess of Aiguillon; and then his grand-nephew and heir the Duke of Richelieu, who added Poussins and Rubens to the great store; after the Duke the Marshal, whose tastes were, according to the mode of his day, for exquisite china rather than antique busts and "old masters." M. Bonnaffé, who delights in writing of the old "amateurs" and tracking their possessions to their present owners, has now done for the Richelieus what he has done well before for de Bienne and Fouquet and Catherine de Medici, and has produced a work that is at once useful and readable. The first part of his book is devoted to the collectors and their collections, the latter to the dispersion of their treasures. Many of them were sold by the Duchess of Aiguillon in her lifetime to obtain funds for her charities; many passed with the Orleans collection into England; many are preserved in the Louvre, notably the famous "Captives" of Michelangelo, the well-known Greek "Bacchus," and celebrated pictures by Mantegna, Perugino, Costa, Dürer, and Rubens. M. Bonnaffé's volume, which is, printed in a style worthy of the publishers on paper of luxurious tint and thickness, is illustrated with engravings of the "Captives" and a view of the Cardinal's magnificent *château* at Richelieu.

*Art Work in Gold and Silver—Modern.* By H. B. Wheatley and P. H. Delamotte. (Sampson Low.) This little handbook, one of a series on practical art, is copiously illustrated, but almost entirely with old wood-blocks, which have appeared more than once in previous publications. They are, however, not much the worse for this, and the examples are, on the whole, well selected. The text is scanty, and of but little value; and a good many errors need correction—as, for instance, at p. 106, "pixes (*ostensoirs*), cruets for holy oil." The monstrance was never called a pyx; and the *ampullæ*, or bottles, for the holy oil were not called "cruets," a word employed to designate the two little flasks for the Eucharistic wine and water. The two reliquaries given on pp. 111 and 115 are really of gilt bronze, not of gold, as stated in the book. Some of the specimens of modern metal-work are very unworthy of their places among the beautiful old examples, of which so many are given. The "Milton Shield" of silver, *repoussé* and damascened, executed by Morel Ladeuil, should rather have been given as a warning to show what sculptured work in relief ought not to be. In spite of the graceful, though over-crowded, design of the various compartments, and the knowledge of the human figure shown by the artist, the work is much more pictorial than sculptural; the whole surface is tooled and fussed about to the utter destruction of all the breadth and simplicity on which the beauty of sculpture in low relief so much depends. It is most unfortunate that the authorities of the South Kensington Museum should have wasted large sums of money on this shield and other similar pieces of metal-work, which are the worst possible models that could be set before students.

THE lately published volume, *Echoes from the Welsh Hills*, by the Rev. D. Davies (Alexander and Shephard), deserves a word of notice in this place by reason of the many quaint illustrations from the pencil of Mr. T. H. Thomas. It is probable that no one is more familiar than this artist with all those characteristic features of Welsh life which what is called the march of civilisation is in act to destroy. Only in the remoter regions of Wales do there yet linger those fashions of apparel and customs of behaviour which a score of years ago were noticeable in the chief towns, giving them a distinctive character. An anecdotal volume like the one before us—concerned with local anecdote and pious reminiscence—was just the one to afford an artist like Mr. Thomas the best scope for the exercise of his peculiar knowledge, and it is therefore not surprising that he should have willingly embraced the occasion to illustrate it. His artistic dexterity has been of service in allowing him to record with picturesqueness and point the many subjects and objects of his familiar acquaintance.

*Art Work in Porcelain.* "Illustrated Handbooks of Practical Art." (Sampson Low.) This slender volume, like others of the series, is very nicely printed, bound, and illustrated. Such information as it contains is fairly accurate, but it is too meagre to be of any practical use to students or collectors. The general public, however, who neither need nor desire any intimate acquaintance with the subject, may spend an amusing, and not unprofitable, half-hour in looking at the pictures and reading the letterpress.

*The Art of Etching.* By H. R. Robertson. (Winsor and Newton.) One of the well-known series of handbooks published by Messrs. Winsor and Newton. Mr. Robertson, it need scarcely be said, can be trusted on the subject of etching. His hints and descriptions are few and brief, but they are clear and useful. The handbook is illustrated with two pretty little etchings.

*Vere Foster's Simple Lessons in Water-colour Painting.* (Blackie.) The principal recommendation of this educational work is that the lessons are simple. As a means of acquiring an elementary knowledge of the combinations of the most useful colours for landscape painting and of practising manipulation with the brush the course may be profitably gone through by beginners, but the "copies" are not very true to nature, nor very admirable examples of art.

*Handbook on Tapestry Painting.* By A. Rischgitz. This little book, which is published by the accomplished author at his studio in Linden Gardens, Bayswater, is, like his *Handbook on China Painting*, irreproachable as a guide to amateurs. The extraordinary development of tapestry-painting in the last year or two, and its encouragement by artists of a high class, have been recently dwelt upon in the ACADEMY.

*Die Dresdner Gemälde Gallerie.* By Karl Christian Friedrich Krause. Edited by Dr. Paul Hohlfield and Dr. Aug. Wünsche. (Leipzig: Schulze.) This is the second instalment of the publication of the Krause MSS., and is composed of descriptive and critical notes on the most important of the pictures in the Dresden Gallery. It is needless to say that it is marked by great learning and critical insight, and has been edited with much care.

*The Recent Discovery of Ancient Egyptian Mummies at Thebes.* By Sir Erasmus Wilson. (Kegan Paul, Trench and Co.) Seldom has an oft-told tale been retold so pleasantly and instructively as in this tiny volume, the contents of which, as announced upon the title-page, were lately delivered by Sir Erasmus Wilson in the

form of a lecture to the members of the Young Men's Christian Association at Margate. Beginning with a singularly interesting sketch of the Nile and its course, the physical geography of the Nile valley, the foundation of the Egyptian monarchy, and the leading features of the national solar myth, Sir Erasmus Wilson leads up to the great religious dogma of the nature of man, the body, the soul, and the "Ka" as conceived by the most philosophically religious people of antiquity. Embalment as necessary to the resurrection of man in the flesh, and the hidden tomb as necessary to the safety of the mummy and its funeral chattels, are next touched upon, paving the way to an excellent account of the modes of burial in favour at different epochs, the various treasures buried with the Egyptian dead, and the depredations to which the tombs of kings and commoners have been subject from remote antiquity. The story of the discovery of the vault of the Priest-Kings at Dayr-el-Bahree, with its extraordinary population of mummified royalties of various dynasties and all their funerary treasures, is most amusingly and graphically told; and the whole concludes with a useful table of the native dynasties from Mena to Sheshonk, briefly summarising the principal events of each, together with what the author conceives to be their approximate dates. This handy and pretty little volume, though published by Kegan Paul and Co., is, we observe, printed—and well printed—at Margate. It is not, however, altogether free from typographical errors, some ancient and some modern proper names being misspelt, and Pharaoh being printed "Pharoah" from beginning to end. These slips are not, however, to be charged to the account of Sir Erasmus Wilson, who was, we understand, unable to correct the proofs himself.

#### ART MAGAZINES.

THE quarterly part of the *Great Historic Galleries* shows that in the art of photographing pictures we are not behind our Continental neighbours. Even Messrs. Braun would find it hard to excel some of the beautiful plates in this number, and they are all printed straight upon the paper. As an imitation of the tone and glow of the original we have never seen a finer permanent photograph than that of a lovely little *Ostade* from Deepdene. Among the other pictures represented are a portrait of the Empress Josephine by Prudhon, a capital Janassen, Lady Mary Wortley Montagu in her Turkish dress by Kneller (now to be seen in the Bute Collection at Bethnal Green), and four fine miniatures by Cooper.

MR. WILLIAM STRANG's fine etching of "Tinkers," much admired at this year's Exhibition of Painter-Etchers, is published in this month's number of the *Portfolio*. The editor's paper on Paris (continuation) is illustrated with an etching of the Rue St-André by M. Léon Lhermitte.

THE principal illustration of the *Art Journal* for August is a study of cats, by Mr. E. N. Downard, called "Romeo and Juliet."

THE *Gazette des Beaux-Arts* is occupied mainly with exhibitions—the Salon and several minor exhibitions in London and Paris. There is a sympathetic etching by M. H. Guérard of Mr. Whistler's well-known portrait of his mother. M. T. Duret's estimate of Rossetti is severe, and is illustrated by a scarcely fair representation of the artist's "Pandora." Mr. W. L. Wyllie's "View on the Thames" (one of the purchases by the Royal Academy with the Ohantry bequest) is, on the other hand, admirably translated into black and white.

THE result of the Austrian expedition to Lycia is treated by O. von Lützow in the current number of the *Zeitschrift für bildende Kunst*, and illustrations are given of several interesting bas-reliefs of scenes from the *Odyssey*. Konrad Lange concludes his study of the Cupid by Michelangelo at Turin; and the Silesian Museum at Breslau is the subject of an interesting and well-illustrated paper by E. Kalesse. The etchings of the month are by J. Groh from an altar-piece by Hans Baldung, of which the central painting represents the martyrdom of St. Sebastian. This interesting work contains a portrait of the artist.

M. JOSSE on Japanese art, M. Victor Champier on "La Maison modèle," M. Passepont on elementary ornament, and M. Garnier on china painting again occupy the pages of the *Revue des Arts décoratifs*; and these pages could scarcely be better filled. The illustrations are as numerous and good as usual.

### MURAL PAINTINGS AT ROME ON THE CAPITOL.

THE Roman journals have been for some time past discussing the mural paintings discovered in the halls formerly appropriated to the Protomoteca, which now serve for the offices of the Statistical Board, in the Palace of the Conservators, on the Capitol. From the few remnants of an inscription restored to light, it was supposed that the name of the artist had been recognised, but this does not seem to be the fact. It must be premised that these paintings, which are in the style of the sixteenth century, or the end of the fifteenth, are not in very good taste. In the middle of the wall appears the Madonna and Child. The disposition of the group resembles that of the Virgin attributed to Pinturicchio, which is in the chapel of the palace. To the left is St. Sebastian, and to the right St. Omobono, with the scissors in his hand. Underneath is written,

PETRVS · ISPANVS · E · MICINELLO · MC. . . .

It is clearly demonstrated by the figure of St. Omobono with the scissors that the guild of tailors had their head-quarters here, adjoining the other trade corporations, whose emblems are visible on the ascent to Montecuprino. We suspend our judgment on these frescoes until they are completely uncovered, under the direction of Prof. Caesar Mariani, who is employed on the task by the Municipality.

F. B.

### MR. WOOD'S EXCAVATIONS AT EPHEBUS.

MR. A. J. B. BERESFORD-HOPE, as chairman of the committee for promoting Mr. J. F. Wood's excavations of the temple of Diana at Ephesus, has written a report of the work accomplished by Mr. Wood during the early part of the present year, from which we make the following extracts:—

"In March Mr. Wood was authorised to proceed to Ephesus, and resume the excavations which had been so long in abeyance for want of funds. The freehold of the site of the temple had been purchased by the Trustees of the British Museum at the time of the former excavations. Their right to resume the works seemed accordingly to be clear, although the question of the privilege of removing the sculptures which might be found was more disputed. Mr. Wood, however, had not long resumed his work when the Mudir of the district visited the spot, and reported their recommendation to the Kaimachan of Scala Nova, who in his turn reported the same to the Governor of Smyrna; and in due time the Mudir received written instructions to stop the excavations. Mr. Wood suspended the work which he had then carried on for eleven days, and took the first boat

for Constantinople to obtain a fresh permit from the Ottoman Government. This interruption delayed operations for several weeks. But happily the required document was eventually obtained through the effectual good offices of Lord Granville and of the Embassy at Constantinople; and, in three days from the time when the request was submitted to the Sultan, the permit was handed to Mr. Wood by the Minister of Public Instruction. Mr. Wood then returned without delay and resumed the excavations. By this time the cool weather had passed away and the hot season had set in; but, as he was anxious to make some important discovery before abandoning the work till the autumn, Mr. Wood persevered until June 15, when he was forced to stop, for not only did the heat prevent the workmen from doing a fair day's work, but the water stood in the excavations at a level which prevented the recovery of the stones which could be felt through the mud. Several interesting inscriptions and fragments of sculpture were, however, secured. The latter evidently belonged to the pediment at the east end of the temple. The most interesting of these was the leg of a male figure in high relief, somewhat larger than life.

"At a committee meeting held on July 24, it was decided to authorise Mr. Wood to return to Ephesus in September and resume the excavations. The committee was justified in this decision by the fact that a large area had been opened up to an average depth of seventeen feet in the few weeks of work during the spring and early summer; while the stones, which could only be felt at that time through the mud and water, could be easily removed in the autumn after the water will have subsided several feet. I need hardly impress upon the archaeological public that it is most desirable that they should subscribe liberally if they desire the success of this most interesting exploration. If it is carried on, as it ought to be, to the extent proposed—namely, to the outer face of the colonnade which surrounded the temple—the result will probably be the unearthing both of beautiful sculptures and of inscriptions possessing historical value. The discoveries which reach England will be placed in the gallery which is to be devoted to the British Museum to the Ephesian antiquities, and will be a great addition of permanent value to the national art treasures."

### CORRESPONDENCE.

#### A CONTEMPORARY NOTICE OF GAINSBOROUGH.

Ipswich: July 24, 1883.

In searching the files of the *Ipswich Journal* for some particulars as to the picture referred to in my letter in the *ACADEMY* of July 21, I came upon the following brief history of Gainsborough. From Sir Philip Thicknesse's *Life of Gainsborough* we learn that the then proprietor and editor of the *Ipswich Journal* was an intimate friend of the great artist; and, as the subjoined article was in all probability written by him, it will have a special value and interest at the present day. The extract is *verbatim* from the *Ipswich Journal* of August 9, 1788.

WM. KING.

"*Memoirs of the late Mr. Gainsborough, the celebrated painter who died on Saturday last, aged 61, of a cancer in his Neck, caught by a Cold a few months since, whilst attending Mr. Hastings's Trial.*

"Mr. Gainsborough was born at Sudbury in Suffolk, in the year 1727: his father, on his outset in life, was possessed of a decent competency; but a large family, and a liberal heart, soon lessened his wealth to a very humble income. The son, of whom we speak, very early discovered a propensity to painting: Nature was his teacher and the woods of Suffolk his academy; here he would pass in solitude his mornings, in making a sketch of an antiquated tree, a marshy brook, a few cattle, a shepherd and his flock, or any other accidental objects that were presented. From delineation, he got to colouring; and after painting several landscapes from the age of ten to twelve, he quitted Sudbury in his thirteenth year, and came to London, where he commenced portrait painter; and from that time never cost his family the least expense. The person at whose

house he principally resided, was a silversmith of some taste; and from him he was ever ready to confess he derived great assistance. Mr. Gravelot the engraver was also his patron, and got him introduced at the Old Academy of the Arts, in St. Martin's Lane. He continued to exercise his pencil in London for some years, but marrying Mrs. Gainsborough when he was only nineteen years of age, he soon after took up his residence at Ipswich; and after practising there for a considerable period, went to Bath, where his friends intimated his merits would meet their proper reward. His portrait of Quin the actor, which he painted at Bath about thirty years since, will ever be considered as a wonderful effort in the portrait line.

"The high reputation which followed, prompted him to return to London, where he arrived in the year 1774; after passing a short time in town not very profitably, his merits engaged the attention of the King. Among other portraits of the Royal Family, the full length of his Majesty at the Queen's house will ever be viewed as an astonishing performance. From this period, Mr. Gainsborough entered into a line which afforded a becoming reward to his superlative powers. All our living Princes and Princesses have been painted by him, the Duke of York excepted, of whom he had three pictures bespoken: and, among his later performances, the head of Mr. Pitt, and several portraits of that gentleman's family, afforded him gratification. His portraits will pass to futurity with a reputation equal to that which follows the pictures of Vandyke; and his landscapes will establish his name on the record of the fine arts, with honours such as never before attended a native of this isle.

"He was frequently fond of giving a little rustic boy or girl a place in his landscapes: some of these possess wonderful beauty: his Shepherd's Boy, the Girl and Pigs, The Fighting Boys and Dogs, the one with Figures in Sir Peter Burrell's possession, and several others of a like description, give him a very peculiar character as an artist over every other disciple of the pencil. The landscape of the Woodman in the Storm, finished about eighteen months since, and now at his rooms in Pall Mall, for expression, character, and beautiful colouring, is of inestimable worth. His Majesty's praises of this picture made Mr. Gainsborough feel truly elate; and the attention of the Queen, who sent to him soon after, and commissioned him to paint the Duke of York, were circumstances that he always dwelt upon with conscious pleasure and satisfaction.

"His mind was most in its element while engaged in landscape. These subjects he painted with a faithful adherence to Nature; and it is to be noticed they are more in approach to the landscapes of Rubens, than those of any other master. At the same time we must remark, his tree, foreground, and figures, have more force and spirit; and we add, the brilliancy of Claude and the simplicity of Ruysdael appear combined in Mr. Gainsborough's romantic scenes. The few pictures he attempted that are stiled sea-pieces, may be recurred to in proof of his power in painting water; nothing certainly can exceed them in transparency and air. But he is gone! and while we lament him as an artist, let us not pass over those virtues which were an honour to human nature! Let a tear be shed in affection for that generous heart, whose strongest propensities were to relieve the claims of poverty, wherever they appeared genuine! If he selected, for the exercise of his pencil, an infant from a cottage, all the tenants of the humble roof generally participated in the profits of the picture; and some of them frequently found in his habitation a permanent abode. His liberality was not confined to this alone,—needy relatives and unfortunate friends were further incumbrances on a spirit that could not deny; and owing to this generosity of temper, we fear, that affluence is not left to his amiable family, which so much merit might promise, and such real worth deserve."

### NOTES ON ART AND ARCHAEOLOGY.

WE learn that the Browning Society is to receive from its vice-president, Sir Frederick Leighton, the gift of a copy of a reproduction of

the "Burial of Alkestis," for each of its members. The picture is in the possession of Mr. Bernhard Samuelson, whose assent to the reproduction has been cordially given.

WE are glad to learn that a movement has been set on foot to endeavour to obtain a pension for the widow of James Redfern, the sculptor, who died just as he was becoming eminent, and left his family quite unprovided for. It will be remembered that the remarkable genius of Redfern, when an uneducated country lad, was brought under the notice of Mr. Beresford-Hope, who immediately provided the means for his gaining a better field for the development of his unusual ability than he would otherwise have had. Sympathisers with the movement may address themselves to Mr. J. Cotter Morison, 30 Fitzjohn's Avenue, N.W.; or to Miss E. H. Hickey, 53 Gayton Road, Hampstead.

MESSRS. SEELEY announce for early publication an English version of the Eclogues of Virgil by the late Samuel Palmer, with fourteen etchings on copper by the author. The translation, which was the favourite occupation of Palmer's later years, was completed in 1872; but some of the etchings were left unfinished at his death, and have now been reproduced in facsimile under the direction of his son, Mr. A. H. Palmer. The work will be published in one hundred copies, large paper, with proofs; and also in a smaller edition.

AN English commission, with Sir F. Leighton for its president, and Mr. F. Seymour Haden and Mr. S. Cousins for its vice-presidents in the two departments of etching and engraving, has been appointed for the International Exhibition of the Graphic Arts which will open at Vienna on September 15. The hon. secretary of the commission (why not committee?) is Mr. Edward Pick, 28 Queen's Road, St. John's Wood. A translation into English—or, rather, what purports to be such—has been issued of the Regulations. Among the members of the commission in the department of etching we observe "Prof. Sydney Colvill" (*sic*).

AN important picture, by Simonetti, of the town of Casamicciola will shortly be exhibited at St. James's Gallery, Duke Street. Mr. Mendoza intends to devote the proceeds of the exhibition to the relief of the sufferers by the recent earthquake.

THE Catalogue of the Marquis of Bute's collection of pictures, now lent for exhibition at the Bethnal Green Museum, has just been issued. The name of its author, Dr. Jean Paul Richter, is a guarantee that the work has been faithfully executed, and that a large amount of learning and intelligence has been expended upon it. The collection is a very interesting one, especially in relation to the Dutch school, of which it contains several examples of very rare masters. Among these are a landscape by Lucas van Uden, the assistant of Rubens, two by J. Griffier, the only known examples of this artist, and a Pieter Verhelst, by whom only two other pictures can at present be traced. Of nearly all the more celebrated Dutchmen, with the exception of Rembrandt, the collection contains fine examples. In his remarks upon these pictures Dr. Richter has shown a praiseworthy desire to make just those comments which will be most useful to the student. He, for instance, points out how a landscape by Ruysdael bears evident traces of the influence of the slightly elder Everdingen; and that the de Koninck is "an unusual work of the master, the harmony of colouring being in tone not green, but gray and somewhat dark." The pictures are carefully described, and all decypherable inscriptions are recorded. Although deficient in important pictures of the Italian, Spanish, and

German schools, the Bute Collection is a very valuable one. The notes on the few English pictures which it contains, by Gainsborough, Reynolds, Lawrence, Ibbetson, and others, are very carefully done.

### THE STAGE.

#### THE "PINCERNA" AT THE BIRMINGHAM ORATORY.

THE annals of the Oratory School, Edgbaston, were this year marked by a repetition of Card. Newman's "Pincerna," an adaptation of Terence's "Eunuchus." The heroine of the piece is a young Athenian widow, who, though really loving Phaedria, the son of Laches, encourages the addresses of a braggart soldier, Thraso, in order to receive as a present his slave Pamphila, who is, in truth, an Athenian citizen and her foster-sister. As Pamphila is being taken to Thais' house, Chaerea, the brother of Phaedria, falls in love at first sight, and prevails upon the old family slave, Parmeno, to send him to Thais, disguised as his brother's cup-bearer, Dorus. The elopement of Pamphila with Chaerea, the confusion and distress that ensue, the discovery of her birth and relationship, and the happy ending which naturally follows—these details complete the plan of adaptation.

Those who had seen performances of the "Pincerna" some years ago felt bound to admit that the actors had been trained in such a way as to leave the present little to envy in the past. More uniformly good casts have perhaps been seen at the Oratory; but, on the other hand, various characters were personated in a manner quite unrivalled. We do not intend any disparagement of others by mentioning among these the parasite Gnatho and the slave Parmeno. Too much praise cannot be given to the actor who gave a sustained interest to the latter part, which is a long and thankless one, and has no showy points. The trying ordeal of standing at the back of the stage without taking part in the dialogue was repeatedly gone through by him; and during these intervals his by-play was as unceasing as it was expressive. Full justice was done to the character of the trusty servant in his raillery of his master, his grumpiness with Gnatho, and his fury at being hoaxed by Pythias. Gnatho found an inimitable representative, who brought into relief the particular shade of parasite which is intended by Terence. He described himself with great humour in his opening speech as a gentlemanly kind of person, who lives on his wits by toadying conceited coxcombs, and acting as their right hand and ambassador; and afterwards he admirably represented these qualities in the scene with Thraso, in which he never became a butt of his patron, but stood on a footing of equality with him, while discreetly flattering him and laughing at his stale jokes. The heroine of the piece, Thais, was remarkable for her silvery (though somewhat indistinct) voice. She exhibited in the first scene with Phaedria a quiet and dignified manner, and was throughout very graceful in her movements—matters not less important than difficult. But we missed the pathos of her appeal to Phaedria when she explains her reasons for desiring his temporary absence, and which culminates in "Sola sum habeo hic neminem, neque amicum neque cognatum." Also we think that, when a lady so far forgets herself as to call her maid "sacriliga" and "venefica," she ought to look very angry indeed. Her lover acted vigorously the anger towards Thais produced by the jeers of Parmeno and by the request that he should leave the field to his rival for a few days; but he did not appear quite so tender towards his lady-love as the words of his speech to her might imply. The Oratory again

made a fortunate choice as regards the voice of Pythias, the part servant-maid, who, however, shone much more in the scene where she hoaxes Parmeno than when she laughs at him for being taken in. Chaerea and Thraso were both represented satisfactorily, except that Chaerea's youthful activity led him at times to indulge in superfluous movement. Chremes did not by any means bring out all the humour which the part contains, while Laches had some peculiarities in his walk which we suppose must be set down to the infirmity of old age.

We may conclude by saying that the mutes, one and all, were very well drilled, the ragged army especially causing great amusement. In some of the scenes we might have wished for greater sharpness of rejoinder, but this is clearly an error on the right side. The actors (with a few exceptions) were remarkably deliberate in speech and clear in articulation—qualities often lacking to a school performance.

P. S. C.

### STAGE NOTES.

THE real event of the week has been Mr. Irving's farewell on Saturday night, but that is a matter that the daily press has already well-nigh exhausted. It remains for us, however, to say one necessary word or so about it while the enthusiasm of the scene is fresh in the recollection of all who were present. In a still greater measure than the dinner of a few weeks ago, it emphasises two facts—the first, the extraordinary character of the position that Mr. Irving has made for himself; the second, the total change of public feeling in regard to the stage. The two things are in truth much connected: each has acted and reacted upon the other. Mr. Irving's intelligence, and skill, and liberal enterprise, and wise and well-timed management have done much to bring about that condition of favour in which the world of the theatre now finds itself; and, likewise, the growing disposition to encourage and respect the art of the stage has assisted in the degree of recognition bestowed on Mr. Irving, the art's representative master. Mr. Irving has chosen quite the right moment for going to America; his public position permits him to go almost as an envoy from one people to the other, and America will receive him with prompt enthusiasm, quickly made friendships, and certain good-will. The people of New York next October, of Boston later on, and of Baltimore at Christmas will see an actor who, without having succeeded in every part he has essayed, has been triumphant in parts both many and various. They will also see a practical student of every branch of theatrical work, to whose energy and taste there has been granted this extraordinary reward—that, having found the theatre a place little considered, he has done much to make it again what it was in the smaller London of Edmund Kean and of Garrick, the natural resort of all classes of the fashionable and the learned, of the solid and the frivolous, of the very wealthy and the educated poor.

At Toole's Theatre they have, in the temporary absence of the popular low comedian, produced a play that has been seen but once before, and then on other boards—the "M.P." of the late Mr. Tom Robertson. It has been a curious experiment, and has succeeded perhaps quite as much as could have been expected. Mr. Robertson's plays, along with their conspicuous merits of freshness and individuality, had often many faults; and "M.P." was recognised soon after it was produced to be one of the least faultless and one of the least vigorous. It had little plot; it had not overmuch of distinct character-drawing; it had to rely chiefly for what success it obtained on its sufficient measure of brisk and not unnatural dialogue, and on the always attractive presenta-

tion of the familiar things of to-day. In spite of all this, however, it does not at all follow that Mr. Robertson the younger, who now enters into possession of the acting rights in his father's comedies, was ill-advised in selecting "M.P." as the first of the comedies to be played under his control. "Caste" and "School" and "Society" have been pretty well used up—at least for the time—and in "Play" there is no great element of attraction. "M.P." is practically new to the playgoer of the period; and though it is not very good, and though some of the most telling satire it contains has lost a little force through lapse of time, it is yet a good deal better than most adaptations from the French, than most farcical comedies, than most sensational dramas of realistic effect. If it does not exactly "entertain gracefully," it entertains with innocence and success. It suffers, however, from the absence of the Bancrofts and Mr. Hare, and this not so much through the fact of the surprising excellence of these comedians as because the play shows traces of having been designed somewhat specially to fit them. More than one of the actors now engaged at Toole's nevertheless makes a mark. Mr. Ward performs with great credit, and Miss Gerard is quite artistic and interesting. The little piece will probably serve the purpose of filling the house with contented patrons for the next two months or more. But the stage-work of Mr. T. W. Robertson will hardly, we fear, be found to be permanent literature.

"VALENTINE AND PAUL" at the Gaiety Theatre—the words by Mr. Stephens, the tuneful music by Mr. Solomon—serves to introduce to the London public Miss Lillian Russell, who has had a great success in America. For a while, we believe, she has been the spoilt child of New York playgoers. Miss Russell is a comely person, who knows how to sing, and who has such pleasant ease upon the stage that you hardly trouble to enquire whether she knows also how to act. We are not, ourselves, inclined to credit her with the possession of great dramatic power. Miss [Florence St. John, at her best, has, we think, more vivacity; Miss Violet Cameron both more vivacity and more vigour, and at times, too, more sentiment. No; Miss Lillian Russell, pleasantly as she looks and deftly as she warbles, has not that combination of stage qualities which ensure the popularity of the lady of "Bip Van Winkle." But she is yet an acquisition in a dull season; and the stage of opera bouffe and of burlesque requires brilliant recruits in England now that Miss Nelly Bromley definitely deserts it to play the sentimental heroine at Drury Lane, and that Miss Kate Vaughan aspires to more serious business than that of beginning a languid dance which is too soon finished. There is quite room for the latest arrival from America, though, in London, she will not carry all before her. Her stage companions—Mr. Elton included—have but little to do, and the play itself is not one on which much labour of description need be bestowed.

### MUSIC.

*Life of Handel.* By W. S. Rockstro. (Macmillan.)

DR. GEORGE GROVE, in a short introductory Preface, shows clearly that two important attempts at a biography of the great musician have proved failures—the one (Schoelcher's *Life of Handel*) through its want of method, technical knowledge, and unfortunate style; the second (Dr. Chrysander's) owing to its excessive length and incomplete state, and also from the fact that it is written in German. Mr. Rockstro now comes forward and gives us

a "readable and well-proportioned" book. There is much to praise in the volume. The story of Handel's life is told in glowing and picturesque language; and much interesting and valuable information is given about the Handel MSS. in the Queen's library, the British Museum, and other places. Dr. Grove speaks of the "Life" as a "popular" one; and so indeed it is, for the writer tells us much about Handel as a man, and describes his career as an artist in language singularly free from pedantry and technical abstruseness.

The biography avoids, says Dr. Grove, "some of the errors of its predecessors." But in avoiding Soylla Mr. Rockstro has occasionally fallen into Charybdis. He tells us, for example (p. 33), that the complete score, in Handel's own handwriting, of the first "Passion" Oratorio has been discovered among the Pöhlchau MSS. in the Berlin Library; and yet, in his complete catalogue of Handel's works at the end of the volume, he marks the "locale of Autograph" as unknown. Dr. Chrysander, in the Preface to this "Passion" in the German Handel Society's edition, informs us that the Pöhlchau MS. is *not* in Handel's own writing. Either way, Mr. Rockstro's two statements do not agree. Again, he has committed some serious errors in his account (pp. 13 and 345) of the Sonatas belonging to the year 1696, and of the German Society's publication. Of course, our author has read Dr. Chrysander's great work, and frequently quotes, or we should rather say, misquotes him. We will give one or two examples. Chrysander places little faith in the story of Powell, "the Harmonious Blacksmith," but he has more than "the one fact" mentioned on p. 119 in support of his opinion. We cannot enter into detail; but, to any readers who care to see how far our accusation against Mr. Rockstro is just, we would suggest a comparison of the accounts of the Double Concerto MS. given by Rockstro (p. 335) and Chrysander (tom. iii., p. 163). Once again, the three acts of the opera "Muzio Scaevola" were set to music by three different composers. According to some authorities, the first was composed by Attilio Ariosti; according to others, by a certain Fillippo Mattei (Pippo). "On the strength of a MS. score in the British Museum, Mattei's name has been regarded as not wholly destitute of foundation," says Mr. Rockstro; but Chrysander gives several very important reasons for believing that Mattei, and *not* Ariosti, was the composer. On p. 105 we read that Handel's Chandos Anthems are now more completely forgotten than even his operatic treasures. Mr. Rockstro ought, however, to have mentioned that "O praise the Lord with one consent" was revived by Mr. E. Prout at the Borough of Hackney Choral Society in 1879. He says also (p. 111) that "Esther" was lately given by the Guildhall School of Music; but it was first revived on November 13, 1875, at the Alexandra Palace. "Theodora," too (see pp. 305 and 306), has not "been quite neglected for the last hundred years." An important selection was given by the London Musical Society at St. James's Hall on March 30, 1882.

"Israel in Egypt" and "The Messiah" come in for a full share of notice. Of course the earlier Oratorio introduces the question of the disputed "Magnificat." Mr. Rockstro rightly states that this work has never been presented to an English audience in its complete form; but, since Chrysander, in his third volume, mentions that it was performed at Hanover Square Rooms in 1863, we may as well add that on that occasion only two movements, the "Et exultant" and "Quia fecit" were given. We should be glad if it could be established beyond a doubt that Handel wrote this Magnificat. Chrysander hopes that the Erba parts, from which he firmly believes the two copies (Handel's copy and the one in the Sacred

Harmonic Library) were written out, will be found; and Mr. Rockstro admits that until this happens the question can never be set at rest. He would have us believe that the Magnificat is Handel's own composition. The difference between Chrysander's and Mr. Rockstro's mode of discussing the question seems to us very striking. The former appears to be merely examining the documents with a view to discovering the real truth; the latter to be trying chiefly to exonerate Handel from the blame of appropriating other composers' ideas. Chrysander tells us a great deal about the MSS.; Mr. Rockstro very little. The latter enlarges upon the extraordinary fact (if such it be) of Dionigi Erba writing such a wonderful work; and of his name being so long ignored by "our best critics." But truth is stranger than fiction; the best critics are not infallible, and may easily be ignorant of treasures hidden away in dusty cupboards or in dingy corners of great libraries. Chrysander has given circumstantial evidence in support of the Erba theory; but we do not find that Mr. Rockstro has any fresh arguments in favour of the theory which he seeks to maintain.

And now we must say one word about "The Messiah." Mr. Rockstro wants to hear the grand old Oratorio played as Handel wrote it. The additional accompaniments can, of course, be removed from the score; we can try and imitate the orchestra of Handel's time. But still, to say nothing of the difference of the organ of the present day, we should be without the harpsichord, without the harpsichord part, and without exact instructions respecting the use of the organ and harpsichord. Robert Franz, a great authority, says it is impossible now to say exactly when the one or the other was used. We cannot restore the past; but we can attempt, as J. A. Hiller, Mozart, Franz, and others have done, to reveal the composer's intentions with the modern means at our disposal. The expression "additional accompaniments" is a misleading one. If done in the right spirit, the accompaniments are rewritten rather than added; if mere additions, they are sound without sense. Mr. Rockstro tells us that Mozart's accompaniments to "The Messiah" were substitutes for the organ, as Baron von Swieten wished to perform Handel's works in the Hall of the Bibliothek at Vienna, in which that instrument was missing. There is truth in this statement, but only part of it. Jahn says: "The object with which Mozart undertook to rearrange the instrumentation of Handel's works was the strengthening and enriching of the orchestra to enable it to dispense with the organ or harpsichord." Mr. Rockstro tells us he is trying to "wash 'The Messiah' clean." Let him take care: if he succeed he may wash all the colour out of it.

The date of Handel's birth has been much talked about. Mattheson first mistook the year, and his error was copied by many writers. Mr. Rockstro's "Appendix" on the matter is very interesting. He might, however, have mentioned that the *Gentleman's Magazine* for 1859 is among the few authorities which give 1685, the correct year of birth.

In concluding our notice of Mr. Rockstro's interesting and, in many particulars, valuable book, we would refer to one passage relating to Milton. Our author is surprised to find the "zealous Puritan" encouraging the stage by writing *Comus*. But at the date (1634) when this masque was written, Milton could scarcely be described as a "zealous Puritan." Nor is it strange that the excitement caused by the masques of Shirley and Carew, and the descriptions of them given to the young poet by Lawes and his brother Christopher, should have led him to think for the moment of the stage rather than the Church.

J. S. SHEDLOCK.

SATURDAY, AUGUST 11, 1883.

No. 588, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*The Orkneys and Shetland: their Past and Present State.* By John R. Tudor. (Stanford.)

THE Scandinavian isles of Scotland are still among the least-known portion of unexplored Britain, notwithstanding their easy accessibility by sea. The two groups are, however, widely scattered, and communication between the detached members is difficult and irregular. Roads are few, and railways unknown. Hospitality is lavish to anyone with proper introductions; but a people living so secluded from the busy world naturally regard with prudent suspicion "ferry loupers" newly landed from the Granton boat, while inns are few and hardly to the taste of the ordinary tourist. Hence we are occasionally astounded by gathering from official documents that the Whitehall functionaries are under the impression that the Orcadians speak Gaelic; and that the Shetlands, instead of being peopled by a polished race of pure Norse origin, who would be indignant were they compared with the clowns of Kent and Sussex, are inhabited by semi-civilised autochthones who feed on sea-fowl and are in urgent need of missionaries. In a dictionary which went through many editions, Zetland is described as a land "where the sun does not set for two months in summer, and does not rise for two months in winter;" and it stands on record that the Commissioners of Customs refused to pay bounties on some herrings caught during the winter season in Shetland waters on the ground that no fish could have been caught there, as the islands were at that period of the year surrounded by ice. Indeed, in a very recent map, now before me, the Arctic ice is represented as extending as far south as Orkney.

Such ignorance cannot, however, be general, and, with so exhaustive a work as Mr. Tudor's in the libraries, is now even less excusable than it was formerly. The literature of the Northern islands is tolerably extensive. Hibbert, Edmonston, and Cowie, among other and less systematic authors, have written admirable works on the group, but their volumes are now out of date; for, though Scandinavian Scotland does not move very rapidly, any who visits them after an absence of ten or twenty years is astonished at the changes which the islands have undergone in that interval. The Shetlandman is still a fisherman with a farm, and the Orkneyman a farmer who fishes; but old manners, prejudices, and practices are dying out, except in some of the remoter isles. There is nevertheless enough yet remaining to make the study of

Thule and the Orcaes extremely interesting to the ethnologist, philologist, historian, and antiquary, while their importance to the naturalist concerned with Northern forms and to the geologist studying glacial traces is of course even greater to-day than in former times, when such questions hardly ruffled the surface of the scientific world. In these respects they are hardly second to the outer Hebrides. In Foula and Fair Isle a semblance of the prehistoric man still survives; and implements in daily use often startle the student by the light they throw on some over which the cave men are fighting bloodless battles. Up to the year 1468 Norse Jarls ruled the islands; and it is still a fit theme for Academical discussion whether the non-payment of "the annual of Norway" and the pledging of Orkney for 50,000 florins as surety for Margaret of Denmark's dowry constitute a good title in law for the present holders. The representatives of the old Norse families are almost extinct among the large landowners, but among the "peerie lairds of Harray" the ancient line of Odalsmen exists in unbroken succession. In Harray, indeed, the Norse tongue is said to have lingered so late as 1757; and in Foula, Low, who published his "Tour" in 1774, took down from the lips of William Henry a ballad of thirty-five stanzas describing the loves of an Earl of Orkney and the daughter of a "King of Narroway." Even then the people had "Norwegian transactions at their finger's end," though they knew little about the doings of the rest of Europe; and to this day the islanders talk about "Scotchmen" in a manner which is not at all comforting to the advocates of political pan-Anglicanism. In 1593, according to the *Fasti Ecclesiae Scotticanae*, the minister of Unst was compelled to proceed to Norway to learn Norse, as his flock were unacquainted with any other language. By the will of Sir David Sinclair of Swinbrocht, dated 1506, his pious legacies were divided between Magnus Kirk in Tingwall and St. George's Altar at Roeskilde, the ancient capital of Denmark, though on none of my many pilgrimages to the Danish Domkirke town could I light on any trace of the chain of office (as Captain of the Bergen Palace) which the ruler of Zetland bequeathed to the latter fane. The names of most of the islands are simply corrupt Icelandic, while the terms applied to nearly every article of fishing gear are nearly the same as those in use along the shores of Norway and Denmark.

The reader who is curious in such matters will find ample information in Mr. Tudor's laborious work. Though he modestly deprecates any higher claim than that of a compiler, it is to all intents and purposes an original description of the islands, derived from personal observation, into which is incorporated and brought up to date everything of value in the writings of his predecessors. The volume is, in truth, almost exhaustive so far as topography and history are concerned. The same may be fairly claimed for Messrs. Peach and Horne's chapter on the geology; but the botanical and zoological sketches are the least satisfactory portion of the work, and the scientific names are invariably printed in a manner which at

once proclaims to a naturalist that the editor is imperfectly acquainted with the laws of biological nomenclature. The sportsman cannot, however, find fault with the section devoted to his speciality, nor the general tourist with the care taken to supply accurate information regarding the means available for reaching the different localities mentioned. In brief, Mr. Tudor's book has quite superseded any other of its kind, and is simply indispensable to those who propose examining the Northern isles. Specialists may perhaps find what they are in search of in more recondite quarters, but they will save themselves endless labour by referring to the very full bibliography appended to the volume under review. Curiously enough, the only serious contribution to Zetlandic literature omitted is Mr. Thomas Edmonston's *Flora of Shetland* (though at p. 559 reference is made to it, and the author erroneously designated as "Professor of Botany in the University of Glasgow") and the important additions to it which Mr. Craig Christie has at different times published in the *Edinburgh Botanical Transactions*. The botanical names of the Fair Isle dyes (p. 439) are also very obsolete, though Mr. Tudor very properly corrects the current tradition regarding the flag-ship of the Duke de Medina Sidonia having been wrecked on this island. The story is indeed so captivating for the *amour propre* of the Northerners that it persists despite the most absolute proof of its baselessness. Apart from the fact of Mr. James Melville, the contemporary minister of Anstruther, mentioning the name of the captain of the Fair Isle castaway in his diary, and thus enabling us to get at the name of his ship, Lord Burghley has jotted against the name of Juan Gomez de Medina in the list of the Armada, now in the British Museum, that "this man's ship was doomed 17 Sept. in ye Ile of Furemare, Scotland." The vessel was really *El Gran Grifon*, a chartered transport of Rostock, commanded by "Jan Gomes de Medina, Generall of twentie houlkes." The minister of Anstruther who, in 1588, was so unconsciously helping the historian describes him as "a verie reuerend man, of big stature and graue and stout countenance, gray heared and verie humble lyk." Don Juan was, however, indifferently "humble lyk" when he asked Malcolm Sinclair whether he had ever seen a finer man, and was promptly informed by the bluff tacksman of Umphray that he had "seen many a prettier man hanging in the Borough Moor."

The glossary of Orkney and Shetland words is excellently done. Indeed, after examining it very critically, I am unable to detect any grave errors. Still, in future editions it might be well to delete the *h* in "Bught" (p. 648), while it is needless to search for *gres*, "a pig," in the Sveo-Gothic, since this is actually the Danish word preserved in Caithness, Orkney, and Shetland to this day. *Holm*, an island, may, of course, come primarily from Sveo-Gothic (p. 656), but in modern Norse it is exactly the same word. The Danish "qvoern" should be spelled "qvern," and it may be of interest to know that the *Skat*, or Odaller's land-tax, is still a familiar term in Scandinavia. In like manner

the Orkney and Shetland "Vadmel" is a cloth commonly woven by the country folk of Sjøland and other parts of Denmark; and we venture to think that when Mr. Tudor declares that "Hill Trows" have nothing to do with hills, but are named from the Icelandic *hillda*, "unseen," he is, in seeking far away for a vague etymology, passing over the true one much nearer at hand (p. 668). In Denmark the Trolde (not "Droll," as Mr. Tudor has it) appears in various forms. There are, for example, Hill Trolde, Water Trolde, and those Kirke Trolde which, in old Orkney, were deemed "waur deils" than any of them. The "Kirke Trolde" is, however, more a Norwegian elf than the other two, though all the "Trolde" are really, so far as Danish folk-lore is concerned, importations from the Northern peninsula. But the Hill Trolde (Høj Trolde) is so called from living under a *høj*, or hill, and in all the illustrations to stories touching his pranks is invariably represented in or about a green mound. Mr. Tudor seems to have obtained his reference to Norse customs solely from du Chaillu's *Land of the Midnight Sun*, otherwise he would have known that the old Shetland custom of throwing "three clods" on a corpse is still practised not only in Sweden, but all over Scandinavia. It is, of course, a tribute to the Trinity, and is on a par with the three strokes of the bell-clapper which the village sexton in Denmark gives after ringing the midday and evening peals.

These trifles are, however, small blemishes in so admirable a work, which, with its profusion of maps and wood-cuts, is not likely to be soon superseded. But we may suggest that the easy diction, which often verges perilously on slang, though it might have been suitable enough for the sporting paper in which some of the chapters first appeared, is out of place in a treatise destined for a different class of readers and for a longer literary life.

ROBERT BROWN.

#### RECENT TRANSLATIONS OF SOPHOCLER.

*Sophocles, the Seven Plays in English Verse.*  
By Prof. L. Campbell. (Kegan Paul, Trench & Co.)

*Sophocles, the Seven Plays in English Verse.*  
By Robert Whitelaw. (Rivingtons.)

*The Philoctetes of Sophocles, in English Prose.* By M. T. Tatham. (Spottiswoode.)

THE art of translation has become very fashionable in our generation. Instead of the old school cribs done in the shabbiest way, and with the lowest views, by ignorant or unsuccessful creatures on the outskirts of scholarship, we have now the most prominent professors and fellows of colleges and schoolmasters essaying themselves in this field. Some content themselves with turning classical prose-authors into idiomatic and lucid English; others are more ambitious, and appear as poets for the purpose of reproducing the poetry of another age and tongue. In addition, indeed, to these aspiring scholars, we have our greatest poets condescending to try the same ever-tempting problem, which each of them solves, and yet fails to solve. If any version is generally accepted even for a few years it is a rare and wonderful success; for,

like fashions in dress, the taste in translations changes, and what appeared perfect to one age is almost ridiculous in the next.

So it is that, in addition to the poets, professional or occasional, who work in this field, we have a new school of translators who assert that a dignified prose version of a Greek or Latin poet is the most faithful, and therefore the best method of giving him to the modern public.

This is, no doubt, a very convenient theory for a scholar who is a wonderful poet in Greek and Latin, but feels in himself an inability to figure as such in English; and, if this be an unkind way of putting it, we can only say that the public will hardly be persuaded that a man having a feeling for form, and with facility for verse, would not prefer to use this vehicle in reproducing for modern ears a poetical literature whose strictness of form was of its very essence. One cannot but think that this curious fashion—a sort of apotheosis of the old crib-monger—has started in the professor's lecture-room, where the most valuable lecturing on classical texts now consists (at least in England) in showing by English idioms the exact force, or the supposed exact force, of Greek and Latin idioms. As Mr. Whitelaw puts it in his Preface (p. ix.), "it is, I believe, increasingly felt that a good translation is a commentary of the best kind." So it is, and from this point of view prose is better than verse; but to expect it to take a place higher than that of a scholarly and gentlemanly crib is to expect more than is reasonable. No public, not even the very prosaic English public, will ever be persuaded by its professors, however lauded and admired, to be content with Homer, or Aeschylus, or Sophocles, or Aristophanes, or Theocritus in English prose. Those who can read Greek at all fluently will care little for any translation; those who cannot will prefer, and ought to prefer, even a very loose poetical version. There remains the small but very important class, from the paedagogic point of view, of those who are learning to read Latin and Greek. To such the scholarly prose version is undoubtedly an excellent commentary, and, if honestly used, cannot fail to stimulate their progress. If this is the object of Mr. Tatham's *Philoctetes*, he has accomplished it well. It is an honest translation, in readable English, and showing a careful study of the difficulties of the original. A few notes, however, on other renderings of disputed passages, and, above all, an indication of the lines of the Greek in the margin of his book, would have made it very complete in its way. But this modest estimate of the pretensions of a modern prose translation will not satisfy those who pursue it as a high art; and I find most scholars are so hurt at a free expression of opinion, that I beseech those among them who are my esteemed friends not to set it down as wickedness in me, but as the judgment of one who has no faculty for turning Greek or Latin either into prose or verse. Time will decide between us.

Moreover, if it appears too strong a statement that any poetical translation, however loose, is better than prose, we are no longer obliged to fall back on loose versions, since now we have from good scholars poetical

versions really attending not only to the spirit, but to the letter, of the original. This, no doubt, is one great good done by the accurate prose translations. They have reacted upon the rest, and so raised the standard which men seek to attain. The two larger works before us are striking instances of this. If we compare either of them with Potter, or with Dale, or even with Mr. Plumptre, we cannot hesitate to pronounce it a great advance. A faithful adherence to the original has evidently been studied, no less than the attainment of absolute literary merit. But when we come to compare two such excellent works and endeavour to declare our preference, and give reasons for it, the task becomes exceedingly difficult. Comparing their passage by passage, we prefer sometimes the one, sometimes the other.

On the whole, however, Mr. Whitelaw's translation adheres more closely to the original; and, if direct reminiscences of Shakspeare, Milton, Arnold, and Browning are certainly more frequent, these are no blemishes, perhaps even a merit in such kind of work. To show an idiom in one of our great poets as truly representing the thought of a Greek poet is to suggest a point of much literary interest. Mr. Whitelaw's principle of translating the choruses into unrimed lines gives him an advantage over his competitor; but, on the other hand, effective riming has its unconquerable charm. In the matter of English, it is dangerous to censure a writer so versed in the great masters; but surely, however "to deathward" (*Ant.* 283) may be defended by the Biblical "to usward," "from the Thraceward" (*Ant.* 589) is more than odd. In the same play, the "waters wan" (334) and "short shrift" (933) are modernisms; and so, perhaps, is "fine gold of Ind" (1038). "Splenitive" is an odd and not satisfactory rendering of *keproiouis* (958, 960); and (804) "The fountains of my tears, I can refrain no more," is perhaps a clerical error. This is the kind of flaw which a reader anxious to find fault may often track out in the book—generally doubtful English rather than incorrect translation.

In Prof. Campbell's work there is, perhaps, greater smoothness and beauty in the lyric parts, but not unfrequently additions or alterations for the sake of rime, which remind one of the old versions. Thus, of the Argive host compared to an eagle (*Ant.* 115), "These stooped above the domes, with lust of carnage fired," introduces an idea foreign to the Greeks. Again (1086), "That stains their incense with polluted breath" gives us more than the original. Again (*Elect.* 154), "Sad Niobe, whose moan is muffled in thy sepulchre of stone," gives us a wrong picture of that famous figure. In *Oed. Col.* (669 *sqq.*), the first chorus opens with "Friend" (*ἔνε*), for which Mr. Whitelaw more properly has "Stranger;" and presently a whole line (683) is added to the original—viz., "Bright flowers their never-failing bloom renew."

But why search for these trifles when the merits of the book are really great? It is only to justify a slight preference for Mr. Whitelaw's version. Perhaps the Prefaces increase this feeling, for, while Mr. Whitelaw's is quite downright and to the point, Prof. Campbell has given us an aesthetic essay, which leaves but a vague

impression on the mind. But we may indeed congratulate the English public who want to read Sophocles on having to choose between such exponents of his poetry. Both are excellent, and the judgment here hazarded in preference of the one may doubtless be reversed by other critics. I will conclude by citing the parallel versions of a passage so famous that many readers will be able to judge between them without referring to the familiar Greek. It is but fair to repeat that the task of comparing translations is not to be settled by one or two passages. Like a neck-and-neck race, in which each competitor in turn gains and loses his advantage, till the spectators are at their wits' end to know which is really the better, so it is with this art of translating. Where one is happy the other seems tame, and yet the next page may reverse our judgment.

We take the first antistrophe of the famous Herodotean ode, *Oed. Col.* 1211 sqq. Here is Prof. Campbell's version:—

"Far best were ne'er to be,  
But, once he hath seen the day,  
Next best by far for each to flee,  
As swiftly as each may,  
Yonder from whence he came;  
For let but Youth be there  
With her light fooleries, who shall name  
The unnumbered brood of Care?  
No trial spared, no fall!  
Feuds, battles, murders, rage,  
Envy, and, last of all,  
Despised, dim, friendless age!  
Ay, then all evils, crowded in one room,  
Each at his worst of ill, augment the gloom."

Here is Mr. Whitelaw's:—

"Not to be born is past disputing best:  
And, after this, his lot transcends  
Who, seen on earth for briefest while,  
Thither returns from whence he came.  
For, with its fluttering follies all aswarm,  
Who needs, while Youth abides, go far afield  
To heap vexation? What's the missing plague?  
Slaughters are here, and strife,  
Factions, and wars, and spite.  
And still Life's crowning ills to bear—  
Last scene of all, of all condoned,  
Unfriended, uncompanioned age,  
When strength is gone, but grief remains,  
And every evil that is named—  
Evil of evil, grief of grief."

J. P. MAHAFFY.

#### BIBLIOTHECA WIFFENIANA.

*Spanish Reformers of Two Centuries, from 1520.* Described by Edward Boehmer. Vol. II. (Trübner.)

TIME has brought about few more singular revenges than that of the zealous study of the works of the Spanish Reformers. At the beginning of the century no class of European literature was less known and less read. Men had forgotten both the names of the authors and the titles of their works. Of many of these only single or fragmentary copies were known to exist, and more were supposed to have perished; but the eager search of enthusiastic votaries in our day in European public libraries has been almost annually rewarded by some fresh discovery. The first to call general attention to the subject was a Scotch divine, Dr. McCrie; his *History* was followed later by that of Castro, in Spanish, in 1851. Meanwhile, the lively narratives of that strange missionary, George Borrow, had kept up the interest already

aroused. But it was not till after the meeting of Wiffen and Luis de Usóz y Río in London, in 1837, that the task of collecting and reprinting these forgotten and almost perishing works was seriously undertaken. Some twenty volumes have appeared in the series of "*Reformistas Antiguos Españoles*." Since the death of the first editors, the work has been continued by the late M. de Brunet at San Sebastian, by Boehmer in Germany, and by J. T. Betts in England. The ancient classics have scarcely been edited with more zeal and care than have these of the once obscure Reformers of Spain. They have been happy, too, in finding a worthy antagonist; and, should these reprints become exhausted, their memory will still live in the brilliant pages of the *Historia de los Heterodoxos*.

The present volume is the second of a work of almost monumental character, in which Prof. Boehmer gives an account of all that can be collected as to the lives of these Reformers, but especially as to the bibliography of their writings. He does this with the exact learning, the unwearied patience, and the attention to minute detail which characterise the best work of German authors. Almost the only defect we have to notice is that the English of this volume presents a marked decline on that of vol. i. It is a thousand pities that the MS. was not revised by some competent English friend. We feel this most of all in the numerous references, which, by reason sometimes of the omission of the volume or page, by the insertion of superfluous pronouns, or by the use of a double "not," are frequently most difficult to be understood. Here and there, when a document is epitomised, the English given is such that all we can be sure of is that the author did not write what is given in the text. Wiffen, as a Friend, sometimes wrote quaint English; but he never penned such a sentence as this on p. 77: "This man was a corrector to the print of such books as were printed at Geneva." The "weapon" of a cardinal, p. 30, we conjecture to mean the "arms" in the heraldic sense; "conterranean," p. 182, may be equivalent to "fellow-countryman." But, if from style and arrangement we turn to matter, the book is full of information. We have here, as elsewhere, abundant proof of the great part which mere gossip played in the religious struggle of the sixteenth century, owing to the credulity of the antagonists on both sides. Some of this—e.g., that relating to the last days of Charles V.—Dr. Boehmer fully exposes on p. 23; and other items are ruthlessly examined elsewhere.

If we look at the account of the Reformers given in these two volumes, it is not hard to see why, apart from external persecution and the vigilance of the Inquisition, the Reformation failed to establish itself in Spain. The chief Spanish Reformers never seem to have attached themselves definitely to any of the great schools of religious thought, nor to have attempted to found a national Spanish Church. Their teaching is too vague and indefinite. They adopted neither the broad humanitarianism of Luther nor the ideal theocratic commonwealth of Calvin, nor did they make their appeal to primitive antiquity as did the Church of England.

This last has indeed been done in Spain, but it has been by statesmen on political, or on higher grounds by Jesuits, as Burriel, 1750, and Masden, 1817; but not by the Reformers until our own day. Their mystic writings, too, which are some of their best, are fully equalled by those of the opposite side. Chapters from Luis de Granada's works were incorporated in the writings of the Protestant Constantino de la Fuente, and were the inseparable companions of even such a free-lance as the Abbate Marchena. The doctrinal affinities of the separate Reformers are not fully traced out either by Boehmer or by Menéndez Pelayo, though their works will greatly aid subsequent writers in doing so. In this respect we are disappointed in the tables of comparative extracts (pp. 322–52) of translations of the Bible into Spanish. These seem all to be chosen with reference to literary considerations only. But had such passages been selected as the opening verses of St. John's Gospel, the reader would have been in a position to judge how far the action of the Trinitarian Bible Society, and that of the Spanish bishops, was justified in rejecting some of these versions, on account of the substitution of *estar* for *ser* to denote the relations of the Trinity, of *la palabra* for *el Verbo* as a translation of *ὁ Λόγος*, &c. The number of Bibles, Testaments, and portions of Reina's Bible alone (including Valera's revisions) printed in Spain by the Bible Society between 1869–82 is given from official lists (p. 290) as 1,501,000 copies. This is exclusive of other versions printed in Spain, such as Scio's; of all those printed in Great Britain, France, or the United States; of all Roman Catholic versions; of all dialectic versions in Basque, Catalan, Gypsy, &c.; and of all of any kind printed before 1869. A chance catalogue of general literature of a second-hand Madrid bookseller lying before me contains, beside Protestant versions, five large editions of Scio between 1816 and 1868, and we know of others. It gives also Roman Catholic versions by Amat, Santos, and de Saey. The opposition to the printing of the Bible in Spain has evidently been exaggerated by controversialists.

We fear lest, while dealing with details, we may leave a false impression on our readers. We repeat, therefore, that, in spite of defects which are more irritating than important, this work contains a mass of information, especially as to bibliography, not to be found elsewhere, and must always be the standard and indispensable work of reference to all students of the subject.

WENTWORTH WEBSTER.

*Folk-Medicine*: a Chapter in the History of Culture. By William George Black. (Published for the Folk-Lore Society by Elliot Stock.)

THIS is, in my opinion, about the most valuable work yet issued by the Folk-Lore Society. Not only are the various subjects treated in a clear and consecutive manner, but the scope is wide and comprehensive, while chapter and verse follow almost every quotation or fact adduced, thereby placing the student at once in a position to verify

everything for himself. Those who have read and studied European and Oriental folk-lore for themselves, and made notes of such facts as have come under their own observation, will find that while Mr. Black's work is suggestive it is far from being exhaustive. In fact, it would be almost impossible to enumerate all the facts and fancies one gleans in our own outlying places, much less could one be expected to place on record all that is to be obtained, either at first or second hand, in countries less advanced in the knowledge of medicine than ourselves. In those lands where medicine is still unknown as a science, and everyone resorts to the use of herbs, charms, animals, and such-like things for the cure of diseases, a wide field is open to the student; but my own personal experience of the matter teaches me that the folk-medicine of the English peasant is exactly the same as that of the heathen Chinese. Thus in Lincolnshire, Aberdeenshire, and elsewhere, mice used to be employed for certain complaints. In the former place they were fried for whooping-cough. (As I write, a relative living in Sussex informs me that a neighbour cured her child of a very troublesome complaint by baking a mouse and grinding it to powder, and she strongly recommends the recipe!) In Canton, South China, I one day overtook a lad in the streets of the city carrying a *so-shü*—a kind of shrew-mouse—by the tail, and enquired what he intended doing with it. He replied that when it had been roasted in a *wok*, or cauldron, and ground to powder it would be put into some gruel to cure a lad suffering from a big belly! Mr. Dyer mentions in his *English Folk-Lore* that in Oxfordshire children were wont to be cured of whooping-cough by drinking milk which had been left by a fox. In the same way the people of China effect a cure on their children. A friend of mine living near Canton once possessed a monkey, which he observed to be constantly receiving attention from the natives around. On one occasion he noticed that the people threw down a banana to the animal, and when it was half eaten, snatched it up again and ran away. He enquired their object, and was told that if their children ate the remainder of the fruit it would prove an effectual cure for the complaints from which they were suffering.

Mr. Black devotes a whole chapter to the study of Personal Cures; but, while he takes us from England to Persia and from Egypt to China, and even introduces us to the Holy Land, he does not mention any case from Holy Writ which teaches us that cures by touch were believed in. Surely this is to be clearly argued from the case of the woman who said, "If I may but touch the hem of His garment I shall be made whole." There can be no doubt that the woman's faith was based upon a long-established credulity existing in the popular mind.

The author's notice of plant-medicine is scanty considering the wonderful field which the study of local plant-cures opens up. In the Midlands great faith is still placed in herbs, and the people are very fond of a "diadrink" (*i.e.*, diet drink), which they make from a particular number of different plants. A lady recently told me that honey

was good for stings, and, in fact, "for most things, because it is extracted from all the different kinds of herbs," and so must contain all the virtues of the same. In Somersetshire nine leaves of a certain plant, and in Devon seven or nine, must be employed for producing cures. On the use of numbers Mr. Black has some interesting notes, as also on the use of colours. Mr. Farrer's valuable remarks and references (*Primitive Manners and Customs*, chap. ix.) might have been quoted among the authorities adduced in connexion with this subject. In Northants the meanest weeds sometimes find a place in the herb-medicine of the peasants. I one day called to see a young person who was reported to be ill, and found her fomenting her face with a dark decoction made of groundsel (*Senecio vulgaris*) steeped in boiling water. Thinking she might be suffering from a boil, or pains in the face, I asked what object she had in view in using this. Her simple reply was, "They say it takes away freckles and spots, and makes the skin fair." I replied that she must be very anxious to make herself handsome, and, as my pastoral services were not required for such a purpose, forthwith took my leave. In Oxon the plant just mentioned is said to be a capital remedy for rheumatism.

A belief in the power of the seventh son to work almost miraculous cures still lingers in the West of England. As I was crossing from Ipplepen to Newton Abbot in South Devon one day not long since I was overtaken by a labouring man who readily entered into conversation respecting the virtues of plants. He told me a number of wonderful stories about the seventh son of a seventh son who lived not many years ago at Torquay, and who had cured two or three people of his acquaintance by means of herbs after all the doctors had given them up. It is a curious thing that a seventh son should be "looked upon with horror in Portugal," where he is supposed to assume the likeness of an ass on Saturdays. A friend of mine in Northants says she has sucked a frog's mouth through a muslin bag for the cure of whooping cough, while another person assures me that when her only child (now only four years of age, therefore quite recently) was suffering from the same complaint, having tried everything people recommended, she last of all put a hair between bread and butter and gave it to a dog. The child eventually recovered. Some say the crowfoot (*Ranunculus repens*) is the only useless herb there is, but in Oxon and Northants there is a flower just now in bloom which is said to have been stigmatised by the Virgin and condemned to a life of inutility. She used to employ it for the manufacture of an ointment, but on one occasion

"She could not find in time of need,  
And so she pinched it for a weed."

Just as the fish caught by Peter and the ass ridden by the Saviour still bear a distinguishing mark, so every leaf of this plant has a dark spot in the centre just as though it had been pinched, on which account it goes by the name of "pinch-weed." In Bucks and Oxon one very frequently finds the mantel-piece in cottage homes bedecked with the shaking grass (*Briza media*), and, though

the old idea is fast dying out, it used to be firmly believed that ague would not enter where the "quakers"—the local name—were kept. In Oxon, Yarrow tea is said to be as good for a cold as chamomile, and had I space at my disposal many other similar illustrations of folk-medicine might be recorded.

The Introduction and concluding essay of the volume are very valuable, but into the questions there discussed I cannot enter. I have found a few misprints and errors in the references. On p. 92 the name *Kuang-minrg* has a very strange appearance, even for a Chinese word, and the penultimate letter must be deleted in order to make the word pronounceable (*ming*). For "berth," on p. 224, read "birth." In three instances out of four we have p. 197\* in the Index, and once rightly p. 197†. I have often heard of the nettle-rash, but never of the nettle-rush, as the name of a troublesome eruption; yet, in the text (p. 199) and Index alike, the latter form is employed. The fastidious botanist will find some eyesores in the way in which the names of plants are spelled, without any regard for the use of capital letters, and this sums up the whole of my fault-finding. The triviality of these few points would only be noticed by the critic, and the folk-lorist will find much to repay his careful study. Some books of this class are only fit for light reading; but, while Mr. Black's volume is as entertaining as a novel, it suggests many thoughts which the ethnologist, anthropologist, and even divine may find it worth his while to investigate.

HILDERIC FRIEND.

#### OLD-FRENCH REPRINTS.

*Lycner Yzopet*. Edited by Wendelin Förster.  
*Les Tragédies de Robert Garnier*. Edited by Wendelin Förster. Vols. I.-III. (Heilbronn: Henninger.)

THE series of editions of French MSS. which Messrs. Henninger have for some time been producing has been very welcome to students of Old French, and it is with at least equal gladness that they receive a companion series of reprints of printed books which has been more recently started. The inexhaustible stores of French literature cannot be attacked in too many quarters at once if they are to be made accessible to the world; moreover, in the matter of reprints especially, there is observable in France itself a certain tendency to get into grooves. No sooner has one edition of an author made its appearance than somebody seems to think it his duty to produce another. This may be all very well as evidence of an encouragement to emulation among editing scholars; but it is a little unsatisfactory to reading scholars, in whose case *le mieux* is emphatically the *ennemi du bien*. The two series of which we are now speaking, over which Dr. Förster and Herr Vollmöller respectively preside, appear to be directed in a more intelligent spirit. If we are not mistaken, all the volumes of the older series, or all but one, give texts which, at any rate in their entirety, are new to print. The volumes issued and forthcoming of reprints are all works which no modern or critical

editor has touched at all. This is as it should be, and it may be added that the books are excellently produced as books. They are not quite so cheap as the old Bibliothèque elzévirienne, or the still more surprising volumes of the Belgian Academy; but books in general have got dearer in Germany since the war. In precision and scholarly fullness of editing they leave nothing to desire. German editors are, indeed, sometimes apt (it may be from modesty, it may be from contempt of such frivolities) to leave out of sight the literary, as opposed to the purely philological, aspect of the works they edit. But anyone who has a taste, if not a vocation, for literary criticism may be rather grateful for this abstinence, because it leaves him something to do.

The Ysopet which Dr. Förster has here published is, like the other works which go under that general title, a version of a certain division of the numerous fables in prose and verse which went, in the Middle Ages, under the name of Aesop. In this case the original is the unnamed elegiac writer who has received the designation of *Anonymus Neveleti* from his appearance in the collection of Nevelet, and whose verses Dr. Förster has carefully edited with the French. The chief literary interest of the latter lies, of course, in the comparison of it with other Ysopets, and especially with that of Marie. It belongs to the same century, though, probably, to a later period, for, in the first place, there are distinct traces of allegory in it, and in the second place the handling is much more diffuse. If the originals had been the same (which they were not), this last trait would have been decisive; but, even as it is, it is strong. The *Anonymus* himself is not unduly diffuse, though he is terribly given to playing on words ("sic nocet innocuo nocuus causamque nocendi invenit"). He dispatches the Wolf and the Lamb in sixteen lines. His translator makes seventy of them, which, even allowing for the different capacity of the octosyllable and of the hexameter or pentameter, is exorbitant. Now Marie had found half the number enough to put the story much more pointedly. Indeed, point is not the *forte* of this writer, though he has a considerable faculty of easy narration. He is philologically interesting, because he writes in a dialect which has many peculiarities, especially in the use of the vowels.

The reprint of Garnier is of even more general interest. The late M. Jannet once remarked that "les tragédies de Garnier sont chez tous les libraires." "Every bookseller," in this phrase, may rank with the celebrated "every school-boy." The plays are, of course, not, in the proper sense, rare; but a book which has not been reprinted since the early years of the seventeenth century is scarcely likely to be found "chez tous les libraires." Yet Garnier is the most considerable figure in French tragedy before Corneille, and his masterpiece, "Les Juives," is very well worth reading indeed. With perhaps not unpardonable patriotism, Dr. Förster assigns to his countryman Ebert the glory of having rediscovered Garnier. It is, however, somewhat unfair to speak of Messrs. Darmesteter and Hatzfeldt's excellent *Seizième Siècle en France* merely as having "popularised Ebert's results."

It did much more than popularise Ebert, though it left something for others to do. The three volumes before us include the six "classical" plays (one of which Kyd translated, and which are very closely modelled upon Seneca) and also "Les Juives," but the almost equally interesting "Bradamante" is reserved for the fourth and last. In "Les Juives," however, the reader has the best possible opportunity of judging what Corneille, with some hints from the despised Hardy, did for French tragedy.

Dr. Förster promises, contrary to the wont above mentioned, a short biographical and critical study in his last volume, which will be welcome. We are also glad to see that the series is to comprise an edition of Mariat, who is well worth reprinting, and who is at present less accessible even than his fore-runner.

GEORGE SAINTSBURY.

#### NEW NOVELS.

*A Struggle for Fame.* By Mrs. J. H. Riddell. In 3 vols. (Bentley.)

*Red Riding-Hood.* By Fanny E. Millett Notley. In 3 vols. (Hurst & Blackett.)

*True to the Core: a Romance of '98.* By C. J. Hamilton. In 2 vols. (White.)

*One Summer.* By Blanche Willis Howard. (Edinburgh: David Douglas.)

*Lady Glastonbury's Boudoir; or, the History of Two Weeks.* By the Author of "The New Utopia." (Burns & Oates.)

Mrs. J. H. RIDDELL has considerably changed her style since the days when she wrote *George Keith of Fen Court* and the rather powerful but decidedly melancholy stories which immediately succeeded that popular book. Dr. Downward, in Mr. Wilkie Collins's *Armada*, said of the ideal novelist, "All we want of him is—occasionally to make us laugh, and invariably to make us comfortable;" but Mrs. Riddell, in her first period, evidently differed from the proprietor of the Hampstead Sanatorium, for she disdained to make her readers laugh, and consistently endeavoured to make them as uncomfortable as possible. There were few notes in the scale of human misery that Mrs. Riddell did not strike; and, even when things were going prosperously with her characters, she was careful to spoil our thoughtless complacency by numerous hints of troubles in store. Women young enough and comfortable enough to enjoy the luxury of "a good cry" doubtless revelled in these records of wretchedness; but those of us whose tastes in the main coincided with Dr. Downward's wished for something a little more cheerful. At last we have got it, and we are, or ought to be, grateful accordingly. There is very little that is depressing in *A Struggle for Fame*, for we are not made seriously unhappy by the misfortunes of a heroine who fails to fascinate us; and there is a good deal of light comedy, with here and there a touch of farce, which is entertaining enough, if not absolutely provocative of laughter. There are about half-a-dozen people in the book who may be considered strugglers for fame; but the character whose struggles are made the most interesting is a certain raw young Irishman,

Bernard Kelly, who comes to London to make a living out of literature. As Kelly has a certain amount of marketable cleverness, a cool head and cooler heart, with a happy knack of making useful friends and of dropping them when they have ceased to be useful, it is needless to say that his struggles are not wholly in vain; and the record of them not only "adorns a tale" very agreeably, but "points a moral" of the kind to be found in Rochefoucauld's maxims. A still more amusing Irishman is a certain Mat Donagh, who also has had literary aspirations, but who, owing to the non-appreciation of publishers, is "connected with the press" not as a purveyor of lofty verse or sparkling prose, but in the humbler capacity of a canvasser for advertisements. This degradation is the secret of Mat's life, and the picture of his despair when the dreadful truth becomes known is delightfully ludicrous, though perhaps the language of his lamentations is rather too closely modelled on that of Mr. Micawber. The Bohemian Dawtons are a capital sketch group, and the story of the firm of Felton and Lapdash is an amusing episode; but even Mrs. Riddell's most simple-minded readers will find it difficult to believe that a publishing house without credit should leap into prosperity and fame on a capital of eight pounds and ten shillings. One slip, however, does not spoil a good story; and *A Struggle for Fame*, in spite of a weak and unsatisfactory conclusion, may fairly be so described.

The first few chapters of *Red Riding-Hood* introduce us to a girl of sixteen who has fled from an unkind grandmother. She is beginning a walk to London of 283 miles, from which one imagines that her deserted home is somewhere in the South of Scotland, though the dialect spoken in the district is anything but Scotch. Her only earthly possessions are a marvellous voice and a Cremona violin which has been left with her by her father, an Italian conspirator, of whom for years she has heard nothing. At the beginning of her journey she encounters a mysterious stranger, who sentimentalises in symbolical and enigmatical language, and who takes her to the equally mysterious home where he lives with his little boy and a prosaic, middle-aged woman who acts as housekeeper. The persons, the situations, the literary style, are all suggestive of "Ouida," and the reader begins to think that he is in the company of one of the numerous imitators of that eloquent and voluminous romancer; but, all at once, the "Ouida" disguise drops off, vaporous sentiment is exchanged for solid sensationalism, and we recognise the features of our old friend the "penny dreadful." *Red Riding-Hood* is, however, a pretty good specimen of an inferior species of literature; and the reader of simple tastes who does not demand that characters shall be comprehensible or incidents credible may, and doubtless will, derive from it a considerable amount of serene satisfaction. As almost all the personages in the story are present or past members of secret societies, and as everybody is conspiring against everybody else, and is either in the power of somebody or has somebody in his power, it will be seen that there is "ample scope and

verge enough" for an exciting and complicated plot. Miss Notley makes the fullest use of her opportunities in this respect. Indeed, the main objection to the story, as a story, is that the plot becomes occasionally so very complicated that it is not easy to follow without the help of such external appliances as a cup of strong tea and a wet bandage. At last patience is rewarded. Everything, or nearly everything, becomes clear, and all turns out right. Lady Brentwyche very properly poisons herself, Delgado blows himself to pieces with dynamite, and Lord Enderby marries his second love and lives happily ever afterwards.

I suppose Miss Notley would class her story among novels, while Mr. Hamilton gives to his the name of a romance; but *True to the Core* displays a much stronger grip of actual fact than is to be found in *Red Riding-Hood*. *True to the Core* is so good both in conception and execution that one wonders at first why it does not produce a deeper impression upon the mind. It is not a powerful novel, but, one feels that it might have been made so if the characters had been a little more sharply individualised, and made really to live instead of simply to speak and act before us. They are very creditably executed lay figures, but, with one exception, they are little more. We seem to know all about the enthusiastic young barrister with a turn for rebellion, the Castle spy who professes to be an ardent patriot, and the faded beauty whose vanity has outlived her charms; and Mr. Hamilton hardly manages to inspire us with a new interest in such very old acquaintances. On the other hand, Norah Buidhe, the wild Kerry girl, who offers not merely her life, but something she holds dearer, to save the man who has rejected her love, is a strongly conceived figure, who, in the hands of a master like Victor Hugo or Mr. Charles Reade, would have been a most impressive and memorable creation. Even in these pages the lines of this portrait are so sure and masterly as to encourage a feeling that Mr. Hamilton is a writer from whom something is to be expected; and if, in speaking of *True to the Core*, I have seemed to "damn with faint praise," it is only because I think that Mr. Hamilton has it in him to produce something even better, good as this story undoubtedly is.

*One Summer* is disappointing. It opens with a really brisk, novel, and humorous situation, and the reader is naturally led to expect a good deal; but, unfortunately, the rest of the tale—if tale it can be called which tale hath none—confirms the truth of the modern beatitude, "Blessed is he that expecteth nothing." In a mere literary sense, *One Summer* is a blameless work. Miss Howard's style is pleasant and graceful, and there are occasional felicities of expression which break the monotony of a somewhat somniferous correctness; but there is a terrible lack of story, and in a novel there really should be some story, just as in a comic journal there should be an occasional joke. Mr. Henry James, jun., and Mr. Howells, who seem to think that there is something vulgar in a plot, and that we ought to be ashamed of being interested in a novel which

has a beginning, and a middle, and an end, have many things to answer for, and one of the many is Miss Howard's achievement in fiction. There is some cleverness in *One Summer*, but hardly enough to make us forget its thinness, its expatiation, and—I must add—its tiresomeness, which is all the more exasperating because Miss Howard seems to be tiresome on principle, and not because she cannot help it.

*Lady Glastonbury's Boudoir* is a readable little novelette which will wile away the hours of a wet afternoon very pleasantly. The anonymous author, unlike Miss Howard, has old-fashioned views upon the subject of fiction, and does not disdain to write a story which, if not remarkable for originality, is, at any rate, well put together and attractively told. Crawley is a somewhat melodramatic scoundrel, and there is a touch of Grandisonian conventionality about Uncle Bevis; but the portrait of Lady Glastonbury indicates some knowledge of human nature and not a little literary skill. There is just the tincture of polemics which one naturally expects in a story which comes from a well-known Catholic publishing house, but there is not a single offence against good feeling or good taste; and the only complaint to be made is that the conversions which follow each other so rapidly at the close of the story are not very artistically managed. The writer might have been content with Uncle Bevis and Maurice, and have left the naughty Lady Glastonbury out in the cold. JAMES ASHCROFT NOBLE.

### THREE VOLUMES OF VERSE.

*Poems of Many Lands.* By Rennell Rodd. (Bogue.)

*A Year of Life.* By John Cameron Grant. (Longmans.)

*An Actor's Reminiscences, and other Poems.* By George Barlow. (Remington.)

IN Lord Ronald Gower's recent *Reminiscences* the opinion is advanced that Mr. Rodd is a clever young fellow, whose poetic intelligence must have had enough to do to develop under "the cold shade of Jowett." But Mr. Rodd is not dependent upon his friends for introduction to the public. His dainty little volume, published some time ago (if we remember aright, in almost too gorgeous apparel), sufficiently signalled the advent of a graceful writer. The present volume incorporates the book just referred to with sundry fugitive scraps that have been since contributed to periodical literature. It cannot fail to add to the good opinion formed of its predecessor. It is hardly rash to say that of the younger poets none exhibits a truer love of nature or a more intimate knowledge of her phenomena. Only Mr. William Sharp's "Transcripts," among the recent productions of the younger singers, seem at all on a level with some of the descriptions of inanimate nature contained in this volume. There is the genuine ring of nature-worship here, as distinct as possible from the *aurora borealis* of writers who, in the heart of London, in an atmosphere smelling of the candle, cry, as Carlyle says, "Come, let us make a description." Especially happy is the following realisation of the spirit of that *natura maligna* which pervades nature, according to those writers of verse who are so prodigiously Oriental:—

"And one dwells there in the caves below  
That only the seals and the seagulls know,

And the haunting spirit is passing fair  
With sea-flowers set in her grey-green hair,  
But she looks not off to the daylight skies  
For the sunshine dazzles her ocean eyes;  
But now and again the sea-winds say,  
In the twilight hour of after-day,  
They have seen her look through her veil of spray.

"Stilled are the waves when she lies asleep,  
And the stars are mirrored along the deep,  
The gulls are at rest on the rifted rocks,  
And slumbering round are the ocean flocks,  
Where the waving oarweeds lull and lull,  
And the calm of the water is beautiful.

"But ever and aye in the moonless night,  
When the waves are at war and the surf is white,  
When the storm-wind howls in the dreary sky,  
And the storm-clouds break as it whirls them by;  
When it tears the boughs from the churchyard tree

And they think in the world of the folk at sea,  
When the great cliffs quake in the thunder's crash

And the gulls are scared at the lightning flash,  
You will hear her laugh in the depths below,  
Where the moving swell is a sheet of snow,  
Mocking the mariner's shriek of woe."

Hardly less beautiful are the descriptive passages entitled "Sea Pictures—France;" but the following sonnet, exhibiting the writer's powers in another direction, is all that we are now able to quote. The tradition that tells how, wretch as Nero was, he had still some few to mourn him and to place, unseen, some flowers on his grave is one of the most beautiful stories that come down to us, coupled, as it is, with the record of so much that is ignoble and loathsome. Obviously, the story of Actea is an excellent one for a poem. Byron, who might have dealt well with so fine a theme, touches upon it for a moment earnestly in "Don Juan," and then, of course, goes off into the flippancy of

"But I'm digressing: what on earth has Nero  
To do," &c.

The following is Mr. Rodd's treatment of the subject:—

"ACTEA.

"When the last bitterness was past, she bore  
Her singing Caesar to the Garden Hill,  
Her fallen, pitiful, dead emperor.  
She lifted up the beggar's cloak he wore—  
The one thing living that he would not kill—  
And on those lips of his that sang no more,  
That world-loathed head which she found  
lovely still,  
Her cold lips closed; in death she had her will.  
Oh, wreck of the lost human soul left free  
To gorge the beast thy mask of manhood  
screened!  
Because one living thing, albeit a slave,  
Shed those hot tears on thy dishonoured  
grave,  
Although thy curse be as the shoreless sea,  
Because she loved, thou art not wholly fiend."

It ought to be added that Mr. Rodd's book does not make revolt either against canons of morality or canons of religion; and this is the more remarkable at a time when there seems to be a growing appetite for such rebellion and an increasing relish of turbulent emotion. As a minor point, Mr. Rodd may be reminded that the burden of his "In the Woods" bears an unlucky resemblance in the matter of form to the burden of "Cloud Confines."

In the Preface to *A Year of Life* the author tells us that the stanza he has chosen for his poem is the sonnet. He says the sonnet advisedly, "for verses often appear, set forth as sonnets, which are as much so in reality as they are Homeric poems." He admits that "there are sonnets and sonnets," but he thinks "no modern poet ought to write otherwise than by the strictest Miltonic rule." Moreover, the legitimate sonnet is "such a beautiful, flowing, and plastic verse that one should scorn to

require more than four rhymes in the fourteen lines." In a language "so wonderfully flexible and adaptive as English—so splendid in its very wealth and wildness of rhymes wherefrom to choose"—writers should not, in this author's opinion, be allowed to stray into slipshod structure. After much to a similar purpose, and after a curiously unnecessary repudiation of that "Devil's darling sin"—the "pride that apes humility"—the author proceeds to say that "the greatest master of the sonnet was John Milton," and that "nearest in sway" to the blind poet comes, he thinks "indisputably, John Keats." About a third of Keats's sonnets are on the strictest plan, and "if he had lived he would," the author thinks, "have given up the lower and looser method of writing." Finally, Mr. Grant believes his own poem is "the first and only one of any length in the English tongue written throughout in true sonnets." It seems almost sorry sport to disturb the gingerbread palace of so much radiant self-satisfaction; but it is necessary to tell the author that he is wrong in every particular. He speaks of the sonnet as an artificial form of verse. It is not by any means artificial, but is as subservient to a natural law of melody as is the *terza rima* or the Spenserian stanza. The law requiring that there should be four rhymes in the fourteen lines originated in Italy, where the abundance of rhymes in the Italian language required that, for variety's sake, there should be at least so many. Frequently Dante, and sometimes Petrarch, give five rhymes—three being in the sestet. When Wyatt first, and Milton afterwards, began to work in this form, the conditions were reversed, and the poverty of rhymes in the English language made the difficulty of sonnet-writing lie in keeping down to that number of rhymes above which the Italian writers were not expected to go. But Milton never, save once, wrote in the exact form adopted by Petrarch. He never consciously observed that intellectual and metrical pause between octave and sestet which is ever a part of the design in the purest Italian models. Moreover, in his Italian sonnets he usually closed with a couplet. To speak of the "strictest Miltonic rule" as establishing arbitrary laws of sonnet-structure is, therefore, the error of one who knows his subject imperfectly; and to speak of Keats as "nearest in sway" of the sonnet to Milton is, we fear, the blunder of one who hardly knows English sonnet-literature at all. Keats wrote fifty sonnets; about six of these are of the finest quality, about ten are of secondary value, and the rest are (as Rossetti used to say) among the sorriest drafts ever thrown off by a great poet. Moreover, Keats's model was not Milton, but Shakspeare; and so far was he from giving up "the lower and looser methods of writing" that he was perpetually grumbling at the shackles imposed by the Petrarchian form, and constantly resolving to make a structure for himself. His last sonnet is Shaksperian. Now to come to Mr. Grant's own sonnet. We are sorry to say that it is not a sonnet at all. It is merely a stanza having the arrangement of rhymes adopted by Milton. It possesses no such intellectual unity as should always accompany, and correspond with, the metrical unity. It is employed for the purposes of a continuous poem. Neither Milton nor Keats ever used the fourteen-line poem in this way; and, though there is no reason why Mr. Grant should not so employ it, there is every reason why he should not call his work a series of sonnets. Nor has he truth on his side when he arrogates the distinction of being the first to use the sonnet-stanza continuously. A true poet, Mr. J. A. Symonds, has done as much with the sonnet, as a vehicle for interlacing continuous moods of thought, as can be done without violating the sonnet's clear function of presenting, within its

narrow limits, a completely rounded and isolated conception. Coming to the poem itself, we can commend it. Exhibiting a grasp of style, being fluent and forcible, it is more enjoyable than the Preface that precedes it. With the symbolical business of the stream on whose banks the author stands, &c., we can hardly concern ourselves. There is a hint of beauty in the following:—

"My day hath been all sterile, single, sour,  
My night hath been all long, and dark, and sad;  
But now new crimson morning rises glad,  
And now the cloudy wracks, that seemed to lower  
Above my mountains, lift, some other Power,  
Some Cause compels; whence else were it  
They had  
Those golden finger touches, tho', grown mad  
To yield without a struggle, for an hour  
The ragged storm swept back, and here and there  
Grey clouds like northern wild-geese overhead  
Shot o'er the vast, and almost made the air  
Sing to the whistle of their wings that led  
And captained in the gusty squalls:—but fair  
New morning breaks, the mist will soon be  
fled!"

The miscellaneous poems following the "Year of Life" are not very noticeable. One of them, "London—Four Photos," has a certain picturesqueness; but surely the author cannot have reflected how dangerously close to a passage in "Jenny" are the following lines:—

"When round the corners smokes the rain  
And ceases for a while again,  
And grimy fog and heavy damps  
Lie low, and all the red-eyed lamps  
Stretch on and on, and twist and meet  
Like fiery serpents down the street."

It must be said that the "fiery serpents" have no right to be in Mr. Grant's book.

Mr. Barlow is a literary enigma. He is for ever free from the accusation which Johnson urged against Gray, of being a "barren rascal." He has certainly a trick of reprinting his old work again and again in volumes bearing new names, which accounts for some of his apparent fecundity. But that, without attaining to any adequate measure of desirable recognition, he should go on from year to year publishing volumes of verse almost exactly similar in character is only to be accounted for upon the assumption that in the teeth of neglect he either possesses vital poetic genius or vital poetic conceit. Mr. Barlow is at liberty to make his own inward comment, and he must be content if his readers make theirs also. We suspect the truth to be that Mr. Barlow's facility is one of the principal agents in his non-success. Sheer mass of work must alone interfere with a just estimate of his merits. If he had printed no more than twenty sonnets there might have been a possibility of considering them, but the 2,000, or perhaps 20,000, that he has written and published would in mere quantity turn the stomach of the most voracious of sonnet-readers. This author is a sort of Petrarchian Falstaff, although, in truth, he is neither the embodiment of poetry nor the cause that poetry is in others. The present volume is disfigured by all the faults and distinguished by all the merits of his former books. There is the same lack of invention, the same dearth of thought, the same poverty of general intellectual resource; but, with these deficiencies, there is the old fluency, fervour, and picturesqueness which in their very excess constitute sometimes a negative defect hardly less reprehensible than the author's more positive literary failings. It would be unfair, it would be grossly unjust, to allow it to appear that in natural gifts Mr. Barlow is on a level with the shoals of versifiers who only differ in habits of life from the fish that spawn in the spring in so far that they spawn at every season of the year. No one can open his books and note the essential power of facile expression which co-

exists with so much verbal excess, with so much intemperance of opinion and recklessness of irresponsible tirade, without perceiving that the author demands more and graver consideration than can usually be given to the writers of his class. But then he deliberately puts himself out of court by what we can only suppose to be conscious buffoonery or downright raving. Unbelief is a tenable position, susceptible of defence on grounds of reason, but scepticism like Mr. Barlow's is nothing short of a palpable, wanton, and cruel outrage, such as will always operate to prevent sober-minded persons of all shades of opinion from offering that tribute to his natural powers which, with all the bad use made of them, they seem sometimes to deserve. The present volume contains, in addition to a few sonnets of distinct merit, and a lyrical poem entitled "The Singers of the Nineteenth Century" (which seems to be in great part a tribute to Mr. Philip Bourke Marston), a long monologue entitled "An Actor's Reminiscences." In this poem the author, after glancing from earth to heaven in the discussion of many subjects, urges the poets of the age to become actors on the ground that they possess the imagination supposed to be essential to great acting. We cannot wait to discuss the thesis; but it could hardly be difficult to show, first, that imagination neither is, nor, except in rare cases, can ever be, a primary agent in the actor's art; and, next, that the minor poets of the age, as represented by the bulk of Mr. Barlow's *confreres*, are more deficient in imagination than any class of the community short of the costermongers and the sandwich-men. There is more imagination exhibited in Mr. Bram Stoker's prose stories than in reams of modern verse of certain kinds. If Mr. Barlow is not already so far established in questionable literary habits as to be lost to all efforts after improvement, we would counsel him to eschew poetry for the next five years, and then to publish a small selection from the best he has done, carefully eliminating every trace of the tiresome poetic phraseology of the day with its countless "roses" and measureless "foam."

## NOTES AND NEWS.

We understand that Mr. E. W. Gosse has nearly ready a volume of "Seventeenth-Century Studies," some of which have already appeared in the *Cornhill*. The plan he has adopted is to take one writer to represent each decade of the century. The following are the ten chosen, in chronological order:—Lodge, Webster, Rowlands, Randolph, Herrick, Crashaw, Cowley, Mrs. Philipps (the "incomparable Orinda"), Ethredge, and Otway.

A new edition of Mr. T. H. Ward's *English Poets* is in preparation, revised throughout and augmented with extracts from three poets recently dead. Rossetti will be treated by Mr. Pater, O'Shaughnessy by Mr. Gosse, and James Thompson (author of *The City of Dreadful Night*) by Mr. Philip Bourke Marston.

MR. AUSTIN DOBSON, we hear, has undertaken to edit (in addition to *The Vicar of Wakefield* in the "Parchment Library") a selection from Steele for the Clarendon Press, and also a selection from Horace Walpole's letters for the "Golden Treasury" series.

We understand that Mr. James Sully has finished the text-book in mental science on which he has been engaged for some time. The work aims at giving the main outlines of psychology in a shape that will be useful to students generally, and at the same time at tracing some of the main bearings of the science on education. It will be published early in the autumn.

A LIFE of Marie-Antoinette, by Sarah Tytler, will shortly be published in the "New Plutarch" series.

THE *Library Handbook* is the title of a work upon which Messrs. H. E. Tedder and O. E. Thomas have been for a long time occupied, and which they hope shortly to publish. It will contain an account of all the libraries of Great Britain and Ireland of any importance, as well as the chief of those of other countries, with an Introduction devoted to library-management, including directions for arranging and cataloguing books, library-buildings and appliances, binding, &c. The price will be moderate, as it is intended to make the *Library Handbook* of use to all persons who either own books or frequent libraries.

CANON BARRY, the Primate Designate of Australia, is the contributor of the Commentary on the First Book of Kings in vol. iii. of Bishop Ellcott's *Old Testament Commentary*, which will be published shortly by Messrs. Cassell and Co.

A NEW edition is about to be issued by Messrs. Sampson Low of Mr. Francis George Heath's *Autumnal Leaves*. The author claims that this work is the only one in existence which gives actual facsimile representations in colour of autumn-tinted foliage; and, although he figures some 250 examples of variation in autumn tinting, his list by no means exhausts the autumn colouring of English leaves.

COL. EDWARD MONEY, on his return from the East, has written an addition to his work on *Tea Cultivation*, treating of countries outside China and India that produce tea, and of tea-markets outside Great Britain. It will be issued immediately by Messrs. W. B. Whittingham.

WE hear that the Roxburghe Club means to have the Early-English "Siege of Jerusalem" edited for it. We only hope that it will produce both the long- and short-line versions of the poem in parallel texts or one beneath the other on the same pages, as the Early-English Text Society meant to do; but its editor has been too busy with other work to produce these texts.

MR. W. J. ROLFE, the American editor of Shakspeare, contributes to the New York *Critic* of July 28 an interesting paper upon the text of Scott's "Lady of the Lake," pointing out, by an examination of the *editio princeps* (1810), how many and flagrant are the misprints that have appeared in all subsequent editions. One instance will suffice. In canto i., stanza 12, Scott wrote—

"The primrose pale and violet flower  
Found in each cliff a narrow bower;"

so in the edition of 1810. But every reprint has "cliff" for "clift."

THE three most recent American biographies are those of President Buchanan, by Mr. George Ticknor Curtis; of John Adams Dix, by his son; and of Thurlow Tweed, by himself.

DR. KARL WARNKE and DR. L. PRORSCHOLDT have lately brought out a very careful edition of "The Comedie of Faure Em," which must have been written before 1591, though the first dated edition is 1631. The editors wisely refuse their assent to the theory of two English critics that, in this play, Kemp, Marlowe, Greene, and Shakspeare or Peele are to be identified with the characters of William the Conqueror, Manville, Mountney, and Valingford.

THE *Euskal-erria* of July 30, which is dedicated to the memory of Loyola as a souvenir of the annual *fête* at Azpeita, contains interesting documents, in Basque, with Spanish translations, concerning the founder and the early years of the Order.

## SCOTCH JOTTINGS.

THE scheme for establishing a National Scottish Portrait Gallery, which first took shape last February, seems to be now close on realisation. The Government have just issued a supplementary estimate for £10,000, to be added to an equal sum given by an anonymous donor. The whole will be invested and devoted to the purchase of pictures and the maintenance of the gallery. This course is rendered possible by the happy coincidence that the enlargement of the Museum of Science and Art at Edinburgh allows of the transfer to it of the Antiquarian Museum, which will henceforth be seen to more advantage in two large new rooms, still under the charge of its accomplished Keeper, Mr. Anderson. The building on the "mound" will thus be set free for a portrait gallery.

THE gunboat *Jackal* has been placed at the disposal of a committee of the Fishery Board for Scotland for the prosecution of scientific researches into the life-history of the herring. Prof. Cossar Ewart and Sir James Gibson Maitland, accompanied by a chemist, began in the early part of this week the work of dredging in the Moray Firth, their special object being to enquire what effect the spawning of the herring so much farther from the shore than formerly used to be the case may have on the fishery.

THE tombstone at Kirkoswald, in Ayrshire, to the memory of the grand-parents and great-grand-parents of Burns on the mother's side has been carefully restored by framing the old stone in a new one, so as to expose both sides to view. The names recorded on it are those of John Broun in Littleton, who died March 3, 1724, aged 50; Janet M'Green, his wife, who died March 28, 1738, aged 60; Gilbert Broun, formerly farmer at Oraigenton, who died in 1774, aged 79; and his first wife, Agnes, who died in May 1742, aged 34.

MISS DICK has bequeathed £10,000 to the Veterinary College at Edinburgh named after her brother, the late Prof. Dick; and also £10,000 to found a professorship in Edinburgh University, either of comparative anatomy or of comparative surgery, according to the decision of her trustees.

THE house in Cheyne Row (No. 24) where Carlyle lived for nearly fifty years is for sale; and it is suggested it should be bought by his admirers, and converted into a sort of Carlyle museum, with a collection of books, MSS., and portraits.

THE *Detroit Free Press* has interviewed Mrs Janet Hanning, the youngest sister of Carlyle who has lived for about thirty years at Hamilton Ontario. Here are some of the results:—

"Carlyle was excessively fond of riding. It was on horseback that most of his thinking was done. Out of his long rides came much that was best in his books. . . . Although he never had any of his own, he was a great lover of children. Nothing seemed to brighten him so much as the little ones. . . . My brother never opened his inmost heart and gave his unreserved confidence to any man except Ralph Waldo Emerson, unless it was Goethe, to whom he was much attached. . . . When Goethe died, Tom wrote us that he felt as if he had lost another earthly father. Our own father had died in January, and Goethe's death occurred in March of the same year. . . . He and Mrs. Carlyle were very happy in each other, but, in summing up their lives, this ought always to be remembered—Mrs. Carlyle had no children. As the years went on, she tired of reading, and felt more and more the need of her husband's close companionship. He couldn't give it, being wholly devoted to letters, and I suppose she brooded over it a good deal. They were, nevertheless, sincerely attached to each other."

## FRENCH JOTTINGS.

THE national subscription for a monument to Gambetta has now reached a total of 250,000 frs. (£10,000). Another subscription, limited to the population of Alsace and Lorraine, amounts to just half that total. For the monument to Gen. Chanzy, to be erected at Mans, 100,000 frs. (£4,000) has been subscribed.

THE following were nominated by the French Government to distribute the prizes at the several Paris *lycées* on Tuesday last, August 7:—Louis-le-Grand, M. Renan; Condorcet, M. Cochery; Henri IV., M. de Lesseps; Charlemagne, M. Edmond About.

THE grand prix de Rome in the section of sculpture has been awarded by the Institut to M. Lombard, with second prizes to MM. Puech and Verlet.

THE Commission of the Senate on the Crown Jewels of France have decided to recommend that they shall be sold, and the proceeds devoted to the creation of schools of industrial art and design.

BENJAMIN RAMPAL, the French translator of most of Schulse-Delitzsch's works, has bequeathed to the municipality of Paris the sum of 1,300,000 frs. (£52,000), to be used in promoting the cause of co-operation in all its forms.

THE Société historique de Gascogne has just published its first part of *Documents inédits sur la Fronde en Gascogne*, by M. J. de Carsalade du Pont. They consist of letters centering round the Marquis de Poyanne, and fully bear out the ignoble character of the war, in which honour, even among gentlemen, was a thing of the past.

BARON CH. DAVILLIER has bequeathed to the Louvre his valuable collection of objects of art (including pictures, goldsmith's work, tapestry, ivory, furniture, &c.), excepting his pottery, which goes to the Musée de Sévres. His books and MSS. have been given to the Bibliothèque nationale.

THE death is announced of M. Hermile Reynald, Professor of History at Aix, who was a laborious student of English literature and English history. The subject of his thesis for the degree of doctor was "Dr. Johnson;" in 1874 he published a *Histoire contemporaine d'Angleterre*; and only two months ago a work, in two volumes, full of research, upon Louis XIV., William III., and the War of the Spanish Succession.

THE *Revue politique et littéraire* of August 4 has a long article on Mr. Robert Browning, one of a series entitled "Contemporary English Poets," signed Léo Quesnel, which is, we fancy, the pen-name of a lady. It is well worth reading throughout, though it makes the curious blunder of confusing the father with the son—the poet with the painter and sculptor. One clever remark is:—"Or, puisqu'il s'agit de caractériser la nature de son thésisme, nous le ferons d'un mot en appelant Robert Browning le Berkeley de la poésie." We quote also the conclusion:—

"Ce point central, c'est, chez M. Browning, l'âme, consciente d'elle-même et de son immortalité; c'est aussi la sincérité de la parole et de la pensée. Parce qu'il est hautement spiritualiste, Robert Browning est bien de la famille des poètes; et, parce qu'il est plus qu'aucun homme animé de l'amour du vrai, il est de la race de ces écrivains hors ligne qui surgissent de temps à autre pour rafraîchir les sources de la pensée, pour nettoyer le champ de la littérature du bois mort, des fleurs desséchées que le temps y amoncelle, et pour ranimer dans le cœur de l'homme le sentiment de sa force, de son indépendance et de sa dignité."

A TRANSLATION.

M. SULLY PRUDHOMME'S "SOUPIR."

NEVER sound nor sight of her face to gain,  
Never aloud her name to say,  
But, faithful, to love her and wait, though in vain,  
Day by day.

To wait, with arms wide-yearning, in vain,  
Then to close them on emptiness wearily,  
Yet, loving ever, to ope them again  
Day by day.

Alas! and to open them only in vain,  
And to wear one's life in longing away,  
Yet to love her weeping, weeping again,  
Day by day.

Never sound nor sight of her face to gain,  
Never aloud her name to say,  
But to love her more tenderly e'er, though in vain,  
Day by day. I. O. L.

OBITUARY.

JAMES CROSSLEY.

THE death of Mr. James Crossley, F.S.A., of Manchester, which occurred on August 1, removes a link that connected the present with what seems already a remote past. The venerable scholar who on Monday, in the midst of a great concourse of friends and admirers, was put to his last rest in the moorland churchyard of St. Paul's, Kersal Moor, had known Lamb, Godwin, Scott, and Lockhart, as well as the brilliant sets that included Dickens, Disraeli, Talfourd, Forster, Cruike-shank, and Ainsworth. There was scarcely a notable literary person of the century with whom he had not been in more or less close contact.

His father was a merchant of Halifax; but the family were originally Lancashire yeomen, who had left their hillside farm to settle in the ancient Yorkshire town. James Crossley was born at The Mount, Halifax, March 31, 1800, and was educated at Queen Elizabeth's Grammar School, Skircoat. His father allowed him, between school and business, an interval of six months, in which he prosecuted at the Chetham Library, Manchester, a systematic perusal of the Latin poets, from Ennius downwards. At sixteen he entered, as an articled clerk, the office of Mr. Thomas Ainsworth, solicitor, the father of the novelist, with whom he maintained a life-long friendship. Mr. Crossley's legal career was prosperous, and he had much business in connexion with the improvements that have transformed Manchester. He was one of the leaders of the opposition to the incorporation of the town when first advocated by Cobden and the Liberals. Mr. Crossley once sent a challenge to the editor of the newspaper that was the chief organ of the Corporators. In those far-off days he was a Tory of the old true-blue type, and, as such, worked hard to promote the election of young Mr. Gladstone, who was the Conservative candidate at the capital of the Cotton Kingdom in 1837. Mr. Crossley finally retired from business in 1860, and devoted himself entirely thenceforward to the gratification of his passion for literature and book-collecting.

These tastes found expression at an early age. His father had a good library, which was a favourite resort of James Crossley even in his boyish days. It would be impossible to say when he became a book-collector—the passion must have been born with him, and certainly it grew with his growth and strengthened with his strength. In English and classical literature he was an omnivorous reader; and the golden period of great Elizabeth was one in which he had special delight. Defoe was one of his favourite authors, and he had brought together a remarkable collection of his books and MSS. As Mr. Crossley's library was understood to extend to more than 60,000 volumes, and ranged from MSS. of Card. Borromeo and Sir Thomas Browne down to the first edition

of *Tim Bobbin* and other local curiosities, it had been hoped that this great collection would have been left for public uses; but Mr. Crossley's will, we believe, directs it to be sold for the benefit of his relatives. Owing to its chaotic want of arrangement and of catalogue, he was not able to make as much use of it as would have been otherwise possible. When he could find a book, he was not indisposed to allow a fellow-student the benefit of it, but very often he was unable to find what he wanted either for himself or for anyone else. For many years he gave the benefit of his knowledge to the Chetham Library, of which he was a foffeee, and his services were very valuable at the formation of the Manchester Free Library. He was a member of the Philobiblon Society and of many of the printing clubs, but his name was most closely associated with the Chetham Society, of which he was the founder. For this he edited Potts's *Discovery of Witches* (a book that forms the basis of Ainsworth's *The Lancashire Witches*), the *Autobiographical Tracts of John Dee*, and Heywood's *Observations*. He began a still more important editorial work, *The Diary and Correspondence of Dr. John Worthington*, but, although the first volume appeared as long ago as 1847, the conclusion was never issued. While thus leaving his own work unfinished, he took up and completed the *Collectanea Anglo-Poetica* at the death of his friend the Rev. Thomas Corser. Many of the other Chetham volumes are, however, enriched by annotations in which his knowledge of men and books, his familiarity with local annals, and his genial humour show to great advantage.

This represents the bulk of his literary work; and, good as it is, it can hardly be said to be worthy of his talents or to realise the promise of his youth, for at the age of sixteen he was already a brilliant contributor to *Blackwood*, and he afterwards helped Lockhart in the *Quarterly*. For the *Retrospective Review* he wrote some excellent papers; and he was one of the band associated with Mr. W. J. Thoms, the founder of *Notes and Queries*. But these scattered leaves have never been gathered together; nor did he ever concentrate his powers upon a topic that would have involved their continuous exertion and have resulted in a lasting memorial of its author's name. Why this was not to be it would be difficult to say, for he had adequate leisure, ample means, a keen and trained intellect, and a memory that was "wax to receive and marble to retain."

The qualities we have indicated made him an admirable companion. In the bulkiness of his bodily presence and in the possession of a certain old-world mannerism he was often compared to Dr. Johnson, and there were some striking points of resemblance, although he was physically as keen-eyed as Johnson was purblind. There were few pleasanter things than to listen to the "lengthened sweetness long drawn out" of Mr. Crossley's reminiscences of men and books, in which an anecdote of Lamb was followed perhaps by an apt quotation from Claudian or some other recondite Latin singer, from Spenser or that sesquipedalian genius Sir Thomas Urquhart of Cromarty. These quotations were given with a gustatory relish that showed his appreciation of good things.

These jottings are but feeble indications of the strong personality that has passed away. His defects were as obvious as his virtues, but we will leave to other hands the task of chronicling his failings. His scholarship was sure and accurate within the limits he had prescribed. He collected one of the largest libraries of modern times. In an age and city specially devoted to money-making, he passed his life in literary pursuits not as a professional career, but out of love and affection. Finally, he was a genial companion and a firm friend.

WILLIAM E. A. AXON.

MAGAZINES AND REVIEWS.

*Macmillan's Magazine* has an article on "The Pulse of English Art in 1883" which takes a sober survey of the progress of art during the last fifty years. The writer does good service in calling attention to the technical superiority of the French artists, and to the dangers which English art runs by the inrush of untrained amateurs by a too servile observance of what is fashionable and by an absence of technical perfection. Mr. Theodore Bent gives a pleasant description of the islands of Ohios and Samos. An article on "Ranche Life in the Far West" deserves reading by those who think of venturing into the backwoods. It enforces the lesson that the settler must be prepared for hard work, and must be content to spend some time in gaining experience before he can hope for profit. Mr. Mowbray Morris, writing "On Some Recent Theatrical Criticisms," warns us of the danger which is done to Shakspere as a poet by identifying his creations with the personality of an individual actor.

THE *Deutsche Rundschau* for August has a good article by Herr Justi on "Die spanische Brautfahrt des Prinzen von Wales 1623." He treats the subject, not from a political point of view, but as a study of the social and aesthetic life of the times. He has gathered much curious information about the presents made to Prince Charles and the art treasures which he was enabled to collect in Madrid. Prof. Ulrichs, in a paper on "Schiller und Fichte," traces the relations between these two men in connexion with the journal which Schiller strove to edit at Jena between 1792 and 1798. He gives several letters which passed between them.

## CORRESPONDENCE.

## A NEW REVELATION ON EARLY KUFIC COINS.

London: July 31, 1883.

Some fifteen or sixteen years ago, Soubhi Bey (now Pasha) published a dirham from his collection, precisely similar to those of the Beni Umayya type, purporting to have been struck at al-Basrah in A.H. 40. But, relying on the reiterated statements of Arab historians, that coins of a purely Muhammadan type were not struck till A.H. 76—and, indeed, none having been till then discovered bearing dates earlier than 77 in gold and 79 in silver—Oriental students and numismatists generally discredited the accuracy of Soubhi Bey's reading of his coin.

About eight years ago I went to Constantinople, principally with a view to seeing Soubhi Pasha's collection, and to examine that unique specimen bearing a date thirty-nine years earlier than any then known Kufic dirham.\* On my arrival at Soubhi Pasha's house I was sorry to find that his Excellency was suffering from illness; but I was kindly received by his son, to whom I explained the object of my visit. He communicated my message to his father, who replied that, to his regret, it was now out of his power to comply with my request, as he had just sold his whole collection to a Greek banker, Mr. G. Z. I then went to Galata to see this gentleman, and was informed that he had gone to Egypt on business. Much disappointed, I returned to Egypt, and, on enquiry at Alexandria as to the whereabouts of Mr. G. Z., I was still further disappointed by hearing that he had just returned to Constantinople.

At Cairo I soon believed that I was again on the track of the Soubhi collection, as I there heard that Mr. G. Z. had sold a collection of coins to his Highness the Khedive (Ismail), which I naturally supposed to be the same that he had so recently acquired. Nor was I wrong in my surmise, for, on applying to the Khedive's seal-bearer for information, his Excellency confirmed the report, and added that his Highness had paid £16,000 for the collection.

My next object was to gain access to these coins, and I begged his Excellency to obtain the Khedive's permission for me to see them.

But the financial troubles of the Egyptian Government were just then beginning to occupy public attention, and the Khedive had to think of matters connected with modern finance which were far more momentous to him than the question of the dates of early Kufic coins. In the year 1879 the Khedive Ismail abdicated, and took the Soubhi collection with him to Naples without, so far as I know, having ever submitted them to any numismatist.

\* I am aware that Prof. Tiesenhausen, in his exhaustive work on the coinage of the Eastern Khalifs, made allusion to one or two dirhams of exceptionally early date; but I am inclined to think that the learned author referred to them under reservation, and without asserting his belief in their authenticity.

A short time after the accession of the present Khedive, Towfik Pasha, his Highness—knowing the interest I take in Arab art, and especially in Muhammadan numismatics—asked me incidentally whether I had ever seen the Soubhi collection. I replied that he was alluding to a matter of the deepest interest to me, and related to him the account of my fruitless journey to Constantinople. His Highness then expressed great surprise that his father had not invited me to see the collection, because, from my long experience as a collector, I could have pointed out any coins of rarity or of special interest it might contain, besides indicating any that I might believe to be spurious; but that it was now too late, as his father had taken the collection with him to Naples.

On my way home from Egypt last month, I remained a day in Paris on purpose to visit the French national collection, and to examine any coins that might have been acquired since I was last there. My friend M. Lavoix, the learned Curator of the Numismatic department, welcomed me even more cordially than usual. He said my visit was most opportune, as he wished to ask my opinion upon certain remarkable coins that he had recently purchased, but which he would not publish until some of his fellow-workers in Oriental numismatics had expressed their views as to their authenticity. M. Lavoix then explained that the Soubhi collection had been recently offered for sale to the French Government, but that the curators of the National Museum could not recommend the purchase of the whole, partly on account of want of funds, and partly because a large proportion of the collection consisted of coins of which duplicates were already in their possession. But M. Lavoix was most anxious to obtain a selection; and he arranged with the well-known firm of coin-dealers, Messrs. Rollin and Feuardent, who purchased the whole collection for the sum of 25,000 frs. (£1,000), and M. Lavoix selected for the National Numismatic cabinet about eight hundred and fifty coins for the sum of 17,500 frs. (£700)—a remarkably good bargain from a commercial point of view, and, scientifically, a most wonderful acquisition! The majority of these selected coins are of great rarity, many are quite unique, some are of hitherto unknown types, and a few bear dates which are subversive of the established theories as to the earliest coins of purely Muhammadan character.

M. Lavoix placed in my hand the dirham alluded to in the first paragraph of this letter, struck at al-Basrah in A.H. 40, and asked for my candid opinion about it. I examined it carefully, and replied that I had not a doubt as to its genuineness. He then showed me dirhams struck in Damascus in the years 63 and 65, and one struck at Marv, of which I did not transcribe the date, all of which I also said I quite believed to be genuine.

The Khalifs 'Umar and 'Uthmān struck dirhams of the Sassanian type, with legends in the Pehlevi character, but none have been discovered bearing the date of the Khalif 'Alī's reign. This gap is now accounted for by this dirham of al-Basrah, A.H. 40, which must have been struck by order of the Khalif 'Alī, who evidently discarded the Sassanian figures and the Pehlevi characters, adopting a purely Muhammadan type, with pious verses from the Kurān, in a style which was perpetuated by succeeding Khalifs till the end of the dynasty of the Beni Umayya.

M. Lavoix informed me that the publication of the catalogue of the Kufic coins in the National Library at Paris had been delayed by his having to intercalate all these recent acquisitions. In the Preface, which will probably appear in January 1884, M. Lavoix reviews all the evidence, both monumental and documentary, bearing on purely Muhammadan coins of

dates earlier than 76, and to that important work I must refer numismatic readers for the full discussion of this question. In the meantime, M. Lavoix has kindly allowed me somewhat to forestall him by giving publicity to the information I gathered from his recent acquisitions as a foretaste of what will appear in his great work.

E. T. ROGERS.

## THE WORD "COMMODORE."

Admiralty: Aug. 7, 1883.

Can any history of the word "commodore" be given? The dictionaries and cyclopædias give the Spanish derivation from *comendador*, with but few exceptions, where the Italian *comandatore* is suggested. Jal and the other naval authorities either copy the above or ignore the question.

Any references to the first known use of the word and how it came to England would be acceptable.

GEORGE F. HOOPER.

[Marsh, as quoted in the new edition of Ogilvie's *Imperial Dictionary*, gives Portuguese *captão mor*, "superior captain."—ED. ACADEMY.]

## "AUT CAESAR AUT NIHIL."

London: Aug. 4, 1883.

In a paragraph in the last issue of the ACADEMY, alluding to the republication in America by Messrs. Harper and Brothers of the Countess von Bothmer's *Aut Caesar aut Nihil*, you say that "it need hardly be added that no pecuniary advantage comes to the author" therefrom. The statement is probably incorrect, for the reason that the Countess von Bothmer's English publishers are the well-known firm of Messrs. Longmans, Green and Longmans, from whom I purchased, on behalf of Messrs. Harper and Brothers, of New York, the early sheets of the work in question.

W. M. LAFFAN.

[This explanation is not necessarily inconsistent with the statement in the ACADEMY, which referred only to the author.—ED. ACADEMY.]

## SWIFT'S GIDDY FITS.

London: Aug. 6, 1883.

In reply to the letter of Dr. Wickham Legg on this subject in the ACADEMY of July 28, I regret that I have no "public sign" to give him in addition to the letter which he acknowledges to have received from me, and which I venture to think is sufficient. In that letter I assured Dr. Legg that I had written my article in complete ignorance of his communication to your columns, which I am sorry to say I have not yet seen.

As to "the force which set this ball rolling," it was, so far as I am concerned, a letter received by me from the author of the recent articles on Dean Swift in the *Quarterly Review*, asking my opinion on the subject of Swift's health, mental and physical; and I fancy you will not think it inexcusable that the reading I undertook, in order to give a reply to this enquiry, was not sufficiently minute to enable me to discover a few lines in a six-months-old number of the ACADEMY.

On turning to my article, I find that I did quote fully whatever medical opinions I could meet with either as to Swift's giddy fits or as to his supposed insanity. With regard to the former, I do not think that any well-educated physician could, at the present day, study Swift's autobiography, as expressed in his diary and correspondence, without recognising his "mysterious disease" as labyrinthine vertigo; so that perhaps all the merit of originality may fairly be left to the French physician who discovered it.

JOHN CHARLES BUCKNILL.

THE "QUARTERLY REVIEW" AND "GULLIVER."  
London: Aug. 6, 1883.

It is very strange that the writer of the article "Dean Swift in Ireland" in the *Quarterly* should assume that this plagiarism was unknown, seeing that Canon Knowles published a notice of his discovery, March 7, 1868, in *Notes and Queries*, and again allusion was made to it by Mr. J. Dixon (iv. 404). The latter pointed out Scott's contradictory note, in which he says that the passage "is merely an assemblage of sea-terms, put together at random, but in such accurate imitation of the technicalities of the art that seamen have been known to work hard to attain the proper meaning of it."

Swift, however, had to convert it into the past tense, and has made some mistakes in consequence—as, for instance, "We hawled off upon the lanniard of the whipstaff;" the original runs "Stand by to hawl off above the lennard of the whip-staff." The whip-staff, or whip, is fastened to the helm for the steersman to move the rudder which the lanniard had fixed; in other words, "unlash the helm above—not upon—and help the man steer." C. A. WARD.

CAT FOLK-LORE.

Aug. 6, 1883.

One version of the story referred to by Einna Halfdon in the last number of the *ACADEMY* is among the "Troll stories." A peasant returning home from his work one evening met a Troll, who said to him,

"Hör, Du Platt,  
Sag til din Katt  
Das Knurre-Murre Er död."

On reaching home he repeated this to his wife, whereupon the cat sitting by the fire-side stood upright on his hind legs, and saying, "What! is Knurre-Murre dead? then I may go home again," he disappeared.

KATE BIRCHALL.

SCIENCE.

*Bentley's Plautine Emendations.* By E. A. Sonnenschein. "Anecdota Oxoniensia," Classical Series. (Oxford: Clarendon Press.)

MR. SONNENSCHNEN has done well to complete the task, to which he first addressed himself in the Appendix to his larger edition of the *Captivi*, of publishing all the extant Plautine emendations of Bentley. Though the study of Plautus is not in England what it is in Germany, spite of the efforts of Dr. W. Wagner, Prof. Key, and others, the constancy with which Ritschl's principles are followed up, developed, and enforced by his disciples still keeps the eyes of philologists steadily turned in this direction. Witness not only the admirable editions of the *Amphitruo*, *Curculio*, *Asinaria*, *Truculentus*, *Epidicus*, recently published by Götz, Schöll, and Löwe, but the numerous articles on Plautine criticism which are continually appearing in every philological journal. It is a remarkable fact that the greatest of English scholars is nowhere thought so great as in Germany; and it is no insignificant fact that Mr. Sonnenschein, himself in part a German, has come forward as the vindicator of Bentley's claims as a restorer of Plautus at times even to the disadvantage of his own countrymen. This will be clear to anyone who takes the trouble to examine only one page of the present volume. Many conjectures hitherto

supposed to be the *peculium* of Ritschl, Bothe, Lachmann, Brix, or others will be found to have been anticipated by Bentley.

Bentley wrote his emendations in no less than three editions of Plautus—the edition of Pareus, of Gronovius, and of Camerarius. The last, however, contains comparatively few, and is of little or no moment; but the relation in which the conjectures contained in the Pareus stand to those in the Gronovius is one of some perplexity. Mr. Sonnenschein estimates the number of conjectures in each of the two editions as nearly the same—about eleven hundred in all; of these a large number are common to both editions, but each "has many valuable readings of its own which are not found in the other." He concludes that Bentley used both copies during the period of his Plautus studies, entering his conjectures sometimes in one, sometimes in the other, occasionally transferring what his mature judgment approved from one to the other.

In none of the plays can the one recension be entirely accounted for from the other. In the *Bacchides*, for instance, the emendations in the Gronovius are decidedly superior to those in the Pareus; yet the Pareus contains one, *Inimiciorem* for *Inimiciorum* (iii. 4, 1), in which Bentley anticipates the reading of the Ambrosian palimpsest. On the other hand, in the *Captivi* the Pareus is far more complete than the Gronovius. In the *Mostellaria* the Pareus cease after act iii., while the Gronovius has several emendations in acts iv., v.

If we consider that, besides this large body of conjectures, Bentley actually published about 360 in his editions of Terence and Horace, it will be manifest that we have before us an ample fund for estimating how far Ritschelian criticism was anticipated by our own great philologist. Such an investigation is of the highest interest—pre-eminently to Cambridge scholars, who certainly cannot be accused of exaggerating the greatness of their greatest, as anyone may see who reads the temperate and cautious remarks on Bentley as an emender in Prof. Jebb's recently published monograph. Prof. Jebb's language must, I think, be felt, in the light of Mr. Sonnenschein's new "Anecdota," to be considerably short of the praise which Bentley may fairly claim. It is a fact which says more for Bentley's power of divination than the strongest assertions of the most mature philologists that he has in a considerable number of cases *guessed* what is now found to be the reading of the only very ancient MS. of Plautus, the Ambrosian. I will mention the instances of this in the *Miles* and *Epidicus*. *Mil.*—170, *foret* for *fuert*; 174, *uostrum* for *uostrorum*; 176, *conseruos* for *conseruos est*; 251, *abit* for *abiit*; 262, *familiarium* for *familiarem*; 270, *meae* for *me*; 274, *malam rem* for *alium*; 405, *prius* del.; 492, *malo magno* for *magno malo*; act iii. 5, bracketed by Bentley, is omitted from the Ambrosian; 710, *habebo* for *habeo*; 714, *ego met* for *ego haec*; 727, *sicut* for *sicuti*; 1151, *periculum* for *periculum*. *Epid.*—5, *recte* for *certe*; 151, *de* del.; 162, *dormitandi* for *dormitandum*; 225, *fuert* for *eat*; 234, *adeptust* for *ademptust*; 238, *me* del.; 247, *actumst* for *actum*. It is true that many of

these are changes of a most minute kind, involving little beyond the omission of one or two letters—changes which in the present state of advanced criticism seem almost matters of course. But an interval of 150 years at least separates us from Bentley; and at the time when these emendations were made neither were the MSS. of Plautus accurately classified nor the laws of Plautine metre and spelling (which have only been made out by laboriously examining them) deduced. If with the comparatively scanty materials before him Bentley's divination was able to achieve so much, we may feel sure that with the full light which Ritschl and his disciples have poured upon the tradition of the MSS. he would have settled for ever much that less gifted men have been obliged to leave uncertain.

It has already been stated that Bentley anticipates not only the reading of the Ambrosian palimpsest, but of many correctors since his time. Mr. Sonnenschein has recorded these in his "Anecdota"; and it will remain a problem for future editors of Plautus whether the rightful claim to these rests with Bentley or his successors in the present century. Among these, Bothe shows the most remarkable coincidences, especially in the *Menaechmi*, with Bentley; but Ritschl, Fleckeisen, Spengel, Hermann, Lachmann, and many others are recorded by Mr. Sonnenschein as occasionally agreeing with him. One of the most curious instances of this agreement is in *Most.* 238, *nam neque edes quicquam neque bibes apud me hinc diebus*. Bentley conjectures *his decem diebus*, and so after him Bothe. The reading of B., *me isdec*, makes it for us nearly certain that this is right; but as a conjecture of the early eighteenth century it seems a marvel of happy divination.

It is disappointing to find that some of the most interesting plays—e.g., the *Truculentus*—find little or no light from these *marginalia*. The reason probably is that the text of these was more obviously corrupt, and offered a less secure basis for conjecture. I think Mr. Sonnenschein deserves the gratitude, not only of the Delegates of the Press, but of all to whom Bentley's memory is precious, for the care with which he has executed his somewhat distasteful and not very remunerative task. R. ELLIS.

MR. SHAPIRA'S MS. OF DEUTERONOMY.

UP to the present we have refrained from any mention of the marvellous "find" Mr. Shapira asserts that he has made. This consists of a number of pieces of parchment—or, rather, leather—which purport to be a MS. of Deuteronomy written in a character almost identical with that on the famous Moabite stone (eighth century B.C.). We now content ourselves with quoting from the *Times* Mr. Shapira's own account of his discovery:—

"I first heard of the fragment in the middle of July 1878. A Sheikh, with several Arabs of different tribes, came to me at my place of business in Jerusalem on other matters. The Sheikh had nothing to do with antiquities. They spoke of some little black fragments of writing in the possession of an Arab. They had been found in the neighbourhood of the Arnon. One of the Arabs spoke of them as talismans, smelling of asphalt. The day following I was invited to dinner by the Sheikh, and heard more about the fragments. About the year 1865,

at a time of persecution, certain Arabs had hid themselves among rocks. There on the side of a rocky cavern they found several bundles wrapped in linen. Peeling off the covering, they found only black fragments, which they threw away. They were picked up by one of the Arabs believing them to be talismans. He kept them as such, and became rich, as he thought, in consequence. This was probably ten years or more before I heard of them. Capt. Conder knows the exact time. I promised the Sheikh a reward if he would bring to me an Arab he spoke of who would be able to get hold of the fragments. This happened on the day of the dinner. The Sheikh fell ill, and afterwards died. About ten or twelve days after the dinner a man of the Ajayah tribe brought to me a small piece, containing four columns. A few words only were legible. A week after, on Sunday, he brought fourteen or fifteen columns, containing the clearer writing. The next Sunday he brought fourteen or fifteen more columns, in another character of writing, but not all of one form. Ten days after, on Wednesday, he brought three or four columns, very black. I saw nothing more of him. After an interval of four or five weeks I wrote to Prof. Schlottmann, on September 24; soon after, also, to Dr. Rieu. The writings were (some of them) in better condition than at present. Schlottmann wrote that they were fabrications, and blamed me for calling them a sacred text. He never saw the writings themselves, only my copy. Schlottmann wrote in similar terms to the consul at Jerusalem, Baron von Münchhausen, and desired him to prevent me from making the find public. Then I wrote or telegraphed to Dr. Rieu that the writings were forgeries, and that he was to take no steps in respect to them. This I did in consequence of Schlottmann's judgment of them, and the reasons on which it was founded. I placed them in a bank in Jerusalem. Subsequently, I began to reconsider Schlottmann's objections, and I found that they were partly grounded on mistakes I had made in deciphering the writing. I felt better able to judge of them myself, because I had had more experience in MSS. It was before Easter of the present year that I re-examined them, and I deciphered them a second time. Prof. Schroeder, consul in Beyrout, saw them in the middle of May 1888, and pronounced them genuine. He wanted to purchase them. I took the writings to Leipzig at the end of July to have them photographed. Professors there saw them. Dr. Hermann believed in them, as did Prof. Guthe, who intends to write about them. They had been smeared with asphalt originally as a kind of embalment. They became subsequently further darkened by the use of oil and spirit. The oil was used by the Arabs to counteract the brittleness, and to prevent their suffering from wet."

The following is a literal translation of the beginning of the MS. :—

"These be the words which Moses spake according to the mouth of Jehovah unto all the children of Israel in the wilderness beyond the Jordan in the plain. God our God spake unto us in Horeb, saying, Ye have dwelt long enough in this mount. Turn you and take your journey and go to the mount of the Amorites, and unto all the places nigh thereunto, in the plain, in the hills, and in the vale and by the seaside. And when we departed from Horeb we went through all that great and terrible wilderness, which ye saw; and we came to Kadesh-Barnea. And I said unto you, Ye are come this day unto the mountain of the Amorites. Go ye up and possess ye the land, as said [unto thee the God of thy fathers]. [Notwithstanding] ye would [not] go up. And ye murmured and said, Because [God] hated us . . . to cause us to perish. And God was angry [and sware] saying, As I live, surely all the people that saw my wonders and my signs which I have done these ten times . . . not . . . they have not hearkened unto my voice, they shall not see that good land which I sware to give unto their fathers, save your children and Caleb the son of Jephunnah and Joshua the son of Nun which standeth before thee, they shall go in thither, and unto them will I give it. But as for you, turn you and take your journey into the wilderness by the way of the Red Sea, until all the generation of the men of rebellion shall be wasted out from among the host. [And they abode] in Kadesh-Barnea

until the men of rebellion were wasted out by death from among the host. . . . Ye are to pass over this day the coast of the children of Esau, which dwell in Seir. Thou shalt not distress them, nor meddle with them in war, for I will not give you of their land any possession, because I have given it unto the children of Esau for a possession. The Horim from of old dwelt therein, and the children of Esau succeeded them, and dwelt in their stead. And we turned and passed the wilderness of Moab. And God said unto me, Ye shall pass over this day the coast of Moab, ye shall not distress them, nor meddle with them in war, for I will not give you of their land any possession, because I have given unto the children of Lot the city for a possession. The giants dwelt therein from of old and the Moabites called them Amim, but God destroyed them, and they dwelt in their stead. And we turned and passed the brook Zered. And God said unto me [saying], Rise ye up and pass over the river Arnon. This day will I begin to deliver to thy face Sihon the Amorite, King of Heshbon, and his land. And we went forth against Sihon to Jahaz, and we smote him till we left him none to remain. And we took all his cities from Aroer, which is by the brink of the river Arnon, unto Gilead and unto the brook Jabbok. God our God delivered all unto us. Then we turned and went up the way of the brook Jabbok. And God said unto me, saying, Ye are to pass this day the coast of the land of the children of Ammon. Ye shall not distress them nor meddle with them in war, because I have given unto the children of Lot the land of the children of Ammon for a possession. The giants dwelt therein from of old, and the Ammonites called them Azamzumaim, but God destroyed them before them, and they dwelt in their stead."

## CORRESPONDENCE.

### THE GREEK NAMES OF THE SIBILANTS.

98 Roebuck Road, Sheffield : July 31, 1883.

It is now definitely known that the primitive Greek alphabet was completely identical, in the forms and order of the letters, with the Phœnician alphabet from which it was borrowed, the one exception formerly supposed to exist having been removed by the discovery, made only last year, that the Dorian *san* answered in form and alphabetical position to *cade*. The names of the Greek letters are, in general, obviously derived from those of their Phœnician prototypes. In the case of the four sibilants, however, this correspondence is entirely absent, *zayin* being represented by *zeta*, *samek* by *xi*, *cade* by *san*, and *shin* by *sigma*. Many attempts have been made to account for the anomalous nomenclature of these four letters. It is, however, only necessary to consider the two alternative hypotheses proposed in Mr. Isaac Taylor's admirable work on *The Alphabet*, all previous theories on the question having been based on imperfect knowledge of the facts.

The supposition which Mr. Taylor seems to regard with most favour is that in the adoption of the Phœnician alphabet by the Greeks an exchange of names took place between *zayin* and *cade*, and also between *samek* and *shin*. Mr. Taylor has endeavoured, with some success, to indicate the nature of the process by which these hypothetical changes may conceivably have been produced. The theory, however, appears to involve too much of unsupported assumption to be entirely satisfactory; and the derivations proposed for *zeta* and *san* are attended with considerable phonological difficulties. Mr. Taylor's other hypothesis is that *cade* borrowed its Greek name *san* from *shin*, while *shin* took the name of *sigma* from *samek*; and that *zeta* and *xi* are words of Greek coinage, formed by assonance with the names of neighbouring letters in the alphabet. This view is not open to serious objection on phonetic grounds, but the suggested displacement of names seems even less easy to account for than that which is assumed in the alternative theory. Considering, therefore, that the problem has not

yet been conclusively solved, I venture to offer an original conjecture, which, if it be philologically admissible, appears to me to be superior in simplicity to any which has hitherto been proposed.

It is to be noted that the words *zayin* and *cade* do not admit of any very obvious etymology in any Semitic language now known. On the assumption that these names of letters became obscure at an early period, it would not be surprising if in some part of the Semitic world they were replaced by other words (denoting visible objects) which began with the same letter. A suggestive analogy occurs in the Ethiopic alphabet. The word *nun* (fish) having become obsolete in the Ethiopic language, its place as an alphabetic name was supplied by the word *nahas* (snake). It is important to remark that a substitution of this kind might very easily be confined to a single city, the ancient name of the letter continuing to be employed everywhere else.

The name of *zeta* is shown by its final *a* to have been derived by the Greeks from an Aramaic, not from a Phœnician, source. Now, supposing that in some Aramaic-speaking city the attempt was made to supply the place of *zayin* with some more intelligible word beginning with *z*, there would be absolutely no object-name available except זית (olive-tree). It is needless to say that this very word is the only Semitic original which could regularly become *zeta* in Greek.

The name of *san*, on the other hand, is, as Mr. Taylor has pointed out, of Phœnician and not Aramaic derivation. A Phœnician who wished to find some more familiar word to substitute in the place of *cade* could hardly fail to select the word זש (sheep). There is reason for believing (see Ewald, *Lehrbuch*, 7th ed., p. 459) that the primitive vocalisation of זש was *caan* or *ca'n*, which would naturally be transliterated into Greek as *σάν*. It may perhaps be objected that the word זש is only used as a collective noun, whereas the alphabetic names generally represent individual objects. This does not seem to be a very formidable difficulty, as זש was certainly by far the commonest substantive beginning with *z*, and the number of names of objects having this initial was very small. Another objection which may be made is that the *z* in this word is shown by its Semitic equivalents to have had originally a sonant pronunciation, instead of the surd sound which must be deemed to have been the normal or alphabetic value of the letter. It seems probable, however, that the primitive Semitic distinction between the two values of *z* had become obsolete in Phœnician even before the invention of the alphabet, since otherwise the inventors would scarcely have failed to find expression for it in their system.

If the hypothesis here proposed be admitted, the names *zeta* and *san* cease to be exceptions to the general rule, according to which the Greek letters agree in name with the Phœnician letters of similar form and position.

The names of the remaining sibilants, *xi* and *sigma*, cannot be explained without admitting the existence of some degree of anomaly. The most probable hypothesis seems to be that of an exchange of names. It is noteworthy that an Arabic *sh* usually corresponds etymologically to a Hebrew *s*, and an Arabic *s* to a Hebrew *sh*. There seems reason for believing that Semitic dialects much more closely allied than Hebrew and Arabic may have differed in the same way by reversing the phonetic values of these two letters. It is well known that the Greeks derived their knowledge of the alphabet from more than one Semitic source. If we assume that they had borrowed the forms and powers of the letters from a people who said *shamek* and *sin*, and afterwards came to learn their names from another people who said *samek* and *shin*, the

transposition of these two names would almost inevitably follow. At the same time, it seems just possible that both *σ* and *σ*igma may be words of purely Greek origin, *σ* having been formed on the same analogy, and perhaps at the same period, as *π*ei, and *σ*igma being, as the ancients believed it to be, a regular verbal form assumed by the word must have been determined by its supposed Greek etymology.

HENRY BRADLEY.

#### CHINESE AND SIAMESE.

London: Aug. 8, 1883.

Dr. Frankfurter has not been fortunate in travelling outside of his ordinary field. His letter published in the last number of the ACADEMY shows that he is not acquainted with the question at issue; and I am compelled to meet his protest, altogether ill-grounded, by a flat contradiction.

The deep connexion of the Taio languages and Chinese dialects is admitted not only by Dr. Edkins and myself, but also by Prof. E. K. Douglas, Prof. Oonon de La Gabelentz, and, I venture to add, by all who have studied these tongues with the view of comparison. I have no time to expound here this connexion, the study of which is a part of the researches embodied in my work on *The Evolution of Speech and Script in China*; but my views on the subject have already been made public (see the *Times*, April 20, 1880, Trübner's *Literary Record*, N.S., vol. i., pp. 125-27, my *Early History*, p. 19, and *The Oldest Book of the Chinese*, § 25, n. 4). The connexion indicated by me is, not a relationship by common descent, but, on the contrary, an affinity which has resulted from a protracted intermingling and reciprocal influence producing remarkable results on the evolution of the two groups.

TERRIEN DE LA COUPERIE.

#### SCIENCE NOTES.

THE International Medical Congress will meet this year at Amsterdam in September. Papers are promised by (among others) Sir Joseph Fayrer, Dr. F. de Chaumont, Dr. J. Ewart, Dr. E. Waring, and Dr. Norman Chevers.

THE first part of *The Elements of Plane Geometry*, prepared by a committee appointed by the Association for the Improvement of Geometrical Teaching, will shortly be published by Messrs. W. Swan Sonnenschein and Co. This instalment of the work contains the portions of geometry corresponding to Euclid books i. and ii., with the addition of a section on "Locii" and of a few useful propositions omitted by Euclid. The general method of treatment will be familiar to those who are acquainted with the *Syllabus of Plane Geometry* issued under the auspices of the association. Theorems and problems are separated; a classification more thorough than Euclid's has been attempted; definitions, axioms, and postulates are introduced in their logical connexion with the propositions; the demonstrations are full and vigorous; and simple exercises are introduced among the propositions. The extensive use already made of the *Syllabus* has induced the association to put before the public this further development of their work.

A NEAT little volume, illustrated with a coloured geological map, and with some good plates of fossils, has lately been published under the title of a *Geognostischer Wegweiser durch Württemberg*. The subject has already been ably treated by such men as the venerable Quenstedt, of Tübingen, Prof. Oscar Fraas, and Dr. Gutekunst; but there is probably still room for Dr. Theodor Engel's new volume. Württemberg has been called a paradise for geologists

on account of the number and variety of its formations, the regularity of their sequence, and their richness in fossils. Probably in no district of similar size are there so many geological collections as in Swabia.

#### FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Oleographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

#### EASTLAKE'S GUIDES TO THE LOUVRE AND BRERA GALLERIES.

*Notes on the Principal Pictures in the Louvre Gallery at Paris.*

*Notes on the Principal Pictures in the Brera Gallery at Milan.* By Charles L. Eastlake. With Illustrations. (Longmans.)

THESE two popular handbooks will be welcome to the general lover of pictorial art. Casual visitors to large picture collections, such as the National Gallery in London, the Louvre, and many others on the Continent, must have often experienced great inconvenience in the use of official Catalogues, which on the whole are little more than inventories, so technical and dry in their statements about the works of art that scarcely anyone cares to look at them, except when standing before the pictures. Mr. Eastlake's notes in the two little volumes before us are framed on a different and, perhaps, a unique plan, which has the advantage of being, above all, a practical one. We have no doubt that the travelling Englishman, when paying a visit to Continental art collections, will prefer to be guided by a writer who holds so authoritative a position at his own splendid national collection, rather than trust to Catalogues and Guide-books written in foreign languages, containing a great deal of information which he cannot be expected seriously to care for. The author states in his Preface that his main object has been to point out those pictures which he considers to be important. The letterpress is accompanied by a large number of illustrations, in order to assist the memory of the reader in recalling the subjects of the pictures. However, in the case of the Louvre Handbook, the wood-cuts are far from satisfactory in their execution. In some cases they may even impress one rather as unintentional caricatures than as faithful reproductions of the artists' conceptions. There is less roughness in the sketches of the Brera pictures, and it is to be hoped that the forthcoming volume on the Munich Pinacothek will be still more successful.

Mr. Eastlake wisely abstains from troubling the reader with remarks on technical details or abstruse theories. He apparently confines his task to reviewing the pictures in a sort of summary of their aesthetic merits or deficiencies, as they present themselves to the modern mind. "Vexed questions relating to the authenticity of certain pictures are also generally avoided." However, in some instances it would, in my opinion, be advisable not to accept the official ascriptions without due caution. We find, for instance, in the present Italian Catalogue of the Brera Gallery, no less than seven fine pictures ascribed to Zenale, an artist by whom not a single authenticated work has come down to us.

Six out of these have been proved to be from the hand of the great Foppa, and the seventh is by Bernardino de' Conti, one of Leonardo da Vinci's best pupils. The preparatory sketch for the last-named work is in the British Museum, where it is officially attributed to neither Zenale nor Bernardino de' Conti, but to a far greater artist—to Leonardo da Vinci himself—although it differs widely from the style of that master. I readily admit that one cannot expect the ordinary visitor to enter into polemical statements about the authenticity of old pictures. Moreover, the "abstruse theories" of specialists whose researches lead to conclusions contradictory of official attributions will hardly be received in a friendly spirit by the custodians of public treasures, who generally are bound to abide by tradition. Everyone acquainted with the present state of the Brera Gallery, who has become aware of the extraordinary results of the scientific investigations made by independent Milanese scholars in connexion with works of art in that gallery, will hope that the official Catalogue will shortly be revised on the principle of embodying these results, not only with reference to historical facts, but also with due regard to art studies as a science. The vexed question of authenticity is, I believe, of vital importance for every collection of standard works. Next to it comes the discussion as to what extent and in what parts of every picture is the original colouring still to be seen undefaced or unaltered by the restorer's work. Unless an amateur has been taught to face such fundamental questions as these, he will never become aware of the real merits and the distinctive characteristics which have established the fame of the Old Masters.

J. PAUL RICHTER.

#### THE ST-MAURICE COLLECTION OF ARAB ART.

THIS very fine collection of objects of Arab art from Cairo has been offered for sale to the South Kensington Museum, and is now being exhibited there on loan by its owner, M. de St-Maurice. It comprises many branches of Oriental art, and a number of specimens of the greatest beauty, both in material and workmanship, belonging to a class which is of rapidly increasing rarity. The most remarkable are, perhaps, a large collection of magnificently panelled and inlaid doors, entirely covered with star and other geometrical interlacing patterns, formed by delicately moulded bands of wood inlaid with ebony, box, and cedar; the spaces formed by these intersecting bands are, in some cases, filled up with bits of ivory most minutely carved with arabesque designs in slight relief—the whole being a masterpiece, both in the richness of the pattern and the varied colours of the ivory and inlaid woods. There are also two fine examples of the most gorgeous kind of wall mosaic, probably torn from the wall of some Cairene mosque. This mosaic is a perfect marvel of rich material skilfully used. A panel of red porphyry is surrounded by a border of delicate patterns in jasper and other coloured stones, with the main lines wrought in mother-of-pearl inlay; a band of white marble between the porphyry and the mosaic gives double richness to the varied colours. The spandrel of an arch is particularly gorgeous from the beauty of the precious stones which form the mosaic and contrast with the brilliance of the prismatic pearl: not even the mosaics of Palermo or

Cordoba quite equal this, either in richness of material or delicacy of pattern.

In addition to a quantity of fine wall-paneling in wood, there are magnificently decorated ceiling beams and cornices of wood, covered with a thin skin of *gesso*, on which are painted graceful designs in brilliant, yet harmonious, colours—bright, without any harshness of effect. The large *mushrabeeyeh* is perhaps the finest and most perfect specimen of this beautiful open lattice-work that has yet been brought from Cairo. It is quite complete, with its graceful, curved, corbel support, its two little projections of delicate, open lattice-work to hold the water-jars, and, at the top, its row of stained-glass windows, with bits of brilliant, gem-like coloured glass set in stucco tracery, worked in flowing lines with a wonderful freedom of hand. A number of so-called Rhodian and Damascus wall-tiles are of great beauty; and also some very fine *argulejos*, or enamelled tiles, with patterns in very slight relief, which seem to imitate mosaics. These appear to be Hispano-Moresque, and might have come from the walls of the Alhambra.

Among the metal-work, there are three sets, unluckily not complete, of the beautiful pierced *plaques* and borders in bronze, cast, chased, and *repoussé*, which once ornamented the doors of most of the mosques of Cairo. These richly worked pieces of bronze were often used, like the bits of ivory, to fill up the spaces of the panel-patterns. The border was made up of long strips of bronze pierced with delicate patterns and Arabic inscriptions. Very few now remain in their places at Cairo.

Some of the smaller pieces of metal-work are very beautiful—candlesticks, dishes, caskets, bowls, and other objects in brass, enriched with damascening, embossing, silver inlay, and chased inscriptions or patterns. There is also some fine silver jewellery, especially belts and buckles of massive metal, richly worked in a somewhat barbaric style, and set with enamels, turquoises, and bits of coral.

The whole collection is a fine one, and contains little that is not of value. The true lover of Oriental art will view it not without regret when he thinks how it has been formed, and of the sad destruction and dismantling of mosques and houses that it bears witness to. It is to be hoped that the new Egyptian Commission for the Preservation of the Treasures of Arab Art will prevent for the future the formation of any such collection as that of M. de St-Maurice.

J. HENRY MIDDLETON.

#### SOME RECENT RESEARCHES IN ASIA MINOR.

Smyrna: July 26, 1883.

THE French School of Athens has achieved many successes and has advanced archaeological science in numberless ways. Its honourable career has been due to the skill with which its members have recognised the needs of science at the moment, and the direction in which their work could be most profitably applied. It will be a matter of universal regret should this spirit cease to guide its work.

When I was talking with the Director of the school in March of this year, he asked me about the route I intended to follow in my proposed journey in Phrygia during the summer, explaining that two of his scholars intended to travel in Asia Minor, and that it would be misapplied labour if we all went over the same ground. I at once described the route which I had in my mind, and which I have since actually traversed. M. Claire, one of the two intending travellers, was then present. Some time later I talked with M. Claire on the same subject. I gave him some information about the best way of travelling in Phrygia, and again pointed out on the map my proposed route.

My astonishment was great when I gradually realised in the course of my journey that the French party had just traversed the very same route which I had described to M. Claire as the one I intended to follow. In justice to M. Foucart, the Director of the French School, I must state my conviction that it was without his knowledge that the two scholars chose to follow the route I had described to him and to M. Claire. I might, indeed, have resigned this field at once, and gone in another direction; for so much of the country is unknown that one can hardly make a mistake in taking any route, and working it thoroughly. But this, I soon saw, was impossible. So hastily and perfunctorily had the French scholar done his work (M. Claire had turned back in bad health to Smyrna, and the other scholar, M. Paris, was alone), that it was still as necessary as before to examine the country for oneself. When we began our journey from Serai Keui, the railway terminus, we were told that M. Paris had started about ten days before us. When we arrived in Smyrna, after exploring carefully and thoroughly the country that he had scamped over, I found awaiting me the July number of the *Bulletin* of the French School, containing an article by M. Paris giving some of the inscriptions copied on his journey. It is worthy of note that the May-June number, for which a long article of mine has been in type for more than three months, has not yet been received by any subscriber in Smyrna.

The paper which M. Paris has published contains a description of the site of the ancient Sebaste, and the text of five hitherto unpublished inscriptions which he found in the neighbourhood. The first of these inscriptions is dated, according to him, in the year 5 A.D. It is, as he remarks, interesting on several grounds, but he does not observe that his explanation of it would overturn all previous theories as to the functions of the "High-priest of Asia." There developed under the Empire a system according to which the priests of the whole province were subject to the supreme authority of the High-priest of the Imperial *cultus* in the province; but it is believed that this system grew very slowly, and that the High-priest of Asia acquired his paramount authority only at a late period. According to M. Paris (p. 450, l. 6 from bottom), the High-priest already possessed this authority in 5 A.D. But Mr. Sterrett, my travelling companion, reads, instead of ΕΤΟΥΞΠΘ (i.e., 89 = 5 A.D.), ΕΤΟΥΞΠΘ (i.e., 289 = 205 A.D.). This reading takes away much of the interest of the text, but agrees singularly well with M. Paris' second inscription. There a certain Q. Memmius Teuthras is mentioned as Ἀσίας ἀρχιερέων ἑγγονον; the date is 245 A.D. The first inscription speaks of Memmia Teuthrantis the High-priestess; according to the usual rule, her husband was, doubtless, High-priest, and Q. Memmius was their grandson. M. Paris remarks that Sebaste *semble s'être donnée tout entière et avoir voué un culte tout particulier aux empereurs*. This is quite possible, but the inscriptions to which M. Paris appeals as proof have no bearing on the point. He appears to have the wildest ideas as to what an ἀρχιερεύς Ἀσίας is, and imagines that, if a lady of Sebaste is ἀρχιερέα Ἀσίας, the city must for that reason have been specially devoted to the Imperial *cultus*. Now, the word ἀρχιερεύς is a term of very wide application. (1) The Κοινὸν Ἀσίας had temples of the Imperial *cultus* in various parts of the province, the oldest being the temple of Rome and of Augustus at Pergamum, built 19 B.C. The official who had the supreme direction of the *cultus* in all these places was the ἀρχιερεύς Ἀσίας; according to M. Waddington, this office was held by one person at one time, and, if he was married, his wife was ἀρχιερέα. (2) The name ἀρχιερεύς Ἀσίας is also applied, by courtesy, to subordinate officers, who directed the *cultus* in each separate city where the

Κοινὸν Ἀσίας had established temples of its own; the full title of these officials was ἀρχιερεύς τῆς Ἀσίας καθ' ὅλης τῆς ἐν Σμύρνῃ, Ἐφέσῳ, &c. The High-priest of Asia was in one year a native of Sebaste, in another of Eumeneia; but this does not prove that there was any special seat of the Imperial *cultus* in those towns. The High-priests were selected from the whole province, the chief qualification being ability to support the expense. An inscription of Acmonia mentions a citizen who is ἀρχιερεύς Ἀσίας καθ' ὅλης τῆς ἐν Ἐφέσῳ. (3) An ἀρχιερεύς might be an official of some purely local *cultus*, not connected with the *cultus* directed by the Κοινὸν Ἀσίας; such a High-priest was not entitled to the name of High-priest of Asia. The people of Sebaste were quite at liberty to dedicate a temple to Augustus, to devote themselves specially to his *cultus*, to style the priest ἀρχιερεύς; but, if Memmia Teuthrantis had been the High-priestess of such a local *cultus*, she would not have been ἀρχιερέα τῆς Ἀσίας.

In the second inscription published by M. Paris, there occurs the following remarkable phrase:—τῆς ἀναστάσεως ποιησαμένης Στατελλίας κ. τ. λ. M. Paris does not point out the difficulty of this reading. It is true that bad grammar is common in Phrygia, but such a gross fault in so common a formula should surely have struck him as suspicious. Mr. Sterrett reads, instead of I H, a *lettre liée* of N and H, and in the space above it a very small O. There is, therefore, no doubt that the Π must have had a little curve at the end of the horizontal stroke, making it a *lettre liée* of Π and P, and that the reading is τῆς ἀναστάσεως προνοησαμένης Στατελλίας. The phrase προνοεῖσθαι τῆς ἀναστάσεως is as common as ποιεῖσθαι τὴν ἀνάστασιν.

M. Paris' third inscription is a long list of citizens of Sebaste; he modestly refrains from claiming the credit of adding several astounding names to Pape-Benseler's *Lexicon*. In ll. 30, 31, he reads Μηνόφιλος Βλέπιδος φύσει Εὐπάτορος. This might pass for a misprint were it not for a remark made at the top of p. 456. The formula is a very simple and common one, though it puzzles M. Paris—Μηνόφιλος β. Λέπιδος, φύσει Εὐπάτορος: Menophilus, son of Menophilus, who is also called Lepidus, by birth son of Eupator. Double names are exceedingly common in Phrygia, and in this inscription they are often given more fully—Μηνόφιλος β. δ καὶ Λέπιδος, &c. In l. 32, M. Paris reads Ἰλέγων. The stone reads faintly, but certainly, Φλέγων.

Yet another *monstrum informe*. M. Paris tortures ll. 40, 41, into this shape:—

Ἀλέξανδρος Μελίτωνος ΛΟΝ  
Διδώρος Πανθίκτου Γένους.

I need hardly point out that the correct reading is

Ἀλέξανδρος Μελίτωνος Λον-γείνος.

Want of space constrained the engraver to place half of the name Longinus below the line.

M. Paris claims to have given special care to topographical study: p. 448, l. 10, *une étude attentive des lieux*. In the first line of his paper he remarks that Seljikler and Sivasly are on the road from Isheky to Ushak. In reality these villages lie several miles to the east of that road. A separate road leads from them to Ushak, crosses the Banas Tohai by a different bridge, and does not join the Isheky road till they both reach Ushak. This error seems slight, but it blurs a very interesting point in historical geography: the road system of the district was determined in ancient time by the situation of Acmonia, as in modern time by that of Ushak. Kiepert's map agrees with M. Paris, but we expect from a member of the French School some correction of that old work. Is it not clear that M. Paris, from ignorance of their importance, cared naught for roads and routes, but contented himself with reproducing, as results

of his own observation, the well-worn errors in Kiepert's map?

The phrase *au pied du Bulgas Dag* may seem felicitous to one who uses Kiepert's map in a library. M. Paris accordingly borrows it (p. 2) to give local colour to his sketch, and to express his own experience as a traveller. It needs eyes to explore Phrygia, but one who had made any use of his eyes would have observed that Kiepert places the Bourgas Dag much too far to the north and east. M. Paris, the slave of Kiepert, writes the name Bulgas; probably, in his hurry, he could not find time to ask the name of the mountain under which, or the village through which, his route led. Had he done so, he would certainly have written Bourgas.

Fortified by the authority of Kiepert, M. Paris ventures to correct M. Waddington for using the form Seldjik, and gives the name Sedjikler. It is not easy to pick holes in M. Waddington's work. The form Seldjik is correct, the form Sedjikler wrong. The village is called indifferently Seljik and Seljikler, singular and plural; so a neighbouring village is Hadjim or Hadjimlar; the name Sedjikler is unknown.

An attentive study of the localities enables M. Paris to affirm that Sivasly and not Seljikler is on the site of Sebaste. I should not venture to say that, and should be glad if M. Paris had given me the opportunity of criticising his reasons for the statement. But what has he to say about the splendid situation of Sebaste, the sources of its importance, its relation to other cities? Not one word. And yet he professes to have made *une étude attentive des lieux*.

If I give no longer list of M. Paris's errors, it is not for want of opportunity, both in the text of his inscriptions and in his commentary; but I have spent enough of time on this paper. Had he chosen some other route, he would have certainly found equally interesting inscriptions, for the country is full of them, and he would have earned the thanks of the world for publishing what would otherwise have been unknown. As it is, he has only done hastily and carelessly what he knew very well was about to be done deliberately and thoroughly. Believing, I suppose, that I, from my knowledge of the country, had chosen for myself some specially rich route, he thought he could, by a rapid journey, gather the first-fruits, and gain the glory of publishing the best of the inscriptions. When ours are published, it will be seen how he has succeeded.

I may mention that, in examining carefully the district which M. Paris traversed in such hot haste, we fixed the sites of nineteen cities of the Græco-Roman period, assigning the names to each usually from the evidence of inscriptions found on the spot. In this number I include no cities whose site was previously known, and no cities for which I am still unable to find a name. I refer only to those which no one had as yet attempted to localise, and to one or two which had been wrongly placed; but I do include three which I had placed correctly in an article published last year in the *Bulletin of the French School of Athens*. W. M. RAMSAY.

# CORRESPONDENCE.

## THE OLD MEETING HOUSE, NORWICH.

Belle Vue Rise, Norwich: Aug. 4, 1883.

The society's transcriber was informed by the caretaker that 1,800 persons had been interred in the Old Meeting House and burial-ground. The result of our work is the recording of the inscriptions on thirty-two monuments, memorials, and stones in the interior of the building, naming fifty-two persons. In the burial-ground attached 146 stones and monuments remain, of

which twenty-nine have the inscriptions totally obliterated, one having the words "To the Memory of the Rev." alone remaining. Ten other stones have the names only—e.g., "Thomas Pigg;" two others are partially obliterated, and three have the dates wanting. The remaining stones commemorate 177 persons. In the interior, the oldest memorial is to the memory of

IOHANNIS COREY, A.L.M.

Anno { Salutis 1698

{ Ætatis Suae 67

On the floor is a stone with a crest and the following inscription:—

Here lieth the Body of  
ELIZABETH OFFLEY  
one of the daughters of  
STEPHEN OFFLEY Esq<sup>r</sup>  
and Granddaughter of  
ROBERT OFFLEY Gent<sup>e</sup>  
and MARY his wife  
bboth interr'd near adjoining  
to this Place;  
who departed this life  
the 28<sup>th</sup> of Sep<sup>r</sup> 1741  
Etat 22

On the north wall there are two mural tablets—viz.:

In Memory of four Clergymen, ejected by the Act of Uniformity, A.D. 1662 and who subsequently became pastors of this Church.

Rev. Tho<sup>s</sup> Allen M.A. who died Sep. 21. 1673  
Rev. John Cromwell B.A. who died Ap<sup>l</sup> — 1685  
Rev. Rob<sup>t</sup> Asty, who died 1686  
Rev. Mart<sup>n</sup> Finch, during whose Ministry the  
"Meeting House" was built A.D. 1693  
and who died Feb<sup>r</sup> 13, 1697

In Memory of the Rev. W. Bridge, M.A. who died March 12. 1670. Aged 70.

He was ejected from St. George's Tombland A.D. 1636 for not reading "the book of sports" and founded the Norwich and Yarmouth Congregational Church A.D. 1642.

Also of the Rev. Timothy Armitage, the first Pastor of this Church, who died Dec<sup>r</sup> — 1655

In the burial-ground the oldest stone remaining is inserted in the north wall, and dated 1713:—

Here lieth y<sup>e</sup> Body of Mr. Edward  
Williams, late Minister And Elder  
of the Baptist Congregation,  
Lately Meeting in the Granary  
in the City of Norwich, who  
died April 12<sup>th</sup> 1713, aged 73.

Is Williams dead: that cannot bee  
Since dead in Christ so Liveth hee

Restored by members of St. Mary's  
Chapel, November 1867.

The next oldest stone is dated 1721:—

Behind this stone  
James Forby's body Lay  
waiting the mercy of  
the Judgement day.  
Aged 89 years. died on  
the 27 of March 1721.  
(Not given in Blomefield.)

The next oldest stone is dated 1723:—

Here lieth y<sup>e</sup> Body of  
THOMAS WITHERS who  
Died Feb. y<sup>e</sup> 16<sup>th</sup> 1723 Aged  
49 Years.

There is a stone to the memory of Ann widow of the late Mr. Thomas Sothorn, who died March 3, 1834, aged 81 years.

There are two stones with the following inscriptions:—

To  
the Memory of  
M<sup>rs</sup>. LYDIA BANFATHER  
who died May 1<sup>st</sup>  
1813  
Aged 83 Years.

To  
the Memory of  
M<sup>rs</sup>. SARAH BANFATHER  
who died Feb. 7<sup>th</sup>  
1811  
Aged 73 Years.

Is the name "Selth" uncommon? for there is a stone to the memory of Selth Coppin, who died November 3, 1831, aged 59 years.

These reminders of the departed may prove of interest to the congregation, if not to the citizens and the nation; and, should some persons be stirred to stay the hand of "time" by preventing the fast fading away into oblivion of any inscription, the society's labours will not have been in vain.

WM. VINCENT,  
Secretary of the National Society for Preserving  
Memorials of the Dead.

## NOTES ON ART AND ARCHAEOLOGY.

WE regret to record the death of Mr. George Love, the well-known printseller, of 81 Bunhill Row. He died on August 2 in his eightieth year, and had conducted his business for about sixty years in the same house. His knowledge of the work of Dürer, Rembrandt, and other old masters, which was almost unrivalled, will be greatly missed by many.

THE British Archaeological Society will meet this year at Dover, beginning on Monday, August 20, under the presidency of Lord Granville. Visits will be paid to Canterbury, Sandwich, Saltwood Castle, Westenhanger, &c.; and excursions have also been arranged to several places of interest on the other side of the Channel.

A SOCIETY has been founded at Naples, under the patronage of the Queen of Italy, for the study of the history of miniature painting. The president is Sig. Capasso, the learned Neapolitan historian; and among the most active members is Don Oderisio Piscicelli, of Montecassino, whose *Paleografia Artistica* and facsimiles of the illuminations in the *Bibliotheca Cassinensis* are well known in England.

THE Madonna della Staffa (Conestabile) of Raphael, for some time shown in the Hermitage at St. Petersburg, has, by the will of the late Empress of Russia, been incorporated in the collection. In transferring it from panel to canvas it has been discovered that the book which is now held by the Virgin was substituted by Raphael for a pomegranate. This fact is specially interesting, as it identifies a drawing in the Albertina Collection at Vienna as the first design for the Madonna della Staffa.

THE recent exhibition of a hundred *chef-d'œuvre* at the gallery of M. Georges Petit at Paris is to be commemorated by a work of unusual splendour. Each of the masterpieces will be engraved, and the engravings are to be published in parts, with studies of the painters by M. Albert Wolff. The text of the first two numbers will be devoted to Corot and Millet.

A BUST of Voltaire, discovered among the old models of the royal manufactory of porcelain, has been added to the special collection of Voltairean relics at the Château of Sans Souci. It is believed to have been presented to Voltaire by Frederick II.

A COMMITTEE has been formed at The Hague, with Dr. Wijnmalen as secretary, to make selection of a design for the bronze statue of Grotius which it has been determined to erect in the market-place at Delft. The competition is not limited to Dutch sculptors. Plaster models must be sent in before December 1 of this year.

THE committee in Zürich have adjudicated the execution of the Zwingli monument to Heinrich Natter, a Tyrolean living in Vienna, whose sketch won the first prize among forty-four. Natter, though as a sculptor self-made, feels himself deeply indebted to an English Maecenas. While still a poor youth, he was enabled, by the liberality of the late Mr. Joseph Geldart, of Manchester, to pursue his artistic education. Mr. Geldart found him in the Galleria dell' Arte in Venice copying a Venus, recognised his genius, and made him a free student for years. He lived to see several considerable works of his protégé—"Brunhilde," "Wotan," "Sigfrid," a number of portraits, the "Haydn" for Vienna; but he died just before this last success—the only drawback to Natter's joy. The statue, which is to be cast in bronze, represents the belligerent Reformer and learned precursor of Calvin standing with sword and Bible in his hands. The expression is powerful in its fine simplicity and religious heroism.

A HITHERTO little-known picture by Van Dyck has recently been placed where it will soon become better known. It is "The Adoration of the Shepherds," long hidden away in the Hospice of Lille. It has now been transferred to the Musée des Hospices which has lately been opened at Lille in the Palais Ribour. For nearly a century the picture formed the altar-piece in the chapel of the hospital.

CONSIDERABLE alterations are being made and projected to the Hôtel de Ville at Brussels. It is proposed to restore the left wing—that towards the Rue de l'Hôtel de Ville—as it was in the fifteenth century. The work is to cost half-a-million francs, 180,000 of which are to be expended upon a series of statues of historical personages to be placed on the façade. The Salle des Fêtes in the Hôtel de Ville has just been decorated with tapestries representing the trades of Brussels. They are the work of M. Geets, of Malines. The Salle des Mariages has also been redecorated with emblematic paintings.

THE Turners' Company will hold their annual competition in the art of hand-turning in wood, ivory, and metal at the Mansion House in October next. The prizes will include the freedom of the company and various medals and certificates of merit given by the guild, as well as money prizes. Special prizes will be given to apprentices. In the wood and ivory classes, the qualities essential to success are beauty of design, symmetry of shape, utility and general excellence, exact copying, fitness of the work for the object proposed, and novelty. In the metal classes, the essentials are truth in turning, accuracy in fitting and finish, exactness in copying, due proportion for stability and strength, and elegance in form.

A LARGE quantity of rare silver coins were found lately at Borzecice, in the Krotoczin district of Prussian Poland. A farmer was having a large stone removed from one of his fields, and the men found deep beside it an urn with 530 silver coins of Bohemian, German, Hungarian, and even Anglo-Saxon mintage. With them were some silver ornaments and a few silver bars. They were all taken to the Berlin Museum.

## MUSIC.

### MUSICAL PUBLICATIONS.

*Handel.* By Mrs. Julian Marshall. "The Great Musicians." (Sampson Low.) The authoress has based her work chiefly on Dr. Chrysander's *G. F. Handel*; and therefore it will prove welcome to those unacquainted with that remarkable and, unfortunately, incomplete *Life of the great musician*. So long as she has Chrysander as her guide, she is pretty accurate

in facts and dates. There are, however, even in this portion of the book some errors. For example, the overture of the Italian Cantata "Fillide e Aminta" was not transferred entire to "Rinaldo"; the Cantata "Nell' africane" does not contain the C below the bass staff, but C sharp. There are several little slips of a similar kind. When, however, Mrs. Marshall loses her guide, she makes very doubtful statements. She leads the reader to suppose that the "Choice of Hercules" was written in 1749, instead of 1750; and her remarks with regard to the re-instrumentation of Handel's works are inaccurate. In her catalogue of compositions at the end of the book there are a few mistakes; but she notices the discovery of the Sonatas (1694) at Buckingham Palace—a fact not mentioned by Mr. Rockstro.

*The Art of Singing.* By Margaret Watts Hughes. (Stanley Lucas.) No one can read Mrs. Hughes's Preface to her work, or the work itself, without coming to the conclusion that she is a conscientious teacher; and she speaks with the authority which experience alone can give. Only a few words are devoted to the invisible organs which produce sound; attention is called principally to the different positions and movements of the mouth. Every vowel and combination of vowels and consonants is connected with vocal exercises throughout all preliminary studies of singing. The system is, therefore, a practical one; the student gradually learns not only the art of vocalisation, but how to sing songs. The authoress acknowledges the debt of gratitude which she owes to her teacher, Sig. Garcia. She has studied his book, and has learnt much from it; her system, however, has been thought out independently, and she suggests a "definite, systematic, and practical" course of study.

*Original Tunes to Popular Hymns.* Composed by Joseph Barnby. Vol. II. (Novello.) Twelve years ago the first collection was published; since that time Mr. Barnby's name has not been forgotten, and there is every reason to believe that the present volume will be received with favour similar to that bestowed on the earlier one. The tunes now gathered together were written for "The Hymnary," "Church Hymns," and "The Church Psalter." Mr. Barnby is determined that congregational music shall have its share of chromatics and passing notes; these he uses with skill and effect, though at times they certainly seem to add weakness rather than strength. We cannot speak of the tunes in detail; it must suffice to say that among them are many which are firm favourites throughout the churches and chapels of the United Kingdom.

*The Morning and Evening Service.* By G. F. Cobb. (Novello.) The author has written a short Preface to his Service which, though not treating of matters purely musical, is, nevertheless, of interest. He touches upon the authority—or, rather, want of authority—for the responses after the Gospel, its different versions, and other points. The music shows that the composer, while looking back, is marching forward. Cadences, fugal points, and old tunes tell of the past; while various licences, plentiful use of chromatics, and enharmonic modulation tell of the present, and perhaps of the future. When the two styles are in close juxtaposition, as on pp. 7 and 9, the effect, it must be acknowledged, is somewhat disturbing. The employment of modern means in church music is worthy of attention; and Mr. Cobb certainly deserves praise for his attempt.

*How to Teach the Pianoforte to Young Beginners,* by Lady Benedict (Joseph Hughes), is a little pamphlet giving useful hints to teachers of the young. We quite agree with the authoress in thinking that the study of the piano and, in a

small way, the study of harmony should both be attempted from the beginning and that to these two should be added *sol-fège* practice.

*The Organist's Quarterly Journal.* Part 59. (Novello.) The first number is a *Concert-Satz* by Otto Dienel, professor of the organ at Berlin; some of the writing is effective, but without any special character. An *Allegretto* by W. Wolstenholme does not say much; there are awkward pauses in it, and some rather forced imitations. A Postlude, in the form of an Introduction and Fugue, by the Hon. Adela Douglas Pennant has no particular merit. A Postlude by G. B. Gilbert is restless, and the part-writing by no means pure.

*Fantasia for the Pianoforte.* By H. C. Banister. (Stanley Lucas.) This piece is divided into two important sections. First we have a *Larghetto* in F minor, with two themes, Weberish in character; a short and effective passage leads to an *Allegro* movement in Sonata form. The principal theme is derived from the opening one in the *Larghetto*. The workmanship is solid and elaborate, and the passage writing, classical in form, is smooth and elegant. The *coda* is exceedingly well worked out. Players will find in this composition excellent study both for the fingers and the mind.

J. S. SHEDLOCK.

## LITERATURE.

*Autumn Swallows: a Book of Lyrics.* By Ellice Hopkins. (Macmillan.)

THIS volume of short poems, composed by the authoress in the intervals of labour in another and a sadder field than that of literature, is remarkably and admirably free from the faults which we might, perhaps, have expected to be present in a volume so composed. It cannot be regarded as poetry of the first order; it has hardly stuff enough in it for that; it contains, one may say, more fancy and feeling than thought or imagination. But it is never morbid, never puritanical, never affected; it may be read from cover to cover with pleasure, and here and there with admiration. It contains, perhaps, rather too many echoes and adaptations of other poets' and poetesses' thoughts; Tennyson, Arnold, Mrs. Browning, Rossetti; one or other of them, are recalled perpetually. But, on the whole, it would be difficult to name any recent volume better calculated to show us how good poetry can be which is yet not first-rate poetry nor markedly original.

In the first place, the form of these "short swallow-flights of song" is exceptionally good. There is hardly a weak rhyme or insipid stanza in the whole book. The nearest approach to a literary fault that I have observed is a tendency to false division, and lines hypermetrical where the hypermeter does not vary, but jars, the cadence. Take, *e.g.*, the third stanza (p. 64) of the very graceful poem "On a White Butterfly":—

"Thou exquisite white flower-soul! what place may be  
'Mid the rude forces of our world for thee,  
That split the frozen crag with winter wan,  
And pour the sounding cataracts of the sea,  
And shatter the deep heart of man?"

Here the first line can only be read rhythmically by slurring the middle syllable of the second word, and forcing "flower-soul" into the condition of an iambus. Managed by a great master of melody, this sort of line may be made effective, but, in this poem, it forms a discord. Again (p. 106), in the second stanza of "Daisies," a pretty passage is marred by the unrhythmical separation of words naturally combined:

"All your innocent white throng  
Came crowding in upon the sense, and o'er  
Me swept in vision beautiful and strong  
And blessed me unawares."

The initial "me" is surely painful to the ear. But these are microscopical blemishes, and I only notice them as being exceptional, and therefore conspicuous, in the book. It is time to justify, by some longer extract, the estimate here formed of its beauty.

The finest poem in the volume is that entitled "Je mourrai seul," nor has Pascal's melancholy phrase ever found a nobler echo. The dying man lies, with Death's chariot, unseen yet ever felt, at his door.

"Thy words, with some strange Other interchanged,  
Strike cold across us like loved eyes estranged,  
With things that are not fraught; our things  
that are  
Fade like a sun-struck star.

"Alone, alone upon thine awful way!  
Do any show thee kindness? Any stay  
Thy heart? Or does the silent charioteer  
Whisper, 'Be of good cheer'?"  
We know not. None may follow thee afar,  
None hear the sound of thy departing car.  
*Only vast silence like a strong black sea  
Rolls in 'twixt us and thee."*

The thought is familiar; to every reader of *The Christian Year*, perhaps even to every thoughtful man independently of his reading, it is well known. But Miss Hopkins has enforced it in this poem (which I would fain have extracted whole) with a power not, I think, equalled elsewhere in her book—nor often in other writers.

Of slighter texture, yet exquisitely picturesque, is "A Flood in Spring" (pp. 111-13), describing the "May-meadows flooded in the night."

"Beneath our loved old meadow trees  
The summer sky spread broad and bright;  
The daisies, drowned in morning blue,  
All went to heaven in the night.

"And every bird that beats the air  
Had now a phantom brother dear,  
That flies with him through fairer skies,  
And sings a song no man can hear.

"And silver-footed clouds slow pass  
The path to church across the fields;  
And everywhere the strong brown earth  
To visionary depths now yields.

"And the great stars come down at night,  
And walk with men upon the earth,  
As when the sons of morning sang  
Of all fair things the primal birth.

"And where we toiled now floats the cloud,  
And where we wept now burns the star;  
And from our narrow vexed to-day  
Open calm infinities afar.

"And all our common beaten paths  
Without a sound now break away,  
And show God's heaven of love beneath,  
And in our dust fresh springs of day."

And in the verses (pp. 88-90) "To Robert Herrick" the very secret of that "jocund soul" is told in the following stanzas:—

"So thou and joy were boonest friends,  
Thy days had all a golden rise,  
And, dying, touched on golden ends;  
While thou beneath spring skies  
Didst fling thy careless glory down the years,  
That came to us so chill and grey with tears.

"But now, thy golden eves all done,  
Thy daffodils and thou for ever  
Long since to evensong have run,  
And gone away together,  
Leaving all moist dim places of the earth  
An afterglow of all your harmless mirth."

Blank verse is somewhat sparingly attempted in the volume; yet the poem (pp. 17-22) entitled "A Portrait" shows no small power in that direction. It recalls, perhaps, both in its merits and its defects, such poems as Mr. Myers' "St. John the Baptist;" it has

the same fervent ardour for Nature's fairer shows—as here:

"Ah wherefore didst thou leave the listening group  
With Christ and beauty on the mountain-side?  
Leave the cool silence of the morning skies,  
And evening wells of gold in herby hollows,  
Where the blue shadows lengthening love to  
linger;  
And all the flowery sun-slopes lifted joy!"—

with the same sense of strain and monotony, the same lack of such magic as Tennyson exhibits, *e.g.*, in "Tithonus." But, of the matter of the poem, the present writer may say, altering one word of Mr. Browning's,

"Nor I myself discern in what is writ  
Good cause for the peculiar interest  
And awe, indeed, this poem touched me with."

It is a narrative describing how a face, seen by chance in a London crowd, and haunting the writer with a vague *ἀνάμνησις*, is at last, by a flash of insight, identified with the lost figure in a chapel fresco, "high up among the Southern Alps." Perhaps there is something especially fascinating, to the superstitious self each man keeps in the background, in this idea of the *revenant*. But the book would be valuable to some people for this poem alone.

On the classical side, Miss Hopkins appears more tentative than successful. "Bormus—a Linus Song" (p. 23) is a pretty, modern poem, but brings no breath from Sicily or Greece. The "Gnomidia" neither are nor pretend to be Greek, except in title; but they are racy and ingenious. Here is a specimen, called "Man's Recusancy," which might have been written by a monk of humour:—

"The man who saw the whole world drowned,  
No sooner safe on shore was found,  
Than, lo! himself was drowned in wine.  
*Ah, Lord! whereto thy discipline?"*

The remaining half is less good; but all these Gnomidia are quaintly clever. The best of the few sonnets is "The Infinite Within and Without."

One literary trick, probably unconscious, may be noted as painful to the ear. A familiar passage should not be written out into other words. Who has not in his ears Helena's avowal?—

"I am undone: there is no living, none,  
If Bertram be away. 'Twere all one  
That I should love a bright, particular star,  
And think to wed it, he is so above me:  
In his bright radiance and collateral light  
Must I be comforted, not in his sphere."

Who will thank Miss Hopkins (p. 211) for

"I love thee much as I might love a star,  
Thy day and night that makes thy purpose  
clear  
Shine not within this world of mine, nor are  
Concentric with my swiftly turning sphere?"

One is reminded of Mr. Montgomery's attempt to "conjure with the rod of Sir Walter."

The general characteristic of the book is a tender melancholy, lit up with humour and occasional gladness of spirit; and, as might have been expected, there is an overflowing sympathy with children and with the poor. We should have known, without a note, that "A Back-Street Child" (pp. 99-102) was taken from life. Even Miss Hopkins could not have invented the story of the little one who, in her foul, unsightly home, made the stains on the wall into a class of playmates and taught them

their lessons. A "moral" often defaces a poem; in this case, I think, it is otherwise:

"I ask no richer gift than that child's heart,  
To which all in Thy light appears;  
And even the rude splotches on the wall,  
Bathed in its love, grow 'pretty dears.'  
Blind me with seeing tears, until I see  
In meanest things Thy beauty lies;  
And God's great poetry is everywhere,  
To open hearts and love-lit eyes."

E. D. A. MORSEHEAD.

*Practical Jurisprudence: a Comment on Austin.* By E. C. Clark, Regius Professor of Civil Law in the University of Cambridge. (Cambridge University Press.)

It is no disparagement of Prof. Clark's "Comment" to say that it is mainly occupied with the attempt to ascertain the true meaning of a single word. Austin's own work centres round the definition of Law, and the copious criticism to which it has lately been subjected reverts continually to the alleged assumptions and supposed consequences of that definition. Prof. Clark ranges himself with the "historical" jurists. His main objection to Austin's method is that he neglects and ignores—or, rather, leads other people to neglect and ignore—the history of the institutions which he defines.

"If we accept his definition of law, his treatment of the subject has the perfect correctness of mathematical demonstration, and must, therefore, be always an admirable logical exercise. But in that definition Austin dwells so prominently upon the circumstances of *legislation* (or *position*) as to throw entirely into the shade those historical beginnings of law which have obviously existed in all nations as rules of human conduct anterior to anything that can be reasonably spoken of or thought of as legislation at all. Practically, Austin considers political societies only at an advanced period of their existence, and denies the name of law to that which has been keeping them together for ages, because it does not square with his own logical conception."

Here is the key-note of Prof. Clark's Comment. Neither Prof. Clark nor anybody else has ventured to impugn the definition in relation to societies "at an advanced period of their existence," and he cordially acknowledges the mathematical correctness of the jurisprudence to which it leads. Is it worth while to quarrel seriously with a system for which the overwhelming advantages can be claimed that it is true for the civilised nations of the earth, and that it is clear and logical, in spite of the natural darkness and accumulated confusion of the subject? By all means let the student be warned that there are, and have been, conditions of human life to which these definitions will not apply. That is the attitude of Sir Henry Maine; and it is, we venture to think, thoroughly consistent with the acceptance of Austin's system as it stands. Prof. Clark goes far beyond this. Before the State was, law is. Prof. Clark seeks a wider definition which will let in the primitive rules of conduct excluded by Austin. He lays the basis for his generalisation in an analysis of the unconscious definitions of law embodied in early nomenclature, and of the conscious definitions attempted by philosophers and jurists. This is work which has not only been done well by Prof. Clark, but

which is well worth doing for its own sake, although it does not very materially help the author to his conclusions.

Law, according to Prof. Clark, is "a rule of conduct obtaining among a class of human beings and sanctioned by human displeasure." And the law of a State is "the aggregate of rules administered mediately or immediately by the State's supreme authority or regulating the functions of that supreme authority itself: the ultimate sanction being, in both cases, disapproval by the bulk of the members of that State." Prof. Clark modestly anticipates as the result of his labours "the addition of one more failure to those which have gone before." We shall be content to ask the question which Prof. Clark asks himself—why, accepting, as he does, Austin's definition of the Sovereign or a State, he does not accept also his definition of law. He avoids the words of command for the insufficient reason that rules administered by a Sovereign must not be spoken of as *set* by a Sovereign (although he admits, in principle, that "all law administered by the magistrates of a community has necessarily an imperative character"). By making the sanction of popular disapproval the *differentia* of law, he either means nothing more than that "obedience of the bulk" of the people which is postulated in Austin's definition of sovereignty, or he sets up a condition which would exclude some of the most undoubted law now existing in the world. What sort of a criterion of law would popular disapproval be in India? All that is gained by the substitution of popular disapproval for the Sovereign's command is the admission of certain "constitutional maxims within the domain of law." It is a sacrifice of logical precision to misplaced sentiment. It slurs over the distinction between rules which are, and maxims which are not, enforced by legal penalties. Even the "practical mind" to which Prof. Clark appeals would be satisfied with the restriction of positive law or State law to the former. Some of us cherish the hope of seeing at no distant day an Act of Parliament which shall vest the sovereignty in the King and the House of Commons. Such a statute, as Austin points out, "might be termed unconstitutional, or immoral, or irreligious; but to call it illegal were absurd." Prof. Clark apparently would call it illegal; at all events, he "apprehends that the conduct of the Parliament would be reasonably called by all people illegal." Is not this a *reductio ad absurdum* of Prof. Clark's struggle to confer a legal status on Constitutional maxims? We prefer to think that there is a legal way of abolishing the House of Lords.

Part ii. (on "the form of law") follows Austin more or less closely through the minor topics of the *Jurisprudence*. Here Prof. Clark is on more fruitful ground. Drawing freely for illustrations on English as well as Roman law, he has compiled a body of notes which cannot fail to prove extremely useful—we might say indispensable—to students of Austin, if only as a corrective of the somewhat arbitrary dicta which, as Prof. Clark truly says, they have been accustomed to accept as admitted facts. The three chapters on the *jus gentium*, and Roman and English

equity, are particularly worthy of attention in this respect. Prof. Clark successfully shows cause against the accepted theory that the *jus gentium* began "as an *abstractum* from the laws of other nations considered together with those of Rome." It was in its origin, he thinks, a philosophical ideal. But why did philosophers seek an ideal in the "law of nations"? Why did the supposed universality of certain rules cause them to be identified with nature on the one hand and equity on the other? E. ROBERTSON.

*Eight Years in Japan.* By E. G. Holtman. (Kegan Paul, Trench & Co.)

THIS book is, at all events, a change. Most persons who have written books on Japan have devoted them to the study of the history of the manners and customs, the art and the natural beauties, of Japan. Mr. Holtman went there to make railways, and his book is mainly a record of his work. His appetite as a sightseer seems to have been singularly limited; and even after a long voyage to a fascinating country, so tantalising to an ordinary imagination, he was not at ease till he had settled to business. He was bored at Yokohama, and never seems to have taken kindly to it or its inhabitants. He prefers Kobe—nay, thinks that a man might do worse than spend his life there—but he gives no distinct reason for his preference. His heart is evidently in his profession—in surveying, constructing, and managing railways. After working till he was ill, he enjoyed his holidays, and he records both his work and his excursions in a straightforward, simple way which makes one well disposed towards the author, though there is little to amuse in his account of his experiences.

It is strange that a man of ability, as Mr. Holtham evidently is, should have spent eight years in Japan, and have travelled over such a large part of it, without having more worth saying about the country and the people. Except a vague notion of the difficulties encountered in building bridges over rivers liable to floods, and the large amount of labour necessary before a railway is started, there is little in the book of a descriptive kind which will be new to anyone who has read any other work upon Japan. One learns more, perhaps, about Mr. Holtham himself than about any other subject. None can read his story without feeling that he is a thorough Englishman, of great industry and determination, with a strong reverence for Bass's ale, and an inalienable affection for his pipe.

It may be rashly gathered from what we have said that the book is a dull one. That inference would be too strong. It is not an exciting book, but it is too genuine to be dull to those who care about human nature as well as Japan. It is a book that a man with leisure may read and not find his time thrown away. It is a book of which much may be skipped without loss, but not without danger of losing a choice morsel where you least expect it. For instance, this is not a bad excuse for one of the "abominations" of Japanese diet. On his holiday trip to Nikkō and other places, Mr. Holtham abandoned sandwiches and eggs, the only available food of a European kind, and, struck with the

superior comfort of his fellow-passengers, he resolved in future to have a Japanese tiffin when on the move.

"In fact, I developed quite a taste for rice and pickles, not even excepting the infamous 'daiko,' the dread of foreigners; it being a half-putrid, half-salted preparation of large horse-radish, and the finest thing in the world to make rice go down: for if you take a piece and chew it well till the taste is all over your mouth, you would, I believe, eat anything else in the world afterwards to get rid of the taste again; so that four or five bowls of rice, one of which would stay an ordinary appetite without this ingenious seasoning, disappear with rapidity."

Mr. Holtham's book reminds us somewhat of a Japanese tiffin, as he describes it. It is, so to speak, mainly composed of wholesome, but not very piquant, matter—like rice; and it goes down by the help of more savoury mouthfuls. The only difference is that these *bonnes bouches* are not nasty, like "daiko," but sometimes "sharp" as pickles and sometimes sweet as honey. Here is a passage that is worth some trouble to reach:

"This year, however, the summer rains were very late and the country dry, and a good deal of rice perished in the seed-beds. I remember well going down to Osaka on one of my frantic expeditions after material that seemed to hang on the hands of the transport department long after it should have been delivered on the work; going part of the way by road, and getting on to a trolley when I reached the rails, the coolies who shoved me along being mournfully eloquent upon the prospects of the season, explaining that rice was going to be so dear that poor people would lie down by the roadside and die, and the farmers be unable even to save seed for next season. They toiled under the brazen June sky, with many a grunt and many a stoppage, so that I thought I should never get to Osaka, at least before nightfall; but, lo! a little cloud, 'like to a man's hand,' came out of the sea, and presently gathered on the flank of Rokkōsan, and grew black and spread over the western heavens, shutting out the cruel sun; while a little shiver, as of an awakening hope, went from field to field, and then a cry rang out from the villages that the long-expected rain was at hand. The toiling farmers put down their buckets beside the sick seedlings, and bared their breasts to the rush of rain that swooped down from the hills. The yells of my coolies as the first heavy drops reached us were enough to bring the heart into one's mouth; and, when the stinging shower struck them, they bent their backs to the work and whisked me along into Osaka at the rate of nineteen to the dozen, whooping with glee."

Mr. Holtham was in Japan during the Satsuma rebellion of 1877; and whatever he says upon this subject, and about the Japanese generally, is interesting and characterised by a sound judgment and fine feeling. He has a proper admiration for the leaders in the wonderful reform of the kingdom, and also for the rebels. He sympathises with the Old, and believes in the New, Japan. The passage in which he dwells upon the close of the rebellion is one of several which show that it is rather literary inexperience than literary ineptitude that has prevented him from writing a thoroughly interesting and valuable book.

"So the last act of this sad drama came to a close, and the last penalty of their crime was paid, in the currency that heroes recognise, by the mistaken leaders and the remnant of their

mistaken followers. If in days to come the hill behind Kagoshima, to which the echoes of the last volleys fired in the great rebellion returned from the mountains that look upon the old seat of the Satsuma power, should become a familiar object to the sight or the tread of the foreigner, it will be associated with none of the sordid struggles of the trading adventurer, or the jealousies of native and imported bankrupts; but the shrine that commemorates the purging, by blood and fire, of a sin that could not have been committed for greed of any less high possession than the responsibility for a nation's life, will draw its votaries from all lands that hold in honour political courage, personal sacrifice, and faithfulness unto death."

With this passage of noble eloquence we take leave of a book which is a curious instance of how well and how poorly the same man may write without being conscious of the gulf that separates the extremes of his performance. COSMO MONKHOUSE.

*History of the Negro Race in America.* By George W. Williams. In 2 vols. (New York: Putnam.)

UNTIL the beginning of the present century the history of the black race in America affords little worthy of notice; but with the commencement of the anti-slavery agitation it grows in interest, and the culmination of that movement in the great war of twenty years ago is one of the most striking episodes in history. The practice of holding Negro labourers in slavery, originating in Spanish America, quickly spread to the other European settlements, and their numbers grew with the growth of the colonies. In spite of the conditions of slave life, the soil and climate of America appear to have favoured their increase. In 1715, there were 58,850 Negroes in British America; in 1775, when the revolution broke out, there were 501,102. After the epoch of independence the increase became more rapid. In 1790 the numbers were 757,208; in 1800, 893,041; in 1810, 1,191,364. At the epoch of emancipation, in 1865, there were, in round numbers, 4,000,000 Negroes held in slavery; and at the census of 1880 the Negro population of the States had risen to the portentous figure of 6,580,793. The prophecy that the abolition of slavery would tell unfavourably on the numbers of the Negro race has therefore failed. "Emancipation," says Mr. Williams,

"has taken the mother from field-work to house-work. The slave-hut has been supplanted by a pleasant house; the mud floor is done away with; and now, with carpets on the floor, pictures on the wall, a better quality of food properly prepared, the influence of books and papers, and the blessings of a preached Gospel, the Negro mother is more prolific, and the mortality of her children is reduced to a minimum" (vol. ii., p. 418).

Without reckoning books and papers and a preached Gospel as causes of diminished mortality, it is obvious that the removal of the unfavourable conditions of slave-life and the opening of a free career in a thriving community have tended to the increase of the Negro population; and Mr. Williams's work proves that they are slowly, but surely, working their way upward in the social fabric. The problems with which American statesmen were confronted in 1865 have been

conscientiously grappled with. Not only has the liberated Negro been found in food and employment, and got his "forty acres and a mule," but he has been educated. He has learned to read and write, to count, and to save money. From the country he has gone into the towns, where he has found colleges and teachers ready to prepare him for the superior walks of life. Throughout the South he is now qualifying himself to take the place of his old masters, and when they prove too many for him he can emigrate to Kansas and Missouri. "In Alabama, Florida, Louisiana, North and South Carolina, and in Maryland," says Mr. Williams (vol. ii., p. 418),

"coloured men have possessed themselves of excellent farms and moderate fortunes. In Baltimore a company of coloured men own a ship-dock, and transact a large business. Some of the largest orange plantations in Florida are owned by coloured men. On most of the plantations, and in many of the large towns and cities, coloured mechanics are quite numerous. The Montgomeries, who own the plantation once the property of Jefferson Davis, extending for miles along the Mississippi, are probably the best business men in the South. In Louisiana, P. P. Deslondes, A. Dubuclet, Hon. T. T. Allain, and State Senator Young are men who, although taking a lively interest in politics, have accumulated money and saved it."

Nor is the invasion of the black race confined to the South. The author of these volumes, a good-looking young Negro gentleman who has graduated from a theological college, but has abandoned the church for the law, claims on his title-page to be "First coloured Member of the Ohio Legislature, and late Judge-Advocate of the Grand Army of the Republic of Ohio." But the palm of being the "representative young man of colour" in the United States is yielded by Mr. Williams to Prof. Richard T. Greener, a legal practitioner at Washington. Mr. Greener, born in 1844, was the first Negro to enter Harvard, where he passed a brilliant academical career, and subsequently became in succession Principal of the Institute for Coloured Youth in Philadelphia, Professor of Metaphysics and Logic in the University of South Carolina, and Dean of the Law Department of Howard University at Washington. The last-named post he seems to have resigned in 1880 in consequence of increase of business following upon his successful conduct of the case of Cadet Whittaker of West Point (presumably a Negro), in the course of which, according to Mr. Williams (vol. ii., p. 444), "he developed ability and industry as an attorney, and earned the gratitude of his race." Other instances are Col. Bruce, who "from a penniless slave has risen to the position of writing his name upon the currency of the country" (Col. Bruce is Register of the United States Treasury); and John M. Langston, born a slave in Virginia, afterwards President of the Howard University, and now Resident Minister to Hayti. Six Negroes have been members of the Legislature of Massachusetts, for an account of whom, and of other eminent members of the race, male and female, the reader is referred to Mr. Williams's second volume. No further argument, with a figure of six millions and a-half on the census, is wanted to convince us that the Negro race is in no sense dying out. At

the same time there are no signs of any fusion of the white and black races. The physical antipathy which prevents inter-marriages continues in full force. We thus have in the United States the singular spectacle of two dissimilar races enjoying the rights of common citizenship, and engaged in similar pursuits, with no prospect of the gulf which separates them being bridged over. This situation obviously has in it the elements of future trouble, on which the history of Hayti in past times, and of Jamaica in our own, cast a lurid light.

Beyond the materials which they afford for a study of this problem of the future Mr. Williams's volumes do not contain much that is new or valuable. They evince less judgment and critical experience than industry, and if the writer could make a stern resolve to be less declamatory and more grammatical it would tell favourably on any future literary effort. The imperfections of the work, however, do not detract from the interest which it possesses in the eyes of the European reader as a history of the Negro race by one of themselves.

E. J. PAYNE.

*Numismata Typographica.* By William Blades.  
("Printer's Register" Office.)

MR. BLADES, whose labours in the investigation of the history of printing are so well known and so highly valued, has devoted a great deal of time and painful research to the cataloguing of those medals which in one way or another bear on his favourite subject. Unfortunately, the medals themselves are, with few exceptions, modern in date, and quite worthless as works of art; while the lithographic drawings hardly do justice to those few which are of more meritorious execution. Among these, perhaps the most important is the bronze medal of the founder of the chief Venetian printing-press—Aldus Pius Manutius—with, on the obverse, a fine profile bust of Aldus with long hair, and wearing a biretta; on the reverse, the usual Aldine badge of the dolphin and anchor. This medal was probably executed in the early part of the sixteenth century, and in design, if not in workmanship, somewhat suggests the hand of Gentile Bellini. Another fine medal, also in bronze, but of a very different style of work, is that with a profile bust of John Petreus of Nuremberg, dated 1545, representing him in his forty-eighth year. Like the Venetian medal, the reverse has the device used by the printer in his books—a hand issuing from a cloud holding a flaming sword.

Although, however, the great bulk of the medals catalogued by Mr. Blades are devoid of any pretensions to be considered works of art—some, in fact, being of quite astonishing hideousness—yet they serve as a peg on which the writer has hung no small amount of interesting and valuable information about the typographic craft and the long list of distinguished men who have practised it in the old days when many a scholarly printer was both author and publisher of the books he produced, as well, perhaps, as being himself in some cases the artist who designed the beautiful illustrations in which early printed books are often so rich.

It is with natural pride that Mr. Blades, as a printer himself, recalls the sometimes forgotten fact that the great Albert Dürer, among his many accomplishments, was a member of this craft.

"Not only did he print the wood-blocks engraved by himself and pupils, but he had a complete printing-office, supplied with presses, with types, and with all necessary furniture. Panzer seems the only bibliographer who has noted this, and he gives the following list of books printed by him:—

"1. 'Passio Christi,' Ben. Ohelidonii. Nuremberg. Folio. 1510.

"2. Another edition. Nuremberg. Folio. 1511.

"3. 'Apocalypsis.' Nuremberg. Folio. 1511.

"4. 'Epitome in Divæ Parthenices Mariæ.' Nurem. Folio. 1511.

"In Nos. 1, 2, and 4, with slight variations, appears this colophon: 'Impressum Nurnberge per Albertum Durer, pictorem.'"

Mr. Blades gives a very interesting description of the founding of the Aldine Press from the arrival in Venice of Aldus about the year 1489. The epithet Romanus which he attached to his name does not mean, as is often supposed, that he was a native of Rome itself, but simply that he was born in the Papal States. This happened in 1449 at the small town of Bassiano. After studying for some years in the schools of Ferrara and Rome, Aldus Manutius attained to considerable excellence in Latin and Greek scholarship; he formed an early friendship with the brilliant young Florentine linguist and philosopher, Pico della Mirandola, who, in a short lifetime, won for himself a place among the most finished scholars in that wonderful group of poets and students collected together under the sympathetic patronage of the Magnificent Lorenzo. The first work printed by Aldus from his Venetian presses was the Greek Grammar of Lascaris in 1494, in the Preface of which the printer-scholar announces his resolve "to work and to do something worthy of a man," rather than lead the tranquil country life which might have been his. That this resolution was fully carried out is shown by the numerous editions of Greek authors issued by the Aldine press during the next few years—first, the complete works of Aristotle, and then a large number of Greek authors up to that time unpublished—books which were all remarkable for the beauty and clearness of the type as well as the accuracy (relatively speaking) of the texts. The amount of careful collation of MSS. required to produce these editions must have been enormously large, and, as Mr. Blades points out, quite beyond the powers of any one man. The workshops of Aldus thus became a centre of learning, and an hospitable refuge for many a scholarly Greek after his escape from the destruction of Constantinople by the Turks.

In 1501 Aldus invented a new form of type now called "italic," by means of which a large amount of matter could be compressed into a small page, thus reducing the cost of production very considerably—an important step towards that more general diffusion of learning to which Aldus devoted his life. One of the first books printed in this type was the beautiful little octavo *Divina Commedia* so much prized by collectors of early

editions of Dante's works; this was the first book in which Aldus introduced the well-known badge of the dolphin and anchor.

This device appears to have been suggested by the reverse of a denarius of the Emperor Titus, of which Mr. Blades gives a wood-cut. With regard to the special merits of the Aldine press Mr. Blades writes:—

"The qualities which have rendered the Aldine editions so famous are the great accuracy of the text and the elegance of the characters. Their beauty, indeed, has been so much admired that several authors have repeated the foolish legend of his types having been cast in silver."

After the death of the first Aldus, in 1515, the presses were worked, first by his father-in-law, and then by his son and grandson, all through the sixteenth century, with but little falling off in the high quality of the texts they produced.

One of the medals published by Mr. Blades, though modern and of no artistic merit, is interesting as commemorating the claims of the Italians to have been the inventors of moveable types. This claim is based upon a MS. preserved in the archives of Feltre—a history of the town down to the year 1681. This MS. asserts that a certain Castaldi, a lawyer born at Feltre towards the end of the fourteenth century, had the idea of moveable types suggested to him by some letters rudely cast in glass by Pietro di Natali, and that he carried out this notion in a practicable form. The history goes on to state that Fust visited Castaldi and stole his secret from him, carrying it back with him to Germany. This is a very improbable story, and rests on no foundation whatever except the statement in the Feltre MS. of 1681. Even if the MS. be authentic, an assertion of this kind, made so long after the event, can have little or no weight.

J. HENRY MIDDLETON.

THE FOLK-LORE OF THE SOUTHERN SLAVS.

*Sagen und Märchen der Süd-Slaven.* Von Dr. F. S. Krauss. (Leipzig: Friedrich.)

INDIA is the great home of animal fables, even with a moralising conclusion. Many of the corresponding Greek tales have probably come from this source. Quite recently—as M. Gustav Meyer states—the well-known story of the lion who lets the mouse free, which afterwards gnaws through the ropes that bind him, has been found in an Egyptian papyrus of the library at Leyden, in a form probably older than the corresponding fable of Aesop. Opinions differ as to whether the *fabliaux* of the West are mere amplifications of the classic stories, which thus would have a double (Asiatic and African) origin, or whether, by the side of the classic lore made use of by the clerical writers of the Middle Ages, there was not also a living source of popular tradition. The latter view is the more probable. For, though in Germany proper few remains of animal fables now exist among the peasantry, a great deal of that kind of folk-lore has been preserved by the Saxons in Transylvania, and various indications tend to show that their stories are really racy of the people.

We have here a collection of South Slavonian

tales, of which animal fables form a large part. The first question is, How far is that which is placed before us in this volume a genuine product of popular fancy?

The editor, Dr. Krauss, who, from the mother's side at least, hails from the Slavonian stock—which perhaps accounts for some defects of his German style—is evidently mistaken when he gives us his publication as the pure outcome of an unlettered people's imagination. Highly amusing the stories presented here no doubt are. Whoever can enjoy the comic, even though it verges—as it does in some of those tales—upon the gross and somewhat unspeakable; whoever takes pleasure in the immortal drolleries of all ages and nations, from Abderite fun to the Reynard-the-Fox pranks, and the Till Eulenspiegel tricks, or those huge *Landsknecht* jests which Hans Sachs has sung with such masterly dry humour, will be delighted by a goodly number of these South-Slavonian stories. Here and there we find in them also the more fantastic manner of the *Märchen*, which leads us into an enchanted land where logic comes to a standstill, and events develop themselves by leaps and bounds, as in a dream.

Having said this much, we must qualify it by expressing a belief that the majority of the stories given in this book show a hidden acquaintance with Aesop and Phædrus, with the Nether-German animal fables and the deeds of Eulenspiegel, with various kinds of Western sorcery tales—perhaps even with Lafontaine and some of the eccentric productions of the German romantic school. Occasionally, it is true, we feel as if we were on special popular ground; but then come not only turns of phrases, but striking incidents of most modern literary origin, even if a story is not altogether made up of a mosaic of recollections from well-known models.

This is very different from simple contact with kindred notions, such as have been shown to be common property of many Aryan, Turanian, even African tribes. Yet the editor of these South-Slavonian tales insists on their absolutely popular origin, as opposed to "artificial, or professional, poetry." With his idea of "strictly popular literature," it is, however, impossible to agree; for he includes in it the *Iliad* and *Odyssey*. Now, the form in which we possess these epics is certainly that of *Kunst-dichtung*. The learned men of Alexandria gave it the last finish. What do we know of the text which Aristotle procured for Alexander of Macedon? What of that of Peisistratos? What of the text of Lykurgos? What of the rhapsodic songs from which the poems attributed to Homer arose? Even if we could get at these rhapsodic songs, we should unquestionably come upon professional bards, distinct from the crowd. A comparison with the *Nibelungen Lied* makes this obvious enough. The original heroic ballads upon which it is founded are lost. In a Norse form, they are, however, in a great measure preserved to us in the *Edda*, where the German source and localisation of the Sigurd and Niblung story are distinctly acknowledged and maintained. But a glance at these Eddic poems satisfies us at once that, with all their purely pagan character, racy

strength, and rapid dramatic development of events, even these are undoubtedly the result of a professional poet's labour.

It is not desirable to spoil our enjoyment of old poetry by making too sharp a division between popular and professional literature. In many cases the division would prove to be untenable. And when Dr. Krauss goes so far as to assert that "a people's aboriginal productions are of greater importance to us than the whole professional literature of Greek and Roman antiquity;" when he says that "a tiny collection of popular proverbs contains more solid wisdom for life than the writings of the clique of followers of Platon and Aristoteles;" and that "a *Volks-Märchen* is to him of higher value than all the philosophical speculations of Cicero;" when, finally, he declares that "we ought to renounce mere theories, abstractions, philosophisms, and similar wishy-washy tittle-tattle [*Gesalbader*]"—he surely travels away into a region whither we do not care to follow him. Of course, he has to contradict himself quickly enough in that particular line; for, in spite of his dislike for all abstract theories, he soon comes back to the necessity of a science of comparative folk-lore, in order to find out whether there has been an exchange of mythological ideas between different nations.

It is idle, in the present advanced state of enquiry, to assert the absolutely independent character of a people's tale-treasure or mythological conceptions. Has not the Aryan creed of the Hindu in course of time become filled with ideas and divine figures drawn from subject Dravidian and other races? Have not the Hebrews taken into their faith Babylonian and Persian notions? Were not even the Hellenes influenced by Egyptian, Pelasgian, Thrakian, Semitic ideas? Would it, therefore, be extraordinary if Southern Slavs, surrounded as they are by various Aryan and Turanian races of Christian and Mahommedan creed, had had their folk-lore vastly modified by the latter?

But it is not in this sense that we wished to point out how much of these South Slavonian tales is evidently borrowed. What we wanted to direct attention to is, that in many of them a later, a modern, and a distinctly literary trait crops up. When the wolf wants to become a "noble Roman;" when, in the war between the Dog and Isegrim, soldiers are preceded by a drummer, and guns are used; when the Imperial officials, evidently of Austria, are called upon to act as judges between the Bear, the Pig, and the Fox, and Isegrim is directed to jump over the pole "like a well-trained gymnast [*Turner*];" or when, during a meeting at midnight, "a clear, star-lit sky veiled the country as with an enchanted half-darkness," we cannot be in doubt that the ground of the old popular tale is distinctly abandoned.

Nevertheless, the collection before us remains an entertaining and valuable one; only its contents must not be measured by a wrong standard. We see too much borrowing from foreign and late sources, too much refurbishing of well-known stories, to believe in the purely Slavonic character of these droll productions. Scientifically speaking, a very close enquiry will have to be made to trace

their real origin, lest the majority of them should be placed in a wrong class.

KARL BLIND.

#### NEW NOVELS.

*Once More.* By Lady Margaret Majendie. (Bentley.)

*Colonel and Mrs. Revel.* By Laslett Lyle. In 3 vols. (Tinsley.)

*A Tragedy at Constantinople.* By Leila-Hanoum. Translated from the French by Gen. R. E. Colston. (Trübner.)

*X. Y. Z.: a Detective Story.* By Anna K. Green. (New York: Putnam.)

*For the Major.* By Constance F. Woolson. (Sampson Low.)

THE volume of tales collected under the title *Once More* is a delightful surprise. I opened it with the utmost aversion and prejudice, as some time ago, in the *ACADEMY*, I was forced to write rather harshly about a novel by the same hand—a wildly romantic story of a lovely Italian Prince gifted with an Evil Eye. It would be pleasant to think that that scolding was taken in good part, and that my advice to discard sensational models and rely entirely on herself and her own singularly graceful taste has been adopted. If this is self-complacency, then the reformation must have been spontaneous, for certainly her ladyship's earlier manner was always praised by other reviewers in the usual conventional terms. Here she has evidently taken great pains, not merely to write well, but to write simply and briefly. There is not a trace of palaver or rigmarole in the book. Short as are the best of the tales, they are singularly full and satisfying, so much is hinted and implied in so few words. As works of art in their different ways, I should be inclined to put "Poll Miles" and "Au Pair" in the very first rank of fiction. They will repay careful study, and, indeed, the whole book should be kept by one to read again some day. It is divided into stories of the "Past," of the "Present," and of the "Future." Of the former, "Poll Miles" is almost perfect. Here the weird element of witchcraft is quite admissible, since it is presented without comment as a prevailing belief. It has the true idyllic tone; is simple, graceful, and tender. Fuller treatment would only have marred the effect, for with a very few touches we have a perfect picture of the wild, sensitive child-witch, the manly, self-satisfied, superstitious rustic lover, and the Methodist cobbler—three figures worthy of *Silas Marner*. There is wonderful poetry and force in the tragic close to which the whole drama steadily tends. In every respect—most of all in form and simplicity—this story is nearly perfect. The other tale, "Wild Jack," is less successful as a whole. Nowadays one scarcely believes in gentlemanly highwaymen and high-souled Claude Duvals, or that they could support a country place and stud by their profession. Most adroitly the difficulty is here evaded by giving the hero political importance as a ruined Jacobite gentleman, half bandit and half secret agent of the Good Cause. Still, the difficulty remains. Nothing can be more charming

than the descriptions of the Berkshire home-life, the old parson, the old maid friend, and his daughter, whose love for Wild Jack is very tenderly painted. The tragedy here is grim and striking—thoroughly in keeping with the times. Few would have ventured to bring Betty under the gibbet of her lover, but the scene is perfectly probable and highly impressive. Of the tales of the Present, the best is "Au Pair." The authoress has studied French home-life with attention, and reproduces it without effort as something natural and quite of course. Her Gascon interior is in its way quite as good as the well-known *Month in a French Country House*, far more typical, more thoroughly French, yet not without a certain individuality of character. Doubtless it is painted from nature. This tiny sketch seems, so far as my own experience goes, to reproduce with photographic exactness the peculiar atmosphere of provincial French life among the genteel retired families, the graceful, caressing home affections, the enormous sum of happiness actually realised, the sprightly, busy activity, and, after all—in our eyes—the frightful inanity and triviality of the whole thing. Into this circle an English girl is introduced as governess, and to it she soon becomes assimilated. With some qualms, she forgets her solid, practical, English lover for the gay, passionate, kindly son of the house. Perhaps it is only chance, perhaps it is because the real story ran thus, but, if not, it is downright genius, the contrast, which is never dwelt upon or even hinted, but beautifully brought out between the two lovers, the perfectly honest conceit of the gallant young Frenchman, and the modest dignity and reserve of the Berkshire squire, and, still better, the curious intuitive respect of the whole family for the "good Englishman." Nellie, perhaps, chooses wisely for herself, and Dick provides the *dot* and effaces himself, and so the tale ends, spoiled by no conventional epilogue about some parson's daughter—some Agnes infinitely superior to Dora—who had been waiting all along to console him. In fact, it would be difficult to suggest any improvement in this charming story. The other French tale is very original and well told, and the ending as natural as it is unexpected. "Uncle George's Will" is a story of English high life. The young ladies and gentlemen are rather unconventional and slangy, but somehow they are real human beings, and a strange contrast to the fine folk in novels. It is a perfect luxury to read about our titled fellow-creatures in an author who does not trouble her head about the titles, but takes it all as a matter of course. Here, as in the other tales, we have many amusing scenes and quaint little touches. It is very enjoyable, but, like the two tales of the Future, the plot is utterly improbable. In fact, all three abound in those unlikely coincidences and contretemps which are the life and soul of the comic drama, and we should strongly advise the authoress to try her hand at refined comedy. She would certainly succeed if she merely dramatised one of these three stories. This strained plot spoils both the "Tales of the Future," but, after all, they are only meant as burlesques, and, as such, they are amusing enough. "Lady Helps" is a sort

of *High Life Below Stairs* reversed, and the ending perhaps suggested by the *Grub Street Opera*. "The Lady Candidate" is much better worked out, and the idea of the blushing, timid, rosebud girl goaded into parliamentary life by her strong-minded friend is most comical, especially her election speech, when, instead of denouncing the Male Tyrant, she prettily appeals to his chivalry on the ground of her feminine weakness, ignorance, and inexperience. We cannot too strongly recommend this delightful book, which even those who do not trouble to weigh its artistic merit will enjoy for the pleasant and graceful entertainment it contains.

Laslett Lyle has evidently read bad novels, and, with the usual female facility, has succeeded in imitating them. Her own notions of life and of society are so scanty and crude that it is hard to blame her for the sins of her models. Her tone is unconsciously nasty. Colonel Revel is a Colonel indeed—his victims were legion; even in the story they positively swarm. He marries the angelic Gladys; then carries on an intrigue, and finally elopes, with Mrs. Molyneux. Another victim dies upon the London streets. Gladys from the first flirts with the excellent Frisby, and finally, before a divorce is necessary, the Colonel dies. Gladys hangs back, and very absurdly dies before her second nuptials. Nearly all the love-making is between married people. The views of society—the talk at the Carlton (apparently a rowdy pot-house)—the grand doings on the "malachite lawns" of the R.H.S. Gardens—are most ludicrous. The writer drags in a few long chapters of nursery- and school-life evidently from her own experience—quite irrelevant and twaddling, but genuine, and so interesting in their way. Of course the English is superbly slipshod. Poverty is a "putative deficit in the exchequer"—dust is "pulverulent particles," but then it was "a night for the fecundation of romantic fancies." The Syren's boudoir has evidently been upholstered in imitation of the style of Braddon, Ouida, and Co. "It was tastefully, even elegantly furnished, pale blue," of course, "being the prevailing colour. There were silken hangings at the window, of pale blue, edged with gold. There were seductive-looking lounges covered with pale-blue silk. There were marble side-tables, and gilded mirrors and dainty cabinets. There were oil paintings on the walls." We can no more. The style of the description is at least worthy of this "coquettish room crammed with elegant and costly trifles."

The Miso-Turcophile will learn with malicious glee that the Sick Man's daughters have grasped the pen, and that the poor Unspeakable is already quailing before lady novelists of his own faith and blood. How this momentous change has come about, and who Mrs. Leila is, we do not know, but should have been very glad to learn. A few lines on this point we had a right to expect, and they would have been worth all the rest of the book. Without them it is hardly interesting, as one cannot tell the point of view from which it is written; in fact, whether the authoress is an over-civilised Turk or an ignorant Frank, or even anybody

at all. It is, however, well worth reading, if only to refresh one's memory of the revolutions and Court intrigues at Constantinople during that period which is too recent for us to remember much about it. The story is rather tragical, and not entirely unlike an Arabian Night; but either the original or the translation, or both, has failed to present it in a literary form.

X. Y. Z. is an excessively prosy, tedious, and improbable detective story, by a lady who perversely aspires to the doubtful fame of an American Gaborian.

Miss Woolson is also American—very American—but in the best sense. *For the Major* is a book few Europeans, if any, could have written, concentrating, as it does, such nervous power and earnest sentiment upon purely domestic incident. It is not at all amusing, but altogether sad, in spite of the racy little touches which bring very near to us the tiny pomps and vanities of a highly respectable primitive Southern village. There are at least three creations in it of extreme merit; one, the stepmother, is perfectly original—perhaps too much so. We cannot go into the plot without divulging it, which would be a pity, as with much art the reader is at first put upon the wrong track, and so is able to enter into the heroine's revulsion of feeling as she learns the truth. Too sad for most readers, it is a book that will be very highly appreciated by some as a signal contrast to the frivolity and laxity of English fiction. The old Major—dimly conscious of his failing mind; the sickly little son—his pretended pupil, but really his playmate; and the faithful women who jealously hide from the world, and even from himself, the secret of his imbecility, form a truly pathetic and truly beautiful group; very difficult to draw, but very well drawn indeed. E. PURCELL.

#### CURRENT THEOLOGY.

*The Editio Princeps of the Epistle of Barnabas* by Archbishop Ussher, as printed at Oxford A.D. 1642, and preserved in an Imperfect Form in the Bodleian Library. With a Dissertation on the Literary History of that Edition by the late Rev. J. H. Backhouse. (Oxford: Clarendon Press.) Ussher's famous edition of Polycarp and Ignatius was published in the year 1645, but the sheets of the Barnabas which it had been intended to include were unfortunately, burned in a disastrous fire which broke out October 6, 1644. There has, however, existed in the Bodleian Library for more than two hundred years "a copy of Ussher's edition of Polycarp and Ignatius, having on the title-page the date 1643 (not 1644), and containing Ussher's Preface to Barnabas entire, and rather more than the first eight chapters of the text." It is this fragment which is here reproduced. It cannot be claimed that it is now of great critical importance, though Ussher's *Praemonitio* is valuable; but as an *editio princeps* it is entitled to its place in literature.

*Evenings with the Saints*. By W. H. Anderson, S.J. (Kegan Paul, Trench and Co.) This is a rather careless and ambitious compilation. On p. 158 we are told that St. Peter said his Mass in a certain house from the year 45 to the outbreak of Nero's persecution in 69, when not absent on one of his many apostolical circuits; p. 326 we read,

"the holy Apostles SS. Peter and Paul were martyred A.D. 64 or 65." It may be remembered that the eighteenth centenary of that event was officially celebrated in 1867. Again, as the writer describes the desecration of the relics of St. Genevieve in the Great Revolution, it would have been as well to ascertain what became of them afterwards by enquiry at Paris, instead of referring to a German cyclopaedia whose latest authorities are Baronius and Tillemont. And it is positively unfair to French Republicanism to imply that St. Genevieve's has been left desecrated ever since it was turned into a pantheon. The legends of martyrs are sometimes given from the Acts, sometimes overlaid by the free use of Father Anderton's archaeological imagination. It is as well to have the astounding legend of St. Martina as it stands, but it might have been better to enquire how such incredible events came to be assigned to the reign of Alexander Severus of all emperors. If idols had fallen at the prayers of martyrs so publicly and so frequently as martyrologies say, "sacrilege" and "magic" and expiatory ceremonies would have filled a large space in the Augustan history.

*Introductory Hints to Readers of the Old Testament.* By the Rev. J. A. Cross. (Longmans.) This book contains more information within its very moderate compass than several pretentious bi-volumes of Biblical introduction that we could mention. The writer presents, in readable form, a collection of facts and opinions which, though abundantly familiar to the few, are still jealously withheld from the many by "authorities" who appear to suppose that pious frauds are a valuable auxiliary of faith and religion. The merit of the work made us curious to enquire who and what this religious teacher could be who ventured to be so truly religious as to prefer facts to time-honoured fallacies, and the retail of sound instruction to reiteration of tiresome commonplace. To our surprise we found that he was not a prophet of some one of the 165 Dissenting communities of this favoured land, but merely a curate of long standing in the Established Church. The poor man, we fear, is likely to stand longer after this manifesto of his critical and scholarly competence; but we hope the public will be better to him than ten (ecclesiastical) fathers or a score of lay patrons. He deserves it.

*Studies in Church History*, by Henry O. Lea (Philadelphia: Henry O. Lea's Son and Co.), is a reprint of a volume already issued in 1869, which then contained essays on the rise of the temporal power, the benefit of clergy, and excommunication, and is now augmented by one upon the early Church and slavery. Those who are acquainted with Mr. Lea's former works on the *History of Sacerdotal Celibacy* and on *Superstition and Force* will hardly need to be reminded of his wide erudition and dispassionate impartiality, and so will be glad to know of this re-issue, if they do not already possess the original work.

*Principles of English Canon Law.* Part I. General Introduction. By John Brownbill. (Kegan Paul, Trench and Co.) The title is altogether a misnomer, for this book proves, on examination, to be a mere recast of a work much used till lately in French clerical seminaries, the *Manuale Compendium Juris Canonici* of Lequeux. Accordingly, it is not occupied, for the most part, with English canon law at all, but with Roman canon law as received in France. Nor is this a mere cavil. As a fact, the Roman canon law never was in use in this country, though a considerable part of the code which did prevail here was necessarily made up of the same materials of ancient conciliar decrees and of fixed rules of procedure. Accordingly, to import the canon law

of France, which was much more affected by the strictly local Roman rulings than that of England, into a work designed for use as a text-book here, cannot fail to mislead, nor is a cure effected by the occasional patches of Anglican matter which Mr. Brownbill has stitched upon the French groundwork. He has read something of his subject, but in an unscientific and inaccurate fashion, while the polemical object which he avows may have tended further to bias his judgment. One remark may be cited, of little significance in itself, as showing how far he is from mastery of the topic he has undertaken to expound. He appends, as a note on the statement that the city or town where the bishop's cathedral is placed gives the title to the diocese, the following not very pertinent words: "Such titles as Bishop of Rupert's Land, or Manitoba, or North Queensland are therefore indefensible; the visible Church, though in the world, is not of the world." Mr. Brownbill has forgotten all about "Reginary Bishops," who had no see, strictly speaking, though they had dioceses; and he has equally left out of account the territorial nomenclature of several Scottish and Irish dioceses dating from pre-Reformation times, such as Moray, Galloway, Argyll, the Isles, Caithness, Ross, and Orkney, in the former case; Ossory and Meath in the latter. He will need much more study before undertaking the second instalment he promises.

*Die apocryphen Apostelgeschichten und Apostellegenden: ein Beitrag zur althristlichen Literaturgeschichte.* Von Richard Adelbert Lipsius. Vol. I. (Brunswick: Schwetschke.) In the Prolegomena to his *Acta Apostolorum Apocrypha*, in 1851, Tischendorf complained that, compared with the gospels, this class of literature had received but little attention. Tischendorf's own work, consisting of thirteen books, of which six were then edited for the first time, was, however, far from exhausting the existing materials, and, indeed, embraced only a small portion of the extensive literature known to the ancients under the names of Acts (*ᾠδῆς, ἁγία, ἁγία*), Journeys (*περίοδοι, τῆμερα*), miracles (*θαύματα, miracula*), and Martyrdom, (*μαρτύριον, τελείωσις, passio, consummatio*) of various apostles. Since then, further important contributions have been made to our knowledge of the subject, among which may be mentioned the labours of several English scholars on Syriac and Ethiopic texts. But much still remained to be done; there were still materials which had hitherto been untouched or were scarcely known. It has accordingly been reserved for Prof. R. A. Lipsius, who had already furnished a comprehensive article on the subject to Smith's *Dictionary of Christian Biography*, to undertake an exhaustive treatise on the apocryphal acts and legends of the apostles. Of this treatise the first volume is now before us. It consists of an Introduction taking a general survey of the subject, a section on the legends of the separation of the apostles, and one on the literature of the subject. Then follows a long section, extending over nearly two hundred pages, in which the sources, Gnostic and Catholic, Greek, Latin, and Oriental, are exhaustively treated. Lastly, the Acts of the individual apostles are taken up one by one; and first that curious work, the Acts of Thomas, so important for the Gnostic elements which all the zeal of the Catholics to purge these popular romances of heresy did not suffice to detect, is subjected to a careful examination. The Acts of John, of which Tischendorf had edited a small fragment from two Greek MSS., but of which there are much more extensive remains in the pseudo-Abdias—and the pseudo-Prochorus and the Acts of Andrew, are next treated in a similar way, and with these last the volume ends. It is only necessary to say that Prof.

Lipsius appears to have thoroughly mastered every detail of his subject. He has had access to MSS. which had not before been examined; he is minutely acquainted with all that has been written on the subject; his own treatment of it is marked both by sound judgment and literary skill; and, on the whole, there need be no hesitation in saying that his work, which another volume will complete, will be indispensable to every student of this very curious and interesting department of early Christian literature.

*Supplementum Codicis Apocryphi.* I.—Acta Thomae graece partim cum novis codicibus contubit partim primus edidit latine recensuit praefatus ut indices addidit Max Bonnet. (Leipzig: Mendelssohn.) The Greek Acts of Thomas were first printed by Thilo in 1523, and afterwards by Tischendorf in his *Acta Apostolorum Apocrypha* in 1851, but, as the Syriac text has since made apparent, in a very incomplete form. The entire work, however, has lately been discovered by Prof. Max Bonnet in a Parisian MS., and is here for the first time presented to the reader, with a critical apparatus consisting of the various readings of four MSS. A complete recension, which would be a work of much time and labour, Prof. Bonnet has not in the meantime undertaken, though, if we understand him rightly, this service may yet be expected from him. The Greek Acts are followed by the Latin Acts in the two forms in which we possess them, under the titles of "De miraculis B. Thomae" and "Passio S. Thomae Apostoli." These have been edited anew from such MSS. as the writer could command; but here, at least, the hope is distinctly held out of a revised text not only of the Acts of Thomas, but of the whole collection which exists under the name of Abdias.

#### NOTES AND NEWS.

DR. SCHLIEMANN is at present taking the baths at Wildungen, in Waldeck; but he purposes to come to England later in the autumn with his wife, and to pass some time in the Isle of Wight.

MR. J. J. AUBERTIN has been paying a visit of a fortnight to Capt. Burton at Trieste; and something may be expected from this meeting of our two English Camoens scholars. Mr. Aubertin hopes to bring out a second edition of the *Lusiads* early next year; and Capt. Burton has nearly finished his translation of Camoens' lyrics, which will form vol. v. of his great work on Camoens. Meanwhile, about one-half of Capt. Burton's book on the Sword has been finally passed for the press. It may interest some to know that Capt. Burton entirely approves of the stringent quarantine regulations that have been put in force at Trieste.

M. HESSE, of Königsberg, has undertaken to edit the Romance of *Ippitis* for the Early-English Text Society.

MR. ELLIOT STOOK has just ready for publication a volume entitled *New Studies in Christian Theology*.

DR. KARL BREUL, of Hanover, has re-edited the Early-English Romance of *Sir Gowther* from its two MSS.—one in the Advocates' Library, Edinburgh, and the other in the Royal Library (King's MSS.), British Museum. The story is that of a child born to a lady by a demon, Merlin's father. The boy turns out a fiend in human shape, burns nuns and hermits, kills and tortures folk, till he learns his mother's secret. Then he goes to the Pope, who orders him to eat no food except from a dog's mouth, and to speak no word till he is assured of God's forgiveness. These behests Sir Gowther obeys; but having helped the Emperor of Almagr thrice against his foes, and

rescued him from the enemy, the Emperor's lovely dumb daughter is given speech, declares Sir Gowther pardoned, and marries him, the Pope declaring that he is now God's child. Then he rules well, marries his mother to his father-in-law, and founds an abbey of black monks to atone for the nuns he once burnt. Dr. Breul, in his text, leaves out all the final *e's* which editors usually put for contraction-marks, and prints "all" for "alle," "mon" for "mone," to mean. This is a mistake. In l. 101 he has "tempe" for "tempte."

MESSRS. CHATTO AND WINDUS have in the press an illustrated book on the Hebrides by Miss C. F. Gordon Cumming; Mr. Robert Buchanan's new novel, *Annan Water*; and a volume of poems by the veteran Dr. Charles Mackay, entitled *Interludes and Undertones*.

WE hear of an illustrated edition of what is undoubtedly Mr. Browning's most popular poem, "The Pied Piper of Hamelin."

MESSRS. BLACKWOOD announce a new novel, in three volumes, by the author of *Miss Molly*, to be called *Alison*.

A NEW novel by Mrs. G. Linnæus Banks will be ready at an early date.

MR. CHARLES MARVIN has left England on a journey to the Caucasus and the Caspian region.

MESSRS. HURST AND BLACKETT will shortly issue vols. iii. and iv. of Mr. J. Fitzgerald Molloy's *Court Life Below Stairs*; or, London under the Last Georges, 1760-1830, thus completing the work.

THE same firm will also publish next month a three-volume novel by Miss Betham-Edwards, entitled *Pearla*, and a work by Mrs. Forrester, under the title *June*, also in three volumes.

THE sixth annual meeting of the Library Association of the United Kingdom will be held this year at Liverpool on Tuesday, September 11, and the three following days. It is proposed to pay special attention to the subject of classification. Papers are promised on several questions relating to library administration and bibliography; and reports will be presented on cataloguing and on size notation. The local committee propose to hold an exhibition of objects and appliances illustrating the working arrangements, &c., of libraries in all departments.

THE total amount realised by the eight days' sale of the library of the late Sir Richard Colt Hoare, commonly known as the Stourhead heirlooms, was £10,028 6s. 6d. Among the best prices were the following:—Sir R. C. Hoare's series of original drawings of Welsh views to illustrate Giraldus's *Itinerary* (1814), £75; *Horæ beatissimæ Virginis Mariæ ad legitimum Eboracensis Ecclesiæ Ritum* (1517), £200; Blomefield's *History of Norfolk*, £90; Buckler's *Ecclesiastical Antiquities of Wiltshire and Salisbury*, £465; Carter's *Ecclesiastical Antiquities of South Wales*, £161; Oox's *Historical Tour of Monmouthshire*, £200; Sir R. C. Hoare's *Modern History of Wiltshire*, £200; *Hungerfordiana*, or *Memoirs of the Family of Hungerford*, £105; *Sarum Missale* (1519), £100; Nichol's *History of Leicestershire*, £230; Shaw's *History of Staffordshire*, £62; Ross's *Ecclesiastical Antiquities of Gloucester Cathedral and Tewkesbury Abbey*, £43; Plot's *Natural History of Staffordshire*, £48; Strutt's Works, £77; and some MSS. by R. Wace, including the "Histoire de Joseph d'Arimatee," £138.

M. BIKÉLAS, who has already translated into Modern Greek five of Shakspeare's tragedies—viz., "Macbeth," "Romeo and Juliet," "King Lear," "Hamlet," and "Othello"—some of which have been represented in his version at Athens and received with great favour, is now

engaged on a translation of "The Merchant of Venice."

MR. ANDREW JAMES SYMINGTON, editor of *Men of Light and Leading*, will contribute to the next issue of the *Welcome* an account of the career and poetry of Mr. Alexander Anderson, the Scottish poet, now of the University Library, Edinburgh, and previously a surface-man.

MR. WILLIAM ANDREWS, of Hull, will shortly have ready for the press a Handbook to Prehistoric Archaeology.

THE success of the Rev. R. V. Taylor's volume of *Yorkshire Anecdotes*, published by Mr. R. Jackson, of Leeds, has induced the compiler to prepare for early publication a second series.

THE Rev. Charles Beard's Hibbert Lectures on the Reformation of the Sixteenth Century are being translated into German, and will shortly be published by Reimer, of Berlin.

THE Washington Bureau of Education publishes from official sources the salaries paid to professors in nine Prussian universities. Berlin, where stipends range from 12,000 to 9,000 marks, pays at the highest, and Marburg, with salaries of 6,000 to 5,400 marks, at the lowest, rate. The professors enjoy lecture fees in addition to their official pay, and in some instances these emoluments are a valuable source of revenue; but the reverse is the more common case. In South Germany a professor's pay is smaller than in Prussia.

MR. RICHARD KEENE, of Derby, will shortly issue a volume entitled *All about Derbyshire*, by Mr. Edward Bradbury.

RUSSIAN editors seem unable to find the descriptive reporter. Newspaper readers in Russia had to content themselves with translations of the coronation festivities borrowed from the *Times*, *Figaro*, and other European papers.

THE British Museum has in preparation, and will shortly publish, a Catalogue of some of its ancient and rare German books. It will contain a few facsimiles.

WE are informed by the Countess von Bothmer that she has received the sum of ten pounds sterling from Messrs. Longmans as her share of Messrs. Harper's *honorarium* for the early sheets of *Aut Caesar aut Nihil*.

#### FRENCH JOTTINGS.

M. TOURNEUX has returned from Russia with a hitherto unknown MS. of Diderot of miscellaneous jottings on philosophy, politics, and art. M. Tourneux purposes to publish selections in some Review.

THE last addition to the series of "Célébrités contemporaines" published by Quantin is a Life of Jules Sandeau, by M. Jules Claretie.

THE municipal libraries of Paris are apparently a success. During the last three months their readers used 127,963 books, as compared with 89,946 volumes during the first quarter of this year.

THE Bibliothèque de l'Institut has been enriched by the letters of Fauriel from the papers of M. Mohl. It is said that this correspondence throws light on the literary and scientific history of the early years of the nineteenth century.

M. BOISSIÈRE, Rector of the Académie d'Algier, has published a revised and enlarged edition of his *Algérie romain*.

M. COQUELIN's *Recollections of Gambetta* may be expected before long. The actor has not followed the example of Talma, who refused to gratify the curiosity of his contemporaries respecting his intimacy with Napoleon I.

A COLLECTED edition of essays on Victor Hugo, by M. Paul de Saint-Victor, is about to be issued.

M. BLAZE DE BURY is said to have finished a biographical monograph on the elder Dumas, which contains unpublished letters and personal anecdotes.

SEVERAL works of an historical and antiquarian character are announced as in preparation. Among them we note a *Histoire de Turenne*, by M. Roy, who has made use of the archives in the Ministry of War; a History of commerce and industry in the reign of Henri IV., by M. Flach; an essay on the freeing of serfs in the Middle Ages, by M. Jusserand; and *The Origin of the Intendants*, by M. Hanotaux.

*Le Livre* states that the unveiling of the statue of Dumas on the Boulevard Malesherbes was postponed till September 15 because a tramway company refused to stop their cars.

THE Société des Archives historiques de la Gironde has issued vol. xx. of its publications, being the Index to the previous nineteen volumes.

THE dark-green illexes with cold, metallic greys  
Alit, where sunlight flashes on their glossy  
leaves,  
And dusky with warm hues of bronze, where no  
beam plays . . .  
I love the strangeness of these Winter-trees!  
. . . But when  
Among their twisted roots with tiny purpling  
sheaves  
Of violets Spring her earliest garland inter-  
weaves,  
When th' air is fresh with subtle odours from  
each glen,  
Their shadows are too sad upon that feast of rays,  
And ghosts of snowflakes are their cold, metallic  
greys.

###### II.

##### *In the Country about Florence.*

WE wandered far into the fields, my love and I;  
She plucked great bunches of dusk-red anemones,  
And I—a harvest fair I gleaned of poesy.  
The blossoms in the city's air soon withered  
grew,  
Pining for sunlight and the cedar-scented breeze;  
And when I strove to note the joyous harmonies  
Which April set a-singing in my soul—they too  
Did fade. 'Tis sad to think we caused sweet  
things to die,  
Through wandering far into the fields, my love  
and I!

###### III.

##### *A Picture by Lejacono.*

Beneath the ardours of deep-blue, Sicilian skies  
The cornfields stretch all golden-tinted to the sea.  
A little breeze from distant hills, which diadem-  
wise  
The vaporous horizon wreathes with sapphire  
walls,  
Comes singing to the plain in roystering liberty,  
Bearing sweet freshness, stol'n from ev'ry moun-  
tain tree,  
And music faint of rainbow-arched water-  
falls. . .  
A storm of waves, steel-bright, the cornfields bend  
and rise  
Beneath the drowsy ardours of Sicilian skies.

FRANCIS EARLE.

#### OBITUARY.

##### JULIUS TYPALDOS.

ONE of the brightest chapters in the history of modern Greece is the literary history of the Ionian Islands under the British protectorate. During the period 1815-63, modern Greek literature was enriched by Mustoxides, Spiridion

and John Zambelli, Lunzi, Braila-Armeni, Chiotti, Romas, Livadas, Stamatelos, Lambros, Gryparis, Solomos, Valaorites, and Julius Typaldos. Typaldos is the last of the illustrious group (Solomos, John Zambelli, and Valaorites) who gave to Greece a new and original school of poetry. He was born in the early part of the present century at Lixuri, in Cephalonia, and was educated in Italy, as was then customary with the Ionians. At Padua he took his degree of doctor of laws; and on his return to his native island he was admitted to the Bar, and practised with much success. In 1850 he was made a judge, and for some time held the position of President of the Correccional Tribunal in the Island of Zante, and was afterwards nominated member of the Supreme Council of Justice, which office he held up to the end of the protectorate. After the cession of the Ionian Islands to Greece, Typaldos retired from public life and removed to Florence, where he rendered eminent services to his country by his contributions to the public press of Italy, in which he continually advocated the cause of Greece. Full of years and in failing health, he returned a few months ago to Corfu, where he expired on July 29. His funeral was a public one, and took place on the following day.

The poetical works of Typaldos are not very numerous, but had he written nothing else than the *Ψαλμός*, that alone would have sufficed to stamp him as a great poet. His other works consist of the "Death of Hamko" (Ali Pasha's mother), "Rhigas," "The Bard," "Gregory the Patriarch," and a literal metrical translation of Tasso's "Jerusalem Delivered." A collected edition of his poems appeared in 1856, and was dedicated to the "Poet of modern Greece, Dionysius Solomos, in token of respect and affection, from his friend Julius Typaldos."

J. DIONYSIUS LOVERDO.

#### MAGAZINES AND REVIEWS.

To the *Antiquary* for August Mr. J. S. Udall has contributed an instructive paper on old oak. He points out that much of the pretended sixteenth- and seventeenth-century furniture we see in sale-rooms and the houses of our acquaintance is not old at all—that is, the carving is a forgery, though the wood itself may be ancient. To the trained eye imposture of this sort is impossible, but most furniture-buyers are not antiquaries. The styles of our old oak carving were not uniform throughout the country. A student of this form of art, if he saw a genuine old chest or cabinet, would probably be able roughly to tell in what part of England it had been made. Mr. O. F. Keary continues his paper on the coinage of the British Isles. Its excessive condensation is to be regretted. The second part of "Simon de Montfort and the English Parliament," by the Rev. Wentworth Webster, is even more interesting than the first. We trust that they may be enlarged and published in a permanent form. The Rev. H. F. Tozer gives a good account of a rock-hewn monastery in Apulia.

The most pleasing literary article in the *Revista Contemporanea* of July is "The Garden of the Poets," by Vicente de Arana; for illustrations, English and foreign authors are largely laid under contribution, while Spanish poets, notably the late J. Selgas, the poet of flowers, are somewhat neglected. "A New Academical Reception," by Otazo y Sivila, reports that of Menendez Pelayo to the Academy of History. Señor Linau y Eguizabal aims at clearing up some confusion in the naval history of Aragon and Catalonia in a letter on "Blasco de Alágon y Roger de Lauria." "Dos horas de Tertulia," by Dionisio Chaullé, gives pleasant reminiscences of a literary circle in Madrid at the beginning of the present century. The scientific lectures reported are by G. Vicuña, on the "Mathe-

maticians of the Seventeenth Century," and by Carlos Castel on the "Scientific Facts of Meteorology." The continuation of "Egyptian and Greek Civilisation in America," by Martin Minguez, is very wild. The writer would adapt geography to his maps and theories, instead of bringing his theory down to facts.

#### CORRESPONDENCE.

RECENT CRITICISM OF "GULLIVER'S TRAVELS."  
 128, Oxford Road, N.

Having regard to the obscurity of many enigmas presented by *Gulliver's Travels*, and also to the very high rank of the work in English prose literature, it is remarkable that the criticisms of this great classic should have been, and, on the whole, should continue to be, but brief and scanty. Instead of extended dissertations, we have usually but a few paragraphs or pages. This fact would not be difficult to understand if *Gulliver* were, as the writer in the July *Quarterly* asserts, "a

savage *jeu d'esprit*," a "mere ebullition of cynicism and misanthropy." But this same writer admits on another page that the work was probably begun a dozen years or thereabouts before the time of publication—a rather long period of incubation if the result was nothing but a *jeu d'esprit*, a "mere ebullition." And, in fact—though the writer in the *Quarterly* informs us that "wise men will regard" the book as he does—there can be no reasonable doubt that *Gulliver* was wrought out slowly and deliberately, and that it was intended to express Swift's matured convictions concerning the condition and the character of mankind. Whether we approve or disapprove, such (according to Swift's own statement) was the aim and purpose of the book. In his letters to Pope under date September 29 and November 26, 1725, Swift describes the work as a building ("the whole building of my Travels") erected on a foundation of misanthropy—misanthropy, moreover, which had never varied since his twenty-first year. This "misanthropy"—which, if Swift had lived a few generations later, he would probably have called "pessimism"—regarded mankind as capable indeed of reason, but as in fact, and with rare exceptions, irrational, and consequently, in their character and conduct, worthy to be detested. This, according to Swift's own account, is the true key to his great allegory.

*Gulliver* has been sometimes biased; and the voyages to Lilliput and Brobdingnag have been published alone. No reasonable objection can be urged against this course when the object in view is merely the amusement of children. But assent can certainly not be given to Mr. Leslie Stephen's opinion (*Swift*, "English Men of Letters") that the voyages to Laputa and to the Houyhnhnms are to be regarded as "wrung from him in later years, after a life tormented by constant disappointment and disease," while the voyages to Lilliput and Brobdingnag give occasion for "a harmless play of fancy." Accepting Swift's own statements, we must look upon the work as one "building," erected on a definite foundation, and in accordance with well-considered principles. If the intention of the book was to express "misanthropy," or pessimism, it was to be expected that there would be a growing intensity in the expression as the work advanced towards its conclusion. And, however offensive to some of us the glare may at last become, Swift has fully observed the Horatian maxim—

"Non fumum ex fulgore, sed ex fumo dare lucem."

Mr. Craik, in his *Life of Jonathan Swift*, has justly remarked on the absence of any great acrimony in the account of the Lilliputians, or at least in the earlier part of this division of the book, and also that in the voyage to Brobdingnag the satire becomes "far more bitter and intense." But if we ask what is the special import of the voyages to Brobdingnag, a question of no small difficulty thus presents itself. There is a pretty general agreement that Lilliput and Blefuscu, with their peoples and government, have a relation, more or less close, to England and France. But what are we to make of the giants of Brobdingnag? Mr. Craik observes: "In the natives of Brobdingnag the leading feature is that massive simplicity after which Swift's soul longed. Political science they deem a waste of time. They have ceased to multiply books. Of philosophy they are fortunate in having no conception. To pursue legal niceties is, with them, a capital crime." The Brobdingnagians would certainly not seem to have any such definite relation to historical fact as the Lilliputians. We may take it as probable that, in entering Brobdingnag, we enter an ideal region—the region of practical common-sense.

The first scenes are laid in the corn-field and farmhouse, and an air of homeliness pervades the narrative. The true patriot is the man who makes "two ears of corn, or two blades of grass, to grow upon a spot of ground where only one grew before." In the final chapter of the book Gulliver declares that the Brobdingnagians are a people "whose wise maxims in morality and government it would be our happiness to observe"—a statement which entirely agrees with the view just suggested. The fundamental pessimism is clearly seen when beauty is magnified into deformity and disease into loathsomeness, and the increased bitterness of the satire is especially manifested when the king declares that Gulliver's compeers must be "the most pernicious race of little odious vermin that Nature ever suffered to crawl upon the surface of the earth."

We next come to the third part, with its account of the Flying Island and the grand academy of Lagado. This is a portion of the book which we are told we must regard as wrung from Swift by disappointment and disease in advancing age. But in opposition to any such notion it is sufficiently evident that the grand academy of Lagado is a development, with suitable modifications, of the students and professors in "Bedlam and the parts adjacent" described in the "Digression concerning Madneſs" in Swift's much earlier work—the *Tale of a Tub*. This is especially clear with regard to "the most ancient student of the academy" when compared with the Bedlamite student who would have been likely to prove "the greatest ornament to that illustrious body" "the society of Warwick Lane"—that is, the College of Physicians. The details in both cases are far too nauseous to be given here. The description of the "ancient student" would be regarded, I suppose, as more offensive than anything else in this part of the book, and about equally offensive is the description just alluded to in the *Tale of a Tub*. But then there is the "exposure of human infirmities" in the account of the Struldbrugs. The *Quarterly Reviewer*, like Hamlet, "holds it not honesty to have it thus set down." "Juvenal has, it is true, left us a similar delineation; but Juvenal's object was, by teaching men to distinguish between what is desirable and what is not desirable, to guide them to a cheerful and elevated philosophy." So says the *Quarterly Reviewer*. One is tempted to ask whether he has read the conclusion of the Tenth Satire, and considered the words "candiduli divina tomacula porci." If he had done so he might well have learned to question whether Juvenal's recommendations are much more serious than Gulliver's assertion in the final chapter that he had resolved to "strictly adhere to the truth," having in view "the noblest end, to inform and instruct mankind." In the Struldbrugs is satirised the common, though delusive, hope of deriving happiness and peace from the dregs of life; and generally this third part of the book is directed against *meliorism*. No improvement is to be expected from science and art. The ghosts of Glubdubdrib are called up to prove:

"Aetas parentum pejor avis tulit  
Nos nequiores, mox daturos  
Progeniem vitiosiore."

I have yet, however, to deal with that much decried and detested voyage to the Houyhnhnms. The *Quarterly Reviewer* accepts the opinion that the Houyhnhnms are to be regarded as brutes—that is, as veritable horses; and Mr. Craik speaks of the Houyhnhnm as "the negation of all human attributes." Now that this view is inaccurate seems sufficiently clear for various reasons: as, for example, the duration of life among them. "They live," says Gulliver, "generally to seventy or seventy-

five years, very seldom to fourscore," which is certainly the age of men, not of horses. The fact is, as I have previously shown elsewhere, that the horse-form of the Houyhnhnms was in all probability derived from the men transformed into the shape of horses, though without the loss of reasoning power, described in the *Arabian Nights*, and especially in the story of King Beder and the sorceress Labe, Queen of the City of Enchantments. The probability of this view is increased by the fact that, when *Gulliver* was written, the *Arabian Nights* was a new book in Europe, the publication of Galand's version having been completed in 1717. The quasi-human characteristics of the Houyhnhnms, including their reasoning powers, are thus accounted for without much difficulty. And it is noteworthy that the characteristics of the Houyhnhnms in more than one particular reflect those of Swift himself. Thus, with regard to Swift's manner of conversation, "his general rule was, never to speak more than a minute at a time, and then to wait at least as long for others to take up the conversation" (*Life* by Sheridan, Appendix, p. 379). Of the Houyhnhnms Gulliver tells us, "they have a notion that, when people are met together, a short silence doth much improve conversation. This I found to be true, for during those little intermissions of talk new ideas would arise in their minds." The parallel may have been unconsciously drawn, but it is nevertheless remarkable, and tells strongly against the notion that Swift conceived of the Houyhnhnms as "brutes" or mere horses. The suggestion was long ago made by Thomas Sheridan that Swift divides human nature into two parts; and to this view assent must be given, even if we make the division not quite as it was made by Sheridan. The Houyhnhnms possess reason, perfect reason, but are destitute of most, if not all, of the passions of men. The Yahoos have human passions and instincts and the general human form, but with reason either absent, or in no degree superior to that of other animals; it being implied, moreover, that such was the original condition of men, from which, even now, the most civilised are but little removed. The portrait of the Yahoos was probably suggested by passages in Horace and Lucretius and in Hobbes's *Leviathan*.

Mr. Leslie Stephen seems to think that, in the behaviour and in the polity of the Houyhnhnms (which is a socialistic, though aristocratic, republic), Swift may have intended to describe a Utopia, something after the fashion, I suppose, of Plato or of More. And Swift may, indeed, very well have delineated what he considered would be the conduct and polity perfectly accordant with reason, but certainly with no practical aim. On this point Mr. Craik need entertain no doubt. To have had in view the improvement of mankind would have been contrary to Swift's express statement. And that he had no such aim is clearly shown by various satirical touches; as, for example, what is said of conjugal and parental love, and of the Houyhnhnm widow's excuse for her want of punctuality. No; as the life according to original and essential human nature, the life of the Yahoos, is exhibited as revolting, so the life according to perfect reason—that of the Houyhnhnms—is set forth as impracticable and even absurd. There is hope for mankind neither on the one side nor the other. And thus the "Voyage to the Country of the Houyhnhnms" becomes the fullest expression of the fundamental pessimism. We may dislike the foundation; but on it "the whole building" firmly rests. THOMAS TYLER.

#### THE COLOURS OF THE WINDS.

Carrig Brae, Howth, Ireland: Aug. 13, 1883.

In the folk-lore of the Mayas of Yucatan the four mysterious beings called *Pah ah tun* are

said to be identical with the winds, and the four cardinal points from which they blow. To each is sacred a particular colour. The red *Pahatun* is placed at the East, the white at the North, the black at the West, the yellow at the South. Other Central American nations appear to have assigned colours to the different points of the horizon. (See an interesting paper by Dr. Brinton in the *Folk-lore Journal*, vol. i., p. 246.) Some similar belief has probably given rise to the Irish notion that each of the twelve winds has a colour. According to the *Saltair na Rann*—a collection of poems recently printed by the Clarendon Press from a M.S. of the twelfth century—vers. 53-80, the East wind was purple (*corcorda*), the South white (*gel*), the North black (*dub*), the West dun (*odur*). The two sub-winds between South and East were respectively red (*derg*) and yellow (*biude*). The two between South and West were green (*uane*) and blue (*glass*). The two between North and West were gray (*liath*) and dark brown (*clár*). The two between North and East were dark gray (*temen*) and speckled (*alad*). The same notion is expressed in prose in the so-called *Senchas Mór, Ancient Laws of Ireland*, vol. i., pp. 27, 28. WHITLEY STOKES.

#### A NATIONAL EPIC.

Marlborough: Aug. 14, 1883.

There is not much belief nowadays in men being made moral by Act of Parliament, but Queen Elizabeth's councillors seem to have thought that patriotism could be promoted by an Order in Council.

I have before me a little quarto of Latin verse entitled *Anglorum praelia*, written by Christopher Ocklande just three hundred years ago, and prefixed to it is an injunction from "hir Maieties High Commissioners in causes Ecclesiastical to all the Bishops throughout hir Highnesse dominions of Englande and Wales . . . for the publike reading and teaching of this booke in all Grammar and Free Scholes within their Diocesses."

The national epic—if I may so term it—is, of course, dedicated in fulsome terms to the Queen:

"Quae vitae meritis, morum et candore coruscans,  
Zenobiam vincis, si qua vel antè fuit:  
Junonem sceptris, Venerem vultu, arte Minervam  
Quae exprimis, et plusquam foemina, mente  
sapis."

and sets forth the annals of our country in doggerel as far removed from beauty as it is from truth.

One would like to know whether the school-children in 1583 really had the additional misery of acquiring their Latin and their history through such a medium as this, and whether Virgil and Horace were laid aside in order that boys might be made pugnacious by repeating Ocklande's halting hexameters.

As a specimen of his style, take the following catalogue of Scottish chiefs at the Siege of Berwick:—

"Fryselli fratres incedunt ordine primo,  
Gualterusque Stuard, tum Cardoil atque Grehamus,  
Parkeys et Gurdon, Brydus, Gramatus, et acer  
Gilbertus Douglas, comes et Morreyus Abbyn."

The engagement that followed was indeed decisive, for on the side of the English the loss was

"Bis sex ex toto numero, si junxeris unum,"

while, on the other side,

"Ex tota autem acie hostili perisse Scotorum  
Quinque et triginta praeacuto millia ferro."

After this we are not surprised to learn that at Agincourt there fell 10,000 French and 300 English! How could contempt for a foreign foe be better taught?

CHARLES J. ROBINSON.

CAT-LORE.

Fern Bank, Higher Broughton, Manchester:  
Aug. 14, 1883.

I believe that the earliest English form of the story of the death of the King of the Cats is in a very curious work entitled *Beware the Cat*, first printed in 1551. The edition of 1570 was reprinted by Mr. J. O. Halliwell in 1864, and there is a copy in the British Museum—12316 O 29. According to this, a man riding through Kankwood, in Shropshire, heard his name called by a cat. He made no reply, when pussy "spake to him plainly twice or thrice these words following:—'Commend me to Titten Tatten and to pus thy cattan, and tell her that Grimalkin is dead.'" When he got home and told his wife, "his cat, which had hearkened unto the tale, looked upon him sadly, and at last said, 'And is Grimalkin dead? then farewell, dame!' and therewith went her way, and was never seen after." The Lancashire version of the story is referred to in Mr. Harland's book on *Lancashire Folk-Lore*.

WILLIAM E. A. AXON.

SCIENCE.

*Indian Snake-Poisons, their Nature and Effects.* By A. J. Wall, M.D. (W. H. Allen.)

THIS latest contribution to the ever-growing "thanatophidian" literature will afford some evidence as to the utility of the experimentation on snake-poisons which has absorbed the energies of so many Indian medical officers. As such investigations are usually made "under the auspices of Government," and, therefore, rarely without expense to the Indian taxpayer, it is desirable to know whether they are of any use except so far as one experimentalist may upset the results of another, and expose the worthlessness of the antidote which already claims public gratitude. These experiments are so easily made, and have such an appearance of public utility, that they appear to have been abused; and the calm and improving study of natural history has too often been neglected in favour of investigations which the ready supply of pariah dogs enables the resident in India with time on his hands to perform. Cobras are plentiful everywhere, and so little are the people afraid of them that any number can be procured in perfect condition for a few pence each. The other venomous snakes are rarer, especially inland, or they are of purely local occurrence. After the cobra (*Naga tripudians*), the only common venomous snakes are the *Daboia* viper and *Bungarus arcuatus*; the latter is replaced in the Malayan fauna by *B. fasciatus*. Much rarer than these is the little *Echis* viper, and still rarer the Malayan *Ophiophagus*, or hamadryad. The *Hydrophidae*, or sea snakes, appear to be all venomous. There are a few other venomous land species of local occurrence, and not dangerous to man; but practically there are only three dangerous snakes in India—the cobra, the *Daboia* viper, and the *Bungarus*.

Dr. Wall's experiments seem to show that, though there are distinctions in the mode of death produced by the poisons of the various venomous snakes, there is not much practical difference; the occurrence or absence of convulsions along with the usual paralysis, and the difference between the acute or convulsive class of symptoms and the slower symptoms

produced by small doses of poison, are the principal points of interest. Birds are more affected than mammals, and frogs less; and there are some differences in the respective actions of the various snake-poisons on these classes. Dr. Wall has a theory to account for the more powerful effect on frogs of the cobra poison as compared with the *Daboia* poison. He considers that the poison has a special purpose in enabling the cobra to paralyse the frog—its favourite prey—as soon as caught. "Now, few animals have such a wonderful tenacity of life as the frog, and it is easy to see that the victim can be even a source of danger to his devourer." On the contrary, it is far from easy to see how a swallowed frog can be a source of danger to a cobra more than to any other of the many snakes which feed habitually on frogs. As to the tenacity of life, it avails the frog little when once it has passed croaking down the snake's throat. And, so far from an habitual diet of frogs having adapted the cobra's poison to the constitution of these animals, the fact is that the cobra's principal prey are not frogs, but rats. No special provision is required for the capture of rats more than of frogs, for other snakes live habitually on rats without the aid of any poison.

Dr. Wall is more at home in the experimental field than in that of natural history; his investigations have been made with scientific method, he has employed the exact processes of sphygmographic delineation and of electric measurement when necessary, and his judgment is not distorted by any fancied discovery of an antidote. He shows that the reputed powers of permanganate of potash announced by M. de Lacerda in Brazil have no foundation; but, in positive results, the only effective treatment offered for the bite from a venomous snake, however indicative of scientific progress, is not likely to be appreciated by patients at least. Hitherto, the treatment of snake-bite has been simple; it has been usual to tie a string so as to prevent the poison entering the general circulation, to scarify or enlarge the wound made by the snake's fangs so as to cause free bleeding, and to administer stimulants. The treatment was usually successful, possibly because the snake was not really venomous, few Englishmen in India having any knowledge enabling them to recognise the various kinds; but there is no doubt that many bites by really venomous kinds produce little or no effect, owing to the dose of poison injected being less than that necessary to produce serious results; hence the reputation of many antidotes. Dr. Wall's experiments introduce a mode of diagnosis and of treatment decidedly more severe. The part bitten must first be isolated, if possible, from the general circulation by means of an indiarubber cord wound round it several times; then the surgeon has time for his diagnosis. For this purpose he makes "a free incision at the site of the bite, and reflects back the skin on each side so as to get a complete view of the underlying tissue." He is then able to judge (supposing he has had experience), by the quantity and quality of the subjacent inflammation, whether the bite was given by a harmless snake or by a venomous one. If by the latter, or in case

of doubt, he now proceeds to the still more disagreeable operation of excision of the underlying tissue—one for which, I imagine, there will not be much demand in India. The Indians will prefer their own system of treatment, while Europeans do not require any—not, at least, to an appreciable extent. When it is considered that, in the whole Indian British Army of sixty thousand men, there were, in twelve years, only four deaths by snake-bite, or recorded cases of bite by a venomous snake, while in the same period there were thirty-eight from dog-bite, it is evident that the question of snake-bite has been pushed into undue importance. It may be said that these researches are made for the benefit of the Indians, to save the twenty thousand lives which are lost annually from snake-bite. The number looks large, but it is based on a population of two hundred millions at least, and it is probably swollen by many deaths from other causes, easily put down to it in a country where there are frequently domestic or caste reasons for making away with people, and where at least nine-tenths of the population are out of the reach of what we should consider medical attendance. Dr. Wall's statement that "in all cases of supposed snake-bite the body is brought for examination to an English official" seems hardly exact, and this cannot be a general custom. Moreover, the fact that in Bengal, the province where the mortality from snake-bite is the largest, more women were killed than men tends to show that many of the deaths ascribed to snake-bite may not be entirely accidental. It is singular that the mortality from this cause should be very largely in proportion to the Hinduism of the people, to the ascendancy of caste in the various parts of India, and that it seems to be least where venomous snakes swarm most, and where people live under conditions of life most favourable to meeting with snakes.

The practical result of all the experiments on snake-bite made under the auspices of a benevolent Government is small indeed; all treatment seems practically useless to diminish the mortality, and the investigators have to fall back on the scheme for exterminating venomous snakes. Dr. Wall follows Sir Joseph Fayrer in the cry for a crusade against snakes—a cry to which there is too much reason to believe that a well-intentioned, but badly advised, Government will yield, imposing generally on the provinces the system which has been tried more or less in all, and has been found to fail in all. Statistics are dead against any hope of success, but they are capable of presentment in a way which will make the public believe that black is white, and that lives have been saved by increased vigour in the destruction of snakes. Unfortunately, the snakes are killed in one province and the decreased mortality occur in another; and, by a judicious combination of these facts, it is made to appear that the extermination system saved a certain amount of life in India. Dr. Wall does not go into these statistical details. Well aware of the arguments against the scheme of extermination, he can only reply that universal experience shows us that when man has earnestly striven to extirpate a noxious animal he has always succeeded; and he instances the fact that

wolves have now become exceedingly rare in Southern and Eastern Europe, regardless of the fact that they are by no means rare in the West of Europe, even in the heart of France, where there is a special *louveterie* establishment for their suppression. The fact is that India swarms with snakes, some of them venomous; that the intellectual stage of the people induces them to tolerate animals which, on the whole, do them comparatively little harm; and that, when the people shall have sufficiently emerged from polytheism, they will, if necessary, destroy their venomous snakes. Considering that anyone can kill the most dangerous snake with a blow from a stick, it seems preposterous to offer rewards for their destruction. It is unfortunate that there is no efficient public opinion in India to counteract the efforts of the extermination party. And when it is a question of forming a new Department, with its chief, its superintendents, its inspectors, through the usual hierarchy down to the actual snake-catchers—a Department which will afford a livelihood at the public expense to hundreds, perhaps thousands, of expectant placemen—one which is not limited by Budget considerations, whose motto might be "Energy and Rupees" (the two conditions, we are told by its principal promoter, for success)—I can only hope that there will always be a Finance Minister ready to veto such a proposition.

EDWARD NICHOLSON.

### CORRESPONDENCE.

#### THE SHAPIRA MSS. OF DEUTERONOMY.

Oxford: Aug. 18, 1883.

From the very outset, when I did not as yet know a word of the contents of Mr. Shapira's Moabite Deuteronomy (as I must call it, since it was discovered in the land of Moab, and is reported to be written in characters similar to those on the Moabite stone), I held it to be a forgery. Mr. Shapira seems to have undergone for the second time the fate that befell him (according to his own statement) in the case of the Moabite pottery which now adorns the Foreign Office at Berlin (the Municipal Museum having refused to accept it). Judging from two inscriptions published by Dr. Schlottmann, of Halle, I then declared in the *ACADEMY* all this pottery to be a modern fabrication. That I was right is now acknowledged on all sides. I am not now going to imitate Prof. Kautzsch, who wrote a big book in order to prove the mistakes of grammar and idiom in the inscriptions on the pottery; for this a few instances would have been sufficient, as they will also be in the present case.

We have now the original text of the Decalogue as contained in the Shapira sheepskins, published by Dr. Ginsburg, with a few remarks, in the last number of the *Athenaeum*. Here we find the first two Commandments of the received text fused into one in the Moabite text. There can be no doubt as to this, since each Commandment in the new version concludes with the words "I am God, thy God" (I shall have to say a word or two about this apostrophe later on). This is not, however, a new idea; it was already mooted by mediaeval Jewish writers. Next we are struck by the ἀπαλ λυγόμενον, הוֹדִירְךָ, "I liberated thee." The usual verbs employed for liberating from Egypt and from the house of bondage in the historical as well as in the prophetic books of the Bible are either *yatsa* in the Hiphil form (as the received text has it here) or *padah*. The roots *harar* or *hur* are not used as verbs in the Old Testa-

ment, but only in the Targum and in the Talmud, and then not in the Hiphil form or with the particle *min*. It is difficult to understand how both texts of the Decalogue, in Exodus as well as in Deuteronomy, should have no trace of such a word, but employ uniformly instead of it the root *yatsa*. In all the other Commandments of the Moabite text, moreover, Israel is addressed in the second person singular; why, then, do we find in the First Commandment "Ye shall not have," "ye shall not bow down"? I shall not say much about the omission of the words "before me" and the passage beginning "for I the Lord thy God am a jealous God," and ending with ver. 10. This last passage we shall find in another Commandment of the new text. If, however, we have already found a strange idiomatic expression, we have as yet come across no grammatical mistake. For this we must wait until we reach the Second Commandment, which refers to the keeping of the Sabbath. It runs thus: "Sanctify . . . for in six days I have made the heaven and the earth, and all that is therein, and rested the seventh day, therefore rest thou, also thee, and the cattle, and all that thou hast." וְשָׁכַרְתָּ, "and I rested," is ungrammatical; it ought to be וְשָׁכַרְתָּ. Evidently the Moabite writer did not make use of Dr. Driver's excellent work on the Hebrew tenses. The root *shaboth* does not mean "to rest" but "to cease from work," and in this sense only it is found in the Old Testament. The forger made a blunder in not leaving the root *noah* as in the received text. The word *gam* ought to be repeated according to classical Hebrew: cf. Exod. xvii. 31, 32, and elsewhere. The expressions "and all thou hast" and "anything that is his" are not classical Hebrew. The Fourth Commandment runs thus: "Thou shalt not murder the person of thy brother." But this is not Hebrew, as can be seen from the passage *urezaho nefesh* (Deut. xxii. 26). Here a clumsy use has been made of the Chaldee paraphrase. The Fifth Commandment says: "Thou shalt not commit adultery with the wife of thy neighbour": cf. Lev. xx. 10. The Sixth Commandment reads: "Thou shalt not steal the wealth [not property] of thy brother." *Hon* is not to be found in the Pentateuch, the word *hail* being employed there instead of it in the sense of "wealth." Now what is the meaning of these paraphrases of the last three Commandments? It is usually supposed that concise texts are the early ones, and paraphrases the later. Why is the word "brother" employed twice, and the third time "neighbour"? Is that a slip of the pen? We come now to the Seventh Commandment, the composition of which does no great credit to the author of it. Here we read: "Thou shalt not swear by my name falsely [Lev. xix. 12], for I shall be jealous [Dr. Ginsburg translates "I visit;" but can *kand* be used in that sense, or is it a misreading?] the iniquity of the fathers upon the children unto the third generation who take my name for a lie" (not "in vain," as Dr. Ginsburg renders it). I have already pointed out the strange—I should rather say the impossible—use of the root *kand*; but the expression *lenosey* is rabbinical; in classical Hebrew we would expect *laish ashet yissa*. The word *eduth*, "witness," is equally a rabbinical form. Such is the grammatical and idiomatic character of the new Moabite text of the Decalogue. I will now pass on to some other points. Dr. Ginsburg informs us "that every Commandment begins a fresh line." But this is a modern idea of writing; in the Siloam inscription a word even does not end with a line. Dr. Ginsburg goes on to say that the words "that thy days may be prolonged" (in the Fourth Commandment) are absent on one of the slips, but occur on the duplicate. He adds: "This is either due to an omission on

the part of the scribe, or indicates that it is intended as a different recension." The account which Mr. Shapira gives of the way he came into possession of his treasure is rather contradictory, and somewhat damaging to the authenticity of the fragments. He says at the end of his letter addressed to Dr. Ginsburg:

"In about twelve days I got [from an Arab near Aroer] four or five columns, with a few Phoenician [P] letters visible upon them; in eight days more he brought me about sixteen beautifully written columns; in eight days more about fifteen, not so well written; in eleven or twelve days more four or five very well-written columns; and I have not seen the man again. The sheik died soon, and I lost every trace that would enable me to follow the object further."

The end of the story is tragical; death sometimes comes when it ought not. But where are these *beautifully* written columns? From the reports in the *Times*, I gather that all the slips are not so easy to decipher. One point more. I have mentioned that the Decalogue begins and ends with the words "I am God [*Elohim*, not *Jehovah*, Lord], thy God," and that at the end of every Commandment these words occur again. This is certainly the cleverest thing in the new Deuteronomy, as it turns the fragments into an Elohist text. (Dr. Ginsburg, by-the-way, states from memory that the expression אֱלֹהִים אֱלֹהִים, "God thy God," does not occur in the Old Testament. It does, however, occur in the Elohist Psalms, xlv. 8 and l. 7. The last quotation might have served as the model for the new Decalogue.) Unfortunately, the Moabite Moses has blundered at the very beginning of the book by using the following words:—"These be the words which Moses spake according to the mouth of *Jehovah*" (so, at least, we read in the translation given in the *Times*). The rest of the chapter has only *Elohim*. This and the following chapters of the new Deuteronomy might be criticised with as damaging an effect as the Decalogue, but it is not worth our while to do so; *ab uno disce omnia*. The omissions and the additions in this part are made without even a superficial knowledge of the results of modern criticism. I shall only point out one oversight: i. 9 of the new text reads "because I have given unto the children of Lot the city for a possession." Instead of *city* the Authorised Version has *Ar*. The new text must consequently have עִיר instead of עָר. Now in the Decalogue, as well as upon the Moabite stone (for the *scriptio defectiva* is general; how, then, does it happen that עִיר is written *plene*? Is it a slip of the pen again? I give my opinion on this grave question without being able to take any notice of the palaeography of the sheepskins. But I am certainly not very anxious to study the "beautifully written columns" of the new Moabite scribe, as I am convinced from the text itself that the whole is a forgery.

A. NEUBAUER.

Queen's College, Oxford: Aug. 18, 1883.

We learn from the *Times* as well as from Dr. Ginsburg's communications to the *Athenaeum* that the fragments of the Book of Deuteronomy which Mr. Shapira has brought to England are written in characters resembling those of the Moabite stone. Now, the discovery of the Siloam inscription has shown that these were not the characters used in Judah (and therefore presumably in the northern kingdom of Israel) in the pre-exilic period. Consequently, if the fragments were genuine, they would belong to a Moabite and not to a Jewish Book of Deuteronomy, and the opening verse of the book

would contain the name of Chemosh, and not of Yahveh or Jehovah.

It is really demanding too much of Western credulity to ask us to believe that in a damp climate like that of Palestine any sheepskins could have lasted for nearly 3,000 years, either above ground or under ground, even though they may have been abundantly salted with asphalt from the Vale of Siddim itself.

A. H. SAYCE.

THE COLOURS OF FLOWERS.

Brackley : Aug. 13, 1883.

Dr. Seemann tells us (*A Mission to Viti*, p. 156) that "the Fijian, in common with other insular floras," is "poor in gay-coloured and rich in green, white, and yellow flowers," and adds that he was once speculating on the cause. He does not, however, favour us with the result of his reflections. Every working botanist has observed that in England in spring we have a great number of yellow and white blossoms, with a remarkable paucity of deeper-coloured ones. But I have not noticed that in the East there is anything of this kind, or that such islands as Penang and others in the Malay Archipelago or China Sea are notable for their golden and white flowers. If this, however, is a fact, it will tend considerably to modify our conclusions respecting the evolution of flower-colours, and some of the theories put forth by Mr. Grant Allen and others will have to be reconsidered. If the sea has anything to do with this, we should expect to find flowers showing a special tendency towards given shades the nearer they are found to the coast; but is this the case? The whole question is both wide and interesting. In the case of some of our highly developed cinerarias, which are natives of smaller islands than our own, is the deep colour wholly due to cultivation, or are the originals, like their English congeners, yellow of hue? While in our native flora yellow and white certainly predominate—so that in a volume I hope shortly to publish on the subject quite half the space is taken up with these, the other half treating of other colours—yet we are not by any means deficient in flowers of a rich and deep hue. The scarlet poppy, blue chicory and violet, red mallows and thistles, purple orchids, and a hundred other flowers may be adduced in proof.

The question therefore arises, Is it an established fact that insular floras are thus marked, and, if so, to what cause or causes can the peculiarity be ascribed?

HILDERIC FRIEND.

SCIENCE NOTES.

AN International Congress of Ornithologists will be held at Vienna next spring, under the patronage of the Imperial Crown Prince. The chief business will be to frame resolutions for international legislation regarding the protection of birds.

SEVERAL accounts were published a short time ago regarding the discovery of what appeared to be human footprints in a sandstone near Carson, in Nevada. The sandstone occurred near the junction of the Pliocene and Quaternary beds, and the discovery of human tracks in such a position would have been of surpassing interest. Prof. O. C. Marsh, who is spending the summer on this side of the Atlantic, and is attending the meeting of German naturalists at Stuttgart, has contributed to the August number of the *American Journal of Science* an interesting note, in which he suggests that the footprints, so far from being those of man, are probably to be referred to a large extinct sloth, such as *Myiodon* or *Morotherium*. In size, in shape, and in stride the footprints agree closely with those which would

be made by such an animal. Prof. Marsh's suggestion amounts, indeed, almost to a certainty.

THE Savilian Professorship of Geometry is vacant, and an election to the office will be held before the end of Michaelmas term (December 17, 1883). A fellowship in New College is now annexed to the professorship. The duty of the professor is to lecture and give instruction in pure and analytical geometry. He will be entitled to the emoluments derived from the benefaction of Sir Henry Savile or from the university chest; and also to the emoluments appropriated to the professorship by the statutes of New College. The combined emoluments of the office from both sources will be, for the present, £700 a-year, but may possibly hereafter be increased to an amount not exceeding £900 a-year. The professor will be subject to the statutes of the university in regard to the professorship, and to the statutes of the college in regard to the fellowship. There are no restrictions on candidates as to age or academical degree. Candidates are requested to send to the registrar of the university their applications, and any documents which they may wish to submit to the electors, on or before Wednesday, October 31.

PHILOLOGY NOTES.

M. DERENBOURG is preparing a Catalogue of the Arabic MSS. in the Escorial Library.

WE have received the first instalment of Prof. Budenz' answer to Prof. Vambéry's book on *The Origin of the Hungarians*. This first *Heft* runs to 107 pages octavo, and has been read at various dates before the Hungarian Academy of Sciences. It maintains the essentially Ugrian character of the Hungarian language, and complains that Prof. Vambéry (1) treats a portion of the evidence of the Ugrian origin as if it were the whole; and (2) modifies the Turkish words either as to sound or signification, or both, so as to make them closer to the Hungarian than they really are. Prof. Budenz begins by expressing his chagrin at having to defend a position which he had supposed established beyond the reach of controversy. But it is to be hoped that the interests of philology will be furthered by this additional discussion of the question.

THE Belgian Royal Academy have published a Glossary, by Dr. Scheler, the Librarian to the King, which completes their edition, in six volumes, of *La Jéte de Liège*. The fourth and sixth volumes of the poem, which is by Jehan des Preis dit d'Outremeuse, have been edited by Dr. Scheler. The poem, although worthless as a literary composition, is valuable philologically, for the author made abundant use of the local idioms of the Liège district, and followed both the orthography and the peculiar forms of construction in use among those with whom he lived. Dr. Scheler has likewise edited, from the Ashburnham MS., *Guillaume Comte de Hainaut*, a poem composed in 1399 by Jehan de la Mote to the order of the then Queen of England.

UNDER the title of *Etudes iraniennes* (Paris: Vieweg), M. James Darmesteter has recently published a collection of valuable essays concerning the history of Iranian languages and religion. Many of these essays had already appeared in various *Mémoires*, but these have been carefully revised by their accomplished author, and now appear in a collected form, with others not previously published. The first volume is devoted to an historical grammar of the Persian language, from the time of Darius to that of Firdausi, tracing the connexion of ancient Persian with the language of the Avesta, its conversion into Pahlavi, and its further pro-

gress into modern Persian, before the latter was invaded by Arabic. This grammar is recast from an essay that obtained the Volney prize in 1881, and is a very successful attempt to place Persian grammar upon the scientific basis which it so much requires. The first part of the second volume contains critical reviews of various works on Iranian history and literature, as well as many scientific essays on particular details of Iranian etymology, mythology, and legend. And the second part of the same volume furnishes scholars with the Pahlavi, Sanskrit, and Persian translations of some of the Yashts, Nyâyishes, and other portions of the Khordah Avesta, which are found in certain MSS. in Paris and London. The whole work is overflowing with the brilliant expositions of scientific thought for which its author is so justly celebrated; and, at the same time, these are so carefully considered that it is unusually difficult for scholars to discover oversights of any real importance. It is, of course, often possible to differ in opinion on matters so uncertain as Iranian antiquities, where there are usually several possible explanations of the same fact; but, in such doubtful cases, the uninitiated reader may safely trust to M. Darmesteter's solution of the problem as being one of the best that can be offered in the present state of our knowledge on the subject.

FINE ART.

FRENCH WATER-COLOUR.

*Les Aquarellistes Français*. Parts I.-IV. (Paris and London: Goupil.)

NO stronger proofs of the success of the French Society of Painters in Water-Colours were needed than the fact that, after an existence of only five years, a publisher has been found sufficiently enterprising to undertake such a work as the one now before us. Each part deals with three members of the society, and consists of an account purporting to set forth their respective artistic careers, together with numerous illustrations of their finished pictures and a multitude of facsimiles of their sketches. Nothing can be more charming than the reproductions of these airy and delicate compositions. So fine are the gradations and velvety the tones that fantasies having the evanescent grace of M. Louis Leloir's diaphanous nymphs lose little in the process of translation. Indeed, those printed in sanguine and violet may almost be said to rival the originals. Or, again, taking the art, containing a higher strain of poetry, of M. Français, there are plates here having all the value of monochromes by the artist. Not only is his vigorous drawing of branch and foliage accurately rendered, but his most aerial effects of light and distance are also reproduced with equal faithfulness. How subtle must be the process which can accomplish such feats will be only fully known to those familiar with the work of the veteran head of the French landscapists. Another artist whose touch is as deft as his fancy is playful is M. E. de Beaumont. His subjects, though of gossamer texture, sparkle with wit and irony, and the brilliance of the motive is reflected in the manipulation. The engraving of his "Syrens," printed in blue ink, gives the sea-foam, the naked figures—scarcely more substantial—and the hazy sky with the same vaporous washes and crisp touches as if it came from the easel of the painter. So, too, with his "Soubrette"—

feather brush under her arm—who stops in her dusting to kiss the marble bust of the handsome young seigneur. Again, in “*Où diable l'Amour va-t-il se nicher?*”—two lovers billing and cooing in a corner of the gallery of one of the towers of Notre Dame, with no witnesses but the grotesque stone monsters, and unconscious of the realities of existence, typified by the Paris spread out below—there was scarcely any quality in the picture which is wanting in the engraving. Excellences of another order characterise the military subjects of M. Detaille. Here all is sharp and clear, with the reality of objects seen in open daylight. He aims at rendering with photographic accuracy the contrasts of physiognomy and bearing in the soldiery of different nationalities, and this without caricature or theatrical exaggeration. The Spanish subjects of M. Worms have been called prosaic; they are never, however, without point. And herein we are inclined to think the painter has shown keener insight than his critics. Where in Spain is romance now to be found? Humorous situations strike the observing eye on every side. The comedy of the meaner vices engendered by misgovernment, superstition, and the brutal diversions of the bull-fight and cock-pit is not far to seek. If, therefore, M. Worms' pictures of Spanish life contain rather touches of satire than romance, it testifies to the truthfulness of his art. Perhaps none of the painters is more happily represented in this volume than M. E. Lambert, who confines himself to pictures of cat life. Whether their coats are soft and sleek, as in the tabbies, or fuzzy, as in the Persians, the reproductions in the engravings are nature itself. The society numbers among its members more than one lady artist. The works of the lady in the part before us, *Mdme. la baronne Nathaniel de Rothschild*, show study and training and, moreover, a capacity for seizing the picturesque which fairly entitle her to rank with her professional brother-members.

The letterpress accompanying the photo-gravures is, it must be confessed, of varying merit. M. René Ménard furnishes a pleasant sketch of the career of M. Français. He is thoroughly conversant with the subject on which he writes; therefore his warm praise has no flavour of unmeaning flattery. The leading quality of the painter—accuracy of drawing—is well brought out and illustrated by an anecdote of M. Français winning a wager made with Benouville respecting the precision of drawing it was possible to put into a study of a tree as compared with one of the human figure. The reader will be inclined to say that M. Français would have been successful in his wager with any one of the many charming designs printed with the letterpress of this work. The most valuable article is, without question, that by M. H. de Chennevières on M. Maurice Leloir. It contains an historical notice of French water-colour giving evidence of the genuine knowledge of the trained student of art. Its only drawback is to be found in its brevity, which must be accounted for by the limitation of space. M. de Chennevières commences his study with the mention of Daniel Rabel, who flourished at the commencement of the seventeenth cen-

tury, but none knows better than the learned author that French water-colour art dates from a much earlier period. It took its rise in the pictures illustrating the Missals, Psalters, Romances, and Chronicles of the preceding centuries. It is nowise a “*nouvel art*,” as one of the writers in this publication seems to imagine; rather is it the earliest method of all pictorial art. And it is interesting to trace in the thirteenth- and fourteenth-century illuminations precisely the same qualities, though under a different form, that distinguish the best modern French painting. The same excellences and limitations characterised it then as now. The scale of the early work is necessarily small, but the tiny figures are full of spirit and brilliance; elegance rather than depth of sentiment has inspired their conception, and their manipulation is conducted with the fastidious refinement we are accustomed to find in French work of to-day. Even weaknesses, like the copious effusion of blood—or crimson-lake—that the exhibitor at the Salon delights to indulge in finds its parallel in the martyrdoms and combats of the primitive painters.

Of the remaining notices, few show the same familiarity with their subjects as the two just mentioned. It is unfortunate for a gentleman who is intimately acquainted with the literature of all nations, who has the whole range of history, science, and the systems of philosophy at his fingers' ends, but who has not yet added a knowledge of art to his encyclopædic acquirements, to be called on to discourse on that particular topic. He can, in a general way, say that the pictures of the subject of his paper combine all the excellences of the masters of different and even opposite schools. He may dilate on the noble physical qualities of the painter, “*grand, robuste, les épaules larges*,” in one instance; in another, “*un beau gars, aux traits réguliers et à la mine ouverte*”—a description, it must be confessed, savouring somewhat of the wax-work bust of a hair-dresser's window: though the intention is evidently complimentary. Leaving his personal appearance, the transition is easy to a sketch of his manners and deportment. With the minute knowledge of nature of a Wordsworth, the artist is also a “*fin Parisien*,” he has, besides, the “*esprit Gaulois*,” and is “*un gentleman d'une affabilité esquire, d'une commerce sympathique avec une pointe de cant [sic] anglais*.” Then a paragraph may be made out of the victim's studio, his costumes, his curiosities, and the splendour of his furniture. But, however postponed and evaded, the time at last arrives when something must be said of the artist's productions; and then, though the writer's presence of mind never deserts him, it must be admitted that his phrases lose precision. “*Cette théorie de la goutte d'eau que les Anglais, les premiers, ont mise en pratique avec un si vrai bonheur*,” is skirmished with, but little comes of it. However, one sees the writer's impression to be that water-colour is a thing of blottings and splashings, a general happy-go-lucky staining of paper—it is always “*un bout de papier*” that is operated on. The rapidity of production in some cases rivals Mr. Alfred Jingle's celebrated attempt at poetical composition, and, curiously enough, we are told that one gentle-

man actually repeated his feat. Jingle, at the Revolution of July, describes himself as having “*fired a musket—fired with an idea—rushed into wine shop—wrote it down—back again—whiz, bang—another idea*.” M. le Blant, according to his historian, enrolled himself a member of a volunteer corps during the siege of Paris in 1870, and “*autour de Paris, il fit le coup de feu entre deux coups de princeau*.” After a sober statement of fact like this, it is clear we must considerably modify our view of the veracity of the versatile hero of so many diverting adventures in the *Pickwick Papers*.

Without for a moment supposing that the painters share the opinions of their encomiasts, that the practice of water-colour is a kind of artistic conjuring or legerdemain, there is no doubt that the true principles of the art have been mastered in very few instances by the modern French school. The system of “*washes*” is fatal to any serious progress. By that process a clever artist may produce drawings that are taking and attractive at first glance, but they are scarcely likely to make a permanent impression. They may attain a fashionable success—and lose it at the next turn of the wheel. The high qualities that make the water-colours of Turner, John Lewis, or Frederick Walker so precious are the result of constant study of nature, of patient and vigorous drawing and subtle manipulation—totally different excellences to dexterous washing. Really true water-colour is scarcely likely to be achieved by men who practise it merely as an interlude, as we are informed is the case with many members of the French Society. It is necessary, if water-colour art is to take any high position, that there should be, as in England, a body of painters entirely devoting themselves to its practice, learned in its *technique* and traditions, and sedulously seeking to widen its aim and extend its legitimate influence. All interested in art will watch the progress of the young society, being assured that, if conducted on the lines that have led to no mean result in this country, a school of French water-colour will be established reflecting the best qualities of the national art, and probably developing other and even higher ones than that art has yet displayed.

HENRY WALLIS.

#### THE DISCOVERY OF EGYPTIAN ANTIQUITIES IN ROME.

Rome: Aug. 14, 1883.

SINCE my last letter (ACADEMY, July 7) on the discovery of the site of the Temple of Isis in Region IX. of the city, fresh researches have been made, and I lay before you their most important results. As you are aware, the excavation near the Minerva church in the Via San Ignazio disclosed a basalt Sphinx, supposed to represent King Amasis of the XXVIth Dynasty. Near this relic was disclosed the lower part of an obelisk which, according to Baron Giovanni Barracco, bore the name of a Pharaoh, Rameses II. As this relic was being dug out, two cynocephalic apes in dark-violet granite were found, each showing the cartouche of Nechtoreb, of the XXXth Sebenetic Dynasty. Close by these figures was the lower portion of a marble candelabrum of Graeco-Roman fashion, the base of which is decorated with some well-executed effigies in relief of Silenus.

The obelisk, which is quite perfect, was finally disengaged in the presence of a distinguished company, including Baron Barracco and Prof. Schiaparelli, Director of the Egyptian Museum in Florence. The Professor had the honour of showing this monument to the King of Portugal, who went to view it in the piazza of the Collegio Romano, where it is placed for the time being. This obelisk is precisely similar to the one in the piazza of the Pantheon, which was transported thither from the Piazza di San Macuto, having been discovered in the fourteenth century while a portion of the Minerva church was being rebuilt. Both monuments are dedicated to the great Pharaoh, Rameses II., and date back to some fifteen centuries before the Christian era. The discovery of this monument is of importance as helping to identify the site of the Temple of Isis. The obelisk seems to have belonged to a group of similar monuments, sphinxes and cynocephali, which bordered the road leading to the Iseum; and Canina's conjecture in 1853, that the sanctuary of Isis must be placed near the Minerva church facing the Via San Ignazio, has every appearance of probability. F. BARNABEI.

### THE EARLY HISTORY OF THE LEVANT.

I.

ARCHAEOLOGICAL discoveries in Greece and Asia Minor have followed one another so rapidly during the last ten years that it is difficult to realise the immense advance in our knowledge of primitive Greek art and life which has been made since Dr. Schliemann started the world by his first volume on Troy. His excavations at Hissarlik and Mykénæ have been succeeded by the discovery of the prehistoric tombs of Nauplia, Spata, and Menidi; while the indefatigable explorer himself has brought to light other remains of the pre-Hellenic age at Tiryns and Orkomenos. A comparison of these with similar objects found in Santorin or Théra, Rhodes, and Kypros, as well as more recently at Knossos in Krete, has thrown a flood of light on the early history of the Levant, and gone far towards re-establishing the credit of the legends of ancient Greece. At the same time discoveries in the remoter East, the revelations of the monuments of Egypt and Assyria, the recovery of Phœnician art, the recognition of a Hittite empire with an art and character of its own, which once stretched from the Euphrates to the Aegean, and, more especially, Mr. Ramsay's recent explorations in Asia Minor have all combined to lift the veil which has so long covered the cradle of European culture. It is now possible to pause and take stock of what we know, to determine the limits of our present knowledge, and the direction which future researches ought to take.

The influence of the Phœnicians upon the early civilisation of the Mediterranean has become a commonplace of history. It was from them that first Greece and then, at a much later period, Italy received some of their earliest lessons in art and culture. The colonies of the Phœnicians in the islands and on the coasts of Greece are still marked by such names as Minoa, "settlement," Megara, "dwelling-place," Kothon, "small harbour;" and they bequeathed to later Greece myths like those of Adonis and Aphrodité, of Melikertés or Melkarth, and of Hēraklēs, the Izdubar of the Babylonian epic. But the Phœnicians were only intermediaries. Their art was at most but a modification primarily of that of Egypt, and subsequently of that of Assyria, the elements they had borrowed from Egypt and Assyria being further combined in a peculiar way. It is probable that before they had settled in the Delta—the Caphtor or Keft-ur,

"Greater Phœnicia," of the Old Testament—they had already submitted to the influence of Babylonia. At all events, early Babylonian kings had penetrated as far as Phœnicia, and even into the island of Kypros, while the legends I have just mentioned as having been handed on by them to the Greeks must originally have come from Chaldaea. As yet, however, I have found no clear traces of an archaic Babylonian element in Phœnician art, while it is possible that the legends I have alluded to may have been brought by the Phœnicians from Babylonia at the time of their original migration to the West. This is one of those questions which will have to be answered by future research.

The Phœnicians, however, were not the only channel through which the arts of the far East made their way to Greece. As far back as 1875, Prof. Ernst Curtius made it plain that a second channel is to be found in the nations of Asia Minor. Kiepert and Perrot had already perceived that the pseudo-Sesostris of Lydia, like the similar figure found by Perrot at Gaur Kalessi, must belong to the same epoch and style of art as the sculptures of Boghaz Keui and Eyuk on the Halys, though what this epoch and style of art were was still undetermined. In 1879, however, I first pointed out in the ACADEMY that the art of Boghaz Keui and Eyuk is identical with that of the bas-relief of Ibrees in Lykaonia, which is accompanied by inscriptions in Hittite hieroglyphs, as well as with that of the monuments of Carchemish, the eastern capital of the people called Hittites alike by Hebrews, Egyptians, Assyrians, and Proto-Armenians.\* On visiting the figure of the pseudo-Sesostris shortly afterwards, I found, as I anticipated would be the case, a Hittite inscription attached to it. Since then, evidences have been multiplying in favour of my conclusion, among which I may mention the exact resemblance of sculptures photographed last year by Dr. Gwyther at Carchemish and Meraah to those of Boghaz Keui and Eyuk. Dr. Ed. Meyer now considers himself justified in saying that "das Jahr 1879 ist für die Alterthumskunde Kleinasien's von epochenmachender Bedeutung."† For reasons which I have given elsewhere, I believe that Kappadokia was the original home of the Hittite race; from hence they forced their way southward into the territory of the Semites, and at a later date carried their arms as far west as Lydia and the shores of the Aegean. The testimony of the Egyptian monuments to the latter fact is borne out by the Hittite inscription discovered by Mr. Dennis engraved by the side of the so-called image of Niobé on Mount Sipylus. The characters composing it are so remarkably like those of Carchemish in form that it is difficult not to believe that they were engraved by conquerors from the Euphrates rather than by local Lydian scribes. This argument will be better appreciated if I add that the forms found on Mount Sipylus more closely resemble those of Carchemish than do those found on a site so much nearer Carchemish as Hamath, and that even at Carchemish itself the forms of characters on monuments belonging to the same king vary very considerably.

In his instructive memoir on *Les Céramiques de la Grèce propre* (1881) M. Albert Dumont endeavours to show that the pottery of the prehistoric cities of Hissarlik—that, namely, found by Dr. Schliemann at a greater depth than two metres—all possesses the same character, and is the predecessor of the pottery of Santorin, which is itself older than the sixteenth century B.C. I had been induced, upon other grounds, to assign a similarly early date to certain of

the Hissarlik antiquities in the *Contemporary Review* for 1878. I find some difficulty, however, in recognising the relationship which M. Dumont believes to exist between the pottery of Hissarlik and Santorin; nor even if we regard the Trojan pottery as an archaic form of that of Théra is it necessary to suppose the whole of it to be anterior in time to the latter. The development of art does not take place contemporaneously in all places, and earlier forms may easily have lingered on in the Troad when more developed ones had shown themselves elsewhere. At all events, the strata of Hissarlik exhibit no trace of any long break of continuity between the uppermost layer of prehistoric remains and the archaic Greek pottery of the Aesolic Ilium, which is found at a depth of from four to six feet, and resembles that of Mykénæ, Rhodes, and other early sites. In agreement with the geological evidence, Prof. Mahaffy has made it clear that the literary evidence also pre-supposes a continued existence for the Pergamos of Troy, though the destruction of the lower town after the fall of the second prehistoric city, as Prof. Goodwin pointed out to me, caused the orator Lykurgos to describe the town itself as *ἀνολυγρος*. In any case, I do not see how it is possible to refer the whole of the prehistoric remains of Hissarlik to so remote an epoch as that which precedes the pottery of Santorin.

On the other hand, it must be allowed that scarcely any trace of Phœnician influence has been discovered at Troy. This, however, may be explained partly by its situation, partly by the insignificance to which it was reduced after the destruction of the second prehistoric city. Though Lesbos and Thasos were colonised by the Phœnicians, the Troad seems to have lain outside the route of their commerce. It was another people of Western Asia who, according to the Egyptian inscriptions, brought the seeds of civilisation to the North-west corner of Asia Minor. The Teukrians (Tekkri) and Dardanians (Dardani) figure among the subject allies of the Hittites in their wars against the Pharaohs in the fourteenth and thirteenth centuries before our era. We should therefore expect to find some traces of Hittite art among the numerous objects discovered by Dr. Schliemann at Troy. Unfortunately, our knowledge of that art is at present mostly confined to sculpture in relief; until the mounds of Kappadokia are excavated Hittite pottery and goldsmith's work are likely to remain unknown to us. But Dr. Schliemann has already drawn attention to the general resemblance between a gold eagle found in the second (not third) city of Hissarlik (*Ilios*, figs. 924-26) and the double-headed eagle of the Hittites, and in an Appendix to *Ilios* I have noticed one or two more similarities. The figure, again, represented on the "owl-headed" vases too closely resembles the rude images of the great goddess of Carchemish and Babylonia (which can be traced back from Mykénæ and the Aegean Islands first to the engraved stones of Aleppo, and then to their original home in Chaldaea) to be the result of chance. Even the "wings," which frequently accompany it, remind us of the extended arms given to the Mykénæan figures of the same goddess. The so-called *swastika* itself, which distinguishes the prehistoric pottery of Hissarlik, as well as that of Kypros and Attica, and is also found at Mykénæ, now turns out to be of Hittite origin, as, in a note to Dr. Schliemann's *Ilios*, I expressed my conviction it would, Mr. Ramsay having discovered that the fringe of the king's robe in the Hittite sculpture at Ibrees is ornamented with a row of Trojan *swastikas*. At Kaisariyeh, moreover, the same explorer procured a terra-cotta whorl which, in form, colour, and ornamentation is identical with those found by Dr. Schliemann at Troy. Excavations in the Kappadokian mounds of Kaisariyeh,

\* Hebrew Kheth, Egyptian Kheta, Assyrian Khattā, Vannic Khate. Mr. Gladstone has identified them with the *Khetai* of Homer.

Eyuk, and Kiz Hissar will, I feel sure, solve most of the problems still presented by the antiquities of Troy. A. H. SAYCE.

#### NOTES ON ART AND ARCHAEOLOGY.

ONE of the nineteen first-class medals awarded at the International Art Exhibition at Munich has been given to Mr. Herkomer. A second-class medal has been awarded to Mr. E. A. Abbey, the American artist.

MAKART's large picture of "Diana at the Chase" has been purchased by Mr. James Banker (an American) for about £7,000.

We are sorry to learn that the residents in the large town of Derby have been unable to collect the small sum of £400 for such an object as the purchase of the masterpiece of one of their most famous citizens. "The Orrery" of Joseph Wright is lost to his native town, and will probably be snapped up eagerly by Manchester or Liverpool. It is to be hoped that a smaller work by Wright—"The Alchemist"—may yet be secured for Derby; but the acquisition of this picture, while doing credit to the individual subscribers, will only emphasise the want of local culture, spirit, and generosity which has allowed the grander work to find a home elsewhere.

M. DE NEUVILLE, MDLLE. MADELEINE LEMAIRE, and M. FERDINAND HEILBUTH are the *sociétaires* represented in the last part of that beautiful work devoted to the drawings of the Société des Aquarellistes français to which we have already called the attention of our readers. We are glad to learn that this publication has met with the encouragement which its beauty and enterprise deserved. But few copies remain unsubscribed, and the price has been raised from 240 to 320 frs. It is to be followed up by a similar work on some of the greatest living artists, in which England will be represented by Sir Frederick Leighton and Mr. Millais. This will be profusely illustrated with the various photographic processes of reproduction which Messrs. Goupil have brought to such perfection.

In the Chapelle du St-Esprit of Tournay Cathedral there are now hung some splendid Arras tapestries which date back to 1402. They were manufactured at Arras by Pierre Feré, and were presented to the cathedral by Canon Toussaint Priez. The Belgian amateurs believe them to be the only extant examples of the famous Flemish high warp of the early fifteenth century. There were originally seventeen scenes representing the legend of SS. Piat and Eleuther, but three have been lost. The history of these tapestries is curious. Originally, they covered the backs of the cathedral stalls. They escaped the attention of the image breakers in 1566, but during the last century they were removed as barbarous rubbish, torn up, and made into rugs. When they seemed to be no longer good enough to be trodden upon, they were used to stop some holes in the roof. They have now been restored so far as practicable; and, although sadly mutilated, the scenes are still vivid and spirited. As works of art, indeed, they are exceedingly fine. The rescued portions cover a space of twenty-two mètres long by two mètres wide.

SOME fine polychromatic mural decorations of the fifteenth and sixteenth centuries have been discovered in the parish church of Heythuizen, in Belgium, the choir of which is being restored. The paintings are composed of sprigs, branches, and flowers, these latter being brilliantly coloured. One of the painted stones bears the arms of the Counts of Horn, who were Lords of Heythuizen.

In the *Zeitschrift für bildende Kunst* the equestrian statue of Philip IV. at Madrid, by

Pietro Yacca, is the subject of a paper by Carl Justi; and Ad. Rosenberg reviews the exhibition of Old Masters at Berlin. The etchings are by L. Kühn and G. Urlaub. The first is after the portrait of a young woman by Van Dyck; the other is an original study of a "Landeknecht" playing the lute. The former is effective, but weak in execution; the latter has some character, but is scarcely good enough for the magazine.

THE same exhibition of Old Masters at Berlin is the subject of a more elaborate study in the last number of the *Jahrbuch der königlich. preussischen Kunstsammlungen*. This is by W. Bode and R. Dohme, and is admirably illustrated with wood-cuts, photogravures, and etchings. The latter are two in number, and of first-rate quality; one is by W. Hecht after a portrait of a man by Franz Hals, the other by G. Eilers after a portrait of a lady by Rembrandt.

MESSERS. AMSLER AND RUTHARDT, of Berlin, announce the approaching publication of a large line-engraving by Prof. Eduard Mandel after the Madonna di San Sisto. The prices of impressions will vary from £45 (remarque-proofs) to £3 (proofs after letters).

#### MUSIO.

*Dictionary of Music and Musicians.* Edited by Sir George Grove. Parts XVII. and XVIII. (Macmillan.)

THE present double number brings us to the end of the third volume. According to the title-page of the first part of the work, the Dictionary ought now to be concluded; but some of the subjects have been so fully discussed, and the biographies of the great masters so elaborately written, that at least another part will have to be added. And we may venture to say that it will not be either a small or uninteresting one; for among other names it will contain those of Verdi, Wagner, and Weber.

Part XVII. gives us the conclusion of the article "Sketches." The word naturally leads us to think of Beethoven, whose sketch-books form such a wonderful and instructive commentary on the masterpieces which he bequeathed to posterity. Mr. W. S. Rockstro, besides noticing these, has something to say about Handel, Bach, Mozart, Mendelssohn, and Schubert. Not one of these composers appears to have sketched after the manner of Beethoven; but Mr. Rockstro, comparing Mozart with Beethoven, reminds us that the former was a mental sketched, the latter a material one. "If Mozart's mental sketches," he adds, "could be collected, it is quite possible that they would outnumber Beethoven's written ones." We are, however, inclined to think that Beethoven was a mental as well as a material worker, and the sketches preserved may, after all, only be a survival of the fittest. F. Smetana is mentioned as the composer of a symphonic poem entitled "Mein Vaterland"; but, besides this one in three sections, he has written "Wallensteins Lager," "Richard III.," and "Hakon Jarl."

There is a long and interesting article on "Sonata" by "C. H. H. P." He traces the history of this important form in composition from the seventeenth century down to the present day. He speaks about Turini's Sonatas published at Venice in 1624, but does not notice those of Andrea Gabrieli of still earlier date (1586). While endeavouring to follow, and to appreciate at its true value, the "intellectualism" of the nineteenth century, we are not disposed to admire less the great works of Haydn and Mozart; and we think that "C. H. H. P." is scarcely justified in speaking of the slow movements of all the composers of

Sonatas till Beethoven's time as "rather artificial." Would that be a fair description of the magnificent slow movements of Haydn's Sonatas Nos. 3 and 10 (Br. and H.), or those of Mozart's Sonatas in A minor and C minor? They are surely something more than specimens of "elegance and taste." Again, the writer calls attention to the fact that Liszt knits the whole of his B minor Sonata into an unbroken unity. C. P. E. Bach had, however, already set the example.

There is an article on "Song," by Mrs. E. Wodehouse, giving in comparatively small space much valuable information. The account of Spohr is interesting, and the catalogue of his works welcome. Mr. Arthur Chappell would, however, scarcely agree with the remark that Spohr's Quartets have fallen into "utter neglect." His name was somewhat prominent in the programmes of the Monday Popular Concerts last season. The article "Spontini," by Dr. P. Spitta, is a most able one. "Steibelt," the composer of the once celebrated "Storm Rondo," comes in for a fair share of notice; and the list of his works, "compiled with considerable trouble," will be found useful. There is a curious little article on the word "Storm," by "F. C." He speaks of the chromatic scales, the zigzag passages, and the arpeggios which almost every composer uses to depict respectively the howling of the wind, the flashes of lightning, and the form of waves. He might have given Haydn's attempt at a description of a storm for the "Krummer Teufel," the music of which he was writing for the actor Kurz. According to report, Haydn drew his fingers rapidly over the key-board, ran through the semi-tones, and tried abundance of sevenths; at last he extended his hands to the two ends of the harpsichord, and, bringing them rapidly together, exclaimed, "The devil take the tempest!" J. S. SHEEDLOCK.

Crown 8vo, pp. 448, with Portrait, cloth boards, bevelled edges, price 6s. 6d.

**LIFE of JAMES MURSELL**  
PHILIPPO, Missionary in Jamaica. By E. B. UNDERHILL, LL.D., Hon. Sec. Baptist Missionary Society.

"Dr. Underhill has given us in this work one of the best biographies of one of the best and most honoured of modern missionaries."

"One of the most compact and complete, and, at the same time, one of the most fascinating, biographies it has ever been our privilege to read. It is certain to be popular."—*Baptist Magazine*.

## LITERATURE.

Mary Lamb. By Mrs. Gilchrist. (W. H. Allen.)

THE story of Mary Lamb's life is not to any very large extent a history of literary efforts and successes. With the exception of stray verses, and such few articles as she is believed to have contributed to periodicals—like the essay on Needlework which Mrs. Gilchrist has discovered and reprinted—her period of literary activity extended over only three of the eighty-three years of her life. From 1806 to 1809 were produced the *Tales from Shakespeare*, the *Mrs. Leicester's School*, and the *Poetry for Children*, in all of which the pen of her brother played an important part; and they were written under considerable pressure, and with some sense of effort, greatly to help the resources of the modest household, for, as Mary confides to a correspondent at the time when the "Tales" were begun, "it is not well to be very poor, which we certainly are at present." When this external stimulus was removed, her days of authorship practically ended; and,

"without this spur, she would never, we may be sure, have dug and planted her little plot in the field of literature, and made it a sweet and pleasant place for the young, where they may play and be nourished, regardless of time and change."

Her writings were sufficiently popular with the little people for whom they were prepared, as is testified by the numerous editions of the "Tales" which still continue to be issued, and by the fact that the "Poetry" was not republished in its entirety for many years because it had been simply read out of existence, and no copy could be found for the printer to work from. They possess a gentleness and purity, "a tenderness of feeling and delicacy of taste," which enable us to understand the praise bestowed upon them by Wordsworth, Coleridge, and Landor; but they can hardly be regarded as works of sufficient genius to entitle their author to any very lofty literary pedestal.

The real and surpassing interest of Mary Lamb's life is a more purely human one. It is her personality and her personal associations that fascinate one—the sweetness and the sadness of her existence. Her history is "mainly the story of a brother and sister's love, of how it sustained them under the shock of a terrible calamity, and made beautiful and even happy a life which must else have sunk into desolation and despair."

To her task of recording this life Mrs. Gilchrist has evidently brought wide reading and accurate knowledge, basing her study chiefly upon the letters of the brother and

sister, and upon the many more or less strictly autobiographic passages which occur in Charles Lamb's Essays. The friends, too—great many of them, individual all of them—who were so important to the Lambs, that pair who had renounced "the feverish romantic tie of love" for the mere "charities of home," are excellently touched in beside the main figures of the biography, and have assigned to them much the degree of relative prominence which they occupied in the life.

Born at Crown Office Row, Inner Temple, in 1764, the year of Hogarth's death, Mary Lamb seems to have passed a somewhat cheerless and unfriended childhood. Shy, nervous, and sensitive, with the seeds in her of the terrible malady which afterwards so often shook her life, her parents never understood her thoroughly, nor bestowed on her the care and tenderness which her delicacy required. Her quiet London life was varied sometimes by a visit to her great-aunt in Hertfordshire, or to her grandmother, who was housekeeper to the Plumers in their mansion of Blakesware; and here, and in the library of Mr. Salt, her father's employer, she made her first acquaintance with the "substantial world of books," harrowing her young fancy with the tales of witchcraft and martyrdoms which the old folios contained. When she was about ten years of age her brother Charles was born, and now her existence had a fresh stimulus, a new and wholesome interest. She was old enough to nurse the infant, and expended upon him an affection which was maternal rather than sisterly in its intensity, and which Charles repaid in after-years with unvarying and self-sacrificing tenderness.

It was in 1795 that the great tragedy of Mary Lamb's life was enacted. Worn out by nursing her sick parent and an elder brother, who had been suffering from the results of an accident, and by the unceasing labour of needlework by which she strove to increase the slender resources of the family, her mind gave way, and in a sudden fit of frenzy she stabbed her mother to the heart. In this terrible crisis the whole care of the household fell upon Charles, and he nobly fulfilled the trust. When Mary was able to be removed from the asylum in which she had been placed, he provided lodgings for her, entering into a solemn engagement to take her under his care for life, and spending with her all his free time on Sundays and holidays. Mrs. Gilchrist proves by a reference to the register of St. Andrew's, Holborn, that the father died in 1799, and not a few months after his wife, as the biographers of the Lambs, from Talfourd to Ainger, have stated. When this event occurred, Mary was received under her brother's own roof, and that life of "double singleness" began which continued for thirty-five years, broken only by the recurrences of mental aberration which required that the sister should be placed in confinement—absences which, as Charles writes so pathetically, "cut sad slices out of the time, the little time we shall have to live together." Of their life Mrs. Gilchrist gives us a pleasant and realisable narrative. It is touching to see the efforts of the pair to glean happiness out of the scanty materials which lay to their hand; how they prized their books and prints, their evenings at the

play, the intercourse with their friends, the little Wednesday suppers with the whist and cribbage, "determined," as Charles puts it,

"to take what snatches of pleasure we can between the acts of our distressful drama, like those, as it has been finely said, who, 'having just escaped earthquake or shipwreck, find a thing for grateful tears in the mere sitting quiet at home, under the wall, till the end of days.'"

Perhaps the clearest picture of Mary Lamb's character and personality that we can have is given in the long series of letters to Miss Stoddart, afterwards Mrs. Hazlitt. Here we see, in quite a singular way, her sweetness and gentleness of nature, her rare prudence and tact—above all, her wide and genial tolerance. Few correspondents and advisers can write in a strain like this:—

"I know I have a knack of looking into people's real character, and never expecting them to act out of it, never expecting another to do as I would in the same case. . . . All this gives me no offence, because it is your nature and your temper, and I do not expect or want you to be otherwise than you are. I love you for the good that is in you, and look for no change."

So the life of brother and sister passed on, broken, yearly or oftener, by Mary's terrible illnesses, which seem to have followed like a Nemesis on any country holiday or change or unusual excitement and gaiety, the brother watching over his companion with a solicitude which was all the tenderer and more unwearied because he himself had suffered in early life from a similar seizure, and knew the bitterness and desolation that it brought, the two growing wonderfully like each other as the years went over them, so that in time the sister came to be a kind of softer and sweeter reflex and echo of her brother's thoughts and voice. "When they were in company together, her eyes followed him everywhere; and even when he was talking at the other end of the room, she would supply some word he wanted." She had "a way of repeating his words assentingly when he spoke to her. He once said, with his abrupt, peculiar mode of tenderness beneath blunt, abrupt speech, 'You must die first, Mary.' She nodded with her little quiet nod and sweet smile, 'Yes, I must die first, Charles.'"

But the fates had ordered it otherwise; the brother died in 1834, and then followed the long, recordless years—not eleven, as Talfourd says, but nearly thirteen—which elapsed before she was laid by his side in the grave at Edmonton.

Mrs. Gilchrist is to be congratulated on the clearness and interest of her narrative, on the success with which she has placed before us one of the gentlest and most pathetic figures of English literature.

J. M. GRAY.

*The Voyage of "The Wanderer."* From the Journals and Letters of C. and S. Lambert. Edited by Gerald Young. (Macmillan.)

LADY BRASSEY may claim the honour of having started a new condition of existence which has already found many imitators. This consists in getting all your family and belongings into a large yacht and going off on a cruise for a considerable period. The voyage

of the *Griffin*, belonging to Mr. John Baird of Knoydart, the account of which was written by Gen. Maxwell, was arranged somewhat in the style alluded to, but in that case the *Griffin* went only to the Mediterranean. The *Sunbeam* went round the world, and the *Wanderer* has done the same, and taken a much longer time to do it; the cruise of the former occupied less than a year, while that of the latter wanted but a few days to complete two years. We have thus a marked development upon the adopted model. Mr. Lambert had his wife and four children with him; a clergyman, a doctor, and an artist were of the party; also a governess, a lady's-maid, a nurse, a valet, and a footman. With the officers and crew, there were sixty-three persons, "all told," on board. These details will show that every arrangement had been made for a comfortable family life at sea; the craft was a floating home for two years. If this style of existence is to be largely followed, Campbell's words—that Britannia's "home is on the deep"—will cease to be poetical and become literally descriptive.

The route of the *Wanderer* should be first noticed. She sailed south by Madeira, and touched the coast of Africa at Gaboon; then to St. Helena, from which the course was westward to Bahia; the Pacific was reached through the Magellan Straits, and a long stay took place at Valparaiso, where Mr. Lambert seems to have property and business of some kind to look after. The Pacific Isles from the Marquesas to Fiji were visited, and then the Sandwich Islands; from that the course was to Japan and China, coming next by Singapore to Ceylon; thence the *Wanderer* sailed direct to the Red Sea, passed through the Suez Canal to Jaffa and Beyrout, from which visits were made to Jerusalem and Damascus; then Cyprus and Rhodes, and on to Smyrna, to visit Ephesus. After that a run was made to Constantinople, returning by Athens, and so to Malta, Sicily, Naples, and Rome. Gibraltar was touched at, and then home, looking in at Queenstown on the way to Cowes. The voyage began on August 5, 1880, and ended on July 19, 1882. The log of the ship is given at the end of the book, which will no doubt be interesting to yachtsmen, and should be of use to anyone who thinks of making a similar cruise.

A bare chronicle of all the lunches, dinners, balls, and parties of a London season would not be particularly interesting matter to make a book of, and their occurrence on board a yacht, or at the places the yacht visits, does not add much to the general interest of such events. The recording of them is no doubt of importance to the persons who put such affairs in their diaries, and perhaps also to friends at home; but readers of books of travel expect other information from distant places. The *Voyage of the "Wanderer"* is evidently a work got up mainly for friends and yachting people to read. In fact, something of this kind is admitted in the short Preface, where it is stated that it is only "a record of two very happy years spent afloat, which cannot fail to interest the relations and friends of the 'Wanderers.'" One of the objects of the voyage (which is touched upon only in the most delicate way) was to take out and erect a monument at Kona, in

the island of Hawaii, over the grave of a son who had been drowned there while bathing about six years before.

The book is not without some interesting bits of description; the visit to the Welsh colony at Chupat may be given as an example; and pleasant glimpses may be had now and then of the Pacific Isles; but Miss Gordon Cumming's works have described these regions with much more detail and ability. Mr. Lambert describes the making of *kava* in Tahiti, which is different from that of Fiji, where a similar drink is called *yangona*. Still, in neither case would anyone, after hearing the process described, care to imbibe such a questionable tippie. It is doubtful if the grandsons of "Marama"—that being the Fiji name for Queen Victoria (the Prince of Wales's sons arrived at Levuka while the *Wanderer* was there)—would have put their lips to the *yangona* bowl if they had been aware that the juice was principally composed of human saliva. Mr. Lambert does not give the Fiji process; but it will be found minutely detailed in Miss Gordon Cumming's *At Home in Fiji*. There is an evident difference in the facilities for getting particulars of cannibalism resulting from the few years between the voyage of the *Wanderer* and the date when Miss Gordon Cumming visited Fiji. In the one case we have a mass of interesting information, and that, too, from individuals who had seen and practised the custom; while during the last visit it seemed rare to find anyone who could speak from personal experience. We may conclude that in a few years more the only information on this subject will be found in books.

Of the amusing incidents in the book may be mentioned that of the Emperor of Brazil's *aide-de-camp*, who somehow or another got confused about the name of the ship and its proprietor during the visit of the Emperor, and addressed Mr. Lambert as "Senhor Milord Wanderer." The English climate has often had hard things said about it; but the following is severely descriptive, even from a Yankee: "England ain't got no climate, but she's got samples of pretty nearly all sorts."

As one of the party on board was an artist, the work is full of illustrations, most of them in colours; but we venture to hope the reproductions have not done full justice to Mr. Pritchett's drawings. The wood-cuts are in most cases to be preferred. W. SIMPSON.

*York and York Castle*: an Appendix to the "Records of York Castle." By Capt. A. W. Twyford. (Griffith & Farran.)

SOME time ago (ACADEMY, November 15, 1879) we reviewed Capt. Twyford's *Records of York Castle*, in the compilation of which Capt. Twyford was assisted by Major Arthur Griffiths. It was a book that we could by no means praise without reserve. We said that the work was so fragmentary that it could be of little use for serious purposes. The earlier volume was, however, so very much better in almost every respect than the present that we are compelled to believe that it owed not a little to the supervision of Major Arthur Griffiths. In the mere mechanical

matter of the correction of the press, the book now before us shows a great falling off. In the earlier volume we can call to mind but few misprints; here they may be counted by the score. We have on the same page the well-known Yorkshire house of Savile spoken of as Seville, a lady of the race of Trappes of Nidd Hall spoken of as "a daughter of the house of Trappy," and her husband, a Towneley of Towneley, called Charles Townely. Excuse might, perhaps, be made if these blunders occurred only on one page, or even in one sheet. Charity might incline us in that case to surmise that a sheet, or part of a sheet, had missed correction. But no such excuse will avail; the same tendency to blunder is found in every part of the volume. The well-known Sir John Reresby is turned into Roresby; and we have a halting English translation by Gent, the York historian, of a part of a mediæval poem attributed to Axpian. We have not Gent's compilation at hand to refer to; but we should be surprised if this strangely named poet did not turn out to be Alcuin, the friend of Charles the Great. No Axpian occurs in Sir Thomas Duffus Hardy's *Descriptive Catalogue*; and we need hardly tell anyone who is in the habit of using that most useful list that "Axpian" would almost certainly have been there had any such person written verses, however trivial, concerning our early history. All these blunders, however, sink into insignificance—become, indeed, by contrast almost ornaments—when we contemplate the wonder that p. 212 has in store for the reader. Here we have an abridgement of the Latin heading of a sessions paper. The name of the Sovereign and the year of his reign have been omitted, perhaps have not been read. The sentence stands thus: "Divi Regis &c 16<sup>o</sup> Die Octob An. 1630." Capt. Twyford evidently requires reminding that, however barbarous we may have been in the seventeenth century in many of our modes of thought and in some of our actions, we were, notwithstanding all drawbacks, a Christian folk, by no means prepared, far as certain ecclesiastical persons might carry their divine-right adulation, to introduce into legal documents the profane title given after death to the emperors of heathen Rome. *Divus*, he may be assured, has no place among the titles of an English king. Whether used as a substantive or an adjective, whether translated "god" or "saint," "godlike" or "saintly," it is, and has been, foreign alike to our religious and our political instincts. We have long known, and constantly affirmed, that the study of classical Latin, when unmellowed by that of the later ages and other tongues, forms of which are yet spoken, has a tendency to make men see the plainest things in modern history through heathen spectacles; but we never came upon so comic a proof of our contention as this with which Capt. Twyford has favoured us. Here it is evident that a false notion of what ought to be has led to a misreading of what is. The word is assuredly not "Divi" at all, but "Dni," the well-known contraction for "Domini."

Capt. Twyford has a grotesquely inaccurate notion of what our predecessors in this island were like before the coming of the Roman legions. Arrangement is not his

strong point. We do not find his views on a given subject in one place. He evidently labours under the impression that the Britons were mere savages; he thinks that they commonly stained their bodies with woad, not as a battle ornament only, but as an ordinary practice. We are aware there is some evidence for this, but it is probably a mistake; and, if true, it is no certain index that they were extremely barbarous. He admits that it is not proved that the Britons ate human flesh, but is inclined to think that they did. These are his words:—

"The Zulu appears to be as civilised as the Briton was previous to the time the Roman met him, or as the Maori in 1848; while it is not proved that the two first ever were cannibals, yet may it not have been so with tribes having many other points in common? They all dressed much alike."

It is useless to reason with a gentleman whose knowledge of anthropology is so limited that he can write in a fashion which reminds one of those lesser lights which illuminated the Society of Antiquaries in its earliest youth. Cannibalism is a subject on which Capt. Twyford is fond of expatiating. The style in which he thinks it pleasant to write about a disgusting subject is neither scientific nor amusing. A good part of the book is taken up with discussions on vagrancy and the punishment of crime, which have very little relation to York or persons and things connected therewith. We have, however, towards the end some very slight sketches of notorious Yorkshire criminals. It seems that a certain Mary Bateman was hanged at York in 1809 for murder, and that, "in compliance with a custom then prevalent in Yorkshire, her skin was tanned and distributed in small pieces to various applicants." Were these horrible relics, one would like to ask, given away to be used as charms?

Except so far as the criminal biographies are concerned, we do not think that we have come upon a single new fact relating to York or its castle. New things of other sorts there are in great plenty. We are told, for instance, that lords-lieutenant have existed from the time of Alfred; that the English Court of Chancery was instituted in 606; that the University of Cambridge was founded in 644; that churches were first built in the Gothic style in 1005; and that the Whig and Tory parties were formed in 1621.

We feel that it is due to our readers that we should make some apology for treating this book at a length so disproportioned to its merits. But every work of this kind, it is to be feared, blocks the way, and hinders some really good book on local history being written. York is a city with a most interesting past, and we know there are those who are capable of treating it as it deserves. It is therefore with no little sorrow that we find the ground occupied for a season by such productions as this.

EDWARD PEACOCK.

*English Literature in the Eighteenth Century.*

By T. S. Perry. (New York: Harpers; London: Sampson Low.)

No one who is familiar with Mr. Perry's literary papers in American Reviews, nor even

anyone who happened to read the very thoughtful and well-expressed note on American humour which he contributed a little while ago to the *St. James's Gazette*, will take up without interest a volume by him on English literature. In his Preface, Mr. Perry ranges himself at once on the right side in criticism, though we can scarcely approve his selection of Mrs. Oliphant as the champion on the wrong, whose shield he touches. A lady, even if she is not the author of many very pleasant novels, has a full right to say that "Every poet is a new miracle; something created, no growth developed out of precedent poets," &c. But it is surely unnecessary to take such utterances as the text of a serious discourse. Mr. Perry might have found a more appropriate "dependence," in the duelling sense, in Mr. Matthew Arnold's depreciation of "the historic estimate." But the chivalry of the nobler sort of American is well known, and it is well exhibited in this courteous exaggeration of Mrs. Oliphant's place among critics. That Mr. Perry is right in his protest against her theory can hardly be doubted by anyone whose conception of criticism is not limited either to the enunciation of stimulating and majestic paradoxes, or else to the expression of his own personal delights and sensations. From the point of view of the mere literary consumer, the history of his literary food, or his literary stimulant, is of course immaterial.

Mr. Perry, then, following the right road, as we hold, has endeavoured to show the interdependence and connexion of the authors of the period of which he treats, rather than simply to expatiate on their individual merits. But we are inclined to think that he has hampered himself unnecessarily in pursuing this road. In the first place (to vary the metaphor) he has made far too wide a sweep of his critical net in order to get together subjects of comparison. Not only does he, in fact, begin his eighteenth century at the Restoration (which, except for the purpose of a mere verbal *chicane* as to title, cannot well be quarrelled with), and give a minute account of Dryden, Otway, and their contemporaries, but he must needs go "back of" (as his countrymen would say) Restoration literature itself. When he comes to the unities he takes us back to Trissino and Mairet; in dealing with satire we have an elaborate discussion of Hall and Donne; nay, the reforms of the Pleiade, the earliest beginnings of the Spanish picaresque romance, and other things belonging not to the eighteenth century, nor to the seventeenth, receive attention. We are not at all sorry to hear what Mr. Perry has to say on these subjects. Here and there we differ with him in opinion, and here and there we seem to catch him tripping in fact; but that is nothing. The point is that in this liberty of digressing he does injustice to his own powers of exposition of his particular theme, and, moreover, gives occasion to the opponents of the historic estimate to blaspheme. *Passons au déluge* is as sound a caution for the man of letters as for others. If we are to show how all the plants of the eighteenth century are due to seeds of the seventeenth, we must show how the plants of the seventeenth have been fostered by the Renaissance, and how

the Renaissance found kindly soil and heat in the literature of the Middle Ages. The only possible result must be that, as happens here, the subject proper is unduly squeezed out by its own genealogy, and that that genealogy is given in a way not too satisfactory.

We have yet another grief against Mr. Perry which can only be advanced, by the present reviewer at least, with a certain feeling of ungraciousness. Mr. Perry is, to our thinking, far too lavish of the opinions of contemporary critics. This is a growing evil, and it has reached its climax in the work of some French writers. No doubt when an idea has been absolutely suggested by one critic to another it is right that the second should make acknowledgment; no doubt, also, second-hand information on points of fact (such as that which Mr. Perry very properly here acknowledges to that invaluable storehouse M. Alexandre Beljame's *Le Public et les Hommes de Lettres en Angleterre*) likewise demands recognition. But to maintain criticism at the height of an original department of literature, or, if it has not yet reached that position, to enable it to attain it, it is absolutely necessary that each critic should read for himself, think for himself, and speak for himself as much as possible. Nothing ought to be more shunned than the taking up of a mere scholastic or scholastic position, in which the critic simply cites authorities and consults leading cases. There is, let it be repeated, a growing tendency to do this; and, however pleasant it may be for one writer to see his name or his writings cited by another, no one who cares more for literature than for literary notoriety can fail to regret the growth.

We perceive, on looking back, that we have rather cursed Mr. Perry than blessed him, which was, and is, by no means our intention. His book is very decidedly superior to the average of critical volumes. It is full of useful information, animated with an evident love of literature; and, when the author allows himself to speak in his own person, it shows that he can think good criticism and write good English. On the earlier eighteenth century, especially, Mr. Perry speaks with exact information, and co-ordinates his facts and inferences with great skill. Except the undue delay in directly attacking the subject, which may be partly due to the fact that the book seems originally to have been delivered as lectures—a form always tempting to diffuseness and digression—the defects which we have noted appear to be chiefly due to excessive modesty and to a scrupulous desire to obey the dictates of distributive justice. These are things with which it is hardly right to quarrel.

GEORGE SAINTSBURY.

*A Narrative of the Boer War: its Causes and Results.* By Thomas Fortescue Carter. (Remington.)

THE author of this book is well acquainted with his subject. He writes from a colonial point of view, and exposes with an unsparing hand all our mistakes in our dealings with the Transvaal. Indeed, almost the only public man who does not come under his lash is Sir Evelyn Wood. We are far from saying

he is unjust, but certainly his book is very unpleasant reading for all who value the honour of their country. We can hardly suppose that many will go through the whole of his 574 pages of closely printed matter, which are stuffed too full of quotations and public documents. These last might with advantage have been relegated to an appendix.

The earlier part of the book treats of the well-worn subject of the annexation of the Transvaal and the breaking out of the War of Independence. Mr. Carter takes a favourable view of the acts of Sir Theophilus Shepstone, and it was not until he was called away that agitation for the revision of the annexation really began. We must entirely disagree with Mr. Carter's assertion that "the cause of the annexation was England's historical greed of territory, especially rich territory." We have always maintained that the annexation was a mistake, and a grievous one; but that Lord Carnarvon was influenced by any base motive we believe to be entirely untrue, however much he may have been led away by the chimera of a South African confederation, or deceived by the misrepresentations of interested parties. Mr. Carter agrees with other writers that if the promises made at the time of the annexation by Sir T. Shepstone had been fulfilled the late disastrous war would never have happened. One may well wonder why these promises were disregarded by the Government at home? Was it that they were ill-advised, or that they never troubled themselves on the subject? Mr. Carter points out the true cause of the hatred of the Boers for the English—namely, that they cannot do without the forced labour of the Kaffirs. He is almost cruel in his exposure of the ignorance and tergiversation of English statesmen and officials, and quotes the many unfortunate declarations of Mr. Gladstone, Lord Wolsley, and others, which doubtless they now wish forgotten. According to the author, the Boers disliked Sir Bartle Frere, but hated Lord Wolsley ten times more than they did Sir Bartle; and for Sir Owen Lanyon their detestation increased daily. With Sir Evelyn Wood, on the contrary,

"the Boer leaders fell in love from the very first, and did not conceal their admiration of the man who was firm as a rock up to the utmost limit allowed him, and who was at the same time courteous, affable, good-natured, and entertaining."

What a pity that he was not sent among them earlier!

We would recommend readers to begin the book at the second part, entitled "The Battlefields." This part is exceedingly well done; and the author shines in his account of the battles, especially those of the Ingogo heights and the Majuba Hill, at both of which he was present as a newspaper correspondent. These actions are so well described that they are perfectly intelligible to a civilian; and we hope it is not presumptuous to add that, even to a civilian, the astounding blunders which caused our defeats are equally apparent. There was the usual underrating of the enemy. When our men reached the top of the Majuba, they were so confident of success that they considered the Boers at their mercy, that they would be completely

taken by surprise, and thoroughly discomfited. They even pitied the miserable fate in store for their enemies. It is clear that there was no lack of ammunition on that fatal day, though our soldiers did not make the use they should of it. The writer's narrow escapes after the action are graphically told, and when he surrendered to the Boers he was treated with humanity. He never heard an offensive expression; there was no boasting, no bragging or exultation at their victory.

That the Boers have won their freedom by hard fighting is incontestable. Had they not been successful in battle the Transvaal would still be under the British flag. What Mr. Carter says is too true.

"Force of arms, not force of oratory, or the righteousness of their cause, has given them what they wished for; because this Imperial Government would never have listened to the story of Boer wrongs; it would never have discovered that there was any righteousness in their cause unless the sordid question of pounds, shillings, and pence necessary to subjugate and hold in subjection this people had gained for them a hearing, and carried conviction to a quarter where pounds, shillings, and pence are held in no light esteem."

It is pleasant to turn from the humiliating story of our defeats to the remarkable skill and endurance shown in the defence of so many garrisons which held out against the Boers all through the war. Of each of them Mr. Carter gives an account. For the most part they were insignificant places, unfurnished with real fortifications, ill-manned and ill-supplied; yet in all officers were found equal to the emergency. The defence of Standerton by Major Montague and of Lydenberg by young Lieut. Long are especially remarkable. One would be glad to know what recognition of their services and ability these and others have received from Government. It is to be feared that services rendered in a losing cause are more likely to be forgotten than remembered.

WILLIAM WICKHAM.

*Histoire de Charles VII.* Par G. du Fresne de Beaucourt. Tome II.—"Le Roi de Bourges," 1422-35. (Paris: Librairie de la Société bibliographique.)

THE second volume of M. de Beaucourt's History of Charles VII. increases our respect for his thoroughness and our regret at the defects of his method. His work is a monument of patient industry; but he has set himself the task of writing a History of Charles VII., not of France under Charles VII. The result is that he is beset with difficulties, and is arbitrary in his choice of what he selects to tell and what to omit. In this volume of 650 pages, dealing with a period of eleven years, there are only fifty-four pages devoted to Jeanne Darc. Even then M. de Beaucourt is not considering Jeanne Darc and her work for France, but simply her relations to the King. He is only labouring to acquit Charles VII. of the charge of deserting her and leaving her to her enemies. It is true that he does this by pleading Charles VII.'s helplessness; and he tries to show, on inadequate evidence, that Charles was deeply conscious of his debt towards Jeanne and bitterly regretted her loss, though

he was unable to help her. About Jeanne Darc herself M. de Beaucourt seems to waver in his view. He holds that after the coronation at Rheims Jeanne's voices ceased; her inspiration was thenceforth at an end, and she continued her military career at her own risk, without any heavenly warrant. He protests against confounding the inspiration of Jeanne with her zeal; but when he comes to her death he says: "C'était sa destinée; il fallait qu'elle souffrit!" Sa mission d'en bas se terminait à Rheims, mais sa mission d'en haut devait s'accomplir à Rouen." It is not, however, for the settlement of psychological problems that we need refer to M. de Beaucourt's pages. His book is written to rehabilitate Charles VII., but he does so only by pleading at every turn that the young King was a helpless puppet in the hands of others. This is hardly a plea which will establish Charles VII. as a hero.

The great value of M. de Beaucourt's work lies in the care with which he has mastered masses of documents and has given us their contents. He throws a new light on the intrigues of Richemont and La Trémoille; he illustrates to the full the lawlessness and self-seeking of the barons. But his chapters on the diplomacy of Charles VII. are a contribution to the history of the fourteenth century. They throw much light on the relations between France and Scotland, and on the causes of the decline of the English power in France. They illustrate the political attitude of Pope Martin V. and the character of the Emperor Sigismund. The story of the Congress of Arras is told with a fullness of detail which makes it familiar to the reader. M. de Beaucourt has put together with skill and care the contents of a vast number of documents, but he feels little interest in anything that lies outside his immediate subject. On p. 339 he has been thinking of very modern history when he speaks of "Jane Beaufort, niece of the Cardinal of Westminster;" and on p. 537 he calls the Cardinal "Thomas Beaufort."

The work is valuable as a summary of State papers, but fails in the power of conception and arrangement which is necessary to weave a mass of material into a History.

M. CREIGHTON

*The Prophecies of Isaiah: a New Translation, with Commentary and Appendices.* By the Rev. T. K. Cheyne. Second Edition. Vol. II. (Kegan Paul, Trench & Co.)

AFTER a short time a new edition of Mr. Cheyne's work on Isaiah has been called for. The author is almost less to be congratulated on this fact than is the reading public. It shows that there are at present in England many persons interested in Biblical studies who are ready to welcome any work that throws a true light on the Old Testament, and are able to appreciate a really good book. The qualities of Mr. Cheyne's Commentary would make it a good book in any language, or almost in any condition of Biblical learning. It is perspicuous without being superficial, and terse without the omission of anything of importance. It is suggestive rather than exhaustive; the remarks, though brief, coming

from a mind perfectly familiar with the prophecies, always cast a light beyond themselves. The translation is suggestive of much which the notes do not expressly touch upon, and is often felicitous. A great deal of critical matter is crowded into the unpretending references to modern scholars which are placed between the translation and the notes; and the Biblical references, though not very numerous, are pertinent and often very instructive. The author advises his younger readers to turn these up; there are few readers, however advanced, by whom this labour will not be found remunerative. Though the author did not design his work primarily for Hebrew scholars, he has given in his "Critical Notes" and "Last Words" a pretty full discussion of all the difficult passages in the original. He has in this way made his work very complete; and the abundant references to modern writers on Isaiah, and to ancient records which illustrate his prophecies, lay before the reader almost all the information that he requires, and very much which he could himself have gathered only with great labour and cost.

Perhaps to scholars Mr. Cheyne's first volume will appear the most successful. The earlier part of the Book of Isaiah consists either of isolated pieces or of small groups of discourses, the delivery of which was occasioned by important historical movements, and which are susceptible of illustration from contemporary records; and Mr. Cheyne shows at his best when he is bringing side-lights to bear upon the Prophet's words from many quarters. In this department an important contribution has been made in the Commentary to the exposition of the Prophet. The second part of the prophetic book is more closely connected, and requires different treatment. History casts little light on these later prophecies. Indeed, the newer discoveries regarding Cyrus seem to obscure the light formerly supposed to exist, and we are thrown back upon the prophecies themselves to find the key to their meaning. Perhaps the author has carried former methods too much into his treatment of this part of the prophetic book. His passion for grouping and dismembering occasionally makes him overlook or neglect links of connexion which appear obvious. Nevertheless, particularly to those who are not professional students, his second volume will be full of interest. The essays at the end will be found suggestive and enlightening. The aim set before himself by the author, which has been rather to state questions than to resolve them in the meantime, gives these essays in their present form a somewhat unfinished, inconclusive look. But a future work which we are led to expect will supplement them, and give the author's final convictions upon the questions raised. Such a work is required for another reason. The author's critical method needs justification, or at least support, from other evidence than mere subjective impressions. The principle with which he starts—that the present form of the text of Old Testament books is the result of very complex operations, in which many operators, at periods considerably apart, were engaged—is a principle difficult to keep in its right place. The function of such a principle,

admitting it to be true, can be no more than to clear the ground and give the critic elbow-room by creating beforehand a possibility; the slightest weight of a positive kind must be rigidly denied to it, and each case must be supported by distinct and independent evidence. The somewhat promiscuous way in which Mr. Cheyne throws out suppositions with regard to passages—that they are "after-thoughts," or have been worked up by the Prophet's disciples, or supplemented by the Sopherim, or that they have been misplaced—leads us to doubt whether he has worked his principle under the necessary restrictions. Evidence, at all events, will not be superfluous.

Though this work is not professedly a critical one, its grain is critical; and its criticism, though formally kept in the background, exercises a dominating influence on the exegesis. What the second half of Isaiah requires is exposition rather than criticism. In spite of the fact that large critical questions rise in connexion with it, there is no part of Scripture to the understanding of which criticism contributes so little. The piece is almost a pure theological projection, as much so as the Book of Job, for there are theological passages even in the Bible. It is a structure built out of the idea that Jehovah, God of Israel, is the true and only God. We may believe that the remarkable developments of this idea given in the Book must belong to a particular era of the history of Israel, but our opinion on this point will not materially affect our understanding of those developments themselves. It is possible that earlier pieces may have been embodied by the Prophet in his own work, though proof of this in regard to chap. liii. or any other passage where the Servant is spoken of is not forthcoming; but, if so, these pieces are now integral parts of the present structure, and anterior critical questions have little relevancy. It may be true that the passage has not been composed all at one gush, though the wide break which Mr. Cheyne makes at chap. xlviii. is not justified by anything either before or after; and his statement—true in words merely—that we have no more of Babylon after this (p. 10) is happily corrected by many subsequent remarks, as it could not fail to be (see on chap. li. 13, p. 32; on lii. 5, p. 36; and on lii. 11, p. 38). The Prophet's point of view in the first nine chapters remains the same in the chapters that follow. Towards the end of the piece the cohesion may be looser, and there may even be foreign elements here, though proof is wanting. All this, if true, finds its parallel in Job, the bulk of which, nevertheless, forms a unity, and is the exhibition of an idea; and it is beyond dispute that the bulk of these twenty-seven chapters forms a unity and is pervaded by a very distinct group of conceptions. And we should have been extremely grateful to Mr. Cheyne if, setting aside his critical assaying balance for a little, and consigning "after-thoughts" and all their tribe to limbo (or, as we should have preferred, to perdition), he had given us the result of a close pursuit of these conceptions from beginning to end of the piece.

In this connexion, two essays in vol. ii. are

of great interest—that on Job and that on the Servant of the Lord. The latter describes a change of critical view on the author's part, but it has a deeper interest than this. The change of view, however, has exercised a material influence on the exegesis of the prophecy as a whole. Mr. Cheyne now thinks that the Servant in chaps. xlii., xlix., and liii. was to the mind of the Prophet an historical person in the future. He argues that these passages, where the Prophet's conception has reached its climax, ought to be our starting-point when enquiring who the Servant was in the Prophet's mind. This would be a good rule if these passages were free from ambiguity; but, as they are not, it is safest to start from the plain passage, chap. xli. Here the Servant is undeniably Israel. And we may safely say that he is never anything but Israel, though it is possible that the Prophet may have reduced Israel to an individual. This is unlikely. The alternative is that the Servant is idealised and personified—the true Israel in Babylon as distinct from the scattered fragments elsewhere. The only positive argument for the personal theory is that the descriptions in the chapters just named are plainly personal. But this is a weak argument. Who will undertake to distinguish between a person and a personification? This Prophet is fond of personification, and we should take his Zion and Jerusalem for persons if we did not know otherwise. It is not such descriptions in themselves that will decide anything, but the substratum which occasionally shines through them. Now, this even in chaps. xlix. and liii. seems National—for example, when the Servant is called the servant of *rulers*, and when it is said that *kings* shall shut their mouths and stand up before him. The difficulties in the way of the personal theory meet one at every step. If the Servant be an historical person of the future to the Prophet, where is this future to be placed? According to the representations of the Prophet, the sorrows of the Exile are Israel's last sorrows, and the Restoration is the initiation of final felicity (chap. lx.). There is no place for the sufferings of the Servant after this. The Prophet's horizon is bounded by the Restoration, and the great drama of Israel's redemption is enacted on his side of that event, not on our side of it. Such is the construction which Delitzsch and most modern writers put on the Prophet's conceptions, and it is hard to see how another can be supported. A remark, vol. i., p. 237, leaves us in doubt how Mr. Cheyne stands in regard to this point. It may be safely said that if this Prophet was himself a contemporary of the Exile he cannot have meant by the Servant an individual.

Mr. Cheyne's theory leads him to some rather violent measures. In chap. xlix., where the Servant is an individual if he is one anywhere, he is called *Israel*. This has always been a rook of offence to the supporters of the personal theory. Mr. Cheyne's solution is perhaps as good as any can be—it is, that the use of the word Israel is an "inconsistency" on the Prophet's part, who is halting between two conceptions of the Servant, the national and the individual. Curious that the Prophet, having safely effected this transition in chap. xlii., should run aground in

chap. xlix. Another intractable passage (chap. li. 16) "originally stood in some other context" (p. 33). Certainly a passing remark on chap. xlix. illustrates better than anything the influence of the author's idea of the *Servant* on his exegesis. He says (p. 10), "The *Servant*, wearied with the infatuated opposition of the majority of the Israelites, turns to the countries and peoples afar off" (chap. xlix. 1). Surely this is not the Prophet's idea? Whoever the *Servant* is, does he not reach the nations through Israel redeemed? and is it not *because* God has redeemed his servant Jacob that the *Servant* turns to the Gentiles? Now God's purpose with the *Servant* begins to concern them. Can it be accidental that the two most splendid delineations of the *Servant*, where he comes in contact with the "isles" (chap. xlix.) and "kings" (chap. lii. 13, *sqq.*), both immediately follow passages which are graphic pictures of God's final redemption of Israel his people, and his leading them out of Babylon (chaps. xlviii. 20 and lii. 11)? And when the Prophet says of the *Servant* that he shall be the light of the Gentiles (chaps. xlii. 6, xlix. 6), and then says, in his final picture of Israel Restored, "Arise, shine . . . and the Gentiles shall come to thy light" (chap. lx.), is there no connexion between the two statements? and is not the connexion that of prophecy and fulfilment?

The materials for answering all the questions regarding this prophecy are to be found within itself; and, though some of Mr. Cheyne's positions are liable to dispute, his work is a very suggestive and instructive contribution to its exposition.

A. B. DAVIDSON.

#### SOME FRENCH BOOKS.

*Essais sur la Littérature anglaise.* Par Emile Montégut. (Hachette.) M. Emile Montégut is now, we think, the *doyen* of French literary criticism of the higher order; and in his case the claims of seniority coincide with those of merit. Subtler and more appreciative than M. Scherer, less crotchety and flighty than M. Taine, he hardly yields to the first in clearness or to the second in literary faculty. But we do not think that he is altogether at his best in these *Essais sur la Littérature anglaise*. The subjects (embracing an essay on English character which is in effect a review of Emerson's *English Traits*; an essay on English literary history which is in effect a review of M. Taine; a paper on Sterne, one on Lord Herbert of Cherbury, and some minor ones on Shakespeare) are sufficiently varied, but no one seems to bring out the best points of M. Montégut's criticism. These are undoubtedly his feeling for poetry as poetry (the point in which M. Scherer is weakest), his appreciation of individual character (the point in which M. Taine is weakest), and a certain faculty of critical divination and construction of which, though M. Renan has it fitfully and within a narrow range, M. Montégut alone among French critics is now master. The little papers on Shakespeare show these points best, but they are slight and occasionally rather fanciful. The Sterne and the Herbert are good, but not specially characteristic, and the longer essays on Emerson and M. Taine are neither specially characteristic nor very good—that is to say, when one remembers how M. Montégut has treated such subjects as Goethe and Boccaccio. The book would be an admirable one for anyone else to have written, but it is not quite up to M. Montégut's mark.

*M. Littré et la Positivisme.* Par E. Caro. (Hachette.) Littré's death in 1881 was followed by a crowd of notices in the newspapers and magazines, of which, perhaps, the most remarkable were those by M. Durand-Gréville in the *Nouvelle Revue*, M. Godefroy in the *Lettres chrétiennes*, and M. Caro in the *Revue des Deux-Mondes*. The latter has now published his articles in a volume which deserves some notice. The first chapter, which is devoted to Littré's life, and the gradual emancipation of his ideas from the later influence of Comte, is an excellent account of the life of the great *savant*. It marks clearly the stages in his mental history, and deduces them from the autobiographical remarks scattered here and there in his Prefaces and more especially in his retraction published in the last edition of his book, *Conservation, Révolution et Positivisme*, which was originally written in the full fervour of his admiration for Comte. The latter part of M. Caro's work contains an examination of Mr. Mallock's *Is Life Worth Living?* It seems that this *tour de force* is seriously considered in France; and, after being twice translated, it is thought worthy of examination by an eminent lecturer, and a member of the Académie française, like M. Caro. A notable point in the book is the author's acquaintance with the doctrines of such English thinkers as Mr. Herbert Spencer and Harriet Martineau, who are far better appreciated in France, and indeed on the whole Continent, than in their own country.

*Contes grotesques.* Par Edgar Poe. Traduction Emile Hennequin. (Ollendorff.) Had this volume contained nothing but translation it would not have called for notice on our part; but the author has prefaced his book with the most original biography of Edgar Poe which has yet appeared in France. M. Hennequin, in his anxiety to place a full and faithful memoir of the famous American writer before his countrymen, confines his lengthy Preface almost entirely to personal facts. Nevertheless, he has not omitted to analyse with the hand of a master the impelling motives of Poe's life and the idiosyncrasies of his mind. Frankly acknowledging the indebtedness of Frenchmen to Baudelaire for his masterly translation of much of Poe's work, M. Hennequin proceeds to show how Baudelaire's estimate of the poet's character was radically wrong, owing to his conclusions having been based upon false premises. M. Hennequin himself makes some happy points with respect to various characteristics of Poe which have not as yet been noticed—such, for instance, as his resemblance to his own "Man of the Crowd" in an inability to be alone, the motif, in all probability, of many of his so-called "amours." But space forbids any lengthy criticism of this thoughtful "Vie d'Edgar Poe," the material for which its author gracefully acknowledges to have been largely derived from Mr. Ingram's exhaustive biography of the poet. The translations, it should be stated, are of writings not previously made French. M. Odilon Redon contributes a characteristic vignette to the volume.

*Les Orateurs de l'Assemblée Constituante.* Par F. A. Aulard. (Hachette.) This elaborate work is a most valuable contribution to the history of the Constituent Assembly, certainly the most valuable which has appeared for many years; and it ought to be studied if only as a counterpoise to the statements of M. Taine in *La Révolution*. Under the pretext of studying the oratory of the Assembly, M. Aulard has really analysed the politics of every group, and of every famous individual, with citations from their speeches. The most important part of the book is the hundred pages devoted to Mirabeau, where will be found for the first time a table of Mirabeau's most famous speeches, and the

names of the individuals who wrote them for him. Perhaps even more interesting to the general reader is the chapter on Cazales. This most eloquent Royalist has hitherto been greatly neglected, and his name is better known than his speeches or his opinions. M. Aulard has shown his ability to treat of this forgotten orator, and it is greatly to be regretted that the family of Cazales refused to give him access to his papers. M. Aulard has been continuing his studies on the oratory of the Revolution in some remarkable articles on the eloquence of Danton in *La Révolution française*, which we hope will appear at no distant date as part of a book on the orators of the Convention.

*La Révolution 1789-1882*, par Charles d'Héricault (Dumoulin), is to be considered rather as a volume of illustrations than as history. The letterpress, it may be said at once, is quite worthless to the student, as the authors are not so much lovers of the *ancien régime* as haters of every act of every group of revolutionaries, and of all their opinions. Their chief authority is M. Taine, and their arguments are abuse of the Revolution and eulogies of the King, Queen, noblesse, and clergy. Yet the book is a most interesting one; it is a perfect museum of reproductions of rare prints and facsimiles of important documents. It contains several beautiful lithographs of coloured pictures of all dates down to M. Mignelet's "Matin du Thermidor," exhibited in the Salon a few years ago. But the most interesting reproduction is that of a drawing of Danton by David, hitherto unengraved, which shows the master in every line, and is a worthy companion to the great painter's rapid sketch of Marie-Antoinette on her way to execution, which is well known from Challamel's *Histoire-Musée de la République française*. It is to be wished that our English publishers could imitate such illustrated Histories, and supersede the wretched wood-cuts which generally ornament their popular books.

*Les Cahiers des États-Généraux en 1789 et la Législation criminelle*, par Albert Deejardins (Pedrone-Lauriel), is rather a monograph on the law reforms demanded in 1789 than a valuable historical work. It is compiled in the German fashion, and abounds in quotations from the Cahiers, which makes it rather heavy reading. Yet it illustrates how deeply and universally the desire for law reform had spread in France, for nobility, clergy, and *tiers état* alike, relying on the researches of Montesquieu and Beccaria, demanded uniformity of law and humanity in punishment. The most interesting passages in the volume are those which analyse the legal ideas of Brissot, Marat, and Robespierre before 1789, and show how differently they acted when themselves in power. It is a book which must necessarily be consulted by anyone who wishes to understand the motives which directed some of the most durable work of the Constituent Assembly, and prepared the way for the legal reforms of Napoleon.

*Les Essais de Lord Macaulay.* Par Paul Oursel. (Hachette.) An example of M. Oursel's method of treatment will give a better account of his book than anything else. He is dealing with Macaulay's well-known essay on Southey's *Colloquies*, and he starts by apparently giving his readers an account of Southey's position and political views; but a close inspection shows that in doing this he is merely abstracting Macaulay's own account of his adversary. Now this would be dangerous in any case, considering Macaulay's idiosyncrasy, but in writing for French readers who probably know nothing whatever of Southey, except (if they are better read than ordinary) that Byron made fun of him, it is very dangerous

indeed. The same fault, that of in effect giving Macaulay's views when he seems to be speaking from his own place, injures M. Oursel's book throughout. He has, however, evidently taken a great deal of pains to familiarise himself with his immediate subject, and his work is well arranged and well written.

*Histoire de la Littérature anglaise.* Par Augustin Filon. (Hachette.) M. Augustin Filon appears to have taken a great deal of trouble about the History of English Literature which he has contributed to the series already containing (to name no others) M. Demogot's well-known and excellent manual of French literature. His accounts of the greater authors are extensive and careful, showing, at least, that he has taken great pains to consult what other Frenchmen have said about them. We wish that we could feel more certain than we do that this is a good way of securing accuracy. When we come to the minors another disagreeable uncertainty begins to weigh on us. The first requisite of every historian of literature is that he shall at any rate read, if not judge, for himself. We should ourselves say that he must both read and judge; but, beyond doubt, if he chooses to subordinate his own judgment, he must at least correct the judgment of others by it. Has M. Filon done this? Perhaps he has, but, if so, he has done his utmost to conceal the traces of the process. What is to be thought of a writer who tells us that Herrick "s'approprie les nouvelles formes poétiques [it is exactly what Herrick does not do] mais c'est pour y adapter le plus souvent les contes les traditions et les légendes de la vieille Angleterre." What Herrick is this, and where on earth did M. Filon find him? Again, what a singular critic of English literature is he who can discover in the *Urn-Burial* nothing but a "dissertation baroque," in *Religio Medici* nothing but a "pot-pourri à la Montaigne," without adding one single word on Browne's unsurpassed splendour of style at his best? The extraordinary paragraph which precedes the notice of Browne forces us to conclude that M. Filon thinks Walton's *Angler* to be a poem, for he informs us that Isaac "se croit poète," and that "tout le monde l'a cru," and that he "introduces in verse persons who discuss the claims of the king and the Parliament and the rival merits of hunting and fishing." Yet again, M. Filon is much pleased with "l'aimable ballade de Sir Richard Lovelace," which the reader may be surprised to hear, is nothing but our old friend the "Ballad on a Wedding." The Restoration drama is a subject on which English writers themselves too frequently make muddles; but M. Filon, disdaining the vulgar confusion which ranks Congreve with Wycherley, tells us that the former "lived long enough to bend his supple talent to a degree of politeness which the contemporaries of the two Stuarts and William had not attained, and so deserved the applause of the readers of Addison." Certainly he lived long enough, but few readers of the phrase would guess that Congreve's last play is dated years before the death of William. Unluckily, it is scarcely possible to open a single page of M. Filon's book without coming across these blunders, every one of which is incompatible with the barest first-hand acquaintance with the works and lives of his subjects. In comparison with them it is indifferent that M. Filon persists in calling Lamb's sister "Mary Ann," though it is not uncharacteristic.

*Bibliographie des Œuvres de Beaumarchais.* Par H. Cordier. (Quantin.) This is an excellent addition to the numerous careful and handsome bibliographic monographs which have been recently produced by French scholars. It has for frontispiece an exceedingly

handsome portrait after Coochin, and the letter-press appears to be both very full and very conscientious.

#### CURRENT LITERATURE.

MR. R. H. SHEPHERD has now ready for delivery to subscribers his *Bibliography of Swinburne*, being a neat pamphlet of forty pages. It contains 151 entries, extending over a period of just twenty-five years. The first entry is a table of contents of the only three numbers published of the Oxford *Undergraduate Papers* (December 1857 to April 1858), among which Mr. Shepherd is able to assign only a fragment on "Queen Iselt;" and it ends with the recently issued *Century of Roundels*. Mr. Shepherd's address is 5 Bramerton Street, King's Road, Chelsea.

*Spenser for Home and School.* Selected and Arranged, with Notes, by Lucy Harrison. (Bentley.) This must be, we fancy, the first attempt to introduce the whole field of Spenser's poetry to the general public. While giving Miss Harrison all praise for the enterprise—for the execution not less than for the design—we must also say that she has attempted too much. In the first place, the book, though pleasant in outward guise, is too closely packed with print. We could well have spared some of the selections from "The Faerie Queene," or even the whole of "Mother Hubbard's Tale," in order to allow more room for the notes at the end, which are so compressed as to be little better than a glossary. Above all, why is the "Epithalamium" altogether omitted? And why is the name of the present Dean of Winchester misspelt more than once? However, books of this sort are so welcome that we feel ashamed of ourselves for having thus treated it in the spirit of fault-finding. It deserves a wider circulation than we fear it will get.

*The Witness of God and Faith: Two Lay Sermons* by the late T. H. Green. With an Introductory Notice by the late Arnold Toynbee. (Longmans.) To all Oxford men of the last dozen years this title-page will tell its own story. For the benefit of others, it may be as well to say that they will here find the most characteristic evidences both of the late Prof. Green's intellectual power and of the means by which that power influenced his pupils. One of these pupils was Arnold Toynbee; and a melancholy interest attaches to the fact that he himself did not survive to see through the press what his teacher had entrusted to him in his last illness.

THE new volume which Messrs. George Bell and Sons have added to their edition of Emerson's Works (being vol. iii.) contains—first, the two series of essays collected under the headings of "Society and Solitude" and "Letters and Social Aims," together with the poems entitled "May-Day and other Pieces;" and, secondly, a number of miscellaneous papers, written at various times and never before reprinted, and eight additional poems. The total amount of new matter amounts to a little more than one hundred pages. The most interesting, perhaps, are the papers on Milton, Landor, Thoreau, Carlyle's *Past and Present*, and Plutarch.

THE edition of Shakspeare in the "Parchment Library" (Kegan Paul, Trench and Co.) has now reached its tenth volume, which contains "Macbeth," "Hamlet," and "King Lear." The two last volumes in the "Riverside Edition" of Hawthorne's works, issued by the same publishers, are devoted to "Our Old Home" and "Passages from the English Note-Books." We have seldom been able to praise the etchings in this edition, but the view of "St. Paul's" in vol. viii. seems to us as much above the average as that of "A London Suburb" in vol. vii. is below it.

THE latest addition to the attractive series of Mr. W. D. Howells' works which Mr. David Douglas is publishing at Edinburgh contains "Out of the Question" and "At the Sign of the Savage."

IN the ACADEMY of July 28 Mr. C. S. Ward's *Eastern Counties* in the "Thorough Guide" series (Dulau) was shortly noticed. We have since tested it by actual use, and have been pleased to find that our favourable opinion has been entirely confirmed. For the needs of an ordinary walking tourist no Guides are equal to these.

MESSRS. FIELD AND TUNE have sent us a plain and elegant reprint of Jeremy Taylor's sermon on "The Marriage Ring," with a Preface by Mr. J. A. Kerr.

#### NOTES AND NEWS.

WITH reference to the "Shapira MSS. of Deuteronomy," we must refer our readers to the letter of M. Clermont-Ganneau in the *Times* of August 21, which apparently is to remain unanswered. That letter is as decisive, from the point of view of extrinsic evidence, as Dr. Neubauer's letters in our own columns are regarding internal testimony. Now that the bubble has been pricked, we cannot refrain from expressing our astonishment at the attention which has been given to such a matter in quarters where more discernment—or, at least, more caution—might have been expected.

WE hear that Mr. Henry Irving hopes to protect himself against the "interviewer" during his American tour by having an authorised interviewer of his own. Some little while ago there appeared in *Harper's Magazine* an article on Mr. Irving, by his friend Mr. Joseph Hatton, giving Mr. Irving's opinions of his audiences and some entertaining incidents of his career in dialogue form. This article supplies the precedent which Mr. Irving has chosen for recording his own "Impressions of America," which he contemplates publishing on his return to England next year. Mr. Irving will speak the book—as we understand; Mr. Joseph Hatton will write it.

MR. W. J. LINTON has nearly ready for publication a large collection of English poetry, arranged on a somewhat novel plan, upon which he has been engaged for some time past in collaboration with Mr. R. H. Stoddard. It consists of five volumes, each of about three hundred pages, thus entitled: (1) Chaucer to Burns; (2) Lyrics of the Nineteenth Century; (3) Ballads and Romances; (4) Dramatic Selections; (5) Translations. In each volume the poets will be given in chronological order, with a brief biography and explanatory notes. The Prefaces are written by Mr. Stoddard, while Mr. Linton makes himself responsible for the accuracy of the text. The work is to be published this autumn at New York by Messrs. Charles Scribner's Sons; and we hope that no difficulties of copyright will prevent its being issued likewise in this country.

AS was to be anticipated, an American publisher has conceived the idea of issuing a reprint of the new edition of the *Encyclopædia Britannica*, with biographies of men who have died since the appearance of the earlier volumes. Among the new articles will be "Bagehot," by Mr. Hutton; "Lord Beaconsfield," by Mr. Keibel; "Carlyle," by Mr. Lindsay Smith; and "Emerson," by Mr. Frank B. Sanborn.

A CHANGE has taken place in the well-known firm of David Nutt, 270 Strand, by which Mr. Meno Haas will be taken into partnership by the widow of the late David Nutt and her son, Mr. Alfred Nutt. Mr. Haas has been connected with the business since 1849, and all who have

had any intercourse with him are under deep obligations to him not only for his knowledge, but also for his unfailing courtesy. The style of the firm and its financial position remain unaltered.

MR. W. J. ROLFE, the American editor of *Shakspeare*, is now on a visit to England.

A THIRD edition is now in the press of Sir Erasmus Wilson's popular and handy *History, The Egypt of the Past*, with additional illustrations, maps, and considerable augmentation of the text.

MR. SATCHELL purposes adding to the series of reprints of the *Treatyse of Fysshynge* upon which he is engaged those versions to which the names of L[eonard] M[ascall] and William Gryndall are attached, and also that which appeared in a *Jewell for Gentrie* (1614).

THE *National Review* for September will contain articles on "Colonial Policy," by Sir Bartle Frere; "Cricket," by Lord Harris; and "The Art of Preaching," by Lord Carnarvon.

MR. W. J. LOFTIE writes "About Westminster" in the forthcoming number of *Merry England*. The article contains some information not generally known about the way in which the Grosvenors won their Westminster estates; and it will be accompanied by an etching of "The Abbey by Moonlight," from the needle of Mr. Tristram Ellis.

IN the September number of the *Expositor* the writer who signs himself "Almoni Pelsoni" contributes a paper on "Miracles," in which he offers a solution of the problem to men of science, and challenges them to refute it. Miss Weld contributes a second article on the "Route of the Exodus," in which she a little recedes from the view of Canon Scarth, and lays down an itinerary of her own.

MR. POINGDESTRE CARREL, who has lately returned from a visit to Algeria, contributes to the September number of the *Bibliographer* an article on the book collections of that country.

SIR JAMES RAMSAY has continued his researches on the receipts and expenses of our early kings; and the September number of the *Antiquary* will contain an article by him on the accounts of Henry V.

UNDER the title of "A Hundred Days in Canada and New Mexico," Mr. George Jacob Holyoake is commencing a series of sketches of travel, undertaken in furtherance of the publication of a guide-book for settlers.

MR. MONCURE D. CONWAY, who recently started on a trip round the world, is writing a description of his travels for the *Glasgow Herald*.

IT is not unworthy of record that *Rab and his Friends* has now reached an issue of fifty-eight thousand.

A MEETING was held at Leeds last week, under the presidency of the mayor, of persons interested in compiling an adequate History of Yorkshire. On the motion of the Rev. R. V. Taylor, of Melbeck, a committee was appointed to confer with the Yorkshire Archaeological Society and other county bodies, with a view to furthering the scheme.

A BRASS tablet, with the following inscription, has just been placed on one of the pillars of St. Giles's Cathedral, Edinburgh, by Mr. James Gibson Craig:—

"In memory of John Craig, for many years a Dominican friar in Italy; embraced the Reformed faith, and was by the Inquisition at Rome condemned to be burnt; escaping to his native country, he became assistant to John Knox at St. Giles's, and minister of the King's household. He was author of the King's Confession or National Covenant of 1581. He died in Edinburgh in his eighty-ninth year."

MRS. HANNING, of Hamilton, Ontario, the surviving sister of Thomas Carlyle, writes to the *New York Critic* that such letters of her brother as happen to be in her possession are "not for publication."

A CORRESPONDENT of the *Revue politique et littéraire* quotes a little-known verse of the "Marseillaise," which is supposed to have been added to the song by Gen. Montesquieu, who led a French army into Savoy in 1792. It has some interest as showing that the "Marseillaise" was then regarded not only as a battle-cry, but as a watchword of Republican unity:—

"Savoisiens, peuple paisible,  
Va, ne crains rien de nos guerriers;  
Le Français est fier, mais sensible;  
Il joint l'olive à ses lauriers.  
Guerre aux châteaux, paix aux chaumières,  
Voilà désormais nos traitées;  
Loin de conquérir des cités,  
Nous cherchons des amis, des frères.  
Aux armes, etc."

WE have received but lately the *Compte-rendu* of the fourth Congress of Americanists, held at Madrid in 1881, presented to the Belgian Geographical Society in 1882 by their deputy, M. A. Bamps. The report is marked by clearness and by the absence of undue technicality. It would astonish the general reader to see how much of interest, and almost of romance, clustered round these debates. He will find here the result of the latest researches on the Norse, Irish, Breton, and Basque pre-Columbian expeditions to America. Something is told of St. Brandan's Isle and of the lost Atlantis, and still more startling are the theories of modern *savants* as to Egyptian, Greek, and Jewish occupations of America. The number of MSS. about America existing in Spain surprised the congress. One speaker mentioned upwards of one thousand unpublished maps known to him, and another reported on seventy original and unpublished works on the languages of America; and besides all this is the vast mass of more purely historical documents. The specimens given in the exhibition more than confirmed these statements. M. Bamps' wish as to the free opening of the archives at Seville is now an accomplished fact.

#### AMERICAN JOTTINGS.

MESSRS. HOUGHTON, MIFFLIN AND Co., of Boston, will publish early in September the first volume of a "Riverside Edition" of Emerson, as a companion series to the "Riverside Edition" of Hawthorne which Messrs. Kegan Paul, Trench and Co. have introduced into this country. It will consist of eleven volumes in all, two of which will contain essays, lectures, and addresses, here collected for the first time by Emerson's literary executor, Mr. J. Elliot Cabot. They will be entitled "Essays: Third Series" and "Miscellanies," the volume which before had the latter title being now called "Nature, Addresses, and Lectures." There will be two new portraits—one an etching after a drawing made on Emerson's first visit to England, the other a steel-engraving from a late photograph. An *édition de luxe* is to be printed from the same plates.

PROF. WADSWORTH, of Harvard, has compiled a genealogy of the Wadsworth family, in which he tries to show that the two poets Wordsworth and Longfellow had a common ancestor. It appears that the great-great-grandfather of Wordsworth spelt his name William "Wadsworth;" while Longfellow was descended on his mother's side from one Christopher Wadsworth, who landed at Boston in 1632. But the connexion between this William and this Christopher remains to be proved.

SOME years ago a merchant of Philadelphia began to form a collection of original prints, &c., to illustrate Dr. Doran's *Annals of the Stage*. His collection, together with a similar one formed by another amateur, ultimately passed into the hands of a certain Mr. E. R. Cope, of Germantown, who has himself devoted much time and money to the pursuit of ransacking the printshops of England and the Continent, as well as of America. At last the collection is completed to the satisfaction of its owner. It now numbers 2,300 examples, and has been bound up in thirteen handsome folio volumes. As an illustration of its exhaustive character, we may mention that the Kemble and Siddons family furnish subjects for 134 pictures, while of David Garrick and his wife there are no less than fifty-one portraits.

NOT less than five illustrated editions of Mr. Black's new novel, *Yolande*, have already been sold by Messrs. Harper in their "Franklin Square Library."

AN American publisher announces a volume of George Eliot's miscellaneous works.

AN edition of the *Waverley Novels* is now being issued in America at fifteen cents per volume, or three dollars (12s.) for the whole twenty-six, which claims to be the cheapest edition ever published.

IN the last session of the Canadian Parliament an Act was passed admitting to free postage all newspapers and periodicals despatched from the office of publication.

A NEW monthly magazine, whose title of *Shakespeareana* ought to be representative of its contents, is announced to appear at New York in November.

THE latest addition to Mr. W. M. Griswold's "Q. P." Indexes (being No. 13) is one of "articles relating to history, biography, literature, society, and travel contained in collections of essays." It consists of forty-six pages, and contains references to 799 volumes in English, French, and German. Mr. Griswold purposes to take in hand next the *Revue des Deux-Mondes*, beginning with September 1870.

THE *Critic* of August 11 prints a letter from Walt Whitman, in reply to an invitation to attend what is styled the "tercio-millennial" (i.e., one-third of a thousandth) celebration of the foundation of the city of Santa Fé, in New Mexico. It is interesting as expressing a warm recognition of the worth of the Spanish stock in North America, and also (though more hypothetically) of the aboriginal element.

THE *Literary World* of Boston thus records the results of the women's classes at Harvard:—"The work of the Harvard Annex is beginning to tell. Two of the late pupils are under engagement of marriage to former instructors, and two others have broken down in health, one having become totally blind. So that some of the first friends of the enterprise are now asking with shadowed faces: 'Whereunto will this thing grow?'"

#### SWISS JOTTINGS.

ON September 10 a conference of the Association littéraire internationale will meet at Bern to arrange the business of the general congress which is to be held later at Amsterdam. The object of the association is the union of the several States by an international treaty for the protection of literary and artistic property. The project of the treaty, which is already sketched out, aims at simplicity of statement, and contains only five articles. The congress will assemble this year for the sixth time. Victor Hugo is honorary president. A Swiss committee, with Bundesrath Droz at its head, has been formed for the reception of members attending the preliminary conference.

PROF. BITTER, of Geneva, has published a pamphlet of genealogical researches concerning his native city, in which he traces the descent of (among others) M<sup>de</sup>. de Staël. Her father, the celebrated Necker, is sometimes said to have been of English or Irish origin. But Prof. Bitter shows that the family for three generations had been settled as lawyers at Oustrin, in Prussia; and that Necker's own father had been induced to migrate to Geneva by George I. of England, for the special purpose of opening a *pension* for English boys.

DR. STRICKLER, archivist of Zürich, and the author of the best recent short History of the Swiss Confederation, is about to remove to Bern in order to devote himself to the completion of his History of the "Helvetik," which he commenced about six years ago. The mass of documents bearing on that episode in Swiss history is so immense that Dr. Strickler expects the completion of his work to occupy him for at least seven years longer.

PROF. RUDOLF RAHN, who has been engaged for the last twenty years in the study of the art-monuments of Switzerland, has just published a new series of essays and lectures, under the title of *Kunst- und Wanderstudien in der Schweiz*. They are mostly reprints of articles from the *Mittheilungen* of the Antiquarische Gesellschaft of Zürich, the *Schweizergeschichtsfreund*, the *Neujahresblatt* of the Zürich Künstlergesellschaft, and the serial published by the Historische Verein of St. Gallen. The value of the contributions of Swiss scholars to the numerous local and specialist publications of their fatherland is widely recognised in Germany; and one, and not the least, of our own living historians has made use of them. Switzerland has never been an eminently artistic land; and its two most brilliant and productive periods—St. Gallen in the ninth and tenth centuries and Basel in the time of the Renaissance and the Reformation—can hardly be claimed as definitively Swiss.

## ORIGINAL VERSE.

### NYMPHOLEPTOS.

It was in the forest-deeps,  
Where the beeches are green on high,  
And the golden sunshine sleeps,  
Shut out from the blue of the sky,  
And the mountain-brook down leaps  
That he saw the Vision, which steeps  
Men's souls in fire, till they follow,—  
And he who follows must die.

Only once—and the gleam of her eyes  
Hath kindled a light in his soul,  
More than of moons that rise,  
More than of stars that roll;  
And the brow, so holy and wise,  
And the lips, where locked sweetness lies . . .  
And he must follow, follow,  
Though he never reach the goal.

He sprang through the tangled brake,  
He tore his hands on the thorn,  
He splashed through the reeds of the lake,  
And the black night passed, and the morn  
Reddened, and found him awake.  
And the lynx, and the water-snake  
Stirred, starting at him who followed  
The trail, all weary and worn.

Where the slopes are mossy and green,  
Where the laurels bloom in the shade,  
He waited with reverent mien,  
When the noon-glory flooded the glade,  
He knelt, and waited his queen,  
To catch but her garment's sheen,  
He strained his eyes in the twilight,  
And watched, and was not afraid.

When the hemlocks were black in the sky,  
And the stars looked down on his doom,  
He followed their course on high,  
And he heard the bittern boom,

For he wandered far and nigh,  
Wherever the night-owls cry,  
And the glowing eyes of the panther  
Gleam green through the forest gloom.  
And changed and marred of face,  
He came back to the dwellings of men,  
They knew not of the grace  
That had come to him there and then,  
In the lonely forest-place;  
And they pitied his bitter case,  
Or laughed, maybe—and he left them  
To follow the track again.

And under the wide blue heaven,  
On a bare and lone hill-side  
Of splintered granite, storm-riven,  
They found him, with arms flung wide,  
As if he had vainly striven,  
Desperate and frenzy-driven,  
To clasp the feet of his Vision,  
That flashed on his sight as he died.

A. WERNER.

## THE ORIENTAL CONGRESS AT LEYDEN.

As we have already announced, the sixth international Congress of Orientalists will be held this year at Leyden, from September 10 to 15. The president of the local committee is Prof. Kuenen, who takes the place of the lamented Dozy; the vice-president, Prof. Kern; the two secretaries, Profs. de Goeje and Tiele; the treasurer, Dr. Pleyte. On this occasion the congress will distribute itself into five sections: (1) Semitic, with subdivisions for Arabic and for Assyrian; (2) Aryan; (3) African, or, more strictly, Egyptian; (4) Central Asia and the Far East; (5) Malay and Polynesian—a new section created partly because of the special interests of Holland in these regions, and partly because of the international colonial exhibition now open at Amsterdam. The official languages of the congress are Dutch, French, and Latin; but papers may also be read in English, German, and Italian. A special exhibition of MSS., books, and other objects has been formed; and the museums and libraries of Leyden will be thrown open. There will be excursions to The Hague and to Amsterdam; and the usual dinner will be held on the evening of Friday, September 14. Orientalists are admitted to the congress on payment of six florins. Both the Dutch and Belgian railway companies have made a reduction of fifty per cent. on their fares.

We understand that the Bombay Government, which has always been distinguished for its enlightened patronage of literary and archaeological pursuits, has granted leave of absence to Prof. Peterson, who is coming from Bombay to attend the congress. He is to report on the progress made in the Bombay Presidency in the search for Sanskrit MSS., and on some recent archaeological discoveries. Prof. Peterson has just brought out a new volume of his edition of the *Kādambarī*, which contains an important Introduction to the whole work, and much valuable information on the period of literature to which Bāna belongs. Pandit Shyāmaji Krishnavarmā, of Balliol College, Oxford, who was present at the Berlin congress in 1881 as a representative from India, has again been appointed a delegate by the Secretary of State.

The following are some of the papers already promised:—Section I.: "The Best System of Editing the Text of the Old Testament," by Prof. Oort; "The Religion of the Harranians," by the late Dozy; "Some Newly Discovered Assyrian Inscriptions," by M. Jules Oppert; "The Origin of Persian Writing," by M. Halévy; "The Decipherment of the Mal-Amir Inscriptions and the Origin of the So-called Median Texts," by Prof. Sayce; "The Goddess Istar in the Babylonian Myth," by Prof. Tiele. Section II.: "Pali Literature," by Prof. Rhys Davids; "The Asoka Inscriptions and

the Origin of the Indian Alphabet," by Mr. R. N. Oust; "A Sanskrit-Kavi Dictionary found in an Old Javanese MS.," by Prof. Kern; "The Age of the Avesta and the Value of Parsi Tradition," by M. C. de Harlez; "The Words for God—Mazda, Ahuramazda, and Ahura—in the Avesta," by the Dastur Jamaspji Minocheherji. Section III.: "The Crowning of Mummies and the Crown of Justice," by Dr. Pleyte; "The Vowel Ablaut in Coptic," by Dr. Abel; "A Fragment of a Mummy Case, apparently of the XX<sup>th</sup> Dynasty, containing the Cartouche of an Unknown King," by Miss Amelia B. Edwards. Section IV.: "The Dialects of Central Asia," by M. J. van den Gheyn; "Buddhist Masses for the Dead at Amoy," by Dr. de Groot. Section V.: "The Lexicological Affinities of Malagasi with Javanese, Malay, and the Other Principal Languages of the Indian Archipelago," by M. Aristide Marre; "Roots in Javanese," by A. C. Vreede; "Roots in Malay," by J. Pijnappel; "The Collection of Folk-lore in the East," by the Rev. J. Long.

## THREE EARLY ITALIAN SONNETS.

Trieste: Aug. 20, 1883.

I VENTURE to ask hospitality for the three following sonnets, the earliest specimens of their kind taken from Crescimbeni. The first (circ. A.D. 1200) by Lodovico della Vernaccia, a statesman's address to the citizens of Florence, is interesting from its perfect Petrarchian form of quatrains and tercets. The second and third both date from a generation later (1230); and, while the tercets are regular, the quatrains have alternate rhymes, after the fashion of the Shaksperian stanza termed a sonnet. That of Messer Polo di Lombardia (Paulo di Castello) is hopelessly corrupt: in l. 12 for *Risprendon chi*, I am tempted to read *Rispondo a chi*. Pier (Pietro) delle Vigne, alias Petrus de Vineas, was chancellor-secretary to the Hohenstaufen Emperor, Frederick II., who caused him to be killed by basining (*bacinare*); Dante (*Inf.* xiii. 58) introduces him saying,

"I be the man that hent the twain of keys."

My object is to contrast a literal rendering with the faithful version of the lamented D. G. Rossetti in *Dante and His Circle*.

### I.

LODOVICO DELLA VERNACCIA.

If you, O Citizens! theme so high, so digne  
As our ambitious deeds aimed honestly,  
Glossing the text would test by phantasy  
Seemeth it not some pastime infantine?  
If on our accidents and intestine  
Troubles you ponder with due modesty,  
You will incline your stubborn souls and see  
Deep rooted in your hearts the horny spine.

When lief would Reason punish all offences  
Of divers foemen and debel the proud  
Ne'er must the triumph of the Sword be shent:  
But, an by violence spoiled and high pretences  
It must be used on the loel crowd,  
Sole shall the Sword be held magnificent.

### II.

MESSER POLO.

E'en as the Leven-fire with lamping light  
Starkens in obscure air, and then relends  
Wi' glare far broadening and blazing bright  
While crash of thundering storm on Earth  
descends;  
That Men advised be by fear and fright  
Things may be true to him that Truth intends,  
So when I view her in my captive plight  
Returning splendour to these eyne she lends.

And since she fared in sight with splendour  
fraught  
All tongues, so cruel-fond of evil tale  
Thunder their parles, and hurt for me have  
wrought.  
I answer those at thee would see me rail  
Full oft shall trouble turn a man to naught  
But life of finer Love shall never fail.

## III.

## PIER DELLE VIGNE.

Now for that eyne view not the form of Love,  
Nor may his shape be weighed in corporal way,  
Amid the many-headed some would prove  
Love to be nothing and his life deny:  
But, sithence Love our every sense can move  
With lordly power and gar all hearts obey,  
More price he fairly claims to his behoove,  
Than were Love visible to our visual ray.  
Yet as the virtue unto Magnet dight  
Attracteth iron while none the draughtage see'th  
Yet to himself he draweth with dominant heat;  
Thus me this matter shall to trust invite  
That Love hath being; and dealeth firmest  
Faith  
To see firm Faith in Love by folk confest.

RICHARD F. BURTON.

## CORRESPONDENCE.

## THE SHAPIRA MSS. OF DEUTERONOMY.

Oxford: Aug. 19, 1883.

I have to correct two involuntary misstatements in my last letter, which I am able to do from Dr. Ginsburg's communication to yesterday's *Athenaeum*. (1) Except in the Decalogue, he says, the writing is continuous, and there is no division into separate words. Points after certain sentences, which are a kind of versicular division, are in the MS. In the original, where a word could not be got into the line, it is divided, and a part of it stands at the end of the line, and the other part begins the next line, as is the case in the inscription on the Moabite stone. Thus far Dr. Ginsburg. I cannot, and will not, undertake to clear up this diversity of writing; I must leave that to the historian of these forged Biblical texts. (2) I see from the published text of the first two chapters of Deuteronomy, according to the Moabite sheepskins, that ii. 9 has *Ar* and not *fr*; why is it, then, translated by *city*, and not as *Ar*? *City* as a conjectural rendering of the last word may be right in an exegetical commentary, but not in a faithful reproduction of a new text. Such a method leads to misunderstanding.

On this occasion I will draw attention to some other blunders in the portion of the text last published by Dr. Ginsburg. i. 20, "Went through all this [not that, which is misleading] great and terrible wilderness which ye saw" is neither good English nor correct Hebrew. The forger ought to have omitted the words "which ye saw." i. 34, *wayinaf*, instead of *wayiqsof* of the received text, "and was wrath" is nonsense. Perhaps it is a misreading for *wayenaf*; but, according to parallel passages in Deuteronomy, it ought to be *wayithanaf* (see i. 37). The following passage, which is an ignorant amalgamation of Numb. xiv. 21-23 with Deut. i. 38-40, is as incorrect as only school-boys could make it. It runs as follows:—"As I live, surely all the people that sees [not saw; the Authorised Version has *have seen*] my wonders and my signs which I have done these ten times [here supply for the *lacuna* in Dr. Ginsburg's translation "in Egypt to their fathers and"] the forger most likely having in mind the ten plagues] they have not hearkened unto my voice, [surely] they shall not see the [not that] good land which I swear to give unto their fathers, save your children and Caleb the son of Jephunneh, and Joshua the son of Nun, which standeth before thee," &c.

For the words "all the people" of the Moabite text, the received text has "all the men," which is logical; are women and children not included in the expression of "people"? "That see" (Numb. xiv. 22) refers to "my glory" in the first instance, which is everlasting, and hence we have the present tense; in connexion with signs and miracles of past time only, we should expect to find "that have seen" (*asher rau*). I will not insist upon the change of *zulalhi*, "save," into *bilhi*, which last is cer-

tainly less emphatic. Now we come to a most illogical construction. God speaks of those who will not see the promised land in the third person. Next comes "your children," and farther on "Joshua . . . which standeth before thee." ii. 14, 16, the Moabite text reads *Anshey M'ribah*, "men of rebellion," instead of the *Anshey ham-milhamah*, "men of war," of the received text. We could admit this emendation, although, according to classical Hebrew, we should expect *Anshey rib*. But "men of war" is the logical idea, when we know that only men aged twenty or more had to perish (Numb. xiv. 29), while there were probably "men of rebellion" under twenty years of age. In the passage "until the men were wasted out by death," the Moabite text has *ad thammū* instead of *ad asher thammū* (cf. Josh. iii. 17). The substitution of the particle *lo* for *al*, "not," is admissible as an imitation of the Decalogue, but otherwise irregular. In the passage "The Horim from of old dwelt therein," we find *ישרי* instead of *ישרי*, which is rightly introduced in other passages. Is this a slip of the pen? Instead of the correct expression *lefanim*, "formerly" (A.V. "in time past"), which refers to the tribes which immediately preceded the Moabites, the Ammonites, and the Edomites in their respective countries, and which "God destroyed before them," the Moabite text has *meolam*, "in old time," which means "an indefinite period." Evidently the Moabite vocabulary will be enriched by these new texts. The Moabite Moses seems to dislike the idea of *Elohim* destroying old tribes for the sake of the sons of Esau. He has consequently "The Horim from of old time dwelt therein, and the children of Esau succeeded them, and dwelt in their stead" (ii. 12; of course the Moabite text was another arrangement than the received text). But gradually he becomes more reconciled to the other tribes, and *Elohim* does something for them. As to Moab, he writes "but God destroyed them [not yet 'before them'] and they dwelt in their stead." As to Ammon, the Moabite Moses is most friendly in relating that "God destroyed them before them, and they dwelt in their stead." This would throw new light upon the character of Moses according to the Moabite conception. In the condensed Moabite text of Deut. ii. 24-37 we read, "Rise ye up and pass over the river Arnon. This day will I begin to deliver . . . Sihon," where we should have expected, according to all parallel passages, a word like *reeh* before *hayyom*, which ought to be followed by *hazze*. In the battle against Sihon the Moabite Moses is represented as a Napoleon or a Moltke. While the received text says, "Then Sihon came out against us, he and all his people, to fight at Jahaz" (ii. 32), the Moabite text has "And we went forth against Sihon to Jahaz." In the received text the Israelites approached only the boundary of the land of Ammon, which is strategically correct, whereas the Moabite text has "Ye are to pass this day the coast of the land of the children of Ammon." And this alteration was most probably inspired in order to settle the difficult question about the River Jabbok. Anyhow, I believe that the approach of the Ammonites must have preceded the fight with the Amorites (such, at least, is the statement of the received text), since the Israelites could not have ventured to attack the latter unless the Ammonites had been neutral. The new spelling of the name of the Zamzumim as *Azanzumim* facilitates the explanation of the word, which would be contracted from *Azanzumim*, "the strong, strong nation." Is this interpretation given by a commentator? If so, we should be on the track of the original upon which the Moabite text is based. Here the printed text before us comes to an end. In the

Times of August 17 the translation of the text is continued as far as the Decalogue. What a pity that the old name of the town of Edrei is illegible in the Shapira sheepskins; it is indeed a loss for the geography of the Holy Land. The station at Beth-Peor is inevitable, since Moses is buried near that place (Deut. xxxiv. 6). Here occurs the scandalous history of the daughters of Moab and the wives of the Midianites, with a new version of the action by which the great plague was stayed. I wonder what is here the original of the words "and they drank of their drink offerings" and of "to show you the word of your God"? Another great loss for the Hebrew lexicon is the complete disappearance of the word *totafoth*, "frontlets" (Deut. vi. 8), from the Moabite text!

Let us hope, however, that there will soon be an end of the publication of these forged texts and their useless commentaries, unless they are intended as exercises for beginners in Hebrew, for whom practice in the correction of bad grammar may be desirable. A. NEUBAUER.

#### CAT-LORE.

Utracombe: Aug. 20, 1883.

The "other form of the story," indistinctly remembered by Minna Halfon, and not noted by later correspondents, is, perhaps, the sprightly tale written down by Shelley after hearing it told with other supernatural stories by Matthew Gregory Lewis. In that version a cat is lying on the hearth when the funeral of the king of the cats is mentioned; on hearing what has been seen, puss jumps up, and saying, "Then I'm King of the Cats!" disappears up the chimney. This will be found in my edition of Shelley's *Prose Works*, vol. ii., p. 212; and it occurs in the *Essays, Letters from Abroad, Translations, and Fragments* (1840).

H. BUXTON FORMAN.

Lerwick: Aug. 17, 1883.

I send you the full text of the cat-story mentioned by two of your correspondents in recent numbers of the ACADEMY. Thorpe's version is taken from "Danmark's Folkesagn Samlede af J. M. Thiele, 2 Bd., Kiøb. 1843." The same story is found in Shetland, where the Troll's name is Kurrremurre.

ARTHUR LAURENSEN.

"KNURREMURRE.

"Not far from Larø is the village of Pedersborg, a little beyond which is another called Lyngø. Between these two places there is a mount called Bründhöi, which is said to be inhabited by Troll-folk. Among these there was an old jealous Troll, on whom the others had bestowed the name of Knurremurre, because through him there was often dissension and ill-feeling in the mount. It once reached the ears of this old Knurremurre that there was too close an intimacy between his young wife and a young Troll, which the old Troll took so much amiss that he threatened the life of the other, who consequently deemed it advisable to flee from the mount, and betake himself, transformed into a yellow cat, to the village of Lyngø, under which form he ingratiated himself with a poor housekeeper named Platt. With him he lived a considerable time, got milk and porridge every day, and lay from morning till night in the easy-chair behind the stove. One evening Platt came home just as Puss in his usual place was lapping some porridge and licking the pot. 'Well, mother,' said the man, 'I will now tell thee what happened to me on my way home. As I was passing by Bründhöi, a Troll came out and called to me, saying: "Holla you, Platt! tell your cat that Knurremurre is dead." At these words the cat rose on his hind-legs, let the pot roll, and said, while stealing out at the door: "What? Is Knurremurre dead? I must then hasten home."—From "Danish Traditions," in "Mythology and Popular Traditions of Scandinavia, North Germany, and the Netherlands, compiled from

original and other sources by Benjamin Thorpe, member of the Royal Academy of Sciences at Munich" (vol. ii. p. 123).

#### RECENT CRITICISM OF "GULLIVER'S TRAVELS."

London: Aug. 22, 1883.

In my letter in last week's ACADEMY with the above heading I find that in the words "If he has done so he might well have learned to question," &c. (p. 114, col. 1), the word "has" is changed by an error of the press into "had." I think it necessary to note this, as it was not my intention to assume that the *Quarterly Reviewer* is ignorant either of Juvenal generally or of the conclusion of the Tenth Satire. "Lilliput," too, is, I see, repeatedly given instead of "Lilliput."

And I may add that though I cannot in any way accept the *Quarterly Reviewer's* interpretation of *Gulliver*, yet in several other respects the two articles on Swift which have recently appeared in the *Quarterly* appear to me to be important contributions to Swiftian literature.

THOMAS TYLER.

#### SCIENCE.

*Outlines of Basque Grammar.* By W. J. van Eys. (Trübner.)

THE name of M. van Eys is a sufficient warrant that this little book is the work of no mere compiler. Every page bears witness to long study, to original thought, and to independent research. Yet, perhaps in consequence of these very qualities, in reading this book we find ourselves constantly harassed by a doubt whether anyone, without at least some previous smattering of the Basque, could possibly gather from it an adequate idea of the actual construction of the language. M. van Eys apologises for having been obliged to write in a language which is not his own. We have no fault to find with his English; his grammar is correct and his style good; but we find too great a contrast between the extreme analysis of the Basque forms and the merely approximate English equivalents by which they are explained. We often miss a *literal* English version of the Basque as an intermediate link between that and the merely current English which is given. In the simpler examples this is not perhaps of much consequence, but in analysing the more complex verbal forms we think that the want of this will cause no small difficulty to the student who makes here his first acquaintance with the Basque. In older English much closer equivalents might have been found. Thus, it is said that the English verb has no subjunctive, but how very recent is this loss? We remember distinctly in our youth old people who always used it. The older English uses of the infinitive and of the verbal substantive are closely analogous to those of the Basque; e.g., p. 47, M. van Eys writes: "Bere adiskideak galtzea ezbear da, 'It is a misfortune to lose one's friends.' *Galtzea* corresponds to, but is not, an infinitive; it is plainly a verbal substantive with the article *a*." *Galtzea* is almost exactly "the losing." "The losing one's friends is," &c. So, too, with the following infinitive clauses. We miss throughout a reference to some modern historical English Grammar, such as those of Dr. Morris, or to some book like the recently

published *Functional Elements of an English Sentence* by Mr. Wrightson.

We mentioned the extreme analysis of the Basque which is attempted. This, we think, is needless, and almost mischievous in so small a work, for the beginner is quite unaware that much of it is merely theoretical. Thus, on p. 7,

"when *a* precedes the agglutinated word, or syllable, or letter," "the *a* is always the article." "When *e* precedes, this letter is merely a binding letter—*bat* without the article, and represented as acting, would be *batek*, which cannot be pronounced, and thus *e* is interpolated—*batek*. This *e* is at the same time the characteristic of the indefinite form—i.e., the noun without article;"

and so on. But what, then, is gained by treating *e* as merely a binding letter? So, too, in some of the cases where the suffix is treated as a single consonant. And this over-minute analysis is given to the exclusion of some of the most common verbal and modal forms.

The illustrations from contracted idioms in Dutch and English given in the Preface do not seem to us at all to cover the facts of agglutination in Basque. To a certain extent Basque incorporates as well as agglutinates. It is true that the noun, subject or object, is not incorporated in the verb; but the pronouns, both subject, object, and indirect object, are not only agglutinated as affixes and suffixes to the verbal forms, but are often incorporated in the verb between the modal conjunction and the temporal affix or suffix. This hardly appears in M. van Eys' explanation. If we reduce the verb to its barest skeleton it may be true that (p. 28) "Few languages have a more simple way of conjugation than the Basque language. The present of the indicative contains the verbal theme, preceded or followed by the pronouns—*dakart*, 'I-bear-it' [rather it-bear-I], from *d-ekart-t*." But as the student soon finds that all the personal pronouns, subject, object, and indirect object, may be thus agglutinated in almost every possible combination; and when he reads (p. 43), "The conjugation with object and dative [necessarily one of the most common] is as regular as any other, but it must be acknowledged that the violent euphonic alterations have sometimes rendered the flexions difficult to analyse," and (on p. 37) that, although there is no formal gender in Basque, the "Basque language distinguishes in the verbal flexion when a man, a woman, or a person who commands respect is spoken to" (and there are two other forms beside these)—the simplicity becomes almost a vanishing point.

But it is in the multiplication of auxiliaries that this Grammar will arouse most antagonism, especially in the case of *eroan*. M. van Eys uses it to explain only one set of forms, and adds: "The moods and tenses of *eroan* are completed by the auxiliary *ezan*." But the introduction of *eroan* at all as an auxiliary is peculiar to our author.

There are one or two misprints which should not have occurred in so small a work. P. 9, *handiena*, "he of the great," should be "the;" p. 49, *bizi*, "alike," should be "alive." In the Commentary, p. 50, "Artean" (it is in the text) is more exactly "in the mean"

(while or time); "ez" is "not," and "not to know" is good old English. So "Prayer make" is as near to the Basque, and is better English than "Prayer do." Larramendi's and Liçanague's dates are not 1725 and 1572, but 1729 and 1571 (pp. ix., xi.); Axular's first (1643) edition is not entitled *Gueroco guero*, but only *Guero* (p. xi.), &c.

We may be allowed to add a few remarks from a friend. The Souletin dialect does not always pronounce *u* as French *u*; it knows, and uses, French *u* and *ou* (p. 1). "The Basque language distinguishes the substantive, the adjective, and the verb" (p. 8); this is not perfectly true, since, as in many other agglutinative languages, the adjectives, pronouns, &c., are treated in the same way as the noun, and may be considered as always mere independent substantives. As regards primitive *h* becoming phonetically *k*, we think Prince Bonaparte's and M. Vinson's hypotheses far better; at the beginning of the words, the softening of *k* to *h* is more natural than the mutation of *h* to *k*; and, on the contrary, in the middle or at the end of a word it is easier to suppose the *k* to be preserved than to imagine an *h* to be substituted for it.

In conclusion, there is one remark in the Preface which we cannot pass by.

"It is to be regretted that the Basque provinces do not take much interest in philological studies; the two periodicals started a few years ago prove this clearly enough, the whole series of 1881 containing nothing about the language."

We have no space to mention the bibliographical and other facts which would refute the first clause. We may, perhaps, refer our readers to the "Discurso" of Victor Balaguer on his reception in the Spanish Academy, February 25, 1883 (pp. 3 and 29, 30), for a widely different opinion on the "importante renacimiento literario en las provincias vascongadas." As to the second, besides numerous reprints of articles and letters by Prince L.-L. Bonaparte, some of which appeared originally in the ACADEMY, and several series of minor original articles on etymology, &c., the *Revista Euskara* of 1879 contains the first chapters, and vol. iv. of the *Euskal-erria* (September to December 1881) contains a series of six articles of the following chapters, of Campion's *Grammatica Euskara*, in which M. van Eys' theories are discussed, and which have been continued at intervals up to the present number. Why will M. van Eys thus gratuitously go out of his way to tread on other people's toes?

WENTWORTH WEBSTER.

### SOME BOOKS ON CHEMISTRY.

*Agricultural Chemical Analysis.* By Percy F. Frankland. (Macmillan.) This book, founded upon Dr. F. Krock's *Leitfaden für die agricultur-chemische Analyse*, has been enriched by some additions from Dr. Grandeau's *Traité d'Analyse des Matières agricoles*, while the section on water analysis has been enlarged so as to correspond with the more searching style of examining drinking waters in vogue in this country. Dr. Percy Frankland might have consulted with advantage other works and papers on agricultural analysis, and he might have introduced more of the special methods first published in Grandeau's

treatise, notably the excellent process for incinerating plants described on pp. 7-11 of that valuable work. The many topics discussed in this volume are handled with varying degrees of skill and completeness. The sections on soil and water analysis are tolerably complete and satisfactory; those on the analysis of such extremely important materials as oilcakes, superphosphates, and dairy produce leave much to be desired as to exactness as well as to completeness. In justification of this opinion, we will point out a few defects in the three sections we have cited as unsatisfactory. Agricultural analysts know the special difficulties attendant upon the exact determination of oil, fibre, and ash in oilcake. The oil needs for its complete extraction precautions which Dr. Percy Frankland omits; the per-centage of fibre is liable to a large apparent increase through contamination not only with albuminoids, but with obstinately adherent oil, which must be carefully removed to ensure anything like an accurate result; while the ash is always found with sand and extraneous mineral matter, which must be separately determined. On these points, and on many other most important matters involved in the proper examination of the quality and wholesomeness of linseed cake, cotton cake, and similar cattle food, our author is silent. Take, also, the case of superphosphates, where the "reduced" phosphates are erroneously stated to consist wholly of dicalcio phosphate, and to be determinable by means of ammonium citrate; moreover, not a word is said as to the meaning of the agricultural usage of the terms "bi-phosphate," "bonephosphate made soluble," "soluble phosphate," and "monocalcio phosphate"—terms commonly used in reporting the results of analyses for farmers. We have said that the section on dairy produce is also inadequate; our criticism will be acknowledged as just when we mention that not a word is said in the paragraphs on butter analysis as to the specific gravity of true milk-fat, or the saponification-method for its analysis. Dr. Percy Frankland's text-book, though of greater bulk and narrower aim than Mr. Church's *Laboratory Guide for Agricultural Students* (fifth edition), is, we think, in some respects less adapted for ordinary English use, not only for the reasons we have named already, but also on account of the redundancy and elaboration of some of its chapters. For this the German original is in part to blame. But if the average agricultural pupil into whose hands this manual may be placed will need much supplementary help and information from his teacher, on the other hand, advanced students will certainly find the volume useful for some of the purposes for which they are likely to consult it. In his estimate of the work before us the reviewer is supported by the opinion of an experienced teacher of agricultural chemistry to whom he submitted the MS. of the present notice.

*Analysis and Adulteration of Foods.* By James Bell. Part II. (Chapman and Hall.) The first part of this "Science Handbook" of the Committee of Council on Education dealt with tea, coffee, cocoa, sugar, and honey. The present section is occupied with the analytical study of milk, butter, cheese, and cereals. The whole work is of considerable importance, especially to the body of public analysts, for the Somerset House chemistry constitutes a kind of Appeal Court to which disputed results are legally referable. We are glad to see that Mr. Bell has modified some of those earlier views of his which were at variance with the conclusions of the Society of Public Analysts. Moreover, he has adopted several analytical methods introduced by members of that body; while not a few of the official analyses which he here for the first time publishes implicitly confirm the

objections felt by outsiders to several of the Somerset House standards. Take the case of butter. Not only is Helmer and Angell's saponification process employed by Mr. Bell in the analysis of butter-fat, but his 113 analyses of butters from various sources confirm the conviction expressed by many professional analysts that no genuine and properly made butter contains anything like twenty per cent. of water. If we are to pass a butter which contains twenty per cent. of water, fifteen per cent. of common salt, and five per cent. of curd, an analytical standard seems a vain thing. This is scarcely the place for further detailed criticism of a volume which addresses itself mainly to specialists, and cannot be regarded as a popular handbook. Generally speaking, we may say that we find here the results of much careful work, but that some of the processes used and some of the conclusions at which the author arrives are by no means satisfactory. One example shall suffice. Mr. Bell determines the albuminoids of wheat by the utterly fallacious (and we thought obsolete) process of washing away the starch from the gluten in a piece of muslin! No wonder he is led to state (p. 97), from the results of such experiments, that flours are richer in nitrogenous matters than the external parts of the wheat grain. The five analyses on which he depends cannot be allowed any weight against the concurrent testimony of hundreds of careful analyses and the elaborate researches of the numerous distinguished chemists who have devoted years to the investigation of this subject. A few casual analyses by a faulty process must not be taken as disproving the results of systematic work in which each mill product from the same "grist" has been submitted to rigorous quantitative examination by trustworthy methods.

*Water and its Teachings.* By C. Lloyd Morgan. (Stanford.) An intelligent and well-read teacher cannot fail to find this suggestive book of notes a most valuable help in class instruction. Mr. Morgan has fulfilled the intention expressed in his Preface, and has successfully employed the substance *Water* to illustrate the general principles of Inorganic Science. The book is rather physical, or physiological, than chemical, but wherever chemical matters are discussed they are handled with clearness and accuracy. The whole of the notes are modern and philosophical; there is no vagueness, no mere talk about subjects which the writer has not mastered. Mr. Morgan, who was a distinguished scholar of the Royal School of Mines, is now a lecturer at the Diocesan College, Rondebosch, Cape Town. Many teachers at home may learn a great deal from the method as well as from the matter of the little volume before us.

*Notes on Qualitative Analysis, Concise and Explanatory.* By H. J. H. Fenton. (Cambridge University Press.) This book, like the vast majority of similar manuals, is made up of statements concerning chemical reactions, followed by many tables of directions or schemes of analysis. The explanatory notes appended to each table are, however, on a somewhat more extended scale than is usually adopted in laboratory handbooks of the kind. So far so good; but the development of this plan of annotation of processes will not, we fear, suffice to prevent the mere mechanical use by students of sets of directions. Nor is the volume quite up to the standard of to-day. A score of easily made experiments and new and delicate tests are omitted; there is, moreover, a lack of precision, completeness, and method in the tabular instructions. We cannot recommend the volume as superior to the standard manuals from which the compiler confesses, in his Preface, its substance has been borrowed. The

large size of the book (10½ inches by 7½ inches) is very inconvenient for a working laboratory manual.

*Chemical Per-centage Tables and Laboratory Calculation.* By O. H. Riddale. (Crosby Lockwood.) The tables in this small book labour under two disadvantages, for they are less complete than those in standard works on quantitative analysis, and the atomic weights used in calculating the co-efficients are not given. The caution on p. 65 has, however, afforded us some amusement, which our chemical readers shall share with us. The author says, "In calculating the per-centage, &c., of any one substance in any compound, be careful to use only one notation, as if the old and new be mixed the results will, of course, be wrong."

*Practical Chemistry.* With Notes and Questions on Theoretical Chemistry. By W. Ripper. (Isbister.) Still another manual adapted to the requirements of the Science and Art Department examination in chemistry! The experiments are clearly described, the reactions systematically arranged, and the problems duly solved. But why should each local science class in the land have its own special manual of elementary chemistry?

*Principles of Agriculture.* By W. T. Lawrence. (Chambers.) We are always afraid to look critically into books about the scientific side of farming. If the author be conversant with practical agriculture he is generally weak in his scientific explanations, and *vice versa*. The book before us is better than some of the crowd of manuals on this subject which have appeared since the Science and Art Department instituted their agricultural examinations. But it is not a strong book: it contains some blunders, while parts of it are inadequate, and other parts imperfect. Not having an Index, this book may contain some things which the reviewer has not succeeded in finding therein; but at least he may complain of the omission of such a subject as cattle-feeding, and of the occurrence of such statements as that nitric oxide combines with water to form nitric acid; that atmospheric oxygen is of little moment as a soil-forming agent; and that common salt is chloride of soda.

## CORRESPONDENCE.

### CHINESE AND SIAMESE.

Oxford: Aug. 12, 1883.

I believe the view generally taken about affinity of languages is that of common descent. In this sense I am glad that M. de La Couperie sees the validity of my arguments concerning the relationship between Siamese and Chinese. It appears, however, that M. de La Couperie's views about an affinity between Siamese and Chinese are not held by all Chinese scholars. Prof. von der Gabelentz, for instance, says (*Anfangsgründe der chinesischen Grammatik*):—"Chinese is a language of the Indo-Chinese family, and as such bodily related [*leiblich verwandt*] to Tibetan, Burmese, Siamese, and a multitude of other languages of Further India, Assam, and Nepal." O. FRANKFURTER.

### THE GREEK NAMES OF THE SIBILANTS.

London: Aug. 14, 1883.

Will you allow me to state that in a paper on "The Origin of the Phœnician Alphabet," read at the Royal Asiatic Society on December 19, 1881, and since printed in the *Orientalia Antiqua*, I explained not only the names of the Greek *sigma* and Phœnician *shin*, but also the Greek and Semitic names of all the letters of the Phœnician alphabet? G. BERTIN.

## SCIENCE NOTES.

THE Gilchrist Engineering Entrance Scholarship at University College, London, will be open to competition at the end of September. The conditions of examination are this year somewhat altered, in a direction which places the scholarship more within the reach of those for whose benefit it was founded. Candidates must be under nineteen years of age. The subjects of examination are (1) Elementary mathematics and (2) any two or more of the following five subjects:—Mechanics, mechanical drawing, essay on one of three given subjects connected with mechanics or engineering, French or German, the use of tools—either carpenters' tools, or the lathe (wood or metal), or the file. The scholarship is of the value of £35 per annum, and is tenable for two years. There is also at University College a senior engineering scholarship, awarded at the close of the session, of the value of £80.

MESSRS. ESTES AND LAURIAT, of Boston, U.S., announce a revised edition of Dr. Elliott Coues's *Key to American Birds*, and also a new work by the same author on the Ornithology of the World.

THE *Scotsman* of August 20 gives a long obituary notice of Dr. John Alexander Smith, who died at Edinburgh on the previous Friday at the age of sixty-five. He was a prominent member and officer of the Scottish Society of Antiquaries and of the Physical Society of Edinburgh, his own special subject being the remains of extinct animals in Scotland and ornithology in general.

## PHILOLOGY NOTES.

WE are glad to hear that Dr. Birch's new Dictionary of Egyptian Hieroglyphs is far advanced; the first part may be expected in the course of next year.

MR. C. E. WILSON, author of the recently published little volume of *Persian Wit and Humour* (ACADEMY, June 30), has been appointed teacher of Persian at Cambridge. This appointment will not interfere with his duties as sub-librarian to the Royal Academy; and we hope that it will encourage him to give to the world some more translations of Persian poetry, and of English poetry into Persian, which have won in MS. the high commendation of the late E. H. Palmer.

M. VOLLGRAFF, a pupil of Cobet, and himself favourably known for his researches in Roman history, has been appointed Professor of Latin Philology at Brussels in succession to M. James, who will, however, continue to lecture on Latin literature. M. Vollgraff will also deliver a course of lectures, in Dutch, on the history of Flemish literature.

PROF. NÈVE, of Louvain, will shortly publish a work on the literary epochs of India, with special reference to Sanskrit poetry.

A NEW edition of Ritschl's *Pœnulus* of Plautus, revised by Goetz and Loewe, is among Teubner's recent announcements.

WE have received the first number of a *Sammlung der griechischen Dialekt-Inschriften*, which is being published by Peppmüller, of Göttingen, under the general editorship of Dr. Hermann Collitz. This number is by Dr. Wilhelm Deecke, of Strassburg, who deals with the Cypriote inscriptions. The second part will contain Aeolic inscriptions by F. Bechtel and North Thessalian by A. Fick. Future parts will treat of Boeotian, Arcadian, Eleian, Pamphylian, &c.

By the courtesy of M. James Darmesteter, who is now on a visit to Ireland, we have

received an early proof of the Annual Report to the Société asiatique which he was deputed to deliver this year in place of M. Renan. It occupies just 110 pages, and forms a worthy complement to the similar Report compiled every year by the secretary of our own Asiatic Society. If it reads better as continuous narrative, the latter perhaps has the advantage in bibliographical detail. We must here content ourselves with drawing attention to the obituary notices of E. H. Palmer (unfortunately styled Professor of Persian at Cambridge) and A. O. Burnell. Of the latter no more worthy estimate has appeared anywhere than the following:—

"Nul indianiste de nos jours n'a mieux connu l'Inde entière, aryenne, musulmane et dravidiennne, et il l'a connue en elle-même et face à face et non à travers des livres: aussi nul peut-être n'a mieux compris les conditions de la recherche scientifique dans l'Inde. Il sentit que l'heure des systèmes était passée ou n'était pas encore revenue et que l'étude approfondie et honnête des faits, et de tous les faits, était le seul moyen de sortir des généralisations vagues où flotte encore l'histoire de la littérature indienne. Aussi, droit, littérature védique, grammaire, paléographie, histoire proprement dite, il a renouvelé tout ce qu'il a touché par la richesse des faits qu'il mettait au jour et la nouveauté et l'étendue des aperçus qui se dégageaient d'eux-mêmes du matériel par lui exhumé. . . . Burnell n'a pas eu, parmi le grand public, la réputation à laquelle il avait droit, mais l'historien futur des études indiennes rencontrera son nom à chaque pas."

PROF. WINDISCH, of Leipzig, has published *Zwölf Hymnen des Rigveda mit Śāyana's Commentar*. He gives the text both in the Samhitā and in the Pāda form, accentuated according to the native system, and the commentary of Śāyana, as printed in Max Müller's *editio princeps*, carefully collated, however, with the excellent MS. of the Chambers Collection at Berlin. The book is chiefly intended for professorial lecturers, and contains in a compact form all that is required by students, a glossary of all the words, both in the text and in Śāyana's commentary, with fuller explanations where necessary; a curious list of words which European scholars have explained differently from Śāyana; lastly, useful extracts from Kātyāyana's Index. In cases where the same verses occur in the Rigveda and in the Śāmaveda, the Taittirīya Samhitā, Brāhmana, and Aranyaka, and in the Vāgasanegī-samhitā, the commentaries have been placed side by side, so as to enable students to judge for themselves how far there was a uniform tradition, followed by different schools in India, in the interpretation of Vedic hymns. Prof. Windisch remarks that vols. i. and ii. of Max Müller's edition of the Rigveda with Śāyana's commentary are out of print, and that he has published these extracts because he feels convinced that a truly scientific study of the Veda is impossible without a study of Śāyana's commentary. "Far from wishing," he writes,

"to represent Śāyana once more as an infallible authority, after R. Roth, Max Müller, and others have so often urged his insufficiency, I hold nevertheless that whosoever desires to study the Veda must know how the native scholars interpreted it. We must always begin with them, as for Sanskrit grammar we must begin with Pāṇini."

Prof. Windisch expresses a hope that vols. i. and ii. of the Rigveda with Śāyana's commentary—with the additional *veritas lectionis* for vol. i., which has never been published—may soon be reprinted. Till then, his book will be the only one in which the system of the native exegesis of the Veda can be properly studied. It will, however, always remain a most useful compendium, and be largely used, we hope, not only in Germany, but in the universities of England also.

## FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. BARR, 115, Strand, near Waterloo-bridge.

*Etude sur les Médaillons Contorniates.* Par Charles Robert. (Brussels: Gobbaerts.)

IN the Prolegomena to his brilliant work on Ancient Coinage, M. François Lenormant has discussed at considerable length a number of metallic objects which, though never intended to pass as coins, have generally been dealt with by numismatists, and are commonly to be found in all extensive collections of coins. Of the three classes which constitute this "Pseudomona"—Medallions, Tesserae, and Contorniatii—the last named is by no means the least interesting, although, perhaps, it has scarcely received from archaeologists the attention it deserves. The work of Sabatier—*Description générale des Médaillons Contorniates*—published in 1860, with many engravings, was the first really important aid towards the study of these pieces; the principal contributions to the subject since the appearance of Sabatier's book are due to Cavedoni, to Lenormant, and to Charles Robert. About four years ago, M. Robert published a Catalogue of the contorniates in his own cabinet; and he has now, in his *Etude sur les Médaillons Contorniates*, produced what is certainly the most lucid and useful essay at present written upon this class of antiquities, which will thoroughly repay perusal by all who take an interest in Roman history and archaeology.

The contorniates are circular pieces of copper, for the most part somewhat larger in size than the Roman *sestertii*, or so-called "first brass" coins. From the latter, however, they are easily to be distinguished by the exceptional thinness of their fabric, and by the appearance of the reliefs on their obverse and reverse, which are not, as a rule, obtained by striking from a die, but simply by process of casting. The name Contorniatii is derived from the circle (in Italian *contorno*) with which both faces of the piece are commonly marked, in incuse. With regard to the date of the contorniates, though many of them bear the heads of early Roman emperors, especially of Nero and Trajan, it is now universally agreed that they cannot, on grounds of style, be assigned to an earlier period than the time of Constantine; there can, in fact, be little doubt that it is the fourth and fifth centuries of our era to which the extant contorniates belong. The interest of these pieces for the archaeologist consists principally in the fact that the majority, and probably the whole, of the subjects portrayed upon them have relation to public spectacles and contests. These entertainments in the Circus and the Odeum, in the Stadium and the Amphitheatre, formed, at the epoch when the contorniates were issued, an excessively prominent feature in the daily life of the imperial city. The sanguinary combats of the gladiators were, indeed, no longer in vogue, but "the Roman people," to quote the scornful words of Gibbon,

"still considered the circus as their home, their temple, and the seat of the republic. . . . From the morning to the evening, careless of the sun or of the rain, the spectators, who doubtless

amounted to the number of four hundred thousand, remained in eager attention; their eyes fixed on the horses and charioteers, their minds agitated with hope and fear for the success of the colours which they espoused; and the happiness of Rome appeared to hang upon the event of a race. The same immoderate ardour inspired their clamour and their applause so often as they were entertained with the hunting of wild beasts and the various modes of theatrical representation."

This passion for *circenses* receives, as I have already indicated, a curious and impressive commentary from the contorniates. By far the commonest of the subjects which these depict are those connected with the *circus*. Sometimes it is the chariot-race itself which is brought before our eyes; but more frequently we are presented only with the victorious chariot and its driver. The *auriga* bears the palms and wreaths of victory, and an accompanying legend often proclaims his name and also the "faction" whose cause he had maintained. Even the horses are to be seen bedecked with palms, and in such names as "Alliger" and "Roscius" we may doubtless recognise the "Eclipses" and the "Blue-gowns" of the day. In place of gladiatorial combats the contorniates sometimes show the beast-hunts of the Amphitheatre. The athletic contests of the Stadium are, however, less frequently represented, though sometimes the types have reference to foot-races or to exercises of strength and skill. In the various mythological and heroic subjects we may further see (with M. Robert) an allusion to actual mimic and theatrical spectacles, of the same character, no doubt, as those "*fabulae salticae*" described by Lucian. The contests in music are represented by a curious type which is generally explained as musicians engaged in playing a wind-instrument or organ; and also by personages taking part in competitions, probably in singing and recitation. Lastly, and in unheroic contrast to the other subjects, we sometimes find depicted such objects as fish and bread, which allude, it may be, to refreshments (provided at the public expense) with which the spectators, after the manner of galleries and pits, delighted to regale themselves between the acts.

The original destination and significance of the contorniates have given rise to much discussion. Some of the older numismatists considered these specimens to be mere tickets of admission to the Circus, with no more romance about them than there is in a metal "pass" to the pit of a modern theatre. This view is, however, quite untenable. On the other hand, M. Lenormant and other writers have imagined that our contorniates were fraught for their original possessors with a deep and magic meaning, being employed, in fact, as *talismans* by the competitors in the contests, and by their friends among the lookers-on who embraced the cause of the "Blues" or the "Greens." It is argued that effigies like those of Pythagoras and Alexander the Great, which often appear upon the contorniates, must certainly have been regarded at that epoch as being of wonder-working efficacy; and contorniate legends, such as "*Margarita vincas*," "*Petroni placeas*" (ejaculations for the good success of a competitor), would also seem to indicate

the talismanic character of these pieces. Although we cannot entirely deny that something of this character may in certain cases have been attached to the contorniates, it is difficult, I think, to believe that they were made and sold to serve *exclusively* as talismans. M. Lenormant, indeed (like Eckhel before him), supposes them to have been issued merely by private enterprise; but of this there is, I believe, no evidence, and the view implied, if not expressly stated, by M. Robert—that the contorniates were issued by *authority*—seems on the whole preferable. The ingenious theory which M. Robert himself brings forward is that the contorniates were given to the winners in the various contests as a kind of certificate of victory which would not only be a memento afterwards of past achievements, but would serve as a sort of *coupon*, by the presentation of which to the authorities the holder could prove his title to a prize. This theory has the merit of offering some solution of one of the most puzzling problems encountered in the study of the contorniates—the meaning of those subsidiary devices which occur on nearly all of them. These devices do not, as a rule, form part of the original design or type, but have been added at some time subsequent to the casting of the specimen by means of engraving or, occasionally, by inlaying little pieces of silver. By far the most numerous are a palm-branch (an evident allusion to the prize of palms) and a curious symbol which has been variously interpreted; but, if we follow M. Robert, we shall find it composed of the letter P—standing for *praemia*—and of a varying number of horizontal strokes which may possibly indicate sums of money. *Praemia*, of course, would denote that the owner of the piece was entitled to one of the prizes *in money* which were certainly given to victors. We read, for instance, in a Latin inscription, of the charioteer Calpurnianus, who won on more than a single occasion sums which amounted to several thousand sesterces, "*Mille palmas complevi in factione prasina . . . et vici praemia majora xli.*" And we know, indeed, from several sources, that the victorious *auriga* of those days was by no means contented with a simple prize of palms and "contorniates," but always looked forward to a more substantial reward in the shape of a splendid garment or a golden helmet, a statue or a good round sum of sesterces.

WARWICK WROTH.

### THE EARLY HISTORY OF THE LEVANT.

#### II.

THE existence of inscriptions among the prehistoric remains of Hissarlik affords another argument against ascribing the upper strata of them to a very early date. In my Appendix on the subject to Dr. Schliemann's *Ilios*, I have, I believe, established that a syllabary was once in use on the shores of Asia Minor and in the neighbouring islands the Kypriot branch of which survived into the historical period, while certain of its characters were preserved in the later alphabets of Pamphylia, Lykia, Karia, Lydia, and Mysia; and I have tried to make it probable that this syllabary was derived from the hieroglyphs of the Hitites. A verification of the latter theory may be found in Dr. Isaac Taylor's

recent work on the *History of the Alphabet*. That the Asiatic syllabary was employed in the Troad down to a comparatively late date is evident from the inscription on an archaic Greek *patera* found by Mr. Calvert in the necropolis of Thymbra, which I proposed to read *Levon*, but which Dr. Desecke, more correctly, now makes *reso* (ῥέσω). The inscribed terracotta weight, too, from the Palace of Assurbani-pal, which bears such a close likeness to one discovered at Hisarlik, may have been brought from Lydia by the ambassadors of Gyges. I doubt, therefore, whether the old syllabary was supplanted in this part of Asia Minor by the Phoenician alphabet before the seventh century B.C. In any case, if it was derived from the Hittite hieroglyphs, it was certainly still unknown there at the time when the pseudo-Sesostris and the Niobé were carved, probably in the fourteenth century before our era.

As for the pottery of Santorin, Ialysos, Mykénæ, and Spata, M. Dumont has little difficulty in proving that they represent successive stages of development. His contention that the objects found at Spata are later than those of the Mykénæan tombs is confirmed by the fact that at Menidi the butterfly of Mykénæ has been conventionalised into a common ornament. The curious spectacle-like device so common at Spata and Menidi, which has been compared to a leaf or bouquet of flowers,\* and appears on one of the inlaid swords of Mykénæ with three blossoms springing from it, is shown, by a large embossed fragment of gold-leaf found at Mykénæ, to have originally represented the face of an owl. It is curious that the same bird should afterwards have been an Athenian symbol.

An ornament of this sort suggests the question, Whence was it derived? It can hardly have been of indigenous invention, partly because of the general character of the art and ornamentation with which it is associated, partly because the materials on which it is found—gold and glass—were of foreign origin. On the other hand, it is unknown, so far as we know, to Phoenician art.

The evidences of Phoenician influence at Mykénæ, indeed, are unmistakable, and have been often dwelt upon. I may mention two, which have more or less the charm of novelty. One of the swords discovered by Dr. Schliemann, which, when cleaned, were found to have figures upon them inlaid with gold, seems to have been imported from the Phoenician colonies settled in the Egyptian Delta. At all events, as Dr. Köhler was the first to point out, the plants represented upon it are papyri, and the birds and beasts are those of Egypt. In fact, the whole scene bears a striking analogy to the pictures of hunting in the Delta, which belong to the time of the XVIIIth Dynasty. The other piece of evidence I allude to is presented by the complicated spiral pattern found on the vases of Santorin and Ialysos, as well as on the tombstones and gold ornaments by Mykénæ. Each spiral consists of five lines, and is united by two others to the spirals which precede and follow. Now, I noticed precisely the same ornamentation carved on certain of the stones in the Phoenician temple in Gozo known as the Giants' Tower. A similar pattern has been found at Troy (*Ilios*, p. 489), as well as on an archaic Babylonian cylinder.

This is almost the only instance, so far as I can see, in which relations can be claimed between Hisarlik and Phoenicia. But it is quite otherwise, as I have already stated, if we substitute Hittites for Phoenicians; and, since the pattern in question was known to primeval Babylonia, whose art and culture were adopted

and modified by the Hittites, we may hereafter find it occurring also on objects of Hittite industry. The Trojan silver talents which are shown by Mr. Head to be thirds of the mina of Carohemish (*Ilios*, pp. 471, 472) point to the extension of Hittite trade as far as the Troad.

Hittite influence, however, was not confined by the eastern shores of the Aegean. Besides the Phoenician element, the art of Mykénæ, of Attica, and of Kypros contains another element which can be distinctly traced to Asia Minor. This is in strict conformity with Greek tradition itself, as well as with the difficulty of finding a nearer source for the gold of Mykénæ than the mines of Tmolos. In the *Journal of Hellenic Studies*, iii. 1, Mr. Ramsay has traced certain forms of sculpture and design from Kappadokia to Mykénæ; and no more striking parallel can be found to the Lydian figure of "Niobé," which we now know to be of Hittite origin, than the small golden figure of the Asiatic goddess found in the third Mykénæan tomb (*Mycenæ*, No. 273). The curious way in which the dress is arranged between the feet of the latter even explains the line still visible between the feet of the "Niobé." Similar seated figures of the goddess, but of terra-cotta, have been discovered on other prehistoric Greek sites. Equally Asiatic is the double axe of greenstone found on the site of the Heraeum. As a foot of the same material and of corresponding size was discovered along with it, it would seem to have been held in the hand of a small figure. We are thus reminded of the Karian Zeus Labrandeus with his double axe. The *bipennis* was also the symbol of Tenedos, and it is placed between the horns of the numerous ox-heads in gold-leaf excavated at Mykénæ. On the famous engraved ring found at Mykénæ, moreover, two *bipennes* appear, one behind the other, in the centre of the scene represented upon it, while the ox-heads are arranged by themselves on the right-hand side. As I have said elsewhere, this ring betrays the influence of archaic Babylonian art. It is archaic Babylonian art, however, which has been modified by its passage through Asia Minor; the details of the Accadian gem-cutter's work are preserved even to the flounced dresses of the Amazonian priestesses, but the grouping has ceased to be Babylonian, and has assumed a new and peculiar form. On another ring from the same tomb at Mykénæ we again find a row of animals' heads. Here, also, we have analogies among the early Babylonian cylinders; but it is only an art influenced by that of the Hittites—who delighted, as their hieroglyphs show, in the delineation of animals' heads—that is likely to have considered them to be of themselves a sufficient ornamentation. It is worthy of notice that the Lydian gold jewellery now in Paris, of which I gave a description in the *ACADEMY* of January 15, 1881, is ornamented with the heads of animals. As I pointed out in the *ACADEMY* two years ago, gems and cylinders engraved in the very peculiar style generally known as Kypriote have been found not only in Kypros and on the coast of Asia Minor, but also in the neighbourhood of Aleppo—that is to say, in the ancient Hittite territory. The style is a rude and remarkable modification of that of archaic Babylonian art; and it originated, I believe, at Carohemish, which adopted the art and religious legends, not of the later Assyria, but of primeval Chaldaea.

We must carefully distinguish from such gems and cylinders others, equally rude in character, which are imitations of Phoeniko-Assyrian work, and belong to a much later date. I have in my possession three chalcodony gems from Sardes, one of which must have been executed by a Phoenician artist at Nineveh, while the other two are exceedingly coarse attempts at imitation on the part of native gem-

cutters. Similar coarse attempts have been discovered in Phoenicia itself. Examples of the same style of art may be found in the gems on which "the god of Harran," as a cuneiform inscription informs us, is represented under the form of a conical stone with a star above it. Harran seems to have originally been an Accadian colony from Babylonia—such, at least, is the inference to be drawn both from its name (the Accadian *Kharran*, "road") and from a statement of Sargon—and to it was transplanted the old Accadian stone-worship. The same system of worship, ultimately derived, perhaps, from Chaldaea, flourished also in Phoenicia, and was probably transported from thence to Paphos, where the famous image of Astarte consisted of an upright stone. It is, however, possible that Paphos and its cult were founded by Hittite or Kilikian colonists, and subsequently appropriated by the Phoenicians. At any rate, Paphos is not a Semitic name, while Kinyras, the local title of the Phoenician Adónis, equally resists a satisfactory Semitic etymology. On the other hand, the legends brought him from Kilikia, and made him the son of the Kilikian Sandakos. But whether or not Paphos was primarily of Kilikian origin, I believe we shall find that whereas the early civilisation of the southern part of Kypros was Phoenician, that of the northern part was Hittite. This again, however, is one of those questions which can only be definitely answered by future research.

The following, then, are the facts which we may now consider to have been established by modern discovery in regard to the early history of the Levant:—

1. The primitive culture of Greece was derived from two sources: the Hittites, whose art was originally drawn from Babylonia, and was passed on to the shores of the Aegean by the nations of Asia Minor; and the Phoenicians, who had imbibed the civilisation of Egypt, and possibly also that of primitive Babylonia.

2. The Phoenicians came first to Greece as simple traders, then as colonists; while the Asiatic influence was disseminated, if we may trust the native legends, through the medium of a conquering race known as the Pelopidae, and resulted in the era of Akhaean civilisation. This civilisation had its chief seats in Argolis, Attika, Boeotia, and Iolkos.

3. Writing was as yet unknown in Greece. On the other hand, the Hittite system of hieroglyphs had been carried as far as Lydia; and a syllabary, probably developed out of it, was in use in Asia Minor and Kypros at least as early as the tenth century B.C. Compare the *σφραγισμα* of *Il.* 6, 168.

4. The epoch of Asiatic influence was succeeded by one of Assyro-Phoenician influence. It was during this epoch that the Greeks learned the Phoenician alphabet, probably in the ninth century B.C. This is the epoch of the archaic Greek pottery, which is followed by the Phoeniko-Hellenic or "Corinthian," and that again by the purely Hellenic.

Certain problems, however, still await solution. Foremost among these are the questions how far, if at all, primitive Phoenician art was affected by that of early Babylonia; and how we are to distinguish between those elements of early culture which came to Greece through Asia Minor and those which were brought by Phoenician trade.

A. H. SAYOR.

#### NOTES ON ART AND ARCHAEOLOGY.

MR. W. M. RAMSAY writes that he has discovered the tomb of Mygdon mentioned by Pausanias. He has recently started on another expedition into the interior of Asia Minor.

PROF. MASPERO has arrived in Paris, and has read two papers on his recent discoveries in Egypt before the Académie des Inscriptions.

\* Von Sybel: *Kritik des ägyptischen Ornaments*, p. 25.

THE September number of the *Portfolio* will contain the third and concluding part of Miss Amelia B. Edwards's series of papers on "The Portrait Sculpture of the Ancient Egyptians."

NOTWITHSTANDING the warm approval with which the project of erecting a memorial to Fielding in the Shire Hall of his native county of Somerset has been received, the subscriptions still fall short of the sum required to pay for the bust and incidental expenses. Mr. Arthur Kinglake, of Haines Hill, Taunton, the originator of the "Valhalla of worthies" among whose busts that of Fielding is to be placed, will therefore be glad to receive further contributions. No alteration has been made in the day fixed—Tuesday, September 4—for the ceremony of unveiling by the American Minister.

DR. CHARLES WALDSTEIN has printed as a pamphlet the lecture on "The Influence of Athletic Games upon Greek Art" which he delivered last April before the Royal Institution. We are glad to learn, from an introductory note, that Dr. Waldstein hopes to write some day an elaborate work on the subject. His main point is that the rapid development of Greek sculpture—in freedom, in nature, in execution—displayed between 510 and 460 B.C. (as seen on comparing the Apollo of Tenos with the Diskobolos of Myron) is to be explained by the systematic attention to the palaestra.

THE Bibliothèque nationale has recovered an album of reproductions in colour of architectural monuments which is believed to have been stolen from the Gaignières Collection by the notorious Clairambault. Gaignières was an enthusiast who spent his life and fortune in travelling through France and collecting memorials in the shape of books, MSS., and views which were executed to his order. In 1711 he entered into a special arrangement with the Crown, and received a pension on the condition of leaving his treasures to the Royal Library. He was afterwards suspected—perhaps wrongly—of making away with some of his curiosities, and Clairambault, who was appointed Keeper of the collection, used his position to filch many valuable books and portfolios. The present album is interesting inasmuch as nearly all the drawings it contains record monuments which have ceased to exist.

In the first number of the *Bulletin* of the Royal Commission on Art (Brussels), M. H. Hymans identifies a small picture in the Royal gallery at Turin, representing "St. Francis and a Brother of his Order," as the work of Jean Van Eyck. Apart from the internal evidence, he quotes the will of a certain Anselme Adornes of Bruges, who died in Scotland in 1483, and who bequeathed to each of his daughters "a small picture of St. Francois by Jean Van Eyck." M. A.-J. Wauters, writing to the *Echo du Parlement*, suggests that the "St. Francois" in the collection of Lord Heytesbury may be the second of the two pictures referred to.

THE *Revue des Arts décoratifs* commences its fourth year with every appearance of renewed vigour and a clear understanding of its peculiar function. The work-table and its appendages are the subjects of the first of a series of articles by M. Antony Valebrèque on "Les Ornaments de la Femme;" and the kitchen utensils of the Middle Ages and the Renaissance are again treated by M. Pedro Rioux de Maillon. The number is well and fully illustrated as usual, one of the separate plates being devoted to some specimens of Doulton ware.

It is not often that fault can be found with the printing of etchings in the *Gazette des Beaux-Arts*, but in our number of that admirable magazine justice to M. Guérard seems scarcely done by the impression it contains of his spirited interpretation of "Vive la Fidélité,"

a characteristic work of Franz Hals in the Pourtales Collection. In this number M. Duranty and M. Paul Gout conclude their respective studies of "Les Curiosités de Dessin antique dans les Vases peints" and "Exploration archéologique de Saint-Emilion;" and M. Natalis Rondot gives some interesting statistics of the remarkably large number of foreign artists and craftsmen employed at Lyons from the fourteenth to the eighteenth century.

THE Nestor of German artists in Italy, August Heinrich von Riedel, died at Rome on August 6, in his eighty-fourth year. He was born at Beyreuth, and studied at the Munich Academy under the directorate of P. von Langers, but left for Rome as early as 1828, since which time he almost constantly resided there. He was a professor at the Academy of San Luca at Rome, and a member of the Academies of Munich, Berlin, Vienna, and St. Petersburg.

MESSRS. ASKIN, GABBITAS AND KILLIK, of Sackville Street, Piccadilly, will shortly publish a reduction of the bust of Dr. Benson, Archbishop of Canterbury, by Mr. H. R. Pinker, exhibited at the Royal Academy this year.

### MUSIC.

*Franz Liszt, Artist and Man.* By L. Ramann. Translated from the German by Miss E. Cowdery. In 2 vols. (W. H. Allen.)

"BIOGRAPHY," observes Hofrath Heuschrecke in *Sartor Resartus*, "is by nature the most universally profitable, universally pleasant, of all things: especially biography of distinguished individuals." Not only is Franz Liszt a distinguished man, but, from his earliest years down to the present day, he has mingled with nearly all of the musical and with many of the literary celebrities of the nineteenth century. In 1822, at his first public concert in Vienna, Beethoven is by his side and embraces him; in 1882, Liszt is congratulating Richard Wagner at Baireuth on the success of his "Parsifal." What a crowd of stirring events between these two dates! Liszt has watched the careers of Schumann, Chopin, Mendelssohn, Berlioz (and, we are now compelled to add, Wagner), almost from their cradles to their graves. He has played a most active part in all the great musical questions of the last half-century; he has always shown himself a friend to rising and struggling genius; and taken a noble view of art and of an artist's duties and responsibilities.

Lina Ramann is an ardent admirer of Liszt, both as a man and as an artist; and, if at times she is prone to exaggerate and to take too enthusiastic a view of her hero's life and works, she has nevertheless given us a most graphic picture of the composer from his earliest days down to the year 1840. This is but a first instalment; in a future volume she will relate to us his wanderings through Europe in the character of a virtuoso, and the epoch of his activity as a composer at Weimar, Rome, and Pesth. Franz Liszt was born in 1811. The early childhood of the future king of pianists was passed, under his parents' guidance, in the quiet little village of Raiding, in Hungary, where his father, Adam Liszt, served as steward to Prince Esterhazy. His mother, the daughter of an artisan, was a woman of simple mind and warm feelings. She was pious, though not bigoted, and taught her boy from his earliest childhood to fear God and honour the Church. These early religious impressions have never been effaced from his memory. His father commenced teaching him the piano at the age of six. Before this he left his playthings to hear his father play; he could sing tunes by ear, and he used to point to a

picture of Beethoven, saying he wished to become "such a one." At the age of nine he appears before the world as a prodigy. "Est deus in nobis?" said one of the newspapers when he first played at Vienna in 1822. In 1823 he is again heard in this city—that memorable concert at which Beethoven was present. In the following year he gives a concert at the Italian Opera House in Paris. Then we hear of him in London and Manchester; and in 1825 he appears in Paris as a composer. His "Don Sancho" is performed in the Opera House. By-the-way, Lina Ramann, speaking of the *libretto* of this Opera, written by Théaulon, says that, "unfortunately, no trace of it is to be found." But what about the piece in the tenth volume of the *Théâtre de Théaulon* published by Roulet? It bears the same title as that of Liszt's Opera ("Don Sancho; ou le Château d'Amour"), and among the list of actors given is the name of A. Nourrit, who actually played the part of Don Sancho in 1825. And, from a description we have read of Liszt's Opera, the plot seems identical.

The death of his father, in 1827, was a heavy blow to Liszt; at first he missed his guiding hand; but, left alone to fight the battle of life, he became more of a man, and gained that experience of the world so necessary to him as an artist. Liszt went to live in Paris, and all the chapters devoted to what are called "his years of development" are exceedingly entertaining. His first love-sorrow, his awakening thirst for knowledge, his religious doubts, his enthusiasm when the Revolution broke out in 1830, are here unfolded to us. The excitement created in his mind by the revolutionary sect of the St. Simonians, followed by the calming influence of the celebrated Abbé de Lamennais; and then again the wonderful impression made on him by Paganini's playing, and the deep interest with which he listened to the new and romantic strains of Berlioz, the apparition of Chopin in Paris, the Liszt-Thalberg contest—all are described in the most attractive manner. Not only does the authoress give us a picture of Liszt with his enthusiastic and most impressionable mind—now believing, now doubting, now fascinated by success and by the applause of the world, now despising the empty fame of a virtuoso, and seeking to lift art into a higher and nobler sphere—but she also gives us graphic pictures of the society in which Liszt lived and moved. Nor is the romantic element wanting. The attachment of Liszt to the "Comtesse d'Agoult," his travels in Switzerland and Italy, his life at Geneva, and his connexion with George Sand are told with an amount of detail that will please the many, who like to know everything about any man who has in one way or another attracted the attention of the world.

We are sorry not to be able to speak well of the translation. To translate a book on music demands a certain amount of technical knowledge. Miss Cowdery has everywhere given *dur* and *moll* as "sharp" and "flat." She makes utter nonsense of some of the sentences: as, for example, when Kreutzer is made to speak of the "barbarous bungling" of choosing Beethoven's Symphony in D sharp. There is one passage about modulation in which, owing to the mistakes of words, there is no sense whatever. Again, in place of "augmented triad" she writes "triplet." We had intended to give a list of the principal faults and muddling sentences. But there is a perfect *embarras de richesse*. We therefore prefer to say generally that we have never read a worse translation; and that it is an enormous pity that so interesting a work should have been presented to the English public in such an unreadable and disfigured form.

J. S. SHEDLOCK.

SATURDAY, SEPTEMBER 1, 1883.

No. 591, *New Series*.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*Mano*: a Poetical History. By Richard Watson Dixon. (Routledge.)

A POEM covering nearly two hundred pages, written throughout in *terza rima*, and broken only into books and cantos, may not at the first blush prove a very appetising literary dish. Nevertheless, *Mano* is in many respects an important work, and in some the most remarkable poetic product of the time. Even if in the result it be proved against the poet that he has chosen a vehicle that is foreign to the genius of our language, it cannot but be admitted that he has, with abundant courage and skill, made a singular metrical experiment. That he has written a long poem without once having recourse to the overcharged phraseology of the time; that he has exhibited the graces of sedateness and moderation of expression; that he has employed more and purer idiom than has for many years found its way into English poetry; that he has conceived his work in a high mood of poetic feeling, and composed it with sustained elevation of sentiment, are statements that will not be questioned by those who know and love the art of poetry. That he is deficient in the human warmth that gives vitality to heroic characterisation; that his narrative lacks some needful impetuosity of passion and swiftness of movement—in a word, that his dramatic instinct is less sure than his epic insight, are qualifications of praise with which no discriminating admirer will quarrel.

*Mano* is described on the title-page as "A Poetical History of the Time of the Close of the Tenth Century concerning the Adventures of a Norman Knight, which fell part in Normandy, part in Italy." The story is supposed to be written by a monk, Fergeant, about fifty years after the death of *Mano*, with the wish of vindicating his memory. The historical basis is the Norman conquest in Italy; and the hero is one of the precursors of those Normans who afterwards did so much there. Thus the groundwork of *Mano* is the exact opposite of that of much modern poetry, being laid among substantial men and women and concerning itself with recorded actions. Landor said that many of the poets of his time were too fond of the unsubstantial in poetry and too proud of that "pure imagination" from which their conceptions were supposed to come. If this was true when Landor said it, we may be sure that it is true to-day, when inebriate imaginations run riot in that province of "Nowhere" which an adventurous critic has recently explored. Shakspeare and Milton—and even Spenser at his best—stand always among actual

men and write about actual deeds. It is only, as Goethe says, the lesser poet who is endlessly spinning his web out of the entrails of what he calls his "subjectivity." That subjectivity of his is usually a matter of no moment to the world, however serious to himself. It perhaps concerns itself with lamenting the loss of some loved one by distance or death, and is often worthless to literature and an abuse of poetry. On the other hand, the "objective" theme, however substantial, however full of strong human interest, and notwithstanding the garb of poetry in which it is enveloped, is after all little more than the prose of common life if a "soul of sentiment," if the "subjectivity" of the writer, is not breathed through it. And this brings us to a true idea of the place which a poem like *Mano* occupies in poetry. It is not Epic, for though it possesses the historical foundation and the heroic outlines proper to that type of narrative poem, it lacks the supernatural, the allegorical, the mythological or quasi-mythological elements essential to that highest type. It is not Historical simply, for the historical element is not paramount; the design is not merely to relate real history poetically, beginning at the beginning and going straight on to the end. But the student of poetry will observe that there is an intermediate class between the Epic and the Historical; and this may best be called Sub-epic or Sub-heroic—a narrative form in which the supernatural, allegorical, and mythological elements necessary to epic poetry are abandoned, but in which an historical basis remains, and the events are arranged into artful structure and worked up to a completeness of final poetic justice. This is the class to which *Mano* belongs. The poem is neither a simple history told poetically nor an heroic combination of all the poetic machines. It is an echo of history resonant with "subjectivity," full of the "soul of sentiment." The period chosen for the poem is well fitted to serve the uses designed for it. Our modern manners are so ill adapted to the play of the higher poetry that to get as far removed from them as possible is often a necessity to the writer who would deal with a Sub-heroic theme. The close of the tenth century, when there was a universal belief that the world would end, when misery of every kind was at its utmost height, is a time that is interesting and impressive and well adapted to the use of one who would offer his views of infinity and destiny. If we were asked for the ultimate idea in *Mano*, we would say Fatality—that the poem gives a picture of the upset of things by destiny, of the erring of virtue and its partial (but no more than partial) triumph at the end, when misunderstanding vanishes only at the tomb of the misunderstood. The name is probably designed to mark the hero as typical, coming, perhaps, from the root "Man." *Mano* himself is depicted as a knight of noble impulses who is led by his virtues themselves into misfortune and even into crime. Indeed, Canon Dixon's fabulous hero may be described in a word or two as the exact reverse of what the hero of the Faust legend was before Goethe transfigured him. In his typical *Mano* Canon Dixon seems to say that there is a plague-spot of evil at the core of this world and this life, and that it infects

everything. We may do our best, we should do our best, but we are not therefore to expect reward. Perhaps our recompense will come to us while we live. More likely it will only be the crown laid on our grave. Destiny works her own way, and in the end she sees that it is the good that triumphs. Now this, while it seems to be disheartening doctrine, is really the most inspiring of all teaching—that without being sensibly affected by human actions, whether good or bad, truth will in the end prevail, though it may and must seem again and again to be conquered. This lesson lies at the heart of Shakspeare. It is the soul of the story of Hamlet, of Desdemona, and of Cordelia dead and glorified in poor crazy old Lear's arms.

We have left ourselves but little space in which to speak of the just poetic pretensions of this poem. The style is marked by ardour, energy, and elevation, and these are as necessary to any writing as concentration. Canon Dixon is not so far an enemy to all amplitude of style as to resemble the writers who for appearance's sake "cut short the tails of their dogs." "Such dogs are proper to such masters," says Landor. Neither is he so far a slave to severe temperance of expression as to neglect the proper indulgence of healthy sentiment from any fear of the reproach of fine-writing. He certainly does not preach; and preaching is what the critics really intend to taboo who are constantly laughing or sneering at that elevated expression of the personal feeling of a writer without which all writing is but as the rattle of so many dry bones of fact and opinion, and is destitute of real value. The plumes of phraseology in *Mano* are distinguished by natural beauty: the descriptions are full of nature, and not of metaphor foreign to nature. The following is neither above nor below the sustained level of the descriptive passages:—

"Now in our journeying the hills more faint  
Lay far and white behind us, and the way  
Turned downward to the plain by passes quaint.  
Known were those paths from earth's primeval day  
To such rude men which in those hills abode:  
But we passed fairly without check or stay.  
Pace with the streams we kept that marked the road,  
And thus descending looked on valleys fair  
Enlaced with terraced vines that darkly glowed.  
The purple sky, high rolled in æstive air,  
The grass, the budded flowers gave more delight,  
The laughing bursten broom seemed yellower.  
And now our scattered fellows gan unite  
Where the long passes ended; and the way  
Suddenly brought the Italian plain in sight,  
The glorious golden country for whose sway  
Fierce nations strive: yea, even as the shores  
Lead to the boundless sea, and therewith stay;  
So suddenly the hills their rocky doors  
Behind us shut, and left us on that plain,  
Which, like the sea, rolled far his swelling floors.  
Their vine and olive-crested grass and grain:  
Cities, the Roman works, stood fair and high,  
Like islands, in the golden-billowed main."

Readers will have no difficulty in admiring that. But Canon Dixon never writes with a palpable design of exhibiting power. Of that sort of bullying we have nowadays too many examples; it is the trick of the bully at school carried up into literature.

In dismissing too briefly Canon Dixon's remarkable poem, we must not omit to say that one of its distinguishing features is that for the first time in English it treats the

metre in which it is written as a stanza—as a terminating stanza. Most of the writers who have tried original composition in it hitherto (translations of Dante and Wyatt's translation of the Seven Penitential Psalms are out of the question) have not, perhaps, troubled themselves to understand the principle of it. They have almost all, from Byron to Mr. Browning, appeared to think that having three rhymes intermingled is everything that is necessary. The structure, however, of the verse ought to play within the stanza, and be terminated with it. Dante always has it so. It is a law as unbending in the triple rhyme of Dante as in the sonnets of Petrarch. Wyatt, who perhaps introduced the metre into English, evidently understood the principle of it; but no one subsequently seems to have quite grasped it. Byron is destitute of metrical structure, and so is Mr. Browning in his recent *Jocoseria* volume. In the latter, indeed, the printer has been instructed to make a stanzaical division for the eye, which the poet has neglected to make for the mind. The metre has been so far misunderstood in England that Cayley, in the Preface to his Dante, actually says that it is not a stanza at all! "The measure cannot be broken into stanzas." *Mano*, while exhibiting occasional freedom of treatment, shows that it can so be broken.

T. HALL CAINE.

*History of the Civil War in America.* By the Comte de Paris. Vol. III. (Philadelphia: Porter & Coates; London: Sampson Low.)

EIGHTEEN years have passed away since that Commemoration Day when the greatest poet of the New World stood up and recited to a breathless audience that ode which thrills our pulses even when read in cold print at this distance of time. What it was to hear it on that day only those who were there can tell—when each man present was able to fill in for himself the names of some or other of the missing ones, and knew, moreover, that he who thus gave voice to the sorrow of all had his own private grief to lend force to his lament over the brave dead ones who had followed Truth so faithfully and died for her sake. When Lincoln had not been three months in his grave, with what hearts must men have listened to his praise and to that passionate cry of devotion to the country he loved—

"What were our lives without thee?  
What all our lives to save thee?  
We reck not what we gave thee,  
We will not dare to doubt thee—  
But ask whatever else, and we will dare."

In England the excitement felt at the time (that English public opinion should ever have been seriously on the side of the South seems to us a strange and, we were going to say, inexplicable fact) has long died away, and another generation has grown up, which knows not, save by vague and confused report, Jeff. Davis, and Lee, and Meade, and McClellan, and Jackson. Probably many English people are (but more excuseably) in the same state of haze as a worthy citizen of Pennsylvania, who, when asked in 1866 by a friend of the writer's what was the difference between the

Federals and the Confederates—he had fought on the Northern side, by-the-by—was, as old Bunyan phrases it, "somewhat at a stand." Finally, after much musing, he expressed his views thus: "Wall—you see—the Federals *air* the Federals, and the Confederates *air* the Confederates."

But it is only natural that in the States twenty years should not have made so much difference. While there are green graves to be strewn with flowers each year as "Decoration Day" comes round; while there are homes where "dear ones whom the dumb turf wraps" in some unknown resting-place in the Virginian "Wilderness," or in the reeking bayous of the Mississippi, are still missed and mourned; while there are Southern towns deserted and melancholy, whose inhabitants cry "Ichabod" over them, and speak with sad resignation of the days "before the war"—we cannot say that the effects of the war have passed away. Of course we do not here mean the effects on the broader and grander scale—the permanent gain to both black and white races, which must in the end result from what after all was a war of principle, despite the shortcomings of many individuals engaged on the right side. This, alas! as most authorities seem to assert, is not very apparent as yet. The writer of a lately published book, *Ten Years on a Georgia Plantation since the War*, finds nothing but evil as the result of the great conflict—the white landowners hardly able to live, the Negro nothing bettered by emancipation, but rather worse. This is a question of great difficulty, and not to be entered upon without much carefully weighed information at first-hand. We would only remark that twenty years is a short time in which to elevate a race systematically kept down for four centuries at the lowest computation, and looked upon to a great extent with jealousy and aversion even at the present time.

It follows that, under the circumstances, a thoroughly unbiassed account of the great conflict of 1861–65 can be looked for only from a foreigner. The Comte de Paris unites many of the qualifications required. Only a man possessed of wide information, unlimited leisure, and access to original authorities, together with the French precision and lucidity necessary to arrange and co-ordinate this vast mass of material, could have undertaken such a task. One would be inclined to think (were it not that a note at the end discloses an appalling array of books and documents as the sources of his information) that the author had examined the various localities for himself, so clear and minutely detailed are the descriptions—e.g., that of the "Wilderness," in which the Battle of Chancellorsville was fought. The maps, too, greatly add to the value of the text; only we think it is a pity that there is none to illustrate the fight just mentioned. Also a larger map is needed, including the whole of Virginia and Southern Pennsylvania, and showing the position, relatively to each other, of the places given on a more extended scale in the smaller ones. The reader is apt to forget the situations of Harper's Ferry, Shiloh, Gettysburg, &c., and to confuse the courses of the Shenandoah, the Rapidan, and the Rappahannock, unless he has them constantly under his eye.

This is only the third volume of the work; and the scale on which it is written may be judged of by the fact that, bulky as it is, it is limited to the operations taking place in 1863, from the fight at Dowdall's Tavern in January to the battle of Mine Run in December. This takes in the two great, if not particularly decisive, battles of Chancellorsville and Gettysburg; the taking of Vicksburg, and the fighting in the Virginian mountains during the third winter of the war.

Writing from the calm standpoint of an outsider, the Comte de Paris is able to do justice to the chivalrous Lee and the gallant Jackson, and also (though the disposition of his material has not allowed him to do so in this volume) to the less brilliant, but higher and more effectual, heroism of the man from Illinois, the central figure of the four years' epic—"wise, steadfast in the strength of God, and true"—who

"Knew to bide his time,  
And can his fame abide,  
Still patient in his simple faith sublime  
Till the wise years decide."

But all these high qualities, though they will make this History permanently valuable as a work of reference, will never render it interesting to the general reader. The detail is too minute and technical to be attractive to any but military specialists, and the scale on which the plan is laid out would consume a large part of an average lifetime in reading it through without exercising what Sir Arthur Helps calls "the Englishman's privilege of skipping." The fickle and frivolous being referred to above will, we fear, be inclined to prefer the livelier, if less impartial, pages of Horace Greeley.

One word as to the translation. It is carefully executed, and renders the sense of the original well; but it has the capital fault of reading like a translation. Many words and phrases are awkward, if not precisely incorrect, and there is a decidedly un-English "run" in the style of whole paragraphs. Perhaps the most palpable fault is the excessive retention of the French historical present—always a translator's stumbling-block—which, effective as it is in the original for vivid narration, is apt to look forced and futile in English.

A. WERNER.

*A Woman's Memories of World-known Men.*  
By Mrs. Houston. (White.)

ONE is sometimes tempted to wish that the art of forgetting were as well cultivated as the art of memory, or that some efficient means could be devised to prevent people shooting the rubbish of their ill-assorted recollections on the so-called world of letters. This latest contribution to the heap is perhaps no worse than many that have preceded it; and it would doubtless be difficult to explain to Mrs. Houston—who writes English, as the Duke of Wellington spoke French, with conspicuous courage—why she should not unburthen her mind to a public only too well disposed to listen to her. Clearly the virtue of reticence is one which finds no favour in her eyes. She gives us, for instance, certain nauseous details of Mr. Samuel Rogers' mode of "manducation," and some lengthy remarks on the "extraordinary sensitiveness" of "the

cynical bard" as to the consumption of his "favourite esculent" (*Anglice*, butter) which are worse than trivial. Mrs. Houstoun, however, sees in them the key to character, and solemnly adds:

"It is for this reason—the reason, namely, that women are, from the very conformation of their minds, more inclined than are men to take note of, and to dwell with interest on, trifles—that the female sex are in general better judges of character than are their stronger brethren."

We cannot help wishing that this feminine interest in trifles had shown itself rather in attention to such little matters as spelling and grammar, and thus preserved Mrs. Houstoun from falling into the ludicrous errors which disfigure many of her pages. The printer, perhaps, is responsible for the rendering of "that exquisite melody, 'I saw from the beech,'" but what are we to say to the bold assertion that "the original lines, as all the world knows, are Wordsworth's, and run thus:

'A primrose by the river's brim,  
A yellow primrose is to him,  
And nothing more'?"

We have, indeed, a right to expect better things than are found in this book from the daughter of Edward Jesse, whose well-known *Gleanings in Natural History* are not the only evidence he has left us of a cultivated mind and gentle nature. Mrs. Houstoun, also, herself in earlier days could hold her own among the "men of light and leading" whom she met at her father's table or elsewhere. Her skill in versification enabled her to impose upon Sir Harris Nicolas (whom, with characteristic inaccuracy, she calls "Sir Nicholas Harris"), and to procure the insertion of some clever stanzas in his edition of *The Complete Angler*. In justice to her we quote the first verse, which we believe has found its way into more than one collection of seventeenth-century poetry:—

"Good Izaak, let us stay and rest us here;  
Old friends when near  
Should talk together oft, and not lose time  
In silly rhyme,  
Which only addles men's good brains to write,  
Whilst those who read bless God they don't indite."

She was not overawed by Wordsworth, whom she describes as "saturated with the fruits of his own genius," but so ugly that she "could have well-nigh wept over his big nose and general coarseness of appearance;" and with her near neighbour, John Wilson Croker, whose memory has been kept alive by the dislike which he inspired, she had many a contest, ending once at least in the triumph of "the daughter of Jesse over the Goliath of dates." With Mrs. Norton she seems to have been on terms of familiarity; and, with regard to the divorce suit instituted by Mr. Norton against his wife, she makes the following remarks:—

"That the husband, who appears to have been thoroughly unsuited to the beautiful and high-spirited respondent, lost his cause was chiefly owing to the abstraction by the brothers of certain compromising letters, of which, in some crafty manner, Mr. Norton had got possession. Beyond the fact that he was 'always taking pills' and 'spinning conversation'—as was said by Dr. Johnson of a valetudinarian 'bore' in his time—'like a spider

out of his own bowels,' I never heard from Mrs. Norton's lips of any particular occasion of offence that was offered to her by her husband."

Mrs. Houstoun's memories of "Professor" Darwin are limited to the receipt of a single note from the naturalist; and her acquaintance with other "world-known men" whose names appear in her book was of the slenderest kind. But she has preserved some amusing recollections of the brothers Smith, of Theodore Hook, and of the Shelley family. If these had been told in simple English, instead of in ill-spelt grandiloquence, we should have enjoyed them all the better.

As an archaeologist Mrs. Houstoun does not shine. It is well known that there is scarcely a village in England which does not possess, in the shape of cromlech, castle, or church, some relic of the past. The little parish of Chilmark, in Wiltshire, seems to be especially rich in such objects. It was, we are told, the home for more than two centuries of a branch of the Jesse family, "namely, that of the Jessés, Barons de Levas, one of the oldest noblesse of Languedoc." The memory of this distinguished family has been preserved upon "one large and curious 'brass,' whereon

"are inscribed in two rows nine names of male and female members of the Jessé family, the dates of whose births and deaths extended over about two centuries—viz., from the end of the fifteenth to the close of the sixteenth century."

Sepulchral memorials of such a character belonging to the fifteenth or even the sixteenth century are undoubtedly rare; but infinitely more so—in fact, absolutely unique—must have been "the old registers which were coeval with the church itself," and to which, in spite of their loss or destruction, Mrs. Houstoun seems to have had ready access. But the curiosities of Chilmark do not end here. "The oldest portion of the church—namely, the chancel—bears decided evidence of having once belonged to a Roman Catholic place of worship." How, then, could the Jessés—who "migrated into Wiltshire during the commencement of the religious wars, and who were, if not actually belonging to the Reformed religion, at any rate possessed of Protestant proclivities"—worship within such a building? The problem is indeed a difficult one, but the solution is to be found in the fact that the emigrants were as free from religious bigotry as their descendant is from the ordinary rules of grammar.

Enough has been said about a book which, in spite of criticism, will have a fleeting popularity because it suits the prevailing taste for gossip and "good stories." If Mrs. Houstoun be content with that, we shall be sorry, believing, as we do, that she is capable of doing better than she yet has done. The caution given to her by her friend Harrison Ainsworth seems as applicable now as ever:—"Do not be led into the too common error of writing in haste. 'Repentance at leisure' is very apt to follow on what I must not be so impertinent as to call the scribbling mania." To this sage counsel we venture to add our advice that she should copy Wordsworth's example (as cited by herself), and never write a line without having a dictionary at her side.

CHARLES J. ROBINSON.

*Essays in Philosophical Criticism.* Edited by A. Seth and R. B. Haldane. (Longmans.)

"A VOLUME of essays such as the present," says Prof. Caird in his general Preface,

"... will, I believe, serve the purpose of its writers if it shows in some degree how the principles of an idealistic philosophy may be brought to bear on the various problems of science, of ethics, and of religion which are now pressing upon us."

And Prof. Caird adds:

"A better indication of the spirit and aims with which the writers of this volume have written than can be given by any such general statement as the above may be found in their wish to dedicate it to the memory of Prof. Green. . . . To Prof. Green philosophy was not a study of the words of men that are gone, but a life transmitted from them to him—a life expressing itself with that power and authority which belongs to one who speaks from his own experience, and never to 'the scribes,' who speak from tradition."

Prof. Green's remarkable influence is, indeed, apparent throughout this volume. No one doubted the value of Green's work in itself; but it is a gratifying circumstance made evident by many of these essays that this work is likely to live after him in others. We welcome this volume as a sign of the times, as showing that philosophy is likely, in spite of the undoubted influences opposed to it, to have an increasing rather than a decreasing weight in the minds of Englishmen—and, it ought specially to be added, of Scotchmen, for these essays are nearly all by Scotchmen.

Prof. Green's philosophical position has been well stated by the editor of *Mind* in words which we take the liberty of quoting:

"The point of the criticism urged by Green (after Kant), with a massive persistence that stamps it as an original philosophical achievement, is too well known . . . to need more than general indication. Locke and the others are charged with assuming for the explanation of mental experience that which is itself unintelligible except as the result of a mental function. They would account for mental experience, including thought, by supposing a world of 'objects' acting upon a mind or a multitude of minds, when it can be shown that the very things or objects assumed are themselves mental constructions dependent on the activity of that thought which is in this way to be explained."

That self-consciousness cannot, without *petitio principii*, be explained as the final product of a physical evolution; that it is not a mere self-identical point over against an alien world, but the reality of all things, the noumenon, the good—is the fundamental principle which it is the merit of these essays to enforce and apply in various ways. Mr. Seth, in his essay, which seems to us remarkable for grasp and lucidity, applies it to the criticism and interpretation of Kant. The criticism consists in pointing out that Kant's theory of knowledge is dualistic because constructed from the standpoint of Psychology, which substantiates *relata* such as "sense" and "understanding," "form" and "matter." The opposition between "phenomenon" and "noumenon" is not that between the known and the unknown, but that between the more abstract and the more concrete point of view. Self-consciousness is the true noumenon. Mr.

Seth's interpretation of Kant finds in his ethics the principle which was lost sight of in his theory of knowledge. In the ethics we have no longer an unknowable reality; man's consciousness of himself as a rational free cause puts him in possession of the true reality. But he realises himself only in "his relations to the totality of the intelligible world," or (in a more restricted sense) of the social organism. Of similar purport is the rendering of the Categorical Imperative given by Mr. Jones in his suggestive essay on the "Social Organism." The Categorical Imperative is not a bare universal confronting a mere particular. "The good is my true self; and it is imperative because I must be *real*. . . . The good must be an organism really existing in the world, and yet an ideal for every individual." This is a doctrine at which most of the essayists arrive by way of deduction from their philosophical principle, and lay great stress upon; and the unanimity with which they apply it to enforce the duty of active co-operative interest in the solution of social problems is, it seems to us, the most significant feature of this volume. As Mr. Ritchie says, in the course of his thoughtful and brightly written essay on "The Rationality of History"—"Most people feel that 'Laissez faire' is not the final word to express the relation of the State to its members;" and similar statements are made by other writers, all going to show that the philosophy of self-consciousness in England recognises it as its duty to "descend into the Cave," where, we doubt not, its influence will make itself felt in the social changes of the future.

The point of view urged in these essays is, we venture to think, far more practically important for ethics and politics than for science. Not only are the natural sciences now tolerably free from the bad metaphysics against which the essayists protest, but it cannot be denied that the existence of these sciences, as a great organised system of knowledge, has done more than anything else to impress on thoughtful minds at the present day the point of view urged in this volume. Hence it is only what we expected when we find the various writers applying their philosophical point of view with a careful sense of what is due to the positive sciences. Indeed, the high value set upon scientific methods and results is a notable feature of the volume, written as it is by "idealists;" and it is fitted to remove much popular misunderstanding regarding the attitude of the school to science. Mr. Sorley, however, in his acute and well-written essay on "The Historical Method," appears to us to lay himself open to some misunderstanding by the way in which he seems to answer in the negative the question "Can the method of historical realism give a sufficient account of the formation of legal ideas or conceptions such as those of the jurists and legislators who modify law?" "If," he says,

"... self-consciousness stands apart from the historical evolution, and can only be evolved from it when it has been already assumed in it, it follows that the ideals we form are in part at least dependent on a source which stands above the merely temporal succession traced by the historical method."

Mr. Sorley's inference is true; but it applies

to *all* conscious states *equally*, and does not avail to discriminate between them so as to place architectonic conceptions on a different footing as regards positive science from conceptions of detail. All conscious states (even the most brilliant and unexpected) are equally, in one sense, objects of science, and equally, in another, above science. What science cannot explain (and thanks, perhaps, in part to the criticism of the "idealists," does not now profess to explain) is the fact that we are here to experience conscious states at all.

Mr. Kilpatrick's essay on "Pessimism" is, perhaps, the most interesting in the volume. Pessimism, according to the writer, has done in the nineteenth century what Hume did in the eighteenth. It has shown the insufficiency of individualism. If the world consists merely of isolated individuals, Pessimism is unanswerable. Comte's extension of the individual—Humanity—only removes the difficulty a little farther back. The philosophical solution which Mr. Kilpatrick offers is presented by him with ability and eloquence, and we gladly refer the reader to his pages. But, after all, can Philosophy—for we are still flesh and blood—really explain away *das Elend des Lebens*? Is not the attempt to show that life is worth living as futile as the attempt to show that it is *not* worth living?

J. A. STEWART.

#### THE INDUSTRIAL HISTORY OF RUSSIA.

*Etudes sur l'Economie nationale de la Russie.*  
"Région industrielle de Moscou." Tome I.  
Par W. Besobrasof. (St. Petersburg :  
Académie Imperiale des Sciences.)

THE above is the first instalment of what promises to prove a most valuable contribution to the industrial history of Russia. Indeed, so far as we are aware, it is the only modern work of the kind showing the effect of the emancipation of the serfs on the commercial development of the country, and giving an insight into the growth and special features of Russian commercial progress. The author is well fitted for the task he has undertaken; he is no novice in political economy, and his name carries with it the guarantee that the information may be relied on.

Mr. Besobrasof has confined his researches to that particular part of the Tsar's wide domains known as Central Russia, which he has dubbed the region of Moscow. It is practically the country formerly known as Muscovy, and it comprises the whole of Russia proper with the exception only of White Russia, or Northern Russia, which has for its capital Archangel, and is washed by the White Sea. Of course St. Petersburg, which is not properly Russian, is excluded; as are also the ports of Odessa and Nikolaeff, the towns of Kharkoff, Kishineff, and Kieff, and the range of the Caucasus; nor are Poland, Finland, and the Baltic provinces included in this region. Siberia, as part of Asia, and the Ural Range are likewise omitted. It will give us some idea of the magnitude of the country with which Mr. Besobrasof has to deal if we remember that, in spite of these large omissions, the region of Moscow covers an area larger than that occupied by Great Britain and equal to nearly two-thirds of Germany

or France. It has a population of only ten million souls; but, notwithstanding this paucity of inhabitants, it contains about one-eighth of the population of all Russia in Europe, and one-ninth of the entire population of the empire. The region of Moscow is the most densely populated of the Tsar's dominions, and also the most industrial. It is somewhat surprising that so sparsely peopled a district should not be purely agricultural; but it is, nevertheless, true that the agricultural produce of Central Russia is not sufficient to maintain its own population, and that it therefore imports large quantities of food. This fact alone will explain why Russian agriculture is not much heard of, and why Mr. Besobrasof is discreetly silent on the subject.

In the present volume Mr. Besobrasof has confined himself to two subjects—the inland navigation of the region, and especially of the Volga; and the great fair of Nijnii Novgorod, its influence on Russian commerce and its probable vitality. Both these subjects teem with interest to the student of the economical condition of Russia, and from both of them we are able to glean the two distinguishing characteristics of the Russian merchant—want of initiative and conservatism. These are great blemishes in an otherwise estimable character. For the Russian merchant is endowed with considerable perseverance, shrewdness, courage, and as much commercial honesty as can be expected. But until he acquires a little more enterprise the commercial history of Russia will not be a very interesting study. Of the Russian manufacturer the less said the better. He is as yet but in his infancy. It is difficult to sympathise much with a producer who is protected from foreign competition by prohibitive duties, and who, moreover, has no trades unions to contend with, and pays very low wages. Slowly and gradually the Russian manufacturer is picking himself up, and has even recently ventured to accuse his English *confrères* of imitating his wares. But he is spiritless enough to grumble at the enormous amount of smuggling carried on, which tends to make the protective rates of none effect; and the days when he will be able to step out by himself without leading-strings are yet far distant. In one department, however, he is already beginning to compete dangerously with English producers—namely, in the manufacture of cotton goods. In this branch of industry England stands first, Germany next, and Russia third. She is seeking to supplant us in our Indian markets, and is not altogether unsuccessfully competing with us in China.

Russia wants means of internal communication—she wants opening out—and until something is done in this direction the supineness of her manufacturers and merchants will continue. We are therefore surprised to find Mr. Besobrasof advocating the development and extension of the internal navigation of the country. Had the suggestion come from an Englishman unacquainted with the climatic conditions of Russia we should only have thought it natural and smiled. Coming from an authority and a Russian, we have listened to it respectfully and given it full consideration, but we remain unconvinced. Of course,

canals are cheaper and more beautiful to look upon than railways; they also involve less technical difficulties in working. But we cannot help thinking that a country which is liable to be covered suddenly by frost, and which remains frozen over for five months out of the twelve, should not put its trust in waterways. If the water could always be relied on during the remainder of the year the case would not be quite so desperate; but for three, sometimes four, months the drought is extreme, and water becomes alarmingly scarce, the magnificent Volga itself assuming mean proportions and abounding in treacherous shallows, while some of the finest rivers dwindle into gutters. The population depends on wells and springs for its water-supply, and in some parts of the country rowing becomes out of the question. We have ourselves assisted at a boating-party where the men had to take off their shoes and stockings and wade along the river, dragging the boat with the ladies in it after them. Railways are expensive, we admit, but there is no reason why Russia should not build light narrow-gauge lines, such as have become famous in America. Speed is not so much the object as cheapness and reliability. But inland navigation is the craze of the day, and Russia has become infected with it.

The most distinguishing trait of Russian trade and commerce is the annual fair of Nijnii Novgorod. This town commands the Volga, and is situated within a reasonable distance (for Russia) of Moscow, the real commercial capital of the country. From July to September Nijnii Novgorod is the scene of great bustle and activity. Almost every nationality finds here its representative. Russians, Armenians, Turcomans, Tartars, Persians, Hindus, Chinese, besides Germans, English, and French, are congregated together, making the rows of stalls and bazaars gay with their many-coloured costumes. Until the fair of Nijnii is over no Russian merchant can say whether he has had a successful year or not. Prices are regulated here more by chance than by the laws of supply and demand; and the fondness for bargaining, which is the bane of all Eastern nations and is still the curse of Russia, makes any commercial transaction more or less a game of hazard. Mr. Besobrasof devotes some space to considering the amusements and social life of Nijnii, and is compelled to admit that modern progress, instead of refining his countrymen's pleasures, has only made them more scientifically sensual and brutal. Meanwhile, he finds reason to rejoice that the native Russian is beginning to oust the foreigner from his country, and that Russian commerce is assuming every year a more and more national character. The future life of the old fair, however, notwithstanding Mr. Besobrasof's sanguine hopes to the contrary, cannot be a very long one. Signs are not wanting to show that Moscow is gradually becoming the permanent trade centre of the country. A more perfect railway communication between the banks of the Volga and the western districts of Russia is still wanting, and then the days of the fair will be numbered. The trade with China, which is one of the main props of the fair, is on the decline, and tea is now more frequently shipped from Shanghai

to Odessa instead of coming overland from Kiakhta.

Mr. Besobrasof takes a hopeful view of Russia's commercial future, as who with his eyes open would not. It is a country of large resources and great riches, but it has rather sluggish inhabitants; and though the emancipation of the serfs gave trade an impetus and set enterprise going as it had never gone before, still Russia wanted the excitement of the late war to stimulate it to its full activity. Foreigners will be surprised to learn that trade was never so prosperous in Russia as it has been since 1878; for they will have before them the rates of exchange on the rouble, which have, perhaps, never been so low since the days of Nicholas, forgetting that to a great extent Russia is a vast country, self-supporting, and independent of foreign markets.

We cannot too much praise our author's self-denial in refraining from quoting the unreliable official statistics, and for basing his remarks almost entirely on personal observations made during frequent visits to the places he speaks of, and an official tour of the Volga. Mr. Besobrasof certainly deserves well of his country for his painstaking work. We hope that the second volume will be fully equal to the present.

E. A. BRAYLEY HODGETTS.

#### NEW NOVELS.

*Dame Durden.* By "Rita." In 3 vols. (Tinsley Bros.)

*A Fashionable Marriage.* By Mrs. Alex. Fraser. In 3 vols. (White.)

*Squire Lisle's Bequest.* By Anne Beale. In 3 vols. (Hurst & Blackett.)

*Disarmed.* By the Author of "Kitty." In 2 vols. (Bentley.)

*In the Carquinez Woods.* By Bret Harte. (Longmans.)

THE deep under-current of tragedy which runs beneath the apparently calm and serene surface of ordinary lives is well exemplified in "Rita's" latest story. It is almost overcharged with the pathos of human life, and yet there is nothing strange or forced about it. The gentle and long-suffering Marjorie Hesseltine, who, from the cares which weigh upon her, and the general lovelessness of her lot, earns the appellation of "Dame Durden," is charmingly drawn, and will strongly move the reader's sympathy. We are glad at last that she finds a haven after much tribulation. Her character is well contrasted with that of her father, a gloomy, morose being, rendered still more terrible to his brood of little ones after the death of his wife. On Marjorie, while yet a child, is thrown the whole burden of the household, and she bears it bravely, never repining at her hard lot. Without affectation or cant of any kind, she is just one of those angelic beings sometimes found in this world, sent to keep others from despair and ruin. Her brother Paul, too, with his literary ambition, his poetic aspirations, and his ill-starred love, is a very natural creation, though there is a little too much about his early lucubrations, and of fulminations against the reading public, the critics, and the publishers. The plot,

or rather plots, if such they may be called, running through the novel are of sufficient interest to gain and keep the reader's attention; and altogether we are glad to be able to give the book hearty commendation. It would be well, indeed, if fiction generally could be kept up to this level.

A more worthless novel than *A Fashionable Marriage* we have not read for years. In the hands of a true artist, the violation of the marriage-bond may be treated without danger; but even then it ought only to be an episode. Here it forms the staple of three volumes, and the whole work is of the most offensive character. It absolutely bristles with grammatical and printer's errors. "After all it's *me* who ought to grumble," says Lady Aylmer; and the same mistake occurs about a dozen times. "Lord Aylmer is the *most* popular man of the two," &c., &c. Although the story deals almost entirely with the aristocracy, the author does not appear to know their proper modes of address, for she writes "The Most *Noble* the Marquis of Ennisford," that being the style of address for a duke only. There is scarcely a page without its little scrap of French; and the author persists in using it where the English phrase would be far better. Such a character "is too *pré occupé* [*sic*] to notice," &c. The mistakes in the French are perfectly ludicrous. *Café noire* in one place becomes *café noir* in another; we have *chiffonné peignoir*, *entrémets*, *par paranthèse*, *cause célèbre*, *appétissant*, *diillusionné*, *voilà tout* (three times repeated without accent), &c., &c. Then there are errors in proper names. We get Paul de Koch and Oscar Wyld; and even the Creator appears twice as the "Diety." A portrait is spoken of as though it were "a Millais or a Turner or a *Tenier*." Of English words we have "dispirited," "sensativeness," "pour over" for *ponder*, &c. Who would know an old acquaintance in "Judith holding the head of *Holiferries*"? Bad as are these blunders from the literary point of view, and rubbish as is the whole style of the work, there are far worse things to be charged against it than these. When Lord Ennisford has left his mistress to return home to his deserted wife for a few hours, the author assures us that his

"countenance at this moment can be seen on three parts of married men's faces nowadays; and, as it is impossible that three parts of the wives can be to blame, the evil originates in the nature of the man."

But, in order to show that we have not misrepresented this novel, let us briefly trace its course. Taking up vol. i., in the first chapter we have Lord Ennisford marrying Lady Frances Clavering when he is bound by every feeling of honour to Bella Grant. The discarded Bella swears to separate Ennisford from his wife by driving them into the Divorce Court. In the sixth chapter the husband insists that his cast-off love shall come into the house where his wife is, on the plea of doing good to the child. In the tenth chapter the temptress nearly brings him to his ruin, and flaunts her love before the injured wife. In the second volume we find Lord Ennisford in Paris. Here he becomes captivated with Lady Aylmer, whose husband is in India, and who, we are left to

infer, is already the mistress of his own brother. Bella Grant, finding her old lover faithless, tries to poison him, but kills his valet instead. In the end she is herself driven mad. When Lord Ennisford's brother learns that Lady Aylmer has played him false, he blows his own brains out. Meanwhile, Lord Aylmer seizes the opportunity to get a divorce from his wife, Ennisford being the co-respondent. Ennisford goes abroad with the syren. On the banks of the Nile, however, she goes off with the Baron von Lieven. A few pages are thrown in at the end to show that Lord Ennisford becomes repentant and is reconciled to his forgiving wife, but these do not reconcile us to the nauseous narrative.

Miss Beale's story is pure and healthy in tone, and agreeably written. If there is any fault to be found with it, it is its length. But the studies of character are excellent; and, although many of them may have been anticipated, there is still much freshness and variety in the way in which they are again presented to us. Squire Lisle's bequest is a somewhat curious one, and we must leave the reader to discover its nature. The hero and heroine of the novel, and an aristocratic Frenchman and his wife, are all admirably drawn, and such plot as there is will be found sufficiently interesting.

The new story by the author of *Kitty* is quite removed from the ordinary type, both as regards characters and plot. The key-note to it seems to be found in a passage in the second volume:—

"There is no Island of the Blest, except in the day-spring of human history. The supreme lesson of experience is that good and evil do not dwell apart, and that to combat the evil the good must seek it out and bear it company."

There is not a person in these volumes who does not possess a distinct individuality, and one or two may fairly be called new types. They would also be called Quixotic in some quarters—notably Stephana, who, because the hero, Valerian, has been born into the world with a stain upon his name, proposes to marry him and endow him with all her wealth in order, if possible, to remedy the evil which has been done him. We can better sympathise with her when, at an expense of five thousand pounds, she conveys a thousand hard-working artisans from hopelessness and misery in London to brighter prospects in the New World. The philanthropist finds out her mistake with regard to Valerian just before it would have been too late for ever. The wrecking of three or four lives is thus saved, not the least important being that of the charming Arthura, between whom and Valerian there have been tender love passages for some time back. The novel has a decided interest of its own, and is cleverly written.

Mr. Bret Harte's story has appeared (and, indeed, is still appearing) in *Longman's Magazine*. The backwoods of America offer abundant material for vivid description and strong local colour, and the author has accordingly painted with a vigorous brush. He has, in fact, never given us anything better in its way than his description of the Carquinez Woods under a variety of aspects. Two of his characters also are intense in their individuality; but novel-readers may

complain that just when the mystery attaching to one of them is cleared up he is bounced off the mortal stage in a very exasperating manner.

G. BARNETT SMITH.

#### CURRENT LITERATURE.

*The Economic Revolution of India and the Public Works Policy.* By A. K. Connell. (Kegan Paul, Trench, and Co.) The production of books about India—of those, at least, that are not merely descriptive—seems to be subject to a sort of law of oscillation. At one time the cheerful optimism of official writers is in the ascendant; at another, the clever band of pessimist critics appear to have it all their own way. In the face of these contradictory opinions, both of which have their representatives in the House of Commons, the English public maintains (not unnaturally) the attitude of puzzled indifference. This little book of Mr. Connell's is intended to serve as an antidote to the views expressed by Sir John and Gen. Richard Strachey in their elaborate work on *The Finances and Public Works of India*, issued by the same publishers last year. The two Stracheys there defended—or, rather, eulogised—the system of administration which has given to India its railways and canals, and for which they are themselves largely responsible. Mr. Connell (who, we hasten to remark, has the advantage over many of his brethren in possessing some personal knowledge of the country) attacks that system with vigour, not only as having been financially unsuccessful, but also as having led indirectly to economical results of a disastrous character. Our space does not permit us to discuss the questions at issue, even if we had the inclination. We must content ourselves with recording our conclusion that Mr. Connell, though he has brought forward several ingenious arguments, has failed to prove the substance of his case. It may be admitted that the railways in India have been constructed on extravagant terms, that some of the canals have turned out conspicuous failures, and that the Department of Public Works has been guilty of many abuses. It may be admitted, also, that the increase of local taxation and the development of the foreign trade have tended to affect injuriously the material condition of the people. Yet, after giving our best attention to the subject, and after weighing all that Mr. Connell has to urge, our deliberate verdict is that the benefits of "the public works policy" have been much greater than the evils. To begin with, that policy was inevitable. Its application was only a matter of sooner or later; and at least India has been preserved alike from powerful monopolies and from capitalist kings. Without going farther into detail, we must conclude with saying that Mr. Connell would often have given his arguments more weight if he had made his language less strong, and that we prefer his practical suggestions in the last chapter to the greater part of his criticisms in the previous ones.

*Germany.* By S. Baring-Gould. (Sampson Low.) This volume is not a condensed edition of the same author's *Germany, Present and Past*, which appeared some four years ago. That work consisted of a set of rambling essays on German politics and social life; the present book, which is part of the "Foreign Countries and British Colonies" series, gives a fairly complete description of the physical features of Germany, and a brief but accurate sketch of the German people. It is possible that too much prominence has been given to geography (out of 210 pages 163 are devoted to physical characteristics and capabilities); but it must be admitted that this portion is well done, and gives a clearer idea of Germany than can

probably be obtained elsewhere. The chapters on the rise and constitution of the empire, and on the peculiar features of German society, are, to a certain extent, borrowed from the earlier work; but the author has chastened his style, and has been at the pains to correct errors, so that even here the reader has a virtually new book. The Constitutional summary is lucid, if slightly inadequate, and Mr. Baring-Gould has wisely avoided the subject of practical politics. Perhaps the best part of the book is the short treatise on the German people; no other English author has so clearly explained why the Germans are divided into castes and not into classes. Taken altogether, this handbook will meet a want; till now we have had no work giving, in small or large compass, any intelligible account of Germany and its people. Mr. Mayhew's clever book on Saxony was an ill-natured caricature, and, moreover, requires writing up to date. The Countess von Bothmer's *German Home Life* is good so far as it goes, but it goes a very short way; and, if Mr. Baring-Gould will permit us to say so, *Germany, Present and Past*, was a farrago of desultory and inaccurate jottings. This book is well got up, and its maps and engravings do credit to the publishers; but the misprint of "Stratsburg" on p. 78 is unpardonable.

*Reminiscences of an Adventurous and Chequered Career at Home and at the Antipodes.* By Alexander Tolmer, ex-Commissioner of Police in South Australia. (Sampson Low.) Mr. Tolmer's career has certainly been adventurous and chequered from its very beginning; one regrets that it has not been more successful. It has, however, given us an amusing book. By descent partly German and partly French, Mr. Tolmer was born in London; and his character partakes of his cosmopolitan origin. He bore all the hardships of his early days with a light-heartedness and gaiety thoroughly French. There is much in his early life which will remind the reader of Marryat and the writers of his school, and which shows that here truth is at least as strange as fiction. When hardly more than sixteen years of age Mr. Tolmer enlisted in the British Legion fitted out to assist the Queen of Portugal in her war with Dom Miguel. This is, to our mind, the most interesting part of the book. The author was placed in the regiment of Lancers commanded by Col. (afterwards Gen.) Bacon. His military experiences began with the siege of Oporto, where,

"If we except the passive duty of starvation, the Lancers had very little to do. This passive duty was, however, no trifling one to us. The enemy kept so strict a blockade that we were unable to get any fresh provisions, excepting, now and then, after a skirmish. Our daily rations were reduced to two ounces of rice, two ounces of salt fish, half a pint of port wine, and one ship biscuit, the latter being generally mouldy, and the salt fish requiring to be soaked for twenty-four hours."

Dogs and cats were at a premium, and many a hearty meal the young Lancer enjoyed off *un bon ragout de chat* at the French quarters. His adventures are well told, and when the war was over he was discharged with about £15, the sole fruit of all sorts of hardships. But it is always easy to find food for powder. On his return to England he enlisted in the 16th Lancers, and became assistant riding-master and acting adjutant. Had he remained in the regiment he would probably have got a commission. Unfortunately for himself, he was persuaded to emigrate to South Australia. Early in 1840, shortly after his arrival at Adelaide, he was appointed sub-inspector of mounted police. Mr. Tolmer, a man of great quickness of perception, courage, and resource, an excellent rider and swimmer, hardy and active, did much good service in the corps, and many were the murderers and bushrangers he captured. Indeed

the state of the colony between 1840 and 1856 presents a strange contrast to its present condition; and though for English readers there is a little too much of his police narrative, yet it cannot fail to interest Australians. The author rose to the rank of commissioner of police, and, as such, organised the mounted escort for bringing to Adelaide the gold from the Victoria diggings. The latter half of the second volume is occupied with the writer's grievances, which he details at length. He had probably some cause of complaint, but it is easy to see that, with all his fine qualities, he was a man not averse to a quarrel; and his opinion of himself and his own attainments is of the highest. We are familiar enough at the present day with official quarrels, jobbery, and injustice, and it is not likely that Mr. Tolmer will succeed in interesting English readers at least in his dismissal from his office twenty-seven years ago. We should be sorry that anyone who began this book with pleasure should lay it down in disgust, and we therefore recommend all readers to go no farther than the eighth chapter of the second volume.

*Through the Zulu Country, its Battlefields, and its People.* By Bertram Mitford. (Kegan Paul, Trench and Co.) In the course of last year the author made a tour through Zululand, entering it at Borker's Drift, and going over the principal battle-fields. He visited several chiefs, and talked with many natives who had fought at Isandhlwana. In this way he acquired some interesting information, though not enough to fill a good-sized octavo volume without a considerable amount of padding. Of the Zulus as a people he formed a very favourable impression. He pronounces them to be "a quiet, kindly, right-hearted race; sober, cleanly, and honest, loyally attached to their exiled King, not wanting in generosity, and good-humoured to a degree." Their physique he considers to be much exaggerated. The author spent three days with the famous John Dunn, whom he greatly admires, and defends against the many charges made against him. One of these is that Dunn is a polygamist. This Mr. Mitford does not deny, but objects that Dunn's domestic relations are entirely his own, that he lives in Zululand and not in Europe, and that he does not bring his wives with him when he visits the colony. Will this be accepted as a sufficient palliation of the original offence? Dunn's territory is orderly and well-governed; and, however unfriendly to the missionaries, he is strict in his exclusion of fire-arms and ardent spirits from the country under his rule.

*From the Pyrenees to the Pillars of Hercules.* By Henry Day. (New York: Putnam.) American tourists to Europe—at least those of them who write and publish—may be roughly labelled under three heads: the Humorous, of whom Mark Twain is the chief; the Dilettanti, of whom Hawthorne is the type; and the Homilectic, or Didactic, of whom Dr. Baxley and our present author are examples. We confess to a preference for the first two classes. Our present book is not a connected record of travel, but a series of observations on the spots which the author visits. In the Preface,

"We wish to acknowledge our obligations to Ford's book on Spain, which is one of the most thorough and reliable books on that country, and a most complete guide to the traveller. We have not scrupled to use the facts collated by him with the utmost freedom."

Without in the least depreciating what is of lasting value in Ford's wonderful book, we may observe that he wrote with all the disdain for Spaniards of the men of the Peninsular War, and with all the prejudices of the ultra-Protestantism of his day. The history, too, of Spain has been almost rewritten since his time; yet our author follows Ford as trustfully

as if he wrote but yesterday. It is utterly useless to point out errors in a book like this. There is not a page on which there is not some mistake to correct or some confusion to clear up. Even on practical matters, on which his countrymen are usually exact, our author gets into mists; p. 176: "There are sweet wines of the sherry grape with all the flavour of sherry wine. It has the delicacy and the deliciousness of Johannisberger." Explain this who can—either as to grammar or sense. As an example of what we call the homilectic style, we quote from p. 11:—

"Andalusia was called by them the [Phoenicians] Tartessus. This Tartessus was the destination of Jonah, which he probably would have reached had he not been detained by an unexpected event which removed him to another sphere of usefulness."

*Leading Men of Japan.* By Charles Lanman. (Boston, U.S.: Lothrop.) Mr. Lanman might not only have done good service both to Europe and Japan, but have made a most interesting volume out of the biographies of that remarkable cluster of men who have been the principal agents in what is not so much the reformation as the regeneration of Japan. It is true that the material at his disposal was defective, and that his position was necessarily that of editor or compiler rather than author; but he has not made use of all the sources of information which are open to everybody, and he has put together the scraps he has collected in such a careless and unintelligent manner that his book is merely a clumsy piece of literary patchwork. For those who are not well acquainted with the history of Japan during the great revolution of 1868, and the subsequent rebellion of Satsuma, the volume will be a hopeless tangle, and even those who have some acquaintance with these events will find it hard to digest. It is also full of inaccuracies and misprints. Nevertheless, it contains a good deal of amusing matter; and with a thorough revision, some judicious notes, and an index it might yet be made of value.

*The Englishman's Guide-Book to the United States and Canada* (Stanford), if not quite so copious as "Appleton," has features which may induce English travellers to give it the preference. There is, for example, a sporting Appendix with a description of the chief shooting and fishing resorts, and a synopsis of the game-laws of many of the States and Territories. We have found the information generally correct, so far as we have been able to test it. More might have been made, perhaps, of the West, although the Yosemite and the Yellowstone are both pretty fully treated. The statement that the station-house meals west of Omaha are "abundant and well cooked and served" is a woful delusion. We should also have liked to see some more connected account of the through railway routes; and the population of cities is a matter of interest to travellers which the compiler has not always kept in mind. The maps and plans, twenty-one in number, are, as might be expected, excellent.

By arrangement with the committee of the Palestine Exploration Fund, Messrs. W. and A. K. Johnston have published a *Map of Palestine* embodying as much of the Great Survey of Western Palestine as the reduced scale allows. The scale is 1 to 714,649; and the reduction has been carried out by Mr. T. B. Johnston. An Index of places is added.

#### NOTES AND NEWS.

DR. GINSBURG, having studied for three weeks the "Shapira MS. of Deuteronomy," has reported to the authorities of the British Museum that it is a forgery. The same conclusion was arrived at so far back as July 10 by

a committee of Berlin scholars after an examination of "exactly one hour and a-half." Prof. Delitzsch, of Leipzig, also characterised the MS. as a "miserable deception" some weeks ago in the *Saat und Hoffnung*. But the first public refutation of the fraud appeared in the ACADEMY of August 18, on which very day (we believe) the portions exhibited in the British Museum were withdrawn from public view.

THE next volumes in the "English Men of Letters" series will be *Adam Smith*, by Mr. Leonard H. Courtney, *Sir Philip Sidney* by Mr. J. A. Symonds, and *Berkeley* by Prof. Huxley.

THE Religious Tract Society will publish this winter, in their series of "By-paths of Bible Knowledge," a little book by Prof. A. H. Sayce describing the most striking confirmations of the Bible shown by recent discoveries in Egypt and Babylonia.

MESSRS. MACMILLAN announce a new volume by Mr. J. H. Shorthouse, the author of *John Inglesant*, to be called *The Little Schoolmaster Mark*.

MISS BRADDON has another three-volume novel forthcoming, which will be entitled *Phantom Fortune*; it will appear early next month. In the present state of trade it is satisfactory to be assured that 30,000 copies of Miss Braddon's *The Golden Calf* were sold during the first week of issue.

WE are not sure that Messrs. Macmillan are to be congratulated upon the title of their new monthly, which will first appear in October. It is to be called the *English Illustrated Magazine*. This is expressive, no doubt; but it is too long, and does not admit of curtailment for ordinary mention. The price, we are glad to hear, will be only sixpence. The following will be the contents of the first number, all the articles being signed:—An engraving after Mr. Alma Tadema's "Shy;" "From the Old Law Courts to the New," by Mr. F. Maitland; Mr. Swinburne's poem on "Les Casquettes;" "The Dormouse at Home," by Mr. Grant Allen; "Rossetti's Influence in Art," by the editor, Mr. J. Comyns Carr; "The Supernatural Experiences of Patsy Cong," by Mr. William Black; "The Oyster," by Prof. Huxley; and the beginning of a novel by Miss Yonge, "The Armourer's Prentices"—an attractive bill of fare, especially as most of the articles will be abundantly illustrated.

WE understand that Messrs. Cassell and Co. are about to undertake the task of providing a popular penny weekly magazine, under the title of *Cassell's Saturday Journal of Pure and Entertaining Literature for the Homes of the People*.

MESSRS. LONGMANS will issue at an early date the fourth volume of Mr. W. Smith's popular annual work, *Old Yorkshire*. Mr. Frederick Ross has written the Introduction, which deals briefly with the history, geographical features, and notabilities of the county.

UNDER the title of *Cartularium Saxonicum*, Mr. Walter De Gray Birch will publish early this month the first part of a collection of charters relating to Anglo-Saxon history. The whole will probably consist of twenty-five parts.

AN American clergyman, the Rev. J. I. Mombert, of Paterson, New Jersey, has issued an appeal for subscriptions to enable him to reprint the little-known first edition of Tyndale's version of the Pentateuch (1530), which was made direct from the Hebrew. He hopes to obtain one thousand subscribers at five dollars (£1) each.

AMONG the announcements of Messrs. Putnam, of New York, are an edition of the *Essays*

of *Elia*, illustrated with etchings by American artists; and a History of the discovery of America to the year 1525, by Mr. A. J. Weiss, upon which the author has been engaged for several years.

THE library at Lambeth Palace will be closed for the recess from September 1 for six weeks.

A SPECIAL collection has been formed at the British Museum of memorials of Martin Luther, in connexion with the four-hundredth anniversary of his birth, which falls in November of the present year. Here may be seen—arranged in a series of glazed cases in the Grenville Library—the first edition of Luther's complete Bible in German (Wittenberg, 1534); the first edition of the Psalter by Luther, in German (Strassburg, 1524); and the first German Pentateuch by Luther (Wittenberg, 1523); two works by Ulrich von Hutten, a friend and admirer of Luther, one of which is entitled *Dialogi Huttenici Novi, perquam festivi* (1521). It was produced in the year of the Diet of Worms, and in it the followers of Luther are for the first time designated as "Lutherici." There is also a MS. letter of Luther to Thomas Cromwell, Earl of Essex, respecting a visit paid to him by Dr. Robert Barnes, dated Wittenberg, "Die palmarum, 1536;" and a contemporary account in English of the ceremony of publishing Pope Leo X.'s sentence against Luther, in St. Paul's, in the presence of Card. Wolsey, May 12, 1521. We understand that a catalogue to the collection will shortly be issued by Mr. Bullen.

THE autumn session of Bedford College for Ladies (8 and 9 York Place, Baker Street) will be opened in October with an inaugural lecture by the Rev. Mark Pattison.

THE next session of the Mason Science College, Birmingham, will be opened on October 2 with an address by Mr. J. H. Poynting, Professor of Physics. Science predominates in the curriculum, but we may remind our readers that the two Arts chairs are occupied by Mr. E. A. Sonnenschein and Mr. Edward Arber. From a copy of the *Calendar* which has been sent us we learn that the students in the past session numbered 366, of whom 137 were females; and that the total of volumes in the library now amounts to upwards of 14,000, a large number having recently been added by donation.

It has now been arranged that the Dundee University College will be opened on October 5 by the Earl of Dalhousie. Prof. Stuart, of Cambridge, will deliver the inaugural address, and the Earl of Camperdown will thereafter present the portrait of Miss Baxter, the founder.

THE Association for the Reform and Codification of the Law of Nations will hold its next conference at Milan on Tuesday, September 11, upon the invitation of the Syndic of Milan. Sir Travers Twiss has announced his intention of bringing forward the subject of "An International Protectorate of the Congo River."

M. PAUL MEYER has been fortunate enough to make another discovery of an Old-French MS.—this time in a private library at Courtrai. It is a fragment of a versified Life of St. Thomas of Canterbury, dating from the thirteenth century.

IN commemoration of the two-hundredth anniversary of the defeat of the Turks by Sobieski (1683), an exhibition has been opened in the Stadthalle, at Vienna, of historical objects associated with that event. Besides a large collection of books and medals, here are the tent of the Grand Vizier Kara Mustapha and a chain used for binding Christian prisoners. These are lent by the King of Saxony.

A GOETHE exhibition has been opened at

Frankfurt-am-Main, in the house where the poet was born (Grosser Hirschgraben, 23). In one room are two large cartoons by Hermann Junker, representing incidents in the life of Goethe; in another, objects belonging to his parents, and a MS. in his handwriting, with many corrections, upon Ancient Art.

FROM Prof. T. F. Crane, of Cornell University, we have received a scholarly paper on *Mediaeval Sermon-books and Stories*. The influence of the pulpit in circulating the Eastern stories which, after the twelfth century, became so popular in Europe has not perhaps been sufficiently recognised; and Prof. Crane's essay is therefore not only valuable in itself, but suggestive of further investigation. It is known that printed literature owes much to oral tradition, but the reverse phenomenon, in which the contents of books again circulate as popular stories, remains for enquiry. The Middle Ages produced many preachers who were by no means confident of their own powers as pulpit orators; and for their use various books were compiled in which, under appropriate headings, there were arranged illustrative stories calculated to attract the attention and reach the minds of those who would not have had either the intelligence or the patience to enjoy metaphysical discourse or dogmatic argumentation. The preachers were thus unconsciously the vehicle by which some good imaginative literature was conveyed to the people, for among the stories—many of Oriental origin—collected by Herolt and others to serve as *exempla* for insertion in sermons were narratives that have since formed the basis for masterworks of Schiller, Goethe, Voltaire, and other immortals. We hope that Prof. Crane will continue his researches into this field, which is full of promise for the student of folk-lore and comparative mythology.

*Correction.*—The inscription on the brass tablet set up by Mr. Gibson Craig in St. Giles's Cathedral, Edinburgh, was not quite accurately quoted in the ACADEMY of last week. Instead of "In memory of John Craig, for many years a Dominican friar in Italy; embraced," &c., it should be "... a Dominican friar, who in Italy embraced," &c.

#### ORIGINAL VERSE.

##### WEARY NOT THE GODS.

THE gods look half in pity,  
Each from his shining throne,  
On fevered hearts beneath them,  
On breaking hearts that moan.  
Unwearied they will not hasten  
Their golden gifts to send,  
They know the times of ripeness  
When shower and sunshine blend.  
But he who ceases moaning,  
And calmly lives his days,  
On him they rain their blessings  
With quiet steady gaze.

O. E. DAWKINS.

#### OBITUARY.

WE have to record the death of Mr. Rawdon Brown, at Venice, on August 25, in his eighty-first year. A long residence in Italy, with a capacity for research that has rarely been equalled, had made him perfectly familiar with the contents of the Venetian archives. So far as we know, his first publication was Marin Sanuto's *Itinerario per la Terraferma Veneziana nell' anno 1483*, which he printed at Padua in 1847, with facsimiles of the original sketches. In 1854 appeared his *Four Years at the Court of Henry VIII.* (two volumes), compiled from the despatches of the Venetian ambassador, S. Giustiniani. Some eight years later he was

appointed by the Master of the Rolls to calendar the State papers and MSS. relating to English affairs preserved in the archives of Venice and Northern Italy. Of this work six volumes have already appeared (the last in two parts), and a third part of vol. vi. is understood to be in the press. The period of history covered by them is from 1202 to 1558. In addition, Mr. Rawdon Brown had transmitted to the Public Record Office no less than 126 volumes of transcripts of Italian MSS., which are open to the inspection of historical students. Of what use they have been may be seen from the acknowledgment made by Prof. S. R. Gardiner in the most recent volume of his *History*.

#### THE AFFINITY OF THE TEN STEMS OF THE CHINESE CYCLO WITH THE AKKADIAN NUMERALS.

UNDER the heading "Meetings of Societies," the ACADEMY (May 12, 1883) gave a short account of a paper read by me before the Royal Asiatic Society on "The Shifting of the Cardinal Points in Chaldaea and China, as an Illustration of the Chaldaeo-Babylonian Culture borrowed by the Chinese." My object was to direct the attention of scholars to the striking confirmation which had been lately disclosed of a characteristic feature in my discoveries. In a lecture on the "Early History of Chinese Civilisation" (May 1880), I had already stated that the Chinese borrowed the cardinal points and the signs to write them at the same time with their writing and other elements of culture from South-west Asia, and that the signs borrowed (which are extraordinarily similar) exhibit a shifting of orientation unaccountable from the Chinese side. As I expected, though not so soon, the confirmation came from further progress in Assyriology. At the meeting of the Society of Biblical Archaeology on February 6 of the present year, my friend Mr. T. G. Pinches communicated a remarkable explanatory note attached to an astronomical tablet of Babylon (entered in the British Museum in July 1881) which he had recently deciphered. In the two paragraphs of this tablet (*Proc. Bibl. Arch.*, February 6, 1883) there is a clear description of the geographical horizon, exhibiting the shifting which I had been able to announce three years previously. The importance of this fact as ascertained both from the Chinese and from the Assyrian side is twofold: (1) It confirms my previous discovery; and (2) it gives the clue to the anomaly of the Chinese Zodiac, which no longer requires the interval of 17,000 years B.C., proposed by Dr. G. Schlegel, for its adjustment.

The same paper of mine contained also a summary list of evidences of several kinds—viz., from the scientific and political notions and institutions, the ethnical, geographical, and personal names and titles, the traditions and customs, religious and other, besides the numerous proofs presented by the writing and language, and the affinities of the *Yh King* with the Akkadian syllabaries—altogether a formidable array of facts, sufficiently strong to resist any criticism of detail, and to justify us henceforth in considering it historically certain that the Chinese borrowed the elements of their culture from South-west Asia.

The borrowing was done in the regions between Bactria and Susiana (Elam), the institutions and names of which are so conspicuous in early Chinese traditions. The time was about 2400 B.C. The writing borrowed was the archaic cuneiform, with which the early Chinese traditions are not unacquainted. But as the transmission of culture was effected by practical intercourse, and not by scientific teaching, the monumental or lapidary style of the writing does not seem to have been insisted upon, the

wedged heads of the strokes being not so sharply marked, as if for current writing in another material than the clay tablets. The many affinities between the early Chinese characters (2300 B.C.) and the Babylonian characters of the pre-cuneiform period (4000 B.C.) do not prove that the two were contemporary. The contrary might be erroneously inferred from the greater ease for comparison and recognition with the Chinese of the Babylonian hieratic characters, whose shapes were not yet entangled by the wedge-stroke complications. Where the archaic wedged forms have diverged from the primitive linear form, it is not this primitive form, but the diverged one, which was known to the Chinese. As a matter of fact, it is with the archaic Babylonian that the similarities of the oldest Chinese characters are more numerous, apart from the wedge and the stiffness of the strokes not required for writing on bamboo bark or any other vegetable material. This explanation is, I think, the true one, and more in accordance with the chronology and historical requirement than the supposition that the wedged forms of the characters were just coming into use in the region when the borrowing was made. By the kindness of the secretary of the Royal Asiatic Society, I have been permitted to withdraw this paper from the *Journal*, where it would have appeared in October next, and to keep it, with all the new facts it discloses, for my book on the *Origin of Chinese Civilization*, which Messrs. W. H. Allen and Co. have in the press.

In the same paper I laid stress on the peculiar affinity of the then known Akkadian numerals with the ten stems of the Chinese cycle. Mr. Pinches has since been able to draw up a complete list, and the result is that the affinities are shown to be still more numerous and more striking. With his permission, I publish the list here for comparison.

Akkadian Numerals.	Chinese Cyclical Stems.	Modern Sounds.
1. gi	ka(p)	kiah
2. min	et	yh
3. eah	binh	ping
4. shimu	dim	ting
5. 'a	ku (or mu)	wu
6. 'ash	ket	ki
7. 'imina	kam	keng
8. ussa	dan	sin
9. ishimu	njam	jen
10. gu	kwi	kwei

A few remarks are here necessary: 5, 6, and 7, with the simple aspirated vowel initial, have been strengthened by the Chinese with the mute guttural; 2 and 3 seem to have been inverted by the borrowers; 8 would agree with the Chinese if the dialectical borrowed form had the known suffix *na*, otherwise it agrees only if we conjecture that on the Chinese side it has gained a final (by the frequent process of an enclitic absorbed), and such would be the case also with 1. The hushing consonant (sh) of 3, 4, 6 is represented by a dental in ancient Chinese. This comparative list, for all those who are acquainted with the paucity of the Chinese phonetic system, will make clear that the Chinese list is an imitation of the Akkadian one. The slight discrepancies may disappear after further research on the Akkadian side; but, on the other hand, we must not forget that the communication to the Chinese Bak clans was not effected by Akkadian scholars, but by practical intercourse with a people of the West speaking a kindred dialect.

To resume, the affinities presented by these meaningless words of the Chinese cycle of ten with the Akkadian numerals prove unmistakably that they are a part of the stock of scientific notions and elements of culture borrowed by the early leaders of the Chinese Bak families from South-west Asia.

## CORRESPONDENCE.

### TWO BIBLICAL SUGGESTIONS: JOSEPH AND HELAM.

Queen's College, Oxford.

So far as I am aware, no one has noticed that the name of Joseph is to be found in the fragment of Manetho quoted by Josephos (*Cont. Ap. i. 26*), in which the Egyptian historian gives an account of the Israelitish exodus. This took place, he states, in the time of Amenophis, the successor of Rhampses the son of Sethos—that is to say, of the Menephthah I. of the monuments. Menephthah is the very king whom Egyptologists, for a variety of reasons, have long believed to have been the Pharaoh of the exodus, and who is now proved to have been so by M. Naville's recent excavations on the site of Pitom. According to Manetho, the leader of the "vile" Hebrews was a certain priest of Heliopolis or On, called Osar-siph,

who promulgated the Israelitish laws and subsequently changed his name to Moses. In the name of this priest it seems to me impossible not to see that of Joseph, who, as we learn from Gen. xli. 50, married "Asenath the daughter of Poti-pherah priest of On." Osar, as Manetho himself explains, is the word which the Greeks pronounced Osiris; and it is therefore plain that in the Egyptian legend the name of Joseph was regarded as a compound of *Saph* and *Jo* (*Yo*), the national name of the God of Israel, who corresponded to the Osiris of Egyptian belief. That it was also sometimes so regarded by the Israelites themselves seems clear from the spelling Jeho-seph in Ps. lxxxi. 5. The name will thus be synonymous with that of Eli-(a)saph the Gadite, the son of Reuel or Deuel (Numb. i. 14, ii. 14), and of Eli-(a)saph the Gershonite, the son of Lael (Numb. iii. 24), where the Masoretic punctuation will have to be corrected. The legend reported by Manetho must have been derived from a special source, and merely embodied in his dynastic history, since in the latter the name of Menephthah is given as Ammenephthes, not Amenophis, and Josephos asserts that the exact length of the reign of Amenophis is not stated as in other cases. The legend, it will be seen, has fused together Jo-seph or Osar-siph, for whom Manetho claims an Egyptian ancestry, and Moses the real leader of the exodus.

Another Old Testament passage upon which, I believe, modern discovery can throw light is that which speaks of a place called Helam (2 Sam. x. 16, 17). Hadad-ezer, king of Zobah, had been defeated by David "while marching to turn his hand against" the country on the banks of the Euphrates (2 Sam. viii. 3). The Syrians of Damascus had also been added to David's empire, which was extended as far as the frontiers of Hamath (1 Chron. xviii. 3), between which country and Israel an alliance was formed, "because Hadad-ezer had had wars" with Toi of Hamath. After this, Hadad-ezer received reinforcements from the Arameans on the eastern side of the Euphrates, but was again defeated at Helam. Helam must, therefore, have been not far from the western bank of the Euphrates; and, since David would have to march through his own territory of Damascus and the territory of his Hamathite allies before he could come up with the enemy, the Jordan which he is said to have crossed (2 Sam. x. 17) is probably a misreading for Orontes. In any case Helam must have lain to the north-east of Hamath.

Now Khélâm (Helam) is written Khélâmâh in ver. 17; and though the final *ah* may simply be the so-called suffix of motion—that is to say, the old termination of the accusative—it shows that the word was pronounced with a vocalic ending. This is also shown, not so much by the Septuagint reading Χαλαμν, which does not occur in Origen, but by the Χαλαμν of Josephos (*Antiq. vii. 6*), who transforms it into a personal name like Shalman or Solomon in Hosea x. 14. Khalaman reminds us at once of Khalman, the name of Aleppo on the Assyrian monuments. Aleppo would have lain exactly in the way of David's march, and its occupation was of importance to Hadad-ezer and his Syrian allies for the following reason.

Hittite tribes had descended from the mountains of Kappadokia, and had driven a wedge into the territory of the Arameans. Their stronghold of Carhemish commanded the principal ford across the Euphrates, they had gained possession of Pethor at the junction of the Euphrates and the Sajur, and, as we now know, they had made themselves masters of Hamath and Kadesh on the Orontes. The enemies of the Arameans were necessarily the friends of the Hittites, and it must have been to fight against the Hittites that Hadad-ezer

was marching when met by David. After his retreat from Damascus he was thrown back upon the country eastward of the line of Hittite occupation, and his only chance of recovery was to seize the fortress of Khalman or Aleppo, which stood on the high road from Carchemish to the south. He was probably engaged in the siege of Aleppo when he underwent his second defeat. David's army at the time no doubt partially consisted of Hittites. Does this throw any light upon the fact that one of his bodyguard was Uriah the Hittite? At any rate, the alliance between the Davidic dynasty and Hamath continued down to the period when the latter kingdom was overthrown by Sargon, as we learn from the Assyrian inscriptions (see also 2 Kings xiv. 28), and the last king of Hamath bore the distinctly Jewish name of Yahu-bihidi, which is also written Iu-bihdi. We know of no other foreigner besides Uriah, and possibly Joram the son of Toi, whose name was compounded with that of the Israelitish God. It is also to be noticed that the northern frontier of David's kingdom not only bordered on the Hittite district of Hamath, but also, as we see from the correct reading of 2 Sam. xxiv. 6, on "Kadesh of the Hittites," the southern capital of Hittite power.

A. H. SAYCE.

## BUDDHA AND ST. JOSAPHAT.

London: Aug. 28, 1888.

Prof. Max Müller, in his interesting essay on the Migration of Fables, has pointed out (also quoting Renaud) that *Iwdrap*, the name by which Buddha found a saint's place in the Greek Church calendar—transformed in the Latin legend into *Josaphat*—is a corruption, through the uncertainties of Persian transcription, of *Bodhisattva*. I have never seen it noticed how strongly this suggestion is confirmed by a passage in the *Chronology of Ancient Nations*, by Albirnî, of which the English translation by Prof. Sachau was published in 1879. Here we have mentioned (p. 186), among the "pseudo-prophets," BUDHĀSAF, who came forward in India." This brings us a long step nearer to *Bodhisattva*.

Having touched on this most curious subject, let me say a few words on another branch of it. I had pointed out briefly in 1875 (*Marco Polo*, 2nd ed., ii. 308) that the identity of St. Josaphat and Buddha had been recognised by the famous Portuguese historian Diogo de Couto. This had not been observed by Mr. Rhys Davids, who, some years later, in the Introduction to his translation of the *Jataka Tales*, observes:—

"It was Prof. Max Müller, who has done so much to infuse the glow of life into the dry bones of Oriental scholarship, who first pointed out the strange fact—almost incredible, were it not for the completeness of the proof—that Gotama the Buddha, under the name of St. Josaphat, is now officially recognised and honoured and worshipped throughout the whole of Catholic Christendom as a Christian saint!" (p. xli.)

There is nothing to correct in the spirit of this passage; but, as a matter of fact, the identity had been recognised nearly three centuries ago by Couto. After telling the story of Buddha's youth, the latter proceeds:—

"This prince is called in the histories of him by many different names. His proper name was Dramā (*Dharma*) Rājo; that by which he has been known since he came to be held for a saint is the *Budāo*, as much as to say, The Wise. . . .

"To this name the Gentiles throughout all India have dedicated great and superb pagodas. With reference to this story we have been diligent in enquiring if the ancient Gentiles of those parts had in their writings any knowledge of St. Josaphat, who was converted by Barlam, who in his legend is represented as the son of a great king of India, and who had just the same up-bringing, with all the same particulars, that we have re-

counted of the life of the Budāo. And as the story of Josaphat must have been written by the natives . . . it would seem that in the lapse of time there grew round it many fables such as they have in the life of Budāo, and these we pass by, for not in two whole chapters could we rehearse the stories as they have them.

"And as a thing seems much to the purpose which was told us about St. Josaphat by a very old man of the Salsete territory in Baçaim, I think it well to cite it. As I was travelling in that island of Salsete, I went to see that rare and admirable pagoda which we call the Canara Pagoda [i.e., the well-known Kānhari Caves] made in a mountain, and with many halls cut out of the solid rock—one of them as big as the larger of the mansions on the Ribeira at Lisbon—and more than 300 chambers rising like a staircase in the mountain, each with its cistern at the door, cut in the same solid rock, containing water as cool and excellent as you could desire, whilst at the gates of the great hall there are carved beautiful figures of the stature of giants, but of art so subtle and exquisite that better could not be wrought in silver; and many other fine things which we omit for brevity.

"And enquiring from this old man about the work, and what his opinion was as to who had made it, he told us that without doubt the work was made by order of the father of St. Josaphat, to bring him up there in seclusion, as the story tells. And as this informs us that he was the son of a great king in India, it may well be, as we have just said, that he (St. Josaphat) was the very Budāo of whom they relate such marvels" (Dec. v., liv. vi., cap. ii.).

H. YULE.

## A BABYLONIAN CYLINDER OF ANTIOCHUS.

British Museum: Aug. 27, 1888.

Among the many valuable things brought to England recently by Mr. Rassam is a small cylinder of Antiochus. It is written in a very complex style of writing, a kind of ornamented Babylonian, in fifty-nine lines. Antiochus is called "the great king, the mighty king, the king of multitudes, the king of Babylon, the king of countries, &c., eldest son of Seleucus the Macedonian, the king of Eki" (i.e. Babylon). Like most Babylonian kings, he repaired or restored the temples of E. ZIDA and E. SAGILI, the bricks for which "his pure hands made in the land of Hattim." The god Nebo is called "the son of E. SAGILI, the first-born of Marduk the supreme one, the offspring of the goddess Aneana the queen." In col. 2, l. 15 appears to be remarkable. It runs: "*mu-kin pal ku-uk-lu sam-e u irsi-tim*," which line I read, "the establisher of the time (reign) of the circle of heaven and earth." The word *ku-uk-lu* looks very like the Greek κύκλος; and it also appears to be used in this line in the same sense as κύκλος is used in the following passages:

τὸν κύκλον πάντα τοῦ οὐρανοῦ δια καλέοντες.

(Herodotus i. 131.)

Οὐρανὸς ἀθροῖζων ἅστρο' ἐν αἰθέρος κύκλῳ.

(Euripides, *Ion*, 1147.)

I do not say that the word is Greek; but I do not see any reason why a Greek word should not appear upon so late a cylinder, which, moreover, contains the names of Antiochus, Seleucus, Stratonice, and the adjective "Macedonian." The inscription makes Antiochus pray for the prosperity of himself, his wife, and his son Seleucus. His wife's name is spelt in cuneiform *Aš-ta-ra-ta-ni-ik-ku*. This is evidently the Stratonike (Στρατονίκη) of the classical authors. Antiochus reigned from 280-261 B.C.; and in col. 1, ll. 13-16, of this inscription he says: "I laid the foundation of E. ZIDA ["the temple of life"], the established temple, the temple of the god Nebo, which is in Borsippa, on the 20th day of Adar, the 43rd year." This is evidently the forty-third year of the Seleucian era; and, as this era began 312-313 B.C., Antiochus laid the foundation of this temple 270-269 B.C., about ten years before his death.

ERNEST A. BUDGE.

## THE AGE OF HOMER.

London: Aug. 26, 1888.

In the last number of the *Journal of Philology* is an article by Mr. Sayce on the age of Homer which must have been read with interest by many scholars. But there are several points in which it is impossible to be sure of Mr. Sayce's real opinion. It will be so long before we can look for another number of the *Journal* that I venture to ask your permission to seek through your columns the further information which I apprehend is needed before a rational discussion of Mr. Sayce's position is possible.

1. Does Mr. Sayce place "our" Hesiod and "our" fragments of the *Cyclic Epics* as well as Homer in the age of Perikles?

2. What does Mr. Sayce consider the Homer of Herodotus to have been? And what the Homer which was appointed by law for recitation at Athens?

3. Does Mr. Sayce consider that the Homer of Plato was our Homer? I supposed so from the mention of the age of Perikles, and also from a passage in which "the Homer of Plato and the Alexandrines" is spoken of, until I found, a little farther on, three lines quoted from the Homer of the Alexandrines, on which Mr. Sayce says: "Had these been the teachings of the old Homer of Greece, Plato could not have failed to dwell upon them in his indictment of epic poetry." It would seem from this that Plato's Homer was not ours.

4. Did Aristotle and Aristarchos—to say nothing of Plato—suppose that they were dealing with the old Homer of Greece, or were they conscious of the fact that "our Homer" is a Greek "Don Quixote" which "holds up to mockery all that had once claimed the deepest reverence of the Greek people"? Can the process be explained by which this Homer was substituted for the Homer of Herodotus?

5. Does Mr. Sayce take the story of the Spartan at Tegea to be serious historical fact? Does he, that is, believe the essence of the story, that the Spartans found the bones of Orestes, which were ten feet long? If not, what becomes of the introductory incident? Or even admitting the bones, did Mr. Sayce never stop at a blacksmith's forge "to admire the performance"?

6. Does Mr. Sayce seriously think that the Homeric poems are "based on the old tragedy of Attica," because they speak of dancing to the flute, dirges, marriage-songs, and hymns of victory?

7. Mr. Sayce admits that our Homer contains part of the *Aeolic* songs which formed the real Homer; can he either tell us which these parts are, or give us a test by which we can find them?

8. Can Mr. Sayce give us any reason to believe that in the fifth century there was any development of the historical faculty or of critical archaeology such as to render possible that vast amount of scientific accuracy in prehistoric scenery which we find in Homer? Mr. Sayce does not attempt to dispute the exact archaism of such important and all-pervading matters as the kingly power, the position of women, the use of cattle for money, the ignorance of horsemanship in war, and many other traits which were utterly unfamiliar to the Greeks of the age of Perikles.

9. Does Mr. Sayce consider that the *Odyssey* as we have it is an earlier work than the *Iliad*? I gather that he does from his remark that "the *Odyssey* seems to breathe the spirit of Aiskhylos, the *Iliad* the spirit of Aristophanes," or rather, it would appear, of Lucian.

I have confined my questions strictly to points which must be explicitly and unmistakably cleared up before it is even possible to enter upon the discussion of Mr. Sayce's paper. I may, at the same time, mention one or two errors which Mr. Sayce will, no doubt, be glad

to have corrected. He says that Delphi is not mentioned; he will have no difficulty in finding it under the older name of Pytho. In speaking of the Dorians, he forgets that the Rhodians were Doric, and are mentioned with a distinct reference to the characteristic triple division of their tribes (*Il. ii. 655*). He says that an age of literary refinement is indicated by the fact that a special knife had been invented for cutting cheese; the utensil mentioned in the lines to which he refers is not a knife, but a grater, perhaps a less literary instrument. A further proof of literary culture is, he says, the employment of a trained slave to cut meat. But Homer says nothing whatever of training or of a slave in the passage he gives (*Od. i. 141*), nor have I been able to find foundation for the statement elsewhere. A swineherd appears to be capable of fulfilling the function in *Od. xiv. 433*.

WALTER LEAF.

### SCIENCE.

#### OXFORD CONTRIBUTIONS TO THE STUDY OF ROMAN LAW.

*The Institutes of Justinian.* Edited, as a Recension of the Institutes of Gaius, by Thomas Erskine Holland. Second Edition.

*Select Titles from the Digest of Justinian.* Edited by Thomas Erskine Holland and Charles Lancelot Shadwell.

*Imperatoris Justiniani Institutiones.* With Introductions, Commentary, Excursus, and Translation. By J. B. Moyle. In 2 vols. (Oxford: Clarendon Press.)

THESE three books are alike in three points. They are beautifully printed by the Clarendon Press, they are welcome evidence of the revived study of Roman law in Oxford, and they are edited by lawyers who are also scholars. The first and third books have evidently not been executed without a good deal of honest labour, and the third puts within the reach of the student a great deal of information and discussion which is not easily found elsewhere in English. Still, partly from what I think faults in the plan and partly from imperfect execution, none of these books is satisfactory.

Ever since the discovery of Gaius' Commentaries, attempts have been made in various ways to exhibit the debt of Justinian's Institutes to Gaius. The most useful practically is Gneist's *Syntagma*, which gives the two works in parallel columns, and adds other relevant extracts. Prof. Holland's plan is different. He prints in thicker type those parts of Gaius' Commentaries which Justinian "left standing," and adds references to other works of the classical jurists extracted in the Digest which were used by the compilers of the Institutes. Something of the kind had previously been done by Krüger, but with important variations of the MSS. at the foot of the page. Now, without saying that a transient curiosity may not be gratified by such a plan, I object, first, that it is necessarily delusive, and, secondly, it aims at a matter of scarcely more than bibliographical interest. It is delusive on more grounds than one. Our MS. of Gaius is in parts quite illegible even by (*oculatissimus ille*) Studemund, and therefore a good deal more than is exhibited as Gaius may really have been incorporated by Justinian. Again, no account taken of Justinian's omissions, and these

are often the most significant part of the alterations. Further, substantial reproduction is not recognised by the type, if the *ipsissima verba* are altered. Prof. Holland has evidently taken much pains in this matter, and yet it is not difficult to find sections where the result is unfortunate. In iv. 6, § 39, what professes to be part of Gaius' 61st section is given in thick type, and this is accentuated by one word, *namque*, being in ordinary type. But the fact is, one-half of the thick type is not in the MS. of Gaius at all, but supplied by Huschke from the Institutes themselves! Prof. Holland's faith in Huschke is sublime, as may be seen in the different types in which iv. 7, § 4, is printed. In iv. 6, § 32, a few scattered words are printed in thick type; but, on comparing Gaius' § 54, it will be seen that the order in Gaius was different, and that the editor has not been quite faithful even to his own plan (*Stipulatus sit* is left in ordinary type). And then, what importance can attach to showing that at least so much has been taken from one particular book as distinguished from other books of Gaius, and from books of others of the classical jurists? Justinian tells us that Gaius' *Res cottidianas* was used as well as his Commentaries. Why should extracts from one be dignified with thick type, and extracts from the other be scarcely distinguishable from Justinian's own additions? The thing becomes ridiculous when we have, for instance, Just. ii. 1, § 29, which was taken almost bodily from the *Res cottid.* (Dig. xli. 1, l. 7, § 10), printed in ordinary type, with the exception of five words, or parts of words, which happen to occur in the corresponding passage of the Commentaries! The editor cannot possibly suppose that Tribonian took these words from the Commentaries and the rest of the passage only from the other work. Further, Huschke's texts are not suitable as a basis without any note (except very rarely) to show the deviations from the MSS. or the generally accepted text. No one is more learned or more ingenious than Huschke, but his conjectures, often most valuable as suggestions of what may have been in the text, should be marked as conjectures only. Studemund's re-reading of the palimpsest conveys a warning to all who attempt to fill up the gaps of an imperfect MS.

The *Select Titles from the Digest* is probably intended merely as a convenient book for lectures. It contains thirty-two titles, with a brief analytical table of contents of each, and a few references, which appear to have been simply selected from Godefroi. If the editors had added short notes such as Godefroi's the book might have been really useful; as it is, it seems to me, except for its type, of little use to students, who will find their account in getting the first volume of the Berlin stereotype Corpus, which is cheaper, contains useful notices of variations from the Florentine MS. and from ante-Justinian jurists whose works are otherwise preserved, and some conjectures in awkward parts of the text, and gives Institutes and Digest complete. As for analyses, they are what should be left to the student to make.

Mr. Moyle's Commentary on and transla-

tion of the Institutes requires and deserves fuller treatment. I have examined several parts of the book, and believe he claims no more than is true when he says that he has consulted the best and most recent authorities, and names particularly Puchta, Schrader, Baron, and Vangerow. Perhaps Baron's *Pandects* (though a handy volume) is scarcely one of the best, if von Wächter's judgment is correct—"No sure guide; slight work, with much that is surprising." Mr. Moyle has adequate knowledge of German, a readable style, and a power of intelligent adaptation and criticism, so that, though much seems to be taken, more or less, from these and other authorities, the book is perhaps all the richer for it. But I greatly prefer, where considerable use is made of other authors, that a definite reference should be given on the particular title or passage. A reader knows then with whom he is dealing, and can verify, if he choose, and satisfy any doubts which may arise.

I agree with the editor that, if we had in English good institutional treatises and histories of Roman law, the Commentary might well have been shorter. Perhaps he would have done better had he given more explanation in the shape of proper notes on the text, and had put as excursus much of the matter which now smothers the text, to which it sometimes adheres by only a slight and casual connexion. It is not a desirable arrangement which, for instance, prints a short essay on suspensive and resolute conditions at the foot of the title on the *Atilianus tutor*. A professedly institutional treatise, if it is to be used as such, should not be overlaid with what may almost amount to another institutional treatise, whose members are dislocated in order to range with the former. But both Gaius and Justinian require notes to explain words, allusions, and obsolete practices; to give quotations from, or references to, the Digest and Code for further illustration or correction of the text; and to emphasise expressions which may otherwise be passed over lightly by the student or give him insufficient or incorrect notions. Some, however, of Mr. Moyle's notes are of this character.

But one's confidence in the book is impaired by finding positive statements on matters where knowledge is impossible, references not unfrequently wrong, quotations not always verified, and other indications of a want of knowledge at first hand and of proper critical method. For instance, take the note on p. 295. It is said the *lex Furia testamentaria* was passed in 183 B.C. Other writers give the date with an expression of doubt. The truth is, it is a pure conjecture. The law evidently preceded the *lex Voconia*, and probably, if a fragment of Varro refers to it, was a *plébiscite*. These two inferences leave a wide chronological range, but that is the whole amount of our knowledge. "It is remarkable as being the first enactment of the civil law in which *Cognatio* is recognised as a title." *Cognatio* is referred to, but scarcely as a title; we know of few enactments on any branch of law at all before this, and the recognition of *Cognatio* was (as the editor knows) the act of the praetor. By the *lex Voconia* "any person ranked in the first class of the census as owner of 100,000 aesterces or up-

wards (Cic. *in Verr.* 2, 1, 42) might bequeath," &c. The only authority for this is not Cicero, but pseudo-Asconius, a worthless authority. Gaius (ii. 274) has "centum millia aeris," but this means 100,000 *asses*, and Savigny has not succeeded in convincing antiquaries that *aeris* meant (silver) *sestercies*. "Provided no legacy exceeded in amount the share which the heir or each of two or more co-heirs received himself." Almost all modern authorities agree that "heredes" meant heirs collectively, not *each co-heir*. On p. 511, it is said "the date of the *lex Aquilia*, according to Theophilus, was the third secession of the plebs, *circ.* 287 B.C." Theophilus knew no more of the date than we do. He put together Dig. ix. 2, l. 1, § 1, with Dig. i. 2, l. 2, § 8, and then jumped to a conclusion. But he says nothing of "third" secession. Similarly, Mr. Moyle gives (p. 626) a date *circ.* 170 B.C. for the *lex Aebutia*. Rudorff suggests, not this, but three other dates. Nothing is really known. On p. 621, it is said Studemund conjectures a law to be the *lex Vallia*. Studemund read it in the palimpsest. He made no conjecture at all. On p. 298, it is said "the heir was entitled to his fourth as heir: whatever else he got from the testator by legacy *fidei commissum* or *donatio mortis causa* was not included in it, unless the testator directed it otherwise," and reference is made to Dig. xxxv. 2, 56, 5. The reference is clearly wrong. On turning to Baron, whose book (§ 447) seems to have been used here, this reference is the first of several given for a general statement, partially identical with Mr. Moyle's, but is just the one not applicable to Mr. Moyle's statement. On p. 240, the editor says, "In Cicero's time no oral will had any validity," and refers to *in Verr.* 2, 1, 48 (it should be 45); but the passage has nothing to do with oral wills, but with the *non-production* of a will which was alleged to have been made (see Leist in Glück's *Pandekten*, books 37 and 38, § 15, 16). Mr. Moyle has apparently been misled by an ambiguous note of Schrader's; at least he copies a false reference of Schrader's—Cic. *de Orat.* i. 43 (should be 53). A similar case appears to account for the note on i. 11, § 12 (p. 132), where, commenting on Cato's view, *servi si a domino adoptati sint, ex hoc ipso posse liberari*, he gives us only the choice of Cato's thinking of adrogation of a slave by his own *dominus* or of the master's giving him in adoption to a third person. Now the first is impossible as law (adrogation applies only to persons *sui juris*), the second is impossible as Latin. Why should not Cato be thinking of a master's mancipating his slave to another, and then claiming the slave from him as his son? On the previous page, the editor says that Cicero, in c. 13 of the speech *pro domo*, declares the adrogation of Clodius to have been "done with the approval of the Pontifices." If the passage is read, it is seen that Cicero was speaking ironically. His very argument is that the adrogation, though alleged to have been duly conducted, was not approved by the priests (see the end of c. 14). On p. 371, *praesens* (*procurator*) is explained to mean "appointed in court." This is inconsistent with the passage itself (iv. 11, § 4): "*vel ipse in iudicium venire . . . vel extra iudicium*," &c., and with the plain explana-

tion in Dig. iii. 3, ll. 5-7. On the following page, he has apparently misunderstood Schrader's note, and states the matter, as I conceive, wrongly. I take it there are three cases, not two. A procurator, if appointed by the defendant himself in court, did not give security *judicatum solvi*, but the defendant did. If appointed out of court by the defendant *praesens*, then he did give security, but the security (*fidejussor*) was the defendant himself; if the procurator acted without such appointment, the prosecutor gave security in the usual way, and the defendant was not directly liable.

A few words on the translation, which, so far as I have examined it, is businesslike, readable, and substantially correct. But here again there is some want of precision. Thus, in iv. 4, § 2 (p. 172), the single word *injuria* is first translated "outrage or injury;" three lines farther it is "insult;" afterwards, generally "outrage." In tit. 9, *si equus calcitrosus calce percusserit aut bos cornu petere solitus petierit*, the connexion of *calcitrosus* with *calce* and of *petere* with *petierit* is ignored, and the clause translated "Examples may be found in kicking by a vicious horse or goring by a bull with a propensity to toss." But this is extending the law, unless kicking is synonymous with viciousness and goring with tossing. On p. 167 (iv. 2, § 2), *in bonis esse* is translated "equitable ownership." Surely Justinian would have indignantly referred Mr. Moyle to Cod. vii. 25.

H. J. ROBY.

#### CURRENT SCIENTIFIC LITERATURE.

*Essays on Sport and Natural History.* By J. E. Harting. ("Field" Office.) Mr. Harting is a naturalist of the very sporting type, with a marked taste for falconry and a general love for all out-of-the-way historical knowledge which bears in any way upon birds or animals. In this volume, he has collected a few of his fugitive pieces, many of them running in the same line as that which he has already so fully worked up in his book on the extinct British animals. Among the more important are papers on the roe-deer in England, on the Irish wolf-hound, on the old English black rat, on the spoonbill in Sussex, on the great bustard, and on the humming of the snipe. Two or three articles are devoted to hawking, and one to the *Bote of St. Albans*, the great mediaeval manual of the craft. Other interesting records are contained in short essays on purple gallinules, wild turkey, fishing with cormorants, and an Essex decoy. We must demur to the wood-cut of a badger, which seems to us strikingly uncharacteristic; but the other illustrations are, for the most part, very good. Altogether, the papers, though not important contributions to science, bear throughout the impress of personal observation and a keen eye for animal life, together with a considerable acquaintance with the literature of sport from the earliest period. Mr. Harting, indeed, stands almost alone in his combination of the antiquarian and biological interests.

*Third Report on the Migration of Birds.* (West, Newman and Co.) The committee appointed by the British Association at York in 1881 to obtain details of bird migration by means of communications from the different lighthouses and lightships round the shores of Great Britain and Ireland have here printed their annual summary. These minute particu-

lars, collected at much trouble and some little expense, cannot be called interesting reading save for ornithological zealots; nor, in spite of their source, are they light reading in the ordinary sense of the expression. But they are paving the way, it may be hoped, for the understanding of that migratory instinct in birds which, although ancient writers easily interpreted it by a little imagination, has hitherto formed a serious difficulty to the present more scientific generation. Instances and facts are being largely accumulated by the co-operation of the lighthouse keepers, so that, before many years elapse, it may be hoped that it will be possible to strike out some general laws which underlie the phenomena of bird-migration. Each year the observers become more competent for their work. Mr. Cordeaux again notices that the tendency of the autumnal migration was from east to west; while, with spring, birds returned from west to east. Owing to the mild winter of 1881-82, fieldfares and all the duck family were remarkably scarce. The autumnal migration seems to depend first upon temperature, next upon the period when young birds are left to shift for themselves. These young birds generally migrate some weeks in advance of their parents. Among the rarer visitors to our shores last year were ten ospreys, with Tengmalm's owl, the rustic and lapp bunting, white-spotted blunthroat, glossy ibis, two Sabine's gulls, the Kentish plover, and the blue-winged teal. We can but wish well to this ingenious attempt to discover the secrets of migration—whether use, wont, and the long experience of the races of birds teach them to pass from land to land, as saith modern science; or whether the poet's surmise be the truer theory, that they migrate

"quia sit divinitus illis

Ingenium, aut rerum fato prudentia major."

*Les Mouvements du Sol sur les Côtes occidentales de la France et particulièrement dans le Golfe normanno-breton.* Par Alexandre Chèvremont. (Paris: Leroux.) In a work published a few years ago under the title of *Les Mouvements de la Mer*, M. Quénauld estimated that the surface of the land in Normandy and Brittany had been lowered since A.D. 700 at the rate of about two mètres per century. Assuming the depression to go on at this rate, it would require but a thousand years to convert the Continent into an island, and to destroy all the French ports along the Channel. But M. Quénauld carried his prophetic calculations much farther: "Quelques siècles plus tard, Paris sera devenu une ville maritime, en attendant qu'il soit englouti dans une vingtaine de siècles." It is cheerful, however, to find that M. Chèvremont, who has made a prolonged and careful study of the Normanno-Breton Gulf, is disposed to take a less gloomy view of the matter. He sees, it is true, marks of depression everywhere along the French coast; but, instead of taking the two mètres per century which the pessimists had adopted, he believes that the rate is less than one-third of a metre in a hundred years. Since the end of the Roman dominion in Gaul (that is to say, in the course of some fourteen centuries) there has been a depression of the shores of the Armorican Gulf to the extent of about four mètres—a movement which gives a centennial rate of only twenty-eight centimètres. The evidence which has led the author to this conclusion is elaborately set forth in the volume before us. In 1879 the French Academy of Sciences, recognising the importance of this subject, offered a prize for an essay on the changes of level which the French coast had undergone from the Roman period to our own day. It happened that M. Chèvremont was at that time occupied with the preparation of the present work, the scope of which, however, was rather different from that of the prize theme. He had confined his studies to the coast between Cherbourg and Brest, while the proposed essay

was to deal with all the Northern and Western coasts, stretching from Dunkirk to the mouth of the Bidassoa. On the other hand, M. Chèvremont had been anxious to study all the movements to which the ground had been subjected since the middle of the Tertiary period, while the Academy limited the enquiry to those changes of level which are of post-Roman date. Hence our author's work was more restricted in area, yet more extensive in time, than the conditions of the prize demanded. Notwithstanding this difference of aim, a portion of his monograph was submitted to the Academy, and was reported on in highly favourable terms by a committee composed of MM. Daubrée, Delesse, Hébert, de la Gournerie, and Serrier. Fortified by the opinion of such authorities, M. Chèvremont can afford to be indifferent to the remarks of a reviewer. Much of the early part of the book, relating to the geology of the country around the Normano-Breton Gulf, might, we think, have been spared. The volume as it stands is a large octavo of 479 pages, but the really valuable part of the book would not occupy more than half this bulk. Probably the most interesting chapters of M. Chèvremont's work are those which relate to changes of level in Normandy and Brittany during historic times. On this subject he has amassed a collection of observations the value of which will be appreciated not less by English than by French geologists. Few indeed can be so short-sighted as to regard the movements of the French area as phenomena of a purely local character: they are, of course, simply part of a system of secular movements to which a large portion of North-western Europe, including the off-lying British archipelago, has been subjected. M. Chèvremont sees this clearly enough, and seeks in a philosophical spirit to bring his own studies into relation with those made in other areas. The phenomena, however, are exceedingly complex, and it may be doubted whether the materials are yet ripe for synthetic discussion.

WE have received from Messrs. Sampson Low a copy of the second edition of Mr. J. E. H. Gordon's *Physical Treatise on Electricity and Magnetism*. In reviewing the first edition at some length (ACADEMY, November 6, 1880), we said that it was "probably the best book of the kind that has ever been published in England;" and we also dwelt upon the exceptional merit of the type and of the illustrations. It is now only necessary to state that the new edition has been revised throughout, and that much additional matter has been added, as well as twenty-one new plates. The chapter on electric lighting has been omitted, as the author hopes to publish shortly a special work on the subject. No one is better qualified, both from the scientific and from the practical side.

#### SCIENCE NOTES.

At the meeting of the British Association for the Advancement of Science, at Southport, the lecture to the operative classes will be given by Sir Frederick Bramwell, on "Talking by Electricity—Telephones."

A MEETING is to be held at New York on September 26 for the purpose of founding an American Ornithologists' Union. It will be proposed to appoint a committee to revise the current lists of North American birds, so as to arrive at an authoritative classification and nomenclature. The meeting is summoned by Messrs. J. A. Allen, Elliot Coues, and William Brewster.

THE second edition of the *Official Catalogue of the International Fisheries Exhibition* (Olowes) tells on its very last page (382) a curious story. Mr. Francis Holmwood, writing from Zanzibar, reports that the native fishermen train the "sucker fish" (locally called *chazo*, and pre-

sumeably *Echeneis remora*) to catch turtles for them. The *chazo* is caught when young, and gradually accustomed to being handled. An iron ring is let into its tail, through which a line is passed. It is then taken out in a boat and let slip at a turtle floating on the water. To this it attaches itself, and the two are hauled in together. Mr. Holmwood adds that he hopes to forward a specimen, but it has not yet arrived. We remember to have read somewhere that the Chinese make use of the *remora* in the same way. The authority of a European eye-witness, however, seems to be still wanting.

#### PHILOLOGY NOTES.

MR. F. S. GROWSE, of the Bengal Civil Service, has now completed the work (upon which he has been engaged for some six years) of translating into English the *Rāmāyana* of Tulsi Das, the most popular vernacular poem of Upper India. The two first parts were noticed in the ACADEMY as they appeared. We have now received the whole bound up in a single volume. It is most handsomely printed at the Allahabad Government Press, and it contains seventeen full-page illustrations, which are interesting on more than one ground. The greater number come from an illuminated MS. of the poem of quite modern date, but still representative of traditional Hindu art; the others are scenes associated with the life of the poet, taken by a native photographer. All have been reproduced by the London Autotype Company, and afford in their mounting a most agreeable contrast to the usual run of Indian photographs. Those who know Mr. Growse's *District Memoir of Mathurā* (now in its third edition) will recollect that his devotion to good workmanship includes a scholar's care for the manner in which his books are turned out.

THE well-known Oriental publishing firm of Otto Schulze, of Leipzig, announce two new periodicals for October. The one is the *Literaturblatt für orientalische Philologie*, edited by Prof. Ernst Kuhn, of Munich, which will be published monthly at the subscription price of fifteen marks a year. The other is the *Zeitschrift für Keilschriftforschung*, edited by Drs. Carl Bezold and Fritz Hommel, both of Munich, with the collaboration in England of Mr. T. G. Pinches. This is to appear quarterly, with five or six plates in each part, for an annual subscription of sixteen marks.

AT a recent meeting of the Académie des Inscriptions, M. Salomon Reinach, of the École française d'Athènes, read a paper upon "The Chronology of Certain Athenian Archons since the One-hundred-and-twentieth Olympiad." Its object was to correct the list published by Gelzer in 1875 by the light of the inscriptions recently discovered by the French in Delos. The following are the chief results:—The Archon Meton, hitherto unknown, must be placed about 110 B.C.; Lykiskos and Dimysios, previously assigned to 5 B.C., must be put back by a century—probably to 102 or 103 B.C.; Agathokles is rightly assigned to 132 B.C., and not to a half-century later; Diotime is changed from 5 to 95 B.C.

DR. NEHRING has published at Posen a critical edition of the Slavic Psalter of St. Florian, with a Latin commentary.

THE *Compte-rendu* of the Imperial Library of St. Petersburg enumerates the acquisitions made by means of the gifts of the late Emperor. These include the palimpsests and the Greek and Oriental MSS. of Tischendorf, the collection of Oriental MSS. of Prince Dolgorouky, two collections of Hebrew MSS. of Firkovitch, and valuable Slavonic *incunabula*.

#### FINE ART.

*Lectures on Painting.* By Edward Armitage. (Trübner.)

THESE Lectures to the students of the Royal Academy by their late Professor of Painting are manly, outspoken, and practical, giving without reserve or ambiguity the benefit of his own long experience and of his own opinions to the rising generation. Beyond this Mr. Armitage does not go. He promulgates no pet theories, is neither sentimental nor transcendental. He seeks rather to develop the personalities of his hearers than to influence them by his own. Sound drawing and common-sense are the main burdens of his Lectures, which cannot fail to inculcate self-reliance and honesty and to develop noble and original work. Although his sympathies are not unlimited, they cover a large area, finding something to praise in much work he does not like. On the other hand, he is no blind panegyrist either of the schools or the artists that attract him the most. On the whole, the reader of the book can scarcely fail to be impressed with respect for its healthy tone and the soundness of most of its advice, and its intellectual breeziness acts like a tonic after the close aesthetic atmosphere of much modern art-teaching.

As might be expected, it is upon drawing and composition that Mr. Armitage is strongest. On colour he has comparatively little of value to say except his own personal experience of pigments, but yet there are more than one of his remarks upon this subject worthy of attention nowadays, when anyone who can arrange patches of pretty colour so as to produce a telling decorative effect is considered a colourist. Take this, for example:—"However unusual or novel the colouring of a picture may be, if it reminds one vividly of some harmony of nature, if there is space and air in it, and if the same atmosphere pervades the whole canvas, it is the work of a real colourist." Some other views of his on this subject are more doubtful. It is contrary to our experience, for instance, that all coloured sketches or water-colour drawings gain brilliancy by being mounted on a white ground. On the other hand, the only fault to be found with the lecture "On Drawing" is in the expression rather than the meaning. Such a sentence as this is scarcely felicitous: "In colossal figures the hands and feet should be in proportion to the head, and therefore small for the body and limbs." The obvious inference from this is that the head in nature is always out of proportion to the body. Shortly afterwards it is stated that, "if you preserve the centre of the body where it ought to be, you can only lengthen the tibia at the expense of the femur," &c., &c., but, as the proper position for the centre of the figure is never explained, the sense of the rest of the paragraph is somewhat obscure. If we add that Mr. Armitage is too chary of giving the reasons for his "dicta"—as, for instance, "that mural painting is the highest and noblest branch of the profession," and that in a severe bas-relief composition a runner should be represented as proceeding "more by comparatively slow bounds than by quick steps"—we shall have given quite as much attention to the minor defects

of the author's style as is fair in so short a notice. The main teaching of the lecture "On Drawing" is admirable; in particular may be mentioned the remarks upon the use of anatomy, on style and details, on the importance of practising drawing from memory, and on the representation of objects in motion.

Mr. Armitage's experience as a mural-painter is large enough to make all that he has to say under this head unusually interesting and valuable. It is agreeable to be able to gather from his lecture "On Decorative Painting" that what he rightly calls "the best and grandest style of decorative work—namely, legitimate fresco," may not, after all, be unsuited to an English climate. He is "perfectly convinced that the rapid decay of our modern frescoes is due to the bad quality of the *intonaco*," or thin layer of fresh mortar on which the painting is executed. We are also glad to learn that the simpler and purer method of fresco-painting (with colours diluted in water only) is to be preferred to the body-colour method, not only on account of beauty, but also on account of durability. This, like other of his lectures, is enlivened with one or two humorous anecdotes of his own experience, and is concluded with an appeal which we hope will not have been without effect upon his listeners. He tells them in effect that, if they devote themselves to mural painting, they must not expect high pay, but must console themselves with the thought that theirs is the highest and noblest branch of the profession; and that, while high-priced easel pictures are relegated to private galleries and dining-rooms, only to re-appear at intervals at Christie's sale-rooms, their work is a fixture, and can always be seen by the public. Bad pay and insecure methods are terrible drawbacks to such artistic enthusiasm; and all the more honour is due to men like Mr. Armitage, the late Mr. Dyce, Mr. Watts, Mr. Madox Brown, and Mr. Shields, who under such discouragements have given of their best for the pure love of art.

The lecture "On Finish" is scarcely on a par with that "On Drawing." Mr. Armitage, though he very usefully insists upon the difference between "finish," or the carrying forward of every part of a picture to the same stage of execution, and "polish," or the smoothing down of all parts to the same level, scarcely seems to us to distinguish sufficiently between "finish" and the minute rendering of detail. The latter, when carried to excess, is not accurately described as "excessive finish;" it is as destructive of finish as its opposite is. Nor do we think with Mr. Armitage that the whole question depends upon where to fix the point up to which we require to be deceived: for we do not want to be deceived at all in one sense—viz., by mistaking the representation for the thing; and we want to be utterly deceived in another sense—viz., by not having our illusion disturbed by a palpable falsity. Let us take a peach for example. We do not wish to think it is a peach, but we equally do not wish to see the paint. What art can do for us is to make us feel that a peach is beautiful, undisturbed by any other emotion to which a natural peach gives rise—the desire to eat it, for instance. The office of imitative art is to

isolate objects from the immediate action of the senses, so that we behold them as in a mirror, charmed; objects which may indeed arouse the senses, but only by a reflex action of the mind. But in art which has a higher motive than the imitation of mere matter, however beautiful, like Mr. Armitage's noble design of Judas returning the pieces of silver, the question is still less to what point we require to be deceived. It is rather how far finish will interfere with our deception. This will depend in some measure upon the extent to which the spiritual force of the design will bear the competition of elaborate execution. We do not want Judas' teeth or finger-nails to get the better of his remorse. Finish is the just proportion between labour and effect, and the diagrams with which Mr. Armitage has illustrated his lectures show how little work is sometimes necessary for this purpose. He need not have apologised for their roughness. They illustrate the text much better than more elaborate drawings would have done.

In his lecture "On Eighteenth-Century Art" Mr. Armitage has an ungrateful subject; but both in this and that "On David and his School" he has gone over ground too often neglected. In the latter especially he speaks with unusual authority as the pupil of Delaroche, and as an artist who both by his training and practice is peculiarly fitted to appreciate what was best in the French classical revival after the great Revolution. His sympathy is less keen, perhaps, with the romanticists; but the little he says of such men as Delacroix and Théodore Rousseau makes us wish that he had devoted a lecture to this subject also. It is, however, probably by a wise instinct that he has chosen to lecture rather of expressive than suggestive art, of form rather than of colour, of design rather than of painting. He owns to a want of appreciation of Corot and Daubigny, of Gainsborough and Blake; and he traces the influence of Millet to the fact that his pictures of bucolic life smelt of the dunghill. However much we may differ with certain of Mr. Armitage's opinions, it is, nevertheless, never without respect that we can listen to the honest way in which he expresses them. He praises nothing that we do not admire; and the whole tendency of his teaching is towards the cultivation of vital, robust, and intellectual art.

COSMO MONKHOUSE.

#### THE ART MAGAZINES.

THE matter in the *Magazine of Art* is varied and interesting, and the illustrations numerous and good. Prof. Sidney Colvin contributes an interesting paper on a not very interesting artist, Elsheimer; and Miss Julia Cartwright on the Certosa at Pavia, and Miss Jane E. Harrison on "Greek Myths," are as good as usual. Mr. J. Arthur Blaikie very properly calls attention to M. Baschet's admirable copies of the drawings in the Louvre, published at a moderate price, and accompanied by excellent comments by M. de Chennevières. Miss Katherine de Mattos' eloquent note on "Flowers and Flower-painters," and a bright little rhapsody, by Miss A. Mary A. Robinson, on "The Art of Seeing," give colour to the number; and Mr. H. Glazebrook commences a series of pleasant papers on "The Country of Millet."

THE plate in a recent number of *L'Art*

by M. Abel Lurat after M. Carolus Duran's portrait of his mother belongs to the first class of reproductive etching. The firm but delicate modelling of the face, and its life-like character, are rendered to perfection. M. Octave Lacroix continues his bright account of his "Voyage artistique au pays basque," which is admirably illustrated with the faithful drawings of M. A. Herst. M. Paul Leroi has completed his somewhat too cursory view of modern water-colour. His remarks upon the English water-colourists are especially abrupt. He appears entirely blind to the merit of such painters as the Hines, Mr. E. J. Gregory, Mr. Linton, Mr. Thomas Collier, and Mr. Small at the Institute; but he does justice to Miss Clara Montalba, and has not overlooked the remarkable work of Mr. Walter Langley. Although M. Leroi is not far wrong in his general views as to the mistaken tendency of modern water-colours in England, we think a more patient examination would have shown him that there was much less monotony and far more promise in this year's exhibitions than he was able to find in his hasty view.

THE *Zeitschrift für bildende Kunst* is of special interest this month. The description is commenced of a very extensive and important collection of documents and drawings relating to the Ter Borch family which now belongs to Herr L. T. Zebinden, a kinsman of the great painter. The collection comprises an interesting letter from the elder Gerard Ter Borch to his celebrated son, and a very large number of drawings and sketches (some 1,200) by various members of the family. Herr A. Bredius describes carefully a portion of the contents of an album in which are preserved drawings by the father, Gerard, his daughter Gesina, and his sons Gerard, Herman, and Moses. Dr. J. J. van Doorninck is occupied on an extensive biographical history of the Ter Borch family founded on the documents in the Zebinden collection. In the same number Herr Hans Bösch prints the text of a letter from Albrecht Dürer the elder to his "lieben hawsfrawen," Barbara, which is the only known autograph of the great artist's father. It was purchased for the National Museum of Germany from a dealer in antiquities at Nuremberg, and was found behind the wainscot in the old house "unter der Vesten" in that town, which was bought by the elder Dürer from Peter Kraft for 200 florins in 1475. This house afterwards passed into the possession of the painter, but it is not to be confounded with the famous "Albrecht-dürerhaus" in the Zisselgasse.

M. RENÉ MENARD commences a series of papers on the decoration of ceilings in the August number of the *Revue des Arts décoratifs*, and M. Edouard Garnier writes of the exhibition of retrospective art at Caen with his usual knowledge and care. The metal-work of the "Hutules," a tribe of uncertain origin who inhabit the Carpathians of Austrian Galicia, is described by M. J. Gorgolewski.

#### A ROMAN VILLA IN SOMERSET.

AT the annual meeting of the Somersetshire Archaeological and Natural History Society, held at Wiveliscombe on Tuesday, August 23, the following paper on "The Roman House at Whitestaunton" was read by Mr. Charles I. Elton:—

"When the society did me the honour of visiting Whitestaunton last year, we were so fortunate as to discover the remains of a Roman house situate beside the stream which rises in the large fishpond and flows down the valley of the Yarty. The existence of the ruins of a villa in the immediate neighbourhood of the stream had long been suspected, owing to the frequent occurrence on its banks of minute fragments of an ancient kind

of pottery, and of stone split into thin sheets and cut into the shape of roofing-tiles. When the course of the high road was altered, about forty years ago, the ruins of a little room or chapel, roofed with these slabs and paved with *tesserae* of brick, were found standing in the wood, not far from the stream in question, and within a few yards of the back north wall of the house which has now been discovered. At the time of the society's visit we had not found much more than the sandstone pillars which had supported the flooring over a hot-air chamber, some of the square, box-like flue-pipes which had let the warm air through the walls of the dwelling-rooms, a quantity of broken tiles, and the foundations and lower courses of some of the principal walls. A good deal of work was done in the course of last autumn and in the spring of this year, under the superintendence of Major Davis, who was so good as to direct the operations, which could hardly have succeeded at all without the benefit of his great experience in everything relating to Roman antiquities of this kind. The plan prepared by him shows the result of the excavations so far as they have at present proceeded. The house was built under a steep hill-side facing to the south, though the windows looking down the valley westwards must certainly have afforded the finest views. The bath-rooms were on the western side, and the principal living-rooms were arranged round the *atrium*, or covered court, at the eastern end. The centre of the house was occupied by a furnace-room, which probably adjoined the kitchen; here were the boilers supplying the warm bath and steam for the vapour bath, which was taken in a heated chamber, from which the bathers must have passed into a room containing the cold plunge-bath, lying farther to the east. The hot-room terminates in a semi-circular recess paved with square red tiles embedded in concrete. Several lines of thicker tiles radiated from the centre of the room towards the curve of the recess, where they reached the wall and formed a support for the *solium*, or bench where the bathers sat. On the further side of the furnace-room, flues and underground passages for hot air, lined with thick tile-work, led to another semi-circular room at the back, containing a number of red-sandstone blocks, intended apparently to support the fire-place, the doorway, and a seat or projection from the wall, and towards the front to another room adjoining the *atrium*, where a huge slab of much-discoloured sandstone marks the position of another large hearth or fire-place. One is reminded at this part of the excavations, if we may compare small things with great, of that vivid description of the ruins of the City of Legions which we find in the *Welsh Journey* of Giraldus, where he tells us how Caerleon 'was excellently built by the Romans with their walls of brick,' and how even in his day were to be seen the traces of its former greatness, the giant tower and the palaces 'aping the Roman majesty' with their roofs of antique gold; 'and the traveller,' he adds, 'within and without the city finds underground works and pipes and winding passages and hypocausts contrived with wonderful skill to throw the heat from little hidden flues within the walls.' The *atrium*, or inner court, which was probably roofed in to escape the inclement weather of the 'land of clouds and rain,' was surrounded by a cloister or gallery opening at the back upon a large archway, of which the ruins lie in a mass of masonry upon the floor. On the eastern side of the arch there is an alteration of level in the floor of the little cloister; and here there are remains of a step and a doorway, and another slab of sandstone in the corner which seems to indicate the position of another stove or fire-place. The cloister was evidently supported on stone pillars, of which two were found lying by the wall at the corners of the court, and another had been displaced and thrown to some distance beyond the outer wall. Owing to the dampness of the soil, which necessitates a tedious course of drainage, we have not yet examined much of the flooring of the *atrium* and its surrounding cloister; but enough has been uncovered to show that the passage at least was floored with fine mosaic-work, bordered with the pattern called the 'double key,' the cubes being made of terra-cotta, white lias, and the darker stone of the district, so as to afford a variety of colours in the pattern. The pavement of the

large room between the outer wall of the *atrium* and the sloping wall shown on the plan appears, from the few fragments left, to have been of the same fine quality, the cubes measuring about a quarter-of-an-inch on every side; in the other rooms and passages the pavement was of a rougher and coarser kind. On passing through the opening for the large archway we come upon three small rooms, paved with concrete, in which a few *tesserae* about an inch every way in size are still in position. Some parts of the wall retain pieces of the stucco, or plaster, of a red or maroon colour striped with white lines, with which the surface was originally covered; but the dampness of the soil led to the destruction of the greater part of the plaster work, which fell off in an almost fluid condition when the stones were first exposed to the air. Mr. Wright, in his work on *The Celt, the Roman, and the Saxon*, has observed a peculiarity of the Roman houses in this county, of which the middle room of the three last-mentioned affords a new illustration. 'One room,' he says, 'has always a semi-circular recess, or alcove, and there is generally at each side, where it joins the room, an advancing piece of wall, or pier, as though a curtain had been drawn across to separate the recess from the room;' and he adds that it has been conjectured that this recess served as the *sacrum*, or place of domestic worship. There are one or two other points about the building which seem to be worthy of observation. The construction of the arches appears to have been similar to that of the larger archways which Major Davis has discovered among the Roman ruins at Bath, the masons having, for the sake of lightness, used 'brick wedge-shaped boxes open on two sides,' set in a cement of lime and pounded tiles, and roofed in with a 'roll and flat tile,' or thin stones cut into a hexagonal shape. The stones of the east wall of the *atrium* are scored over with 'diamond broaching,' like the masonry of Hadrian's Wall. The tiles are of all sizes and shapes, some being flanged for roofing, or for use in the hot-air flues, others being rounded for the ridges of the roof, which seem to have been made in part of stone flags and in part of the thick slate which is found in Wiveliscombe. The box-like flue-tiles are pierced with square holes, and scored with lines so as to get a firmer hold on the mortar. In one or two places, where the supply of red-sandstone pillars had fallen short, some of these flue-tiles were filled with cement, and set up on end to serve as supports for the floor. Several of the tiles show marks of footsteps impressed on them while the clay was wet, the mark in one case showing the nails of a man's boot, and in another the footsteps of a large dog. There has not, as yet, been an opportunity of thoroughly examining the ground, the earth being left for some inches over the greater part of the floor; but some objects of interest have already been found. These include several coins of the fourth century, part of a bronze brooch, part of a glass bowl, several pieces of the fine red Samian ware, a vast quantity of bones, and a number of broken articles of the black, red, or gray pottery which was manufactured in Britain. Between the wall and the stream were found several large pieces of slag, from the ancient ironworks which were carried on in the immediate neighbourhood, and a broken quern, or handmill, made of granite from Dartmoor; and lower down the stream, and hidden under its bank, lay a circular block of red-sandstone, shaped like a truncated cone, and pierced with a square opening, which is said to resemble the stones used at the present day in Brittany for the manufacture of cider. It is not easy, after the lapse of so many centuries, to realise the daily life of the Romans who farmed in our Western valleys, and hunted the wild boar and wolf through the oak forests of the Blackdown Hills. To bring the picture more vividly before the mind, I have found it useful to study the letters of Sidonius, the famous Bishop of Auvergne, who was born soon after the Romans retired from Britain, and who lived to see the final triumph of the barbarian kings in Gaul. The description of his little country house, built in a nook of the hills by the side of a mountain stream, has been of the greatest assistance to us in the exploration of the villa at Whitestaunton. His house faced to the south, and extended from a steep bank at the eastern end to a place where the stream fell into a broad lake on the other side of the garden. The trees on the bank overhanging the

roof of the bath, rising in tiled ridges to a central cone of metal. He describes the furnace-room, with its intricate arrangement of lead pipes carried through the walls of the rooms for the warm baths and the vapour bath, the latter being fitted, as in our own example, with a paved semi-circular recess containing the bathers' bench. By the side of these rooms stretched a large hall containing the plunge-bath, built square, so as to allow plenty of room for the servants. The walls, he says, were of plain white plaster, but the ceiling was ornamented with metal-work, which the people, passing outside, could see through the high bow windows. Three arched doorways led into an open court-yard towards the west, where a perpetual stream splashed into a great stone basin out of six brazen spouts in the shape of lions' heads. An entrance at the further corner opened into the dwelling-house close by the ladies' dining-room, and the wool-room and store-closets were divided from it by slight partitions. Standing in front of these rooms, one looked across the *atrium*, round which ran a narrow cloister opening into a wide veranda on one side of the lake, and at the opposite or south-western corner running into a deep recess, where the servants held a nightly parliament of gossip when the family went upstairs to bed. The hall-door and vestibule took the centre of the southern front, and on the right of the entrance was the winter sitting-room, leading into a long wainscoted morning-room, with windows looking on the lake. A flight of steps led into the veranda below, where the guests used to sit and watch the boat-races and the fishermen dragging in the seine or setting their night-lines for the lake trout. On the other side was a little sitting-room, devoted to the midday *siesta*, and this led into the cool north parlour, near the point where our circuit commenced. The Bishop delights in the country sights and sounds, the nightingale in the bush, the swallow twittering in the eaves, the sheep scattered on the hill-side, and the boys in the hay-field with their songs and rustic flutes. On the lawn stood two spreading lime-trees, where Sidonius and his friends used to play at tennis until the boughs grew thick and caught the balls, and so he concluded that he had lost his tennis-court, and must use the place as an arbour for reading and playing backgammon. I hope that these short extracts from a delightful work will be of some use to us in our effort to understand the life of a country gentleman of Somerset during the Roman occupation of Britain."

## CORRESPONDENCE.

FRAUDS WITH COPIES OF TURNER'S "LIBER" PRINTS.

The Autotype Company, 74 New Oxford Street:  
Aug. 30, 1888.

Permit me to warn readers of the ACADEMY that autotype copies of the *Liber Studiorum* are being sold by unscrupulous persons as the original engravings issued by Turner. In the autotype edition of this work, edited by the Rev. Stopford Brooke, the marginal tint and title with the initial letter, or letters, at top were reproduced with the engraving as being of interest to the question of "states;" but, at the suggestion of the editor, the words "autotype facsimile" were engraved on the marginal tint, in order to make fraudulent representation difficult. No impression has been issued without this mark; but it can be obliterated more or less perfectly with a penknife, the paper margin cut away, and the photograph in this condition sufficiently resembles the original print to deceive inexperienced buyers. A Cambridge student called on me recently with two such mutilated autotypes, for which he paid one pound each—six times the value; in a few days another victim appeared, who had paid eighteen shillings for a copy. Both gentlemen made their purchases at the same shop. On my sending an agent to reconnoitre, he found examples of these falsified autotypes exposed in the window and for sale in the shop; but the dealer was much too wary to give any guarantee to a purchaser. Having been unable in this case

to obtain such proof of guilty knowledge as would enable the law to be set in motion, the publication of this warning in the columns of the ACADEMY may be useful.

W. S. BIRD, Manager.

#### ROMAN INSCRIPTIONS AT CHESTER AND IN WEST CUMBERLAND.

242 West Derby Road, Liverpool: Aug. 23, 1883.

In the ACADEMY of May 5, when writing on some recent discoveries of Roman remains at Chester, I stated my intention of forwarding another inscription found there. This I now do. It occurs upon the upper portion of what has been a fine altar. Its present height is two feet two inches, by one foot three inches broad. The remaining letters are

D E O  
MARTI  
CONSERV  
.....VS

The commencement of the third line is worn off, owing to the soft nature of the stone, and there have probably been two lines on the lower and lost portion. There is on the right side of the altar a representation of a head eared and horned, on the left a *præfericulum*, and it has a large *focus* for the offering. The altar was found about 1875 at the foot of Newgate Street, close to its junction with Pepper Street, and just inside the city walls, on the premises of Mr. Storrar, a veterinary surgeon, when he was levelling some raised ground in his yard which was full of ancient *débris*. It remained lying about this yard for several years until noticed by Mr. F. Potts, of Chester, who obtained it, and has presented it to the City Museum.

The reading should undoubtedly be *Deo Marti Conservatori*, followed by the name of the dedicator, &c. It is the first dedication to Mars Conservator found in Britain, and they are comparatively rare in the Roman Empire. As to the date of it, beyond judging from the style of the lettering, that it is of an early period, nothing can be said. I have not been able, so far, to find an inscription to Mars Conservator bearing a date. There is one on the Continent on a square stone, which on another side bears an inscription to Vespasian; but whether both are of the same date is more than doubtful. Very singularly, on looking through the inscriptions on the reverses of a number of large collections of Roman coins, I find that the reverse of MARTI CONSERVATORI only appears to occur on those of Constantine the Great, just before his conversion to Christianity. There may be some earlier examples, but, if so, they must be rare.

Another interesting altar has just been found at Hale (vel Haile), in West Cumberland. It is inscribed

DIBVS  
HERCVLI  
E.T  
SILVANO  
F.E  
PRIMVS QVAR  
PROSEET  
VEXILATIONE  
V.S.L.M.

The only difficulty is in QVAR at the end of the sixth line. I have suggested QVAR as the correct reading (and those who have seen the stone inform me that it seems warranted); and I think it refers to the nationality of the dedicator, who has been of the tribe of the Quariates, a people of Gallia Narbonensis. If it is QVAR the *c* is ligature with the *v*. The inscription, with this exception, I would expand *Dibus Herculi et Silvano Fellicius Primus . . . . . pro se et vexillatione, v(otum) s(olvit) l(ibens) m(erito)*, or, translated, "To the gods Hercules

and Silvanus, Felicious Primus . . . . for himself and the vexillation, performs his vow willingly to a deserving object." The stops in the centre of the third and fifth lines are singular.

W. THOMPSON WATKIN.

#### NOTES ON ART AND ARCHAEOLOGY.

We learn that the Government of Madras have at length decided to remove the best of the scattered and broken sculptures that remain at Amaravati to the Government Central Museum at Madras. They were lying exposed and in danger of being at any time burnt into lime—as so many of them have already been—or used to repair wells and other buildings, when, about eighteen months ago, Dr. Burgess, the superintendent of the Archaeological Survey, had over 170 of the most interesting of them packed for transmission to Madras. Visitors to the British Museum cannot fail to notice the series of sculptures now on the grand staircase, brought from Amaravati by Sir Walter Elliot many years ago, but long exposed to the injurious effects of the Madras monsoon and other causes of injury before they were so carefully lodged as they are now. These sculptures form the subject of the second part of Dr. J. Fergusson's volume on *Tree and Serpent Worship*. The Madras Government have also issued Dr. Burgess's *Notes on the Amaravati Stupa*, giving a brief account of the freshly excavated marbles, illustrated with seventeen lithographed plates of sculptures and inscriptions. From this it may be learned that the sculptures recently unearthed are much sharper in detail than any of those now in the British Museum.

MISS AMELIA B. EDWARDS is writing a series of papers on Gustave Doré—recollections, criticisms, &c.—for the *Art Journal*, which will be illustrated with original drawings in her own possession.

MR. W. THOMPSON WATKIN requests us to state that, being desirous to make his forthcoming *Roman Cheshire* as exhaustive as possible, he will be glad if any antiquaries possessing private and unpublished information as to discoveries of Roman coins, fibulae (and other jewellery), altars, inscribed stones, pavements, and vestiges of Roman roads, within the county, would kindly communicate with him on the subject at his residence, 242 West Derby Road, Liverpool. Due acknowledgment will be given of the same, as in *Roman Lancashire*.

ONE of the statues that decorate the new Hôtel de Ville at Paris represents the painter Henri Regnault. He wears the uniform of the *garde nationale*, in which he met his death; but why, asks the *Chronique*, is he made to draw his sword with his left hand? "Henri Regnault n'était pas gaucher, pendant."

#### MUSIC.

THE following are the arrangements for the Gloucester Musical Festival:—On Tuesday morning, September 4, Mendelssohn's "Elijah," in the evening, a concert, the programme of which will include a new choral work, "The Glories of our Blood and State," by Dr. C. H. Parry. On Wednesday morning, a new Cantata, "St. Mary Magdalen," by Dr. Stainer, Beethoven's Mass in C, and anthems by Bird and Gibbons; in the evening, Dr. Arnold's new Oratorio, "Sennacherib," will be conducted by the composer, and the programme will include, besides, Mendelssohn's "Hymn of Praise." On Thursday, Gounod's "Redemption," and Mr. C. V. Stanford's "Elegiac" Symphony; and on Friday, "The Messiah." There will be a second miscellaneous concert on Thursday evening. The principal vocalists will be Miss A. Williams and Miss M. Davies, M<sup>me</sup>. Patey, Mr. E. Lloyd, and Messrs. Santley and King. Mr. Charles L. Williams will be the conductor, and Mr. Carrodus the leader of the orchestra.

## WM. BLACKWOOD & SONS' NEW BOOKS.

BY THE AUTHOR OF "PICCADILLY."  
This day is published. Complete in 2 vols.

## ALTIORA PETO.

By LAURENCE OLIPHANT.

2 vols., post 8vo, with Illustrations, price 21s.

*Athenæum*, 25th August.

"Brilliant and delightful. . . . The book is one that everybody will greedily read and greatly admire. . . . It contains enough to equip a score of ordinary novelists for the production of a score of extraordinary novels."

PART IV., completing the Work, is published this day.

This day is published, New and Cheaper Edition.

## MY TRIVIAL LIFE AND MISFORTUNE:

a Gossip with no Plot in Particular. BY "A PLAIN WOMAN." New Edition. Complete in 1 vol., crown 8vo, 6s.

"The story of 'My Trivial Life' is a genuine book, and may indeed be esteemed for one of the bitterest and cleverest novels produced of late years."—*Saturday Review*.

"It is, in fact, a work of great ability, by one who observes keenly, and at the same time sees deeply into character. She has the power of presenting real people."—*Athenæum*.

"A book really cleverly and amusingly written."—*Vanity Fair*.

"The author reminds me again and again of Jane Austen."—*Truth*.

"She delights the intellect by a continuous succession of bright, witty, often caustic sketches of what is commonly known as 'good society.' . . . Imagination, wit, and the power of mental analysis have all contributed to make 'A Plain Woman's' story a remarkable book."—*Scotsman*.

This day is published.

## SANTO, LUCIA, & CO. IN AUSTRIA.

By ELLA HUNTER, Author of "A Lady's Drive from Florence to Cherbourg." With Frontispiece and Map. Crown 8vo, 6s.

Edinburgh and London: Wm. Blackwood & Sons.

## BLACKWOOD'S MAGAZINE

For SEPTEMBER, 1883. No. DCCXV. Price 2s. 6d.

#### CONTENTS.

## LITERATURE.

*The English Village Community*, Examined in its Relations to the Manorial and Tribal Systems and to the Common or Open-field System of Husbandry. An Essay in Economic History. By Frederic Seebohm. (Longmans.)

MR. SEEBOHM'S essay is a brave attempt to solve some of the obscurest problems of our history, to indicate the origin of our oldest institutions, and to show us what was really done by the "great earls and mighty war-smiths" who founded the English kingdoms. He justly considers that a proper understanding of our past economic history should be "the true basis of much of the practical politics of the future;" he has determined, at any rate, by investigating the real character of the community in the English village and the Celtic tribe, to dispel any wish or hope for its revival. He has accordingly, with infinite pains, endeavoured to set our future statesmen right by a discussion of the question whether English history began with the freedom or with the serfdom of the masses, or, in his own words,

"whether the communities living in the 'hams' and 'tons' of England were at the outset of English history free village-communities or communities in serfdom under a manorial lordship; and, further, what were their relations to the tribal communities of the western and less easily conquered portions of the island."

Mr. Seebohm deals with two of the possible answers to the question, and writes, indeed, as if no other solution were conceivable. But we are free, of course, to adhere to the old-fashioned opinion, that the English conquest was a long and intricate series of events, differing from each other in their character and details according to the locality and the ages in which they happened, so that no such simple proposition can be maintained as that English history begins with universal freedom, or that our first society was founded on an antecedent serfdom. "Many and frequent," says the Chronicler,

"were the expeditions from Germany, and many were the lords who strove against each other in the regions of East Anglia and Mercia, and thereby arose unnumbered wars; but the names of the chieftains remain unknown by reason of their very multitude."

The result of these unrecorded wars, and of those which are still dimly remembered by the help of the English Chronicle, may be conjectured, but can never be known with exactness. The country gained by each conquest seems to have been in part allotted in blocks to groups of free settlers, who were, or were regarded as, kinsmen; in part distributed

in similar allotments to the kings and great men, with a sufficient allowance for their dependents; and in part retained as a public reserve for distribution as need should require. This reserve, as time went on, was occupied by rustics holding on very onerous terms, so that they easily fell into a kind of serfdom when the land on which they sat was "booked" to a monastery or a military lord. In other cases a chieftain would reward a follower with gifts of land, held on condition of performing faithful service; and the dependent thane could confer no more than a precarious tenancy on his own half-free retainers. The historians have shown us how the power of the lords increased as the kings learned to imitate the Frankish civilisation and to remember the majesty of the Empire, and how at last every man became bound to some lord to whom he owed obedience, and from whom he might claim protection. Jurisdiction was everywhere converted into ownership, so that almost the whole country came to be regarded as the property of the King, the Church, and the thanes, and the descendants of the free settlers who had established the earliest villages sank into a state of dependence, and too often into absolute bondage. When St. Wilfrid converted Sussex in A.D. 681, he received a grant of the peninsula of Selsey, containing eighty-seven hides of land inhabited by 250 slaves; and, though the whole neighbourhood was not in such a bad condition, we find among the charters of his monastery so many grants of "householders," "tributaries," and "tenants" that we are forced to assume that the right to the man's labour passed with his holding, as in the case of the "villein by blood" on a mediæval manor.

Mr. Seebohm seems to state the problem too generally. The question, as he propounds it, is whether the conquerors of England founded or revived a society of lords and serfs, or whether they constructed the State on the principles of freedom and equality. If answered in one way, our English economic history must begin with free village communities, which gradually degenerated into the serfdom of the Middle Ages; "if answered in the other way, it begins with the serfdom of the masses of the rural population under Saxon rule, a serfdom from which it has taken 1,000 years of English economic evolution to set them free." He prefers the latter view, and concludes that a manorial system existed in this country while still a province of the Empire, which was either adopted or revived by a German people who were familiar with the ancient civilisation. The importance of the matter lies in the necessity of educating our future masters, the statesmen who will have the direction of the "main stream of human progress," on which depend "the success or failure of the planet" and the happiness or misery of mankind. Mr. Seebohm will meet with few readers who can follow him in the contemplation of these tremendous issues; and possibly there will be very few who can bring themselves to adopt his final conclusions; certainly we shall all require evidence of a much wider and more stringent kind before we acknowledge that our manorial system and common-field husbandry were

derived from Roman influences. But he is sure at any rate of an interested and sympathetic audience of friends, who will admire the skill with which he marshals his facts and the vigour exhibited in the defence of his theory.

Mr. Seebohm considers that it is

"as impossible to believe that this complex manorial land-system, which we have found to bristle with historical survivals of usages of the Romano-German province, should have been suddenly introduced into England by un-Romanised Northern piratical tribes of Germans, as it is to conceive of the sudden creation of a fossil"

—a conception, by-the-way, which presented no difficulties to the versatile author of *Omphalos*. Mr. Seebohm adopts the hypothesis ("in the absence of direct evidence") that our manorial system was a compound of Roman and barbarian institutions, "mixing together during the periods, first, of Roman provincial rule, and, secondly, of German conquest." The choice is given to us of believing either in the continuity of the villa under the form of the "Saxon manor," or in a re-introduction of the old system by invaders

"from a district where there had been such continuity, and where they themselves had lived long enough to permit the peculiar manorial instincts of the Romano-German province to become a kind of second nature to them."

It will be seen that the word "manor" is here used in a very peculiar way, signifying apparently an estate worked by serfs and *coloni*; and in one passage the Roman public lands are described as "the great provincial manor of the Roman Empire." The choice of terms is indifferent so long as we know the author's meaning; but it is of real importance to observe that the English are treated as having been thoroughly Romanised before their invasion of Britain. The typical Englishman, in short, is "more an antique Roman than a Dane." We have on this theory to give up all that we have heard from Ethelwold and good King Alfred and the merchant Othere, who lived "northmost of all the Northmen;" about Old Anglia and the nook of land by Flensborg and the islands near Haithaby, "where the English dwelt before they came to England." This is a question of much more than the antiquarian interest which is allowed to it by Mr. Seebohm, and deserves at any rate a closer examination of the evidence. It will be found, for one thing, that it is hardly worth while to combat any "common theory" that the English came out of all the boggy and sandy districts between Northern France and the farther extremity of East Prussia. The Welsh codes are cited to show that the British open-field husbandry was transformed by the Romans into the "manorial three-field husbandry." But the evidence falls short of the mark, even when the legendary laws of Molmutius are pressed into the service; and it should be observed that the scattering of the half-acre strip can be accounted for by the necessity of equalising the value of the lots, without recourse to the theory that the separation and sequence of the strips was due to a diversity of ownership in the plough and its team of oxen.

Mr. Seeböhm gives a clear and interesting account of the co-operative system of husbandry which once prevailed throughout England, and still in some parishes perpetuates those "miseries of common-field" which Mr. Clare Sewell Read deplored in a famous essay. "Gesammt Gut verdammt Gut" is the rough German way of expressing a similar opinion. Many people are aware that our arable farming altered little between the days of the Confessor and the reign of George the Third. Mr. Seeböhm traces the system to still earlier times, and shows how the township in many parts of England was laid out in customary "yardlands" instead of any measurement by acres. The manor of Wimbledon is a well-known district where the yard-land of fifteen acres could not be alienated in parcels. In some parts the subdivision could be effected under a licence from the lord; but elsewhere the lord himself was absolutely powerless in the matter. We may agree that such a custom is the sign of an ancient tenure in villeinage, though the most dignified military estates were at one time equally indivisible. This, however, will not carry us very far, because it must not be assumed that all the "*villani*" in Domesday Book were either serfs or bondmen. They were tenant-farmers holding by a rustic tenure sometimes amounting to a freehold, but more often resembling an ordinary copyhold. Their rent was mostly paid in labour and produce, and was of light amount when the tenant was free, but onerous in the extreme in the case of the "natives" of slavish blood. This class comprised the free peasantry of Kent and the Welsh frontier, the free "boors" of the South-western counties, and the ancestors of the Northern "statesmen," who hold under "the ancient and laudable custom of tenant-right." Mr. Seeböhm has very successfully shown the identity of the system under which the farmers worked in the Middle Ages with that which prevailed long before the Norman Conquest, and has demonstrated with unusual clearness the connexion between the size of the holding and the number of the oxen required for ploughing the land. The hide or ploughland, the original "freeholder's lot," was as much as a team of eight oxen could manage. The tenant of a small customary holding usually received a pair of oxen as his outfit, and his allowance of land was a quarter of a ploughland varying in size according to the capacity of the soil and the usage of the district.

It is unnecessary here to discuss the Continental evidence which shows that the same kind of system prevailed in France and Germany, and that the barbarians were accustomed to describe it by legal terms which they borrowed from their Roman subjects. When they wrote in Latin they used "*villa*" for township and "*colonus*" for the labouring farmer, much as our own ancestors did, or as we might ourselves use the terms to-day. The Frankish conveyancing was soon adopted in England; but it would require more than all the "Formularies" of Marculf to make one believe that our English villa and manors are Roman "villas" in disguise, though the grounds of many a manor-house can match the coins and urns which Mr. Seeböhm adduces

in evidence, and even the walls remain, and "the bricks are there to prove it to this day."

CHARLES I. ELTON.

*Poems.* By J. B. Selkirk. (Kegan Paul, Trench & Co.)

WHERE Dryden would have packed his thought within the confines of a couplet, like the Mussulman's Solomon enclosing the elemental Djinn within the leaden casket, the modern versifier too often dilates his matter until it resembles rather that self-same mutinous spirit freed from his age-long captivity, emerging from his ignominious prison, and overspreading earth and heaven—in the form of smoke. The parallel will stretch no farther, for in watching the vaporous expanse of modern verse the spectator can hope for no such satisfaction as that of the fisherman when he was fortunate enough, by a ruse, to get the ungrateful demon well corked up again, and condensed with quite Landorian strictness. Of course, there is the kind of verbal diffusion which is but one symptom of rambling and flaccid prosiness (such is Wordsworth's when he is uninspired—and that, as we all know, is not an exceptional condition with Wordsworth), and there is the nobler sort of diffusion which is but sheer abundance and largesse of beauty; and that sort is Shelley's. Of a third variety—the most usual one—poets like Mr. Selkirk are examples. With them this loquacious excess appears to spring from a deficient perception of the supreme effectiveness of the *art of hinting* in poetry. They must develop everything to its final possibilities. Every vein struck they must exhaust. Thus one prime element of artistic pleasure is lost to their work—the fascination of the near Unexplored.

Yet somehow, with most writers—even the habitually diffuse—the truly strong emotion brings with it the inevitable counterpart of unsuperfluous speech. It is notoriously so in the best old ballads, where one can see the trembling of the hands that tremble not from weakness as they rein in the fiery-footed passion. It is so with the only poem of Mr. Selkirk's which we choose to quote entire, and which, owing to the presence of that very virtue of suggestive brevity and voluntary restraint, is hardly characteristic of the author:—

"A little faded photograph  
And a curl of golden hair,  
With half-a-dozen broken toys  
Beside an empty chair.—  
O God! is this the whole that's left  
Out of a life so fair?"

About one-fourth of Mr. Selkirk's volume is occupied with love-poetry. Love-poetry able to bear the weight ("heavy as frost") of such words as *differentiate*, and to stand erect under it, might be pronounced to have an exceedingly capable backbone. We fear that the particular Eros who flirts to the extent of some sixty pages with Mr. Selkirk's muse (that

"little high and mighty,  
Wayward whelp of Aphrodite,"

she calls him, with a flippant irreverence which betrays the coquette) can hardly boast of such an exceptional spinal development. Besides his love-poems, Mr. Selkirk has what may be

termed his anti-love poems, which show him as rather too fond of dramatising the emotional attitude of the man who has loved a woman, is rejected or neglected by her, and at last turns round, fox-and-sour-grapes fashion, and covers her with most unchivalrous contempt. It is not a grandly sculpturesque posture of the male soul. And, in truth, one gets little good, generally speaking, from Mr. Selkirk's poems about women. Sometimes, it must be conceded, he exhibits a power of felicitous conceit, as where he likens a damsel, sitting in the shadow of autumn woodlands, to Danaë, "the gold about her falling." But such a piece as "Good-Bye"—in which the narrator tells us how he parted from a girl in a railway station—is simply vulgar, though there are persons to whom its close will seem amusing—

"The train was off! and I had time to find  
My luggage, with my heart,—was left behind."

And this is classed among "Love-poems"! From all humour depending solely upon fantastic juxtapositions—as of a man's heart and his luggage—good Lord, deliver us.

This volume, however, contains poems which exhibit real humour; such is "Love in Yarrow," despite its inequality of parts. And, if there be any man who could read "Death in Yarrow" unmoved, we neither covet his imperturbability nor feel disposed to congratulate him upon that godlike gift. This poem (the only one in Scotch) is put into the mouth of a widower who is left with a little child that pines away in half-unconscious longing for its mother who is not. Here are some of the latter stanzas—though it is a shame to show such a beautiful thing in fragments only:—

"I tak' him on my back,  
In ilka blink o' sun,  
Rin roun' about the stack,  
And mak' believe it's fun.  
But weel he kens, I warrant,  
There's something wrang for a',  
He's turned sae auld farrant  
Sin' his mother gaed awa'."

"I mak' his pickle meat—  
And I think I mak' it weel;  
And I warm his little feet  
When I hap him i' the creel;  
And he kisses me fu' couthie,—  
For he downa' sleep at a'  
Till he hauds up his bit mouthie,  
Sin' his mother gaed awa'."

"And now the lang day's dune,  
And the nicht's begun to fa',  
And a bonnie harvest mune  
Rises up on Bowerhope Law.  
It's a bonnie warlt this,  
But it's no' for me at a',  
For a' thing's gane amiss  
Sin' his mother gaed awa'."

There is fine feeling for nature in the lines where Mr. Selkirk speaks of Spring as the time

"when earliest bees are humming,  
And birds are loudest on the budding spray,  
And Summer sends in front a glorious day  
To tell the longing year that she is coming."

Nor less fine is the feeling for that huge impersonal pathos of history, as expressed in some stanzas of melodious regret for the kingdoms that bloomed and withered in the days

"Before the voice of Greece was hushed  
In war's discordant peal,  
And all her lyric heart lay crushed  
Beneath great Cæsar's heel."

The sonnets in this volume are not very remarkable; and we cannot sympathise with the one entitled "At Darwin's Grave," not being able to see anything repulsive in the fact that rank, learning, piety, and genius should attend a great man to his tomb. The world,

"true to its laws,  
Brings to his grave its tinsel and its strife."

This appears to be Mr. Selkirk's respectful way of saying that the Duke of Argyll, Lord Derby, Canon Farrar, Prof. Tyndall, and other gentlemen acted as mourners at Darwin's funeral. The word *tinsel* here is surely a little strained in its application. But, apart from these harmless eccentricities, the sonnet's final couplet is noble verse, howsoever disputable in point of sentiment:

"He should have sanctified earth's common sod,  
This quiet working worshipper of God."

Mr. Selkirk's pronunciation of English must be peculiar, seeing that he yokes together *prosy* and *poesy* as rhyme-fellows. Unfortunately, such atrocities have their historical parallels in the works of greater artists than Mr. Selkirk—Hood, for instance, who, in his wonderful "Haunted House," accents the first syllable of *pyramidal*, and who elsewhere uses *Laoköon* in such wise as to merge its last two syllables in one, and make them do duty (picture it, think of it!) as a rhyme to *soon* or *moon*, we forget which. It is odd that Mr. Selkirk, in common with other writers beyond Tweed, should still persistently use *world* as a word of two syllables. Of course Burns says *war-rl'd*, and we all like to hear him say it. But *world* is South British, and should be used in the manner of the South Britons. The present writer remembers to have heard North-English horticulturists discuss ways and means for the conquest of their innumerable foe the "worrum" (that dieth not—at least not so much as could be wished). Assuredly *worm*, treated disyllabically, is no more grotesque than *world* similarly pronounced.

WILLIAM WATSON.

*Walks in the Regions of Science and Faith:* a Series of Essays. By Harvey Goodwin, Lord Bishop of Carlisle. (John Murray.)

THE relation of Faith to Science is a field where the sciolist and pretender have long reigned supreme; and thoughtful people, however much they feel that the problem is an ever-present one, are disposed very naturally to adopt the attitude of Gallio towards the crowd of books which profess to solve it.

Bishop Goodwin's antecedents prepare us for a very different attitude with regard to this dilemma of knowledge. A trained mathematician and a keen logician, he is not found using arguments which arouse contempt on the part of scientific thinkers; nor yet does he address his opponents in the language of condescension or of arrogance, such as is too often the case with the partisans of either side of the vexed problem.

The limits of a review prevent our doing adequate justice to a work like the one before us. We have deemed it best to select a sample; and, in doing so, we have chosen a question in which the Bishop joins issue

with a foeman assuredly worthy of his steel, and in which he more than holds his own. To do this with such a masterly rhetorician, and one so well stocked with precise and exact knowledge, as Prof. Huxley is to do a great deal. Bishop Goodwin does not, of course, question the Professor's natural history, but he does question his philosophy. When Prof. Huxley, in his famous *Manual on the Crayfish*, brings into close contact this simple crustacean and a complex creature like man, and argues that in the case of the former there is no evidence of something corresponding to the human mind, but that its acts and doings are entirely automatic—when he urges that although a crayfish shrinks away from danger, hastens towards food, and shows many other rational movements, yet it is really quite an open question whether it has a mind or not, and that the problem is insoluble, since nothing short of being a crayfish would give us positive assurance that such an animal possesses consciousness—the Bishop is surely reasonable in replying that what is said here of the crayfish is equally true of such an animal as the dog, the elephant, or the monkey. And his position is impregnable based on the best empirical proof when he says:

"If I find a crayfish doing things which a human creature would do under similar conditions, I think he may be credited with doing those things for similar reasons. If he exhibits signs of fear, pleasure, preference, and the like, why should he not be concluded to possess those feelings of which he exhibits the signs?"

These things "do not prove," he says,

"that the sense and sensibility of a crayfish are equal to those of a human creature; but they are capable of the simplest explanation, upon the hypothesis that the lower animal possesses in a rudimentary form that which is more completely possessed by the animal of higher organisation."

The chain is complete; the automaton is as much evidenced in the simpler as the more complex structure. Again, when Prof. Huxley allows that the crayfish has senses which correspond to human eyes and ears, and are similarly sensitive to light and sound, and yet he says:

"Do luminous vibrations give it the sensations of light and darkness, of colour and form and distance, which they give us? and do sonorous vibrations produce the feelings of noise and tone, of melody and of harmony, as in us?"

and he proceeds to conclude that

"we are merely justified in postulating in the crayfish the existence of something approaching dull feeling in ourselves, and that it is illogical to treat this obscure consciousness as a factor in the work done by the organism when it is merely a dim symbol of such work in the doing;"

the Bishop, addressing himself to this *a priori* argument, so different to the induction that is the usual and best approved scientific method, says very truly:—"If by seeing and hearing we mean the enjoyment of the higher functions of the eye and ear, we may deny seeing and hearing to crayfishes, as we may, in fact, though in a less degree, to horses and dogs;" but this does not make the functions of eye and ear in the crayfish differ entirely in kind from

those of man, and it is surely reasonable to conclude that, "if to speak of mind as a factor on work done be an absurdity in the case of a crayfish, it is no less an absurdity in the case of a dog, or even in the case of a man"? The rudimentary mind of a crayfish, so far as empirical tests avail, is of the same essential nature, however differing in degree, as that of the philosopher who has described him so graphically. It may be that the human mind is itself an automaton; but this position must not be maintained by the circular argument of first arbitrarily denying to similar manifestations in humbler animals the character of mental acts, and then concluding that the so-called mental acts in man are merely replicas of what have been postulated but not proved to be automatic in lower animals. "There are not," says the Bishop,

"so many partition walls between ourselves and crayfishes. I cannot afford to regard the doings of my humble neighbour as merely mechanical. He has his likes and his dislikes, his pleasures and his pains, his fancies and his fears; and though the distinction between him and a moral, responsible being like man be well-nigh infinite, still his little rudimentary mind must not be regarded as a mere result of physical organisation (unless, of course, demonstrative proof can be given), lest the concession made in respect of our humble neighbour should be found to compromise our own most precious possessions."

Even those who do not share the Bishop's anxieties may sympathise with his logic.

On the vexed question of teleology, which by some aggressive writers on science is treated as an obsolete method, the Bishop has some acute remarks. Prof. Huxley lays it down almost axiomatically that the preservation of the individual and the continuance of the species is the *telos* of an animal. To this the Bishop replies:

"Are these the final causes of human organisation? I am at this time using my right hand for the purpose of guiding my pen, my left for holding my paper, my eyes for watching what I am doing, my brain for considering what I shall indite. What have all these things to do either with the preservation of an individual or the continuance of a species? But if this account breaks down in the case of a man, why should we assume its truth in the case of a lower animal? . . . I have great doubt as to whether we can properly speak of final ends at all, unless we embrace in our conception the whole cosmos. Crayfishes may be a necessary link in the order of creation. It may be that their *raison d'être* cannot be explained apart from the existence of the whole creation of which they form a humble part. But if we are to speak of final causes, I think we are bound not to limit the conception of cause simply to that of preservation of individuals or species; we should go at least one step farther, and consider for what end they are preserved."

It will be fair to put beside these specimens of criticism one of the Bishop's original and suggestive ideas based on his mathematical knowledge. Speaking of the difference between those animals which have external skeletons, like crustaceans, and those with internal ones, like the higher animals, he says:—

"Looking upon the various constituent elements of creation as bound together in unity by some quasi-mathematical formula, we may say that the difference between an exoskeleton

and an endoskeleton is merely the difference of a mathematical sign, the substitution of a *minus* for a *plus*. Every mathematician knows the marvellous changes which result from a change of sign. The substitution of a *minus* for a *plus* in a differential equation will introduce exponential forms instead of sines and cosines into the integral, and so produce quite as great a difference as that which separates crustaceans from mammals. Creatures which in human observation are widely, almost infinitely, divided may in divine geometry be one."

I wish it were possible to outstep the limits of space in order to give other samples of Dr. Goodwin's acuteness and fairness. But I must close, and will do so with an eloquent and stirring passage from the sermon upon Darwin, preached by the Bishop at Westminster Abbey, which worthily closes the book.

"It is by careful questioning of nature, and by freedom of speculation and acute suggestion, that true knowledge grows and thrives. We may be quite certain that a theory with a flaw in it will sooner or later be seen to be baseless. Those who are not scientific themselves—and the mass of mankind never can be—but who imagine that the progress of science involves dangers to truths which, to the mass of mankind, are immeasurably precious, need not be over-anxious and unhappy. Speculations, unless they contain truth, will never be long-lived; and if they do contain truth, then they have in them a life which nothing can destroy, and with which no wise man would wish to interfere."

HENRY H. HOWORTH.

*Walt Whitman.* By Richard Maurice Bucke. (Trübner.)

THIS book will always possess a value of its own, for it is the record at first hand of the impression made by Walt Whitman—the man and the author—on an intelligent observer who has had excellent opportunities for making his observations. Dr. Bucke, a physician holding a very responsible public post at London, Ontario, received Whitman as his guest three years ago, and became his travelling companion through the provinces of Ontario and Quebec, on the Lakes, and the St. Lawrence and Saguenay Rivers. It was not an ill thought, though Whitman himself rather opposed than favoured the enterprise, to put on record the results of direct contact with "the good gray poet." Dr. Bucke writes as a scientific observer, and tells us the exact number of pounds that Whitman weighed in May 1880; but he writes also as a disciple who is something more than disciple—as a lover intoxicated by Whitman's presence. When Dr. Bucke describes the "Song of Myself" as "perhaps the most important poem that has so far been written at any time, in any language," we know that it is the lover who writes, and not the critic. Some of us who honour Whitman's genius are, alas! critics, or critic-bitten, and such a sentence makes us wince. And yet the world needs its lovers, who perhaps can tell us things never revealed to a merely analytic eye. When David danced before the ark of the Lord, Michal sat in a window and despised him in her heart; one can sympathise with the well-bred woman of the world, who was, of her kind, no doubt perfection. But I am glad

that David danced with all his might; in each leap there was an unwritten psalm of rejoicing. And David begat Solomon, love being the parent of knowledge; but Michal had no child unto the day of her death. The madman, said Plato, has every way the advantage. And yet, again, were this a hundred times true, it is wise to make distinctions; and it is somewhat unwise to describe the "Song of Myself" as "perhaps the most important poem that has so far been written at any time, in any language."

But if a personal friend of Shelley's were to write with extravagant admiration of "Adonais," and, at the same time, were to tell us much about Shelley, lovers of Shelley would hardly quarrel with him. We know Whitman better after having read Dr. Bucke's book; we feel, through his words, the powerful fascination of the man. He fronts us in an admirable photograph from life, and in a second portrait from a drawing by Mr. Gilchrist, with his snow-white hair and beard, his massive features, his grave and tender yet genial expression. Walt Whitman, says Dr. Bucke, always disclaims any lofty intention in himself or his poems: "I have imagined a life which should be that of the average man in average circumstances, and still grand, heroic." His manner is curiously calm and self-contained.

"I never knew him to be in a bad temper. He seemed always pleased with those about him. . . . He generally spent a part of each day in reading—perhaps a couple of hours a day. He seldom read any book deliberately through. If he sat in the library an hour he would have half-a-dozen to a dozen volumes about him, on the table, on chairs, and on the floor. . . . His favourite occupation seemed to be strolling or sauntering about outdoors by himself, looking at the grass, the trees, the flowers, the vistas of light, the varying aspects of the sky, and listening to the birds, the crickets, the tree-frogs, the wind in the trees, and all the hundreds of natural sights and sounds. . . . He had a way of singing, generally in an undertone, wherever he was, or whatever he was doing, when alone. . . . Sometimes he would recite poetry, generally, I think, from Shakspeare or Homer. His way of rendering poetry was peculiar, but effective. I remember the 'Midnight Visitor,' from the French poet Murger, also Tennyson's 'Ulysses' and Schiller's 'Diver.' He was very fond of flowers, either wild or cultivated. He was especially fond of children, and all children liked and trusted him at once."

So much condensed from Dr. Bucke. Yet Whitman has also in his character "deepest sternness and hauteur, not easily aroused, but coming forth at times, and then well understood by those who know him best as something not to be trifled with." The benignant, sympathetic qualities have, in Whitman's later years, overshadowed the sterner ones. He is invariably kind and courteous in his conversation, but he can fend off bores, and he has a horror of smart talkers. He never complains or grumbles at the weather, pain, illness, or anything else. His only vice, says Dr. Bucke, is that he reads the newspapers regularly.

"If I were asked," writes Miss Helen E. Price, of Woodside, Long Island, in her very interesting memoranda written for this volume—

"If I were asked what I considered Walt

Whitman's leading characteristic, I should say—and it is an opinion formed upon an acquaintance of over twenty years—his *religious sentiment* or feeling. It pervades and dominates his life, and I think no one could be in his presence any length of time without being impressed by it. . . . His religion is that habitual state of feeling in which the person regards everything in God's universe with wonder, reverence, perfect acceptance, and love. He has more of all this than anyone I have ever met."

This comes near Dr. Bucke's statement, that Whitman's leading characteristic is "moralelevation." If I were to put it in my own way, I should say that Whitman's feeling for the spiritual, as involved in and emerging out of what is natural and even material, gives their peculiar quality to his writings. And accordingly he is at once a mystic or transcendentalist and the keenest of observers. "I have seen," says an East River boatman, Thomas A. Gere,

"a youth swabbing a steamboat's deck with Walt's Homer in his monkey-jacket pocket. At all times he was keenly inquisitive in matters that belonged to the river or boat. He had to have a reason for the actions of the pilot, engineer, fireman, and even deckhands. Besides, he would learn the details of everything on board, from the knotted end of a bucket-rope to the construction of the engine. 'Tell me all about it, boys,' he would say, 'for these are the real things I cannot get out of books.' I am inclined to think that such inquisitiveness must always have been an industrious habit with him, for his writings abound with apt technicalities."

Like Wordsworth, like Mr. Browning, Whitman has lived long enough to see indifference and opposition yield, and a kind of cult (not perhaps always of the wisest) take their place. The edition of *Leaves of Grass* published last year in Philadelphia, without the omission of a line or word, was all sold in one day, and there has been quite a general and steady sale since. Dr. Bucke brings together some of the praise and dispraise of a quarter-of-a-century as found in Reviews and magazines. It is a pity that such testimonies as those of Mr. Ruskin, George Eliot, the late Viscount Strangford, Prof. Clifford, and others are not included. This volume reprints Mr. O'Connor's fervid and fiery pamphlet, *The Good Gray Poet*, with an added letter dated February 1883. Beside portraits of Whitman, portraits of his father and mother are given, with drawings of the ancient burial-grounds of the Whitmans and Van Velsors. Those who care for Whitman will find much to interest them in Dr. Bucke's various gatherings, as well as in his personal record of facts and of impressions.

EDWARD DOWDEN.

A HISTORY OF THE ARGENTINE REPUBLIC.  
*Historia de la Republica Argentina su origen, su revolucion y su desarrollo politico hasta 1852.* Per Vicente F. Lopez. In 2 vols. (Buenos Ayres.)

DON VICENTE LOPEZ is already well known to philological students through his learned work, *Les Races Indigenes du Pérou*, in which he discussed the affinities of the Quichua language with remarkable critical ability, and gave a comprehensive view of Ynca civilisation in all its bearings. Señor Lopez, the

accomplished Rector of the University of Buenos Ayres, has several special qualifications for the work which he has now undertaken. His father was a distinguished statesman who took a prominent part in the events which preceded and immediately followed the declaration of independence at Buenos Ayres in 1810. He himself has, during many years, been a student of history who has followed the philosophical method with true insight, and has selected his facts with judgment and discrimination. His previous historical writings have been, indeed, a preparation for the work which is now in course of publication. Another advantage enjoyed by Señor Lopez is that the ground he intends to occupy is comparatively clear. The work of Dean Funes, the compendium by Señor Domínguez, and the Life of Gen. Belgrano by Gen. Mitre were the only books which treated of the same subject; and none of these can be considered as covering the ground which must be included in a History of the Argentine Republic.

But even if such a comprehensive History did exist, the present work of Señor Lopez would be none the less welcome, for his History is planned on a method which gives it a distinct and important position in literature. It is a very satisfactory result of the first attempt to trace out the causes which have produced the actual state of things among a South-American people. The attempt has been made by one whose learning and abilities qualified him for the task; and, in our judgment, it has succeeded. The philosophic method adopted by Señor Lopez, and the skill and insight with which he has worked it out, entitle these interesting volumes to be classed among Histories of permanent and enduring value.

Señor Lopez perceived that no History of the nation which has risen up in the basin of the Rio de la Plata could be satisfactory unless it kept in view the Spanish origin of the people, carefully watched the parallel Histories of the mother country and the colony, detected the points of divergence in their commencement, and traced the progress of such divergence. This treatment is the special feature of the present work; but not the least pleasant portion of it is the fair and impartial tone which pervades every chapter, and especially the noble and generous way in which the author always speaks of the mother country. Fully alive to the evils and defects of Spanish rule, Señor Lopez does not forget that to Spain the South-American peoples owe their language, their literature, their national characteristics, and their best traditions. He truly says that Spain has derived far greater material benefit from the reciprocal commerce that has risen up with her former colonies than she ever did from the old dominion and monopoly. "We do not deny," he says, "that we consider ourselves the sons, by direct line, of liberal Spain, and we love Spain as the land of our fathers." The historian of the colony feels and acknowledges that honour is due to the mother country, that the qualities which made the war of independence successful were inherited from Spain, and that he is bound to consider the germs contributed by Spain as powerful factors

towards the creation of the new and freedom-loving people whose history he undertakes to portray. This recognition of the merits of an old antagonist is a charming feature in a work which is distinguished throughout by an evident desire to state each case that arises with fairness and impartiality. At the same time Señor Lopez rightly maintains that, although an historian is bound to be just, he cannot be indifferent, nor is it desirable that he should be.

A true historian should begin his work with a graphic and comprehensive description of the geographical aspects of the region which forms the scene of his narrative. This is necessary not only to enable the reader to acquire a clear idea of the natural surroundings of the events as they succeed each other in the narrative, but also because the physical conditions of a country have a positive influence on the character of the people, and therefore on their history. The fifth and sixth chapters of the first volume of the work under review are models of what such descriptive introductions should be. Accurate, detailed, picturesque, without being too minute, they achieve the object in view by impressing the student with an excellent general idea of the aspects of the region, the history of which is to follow. The one chapter treats of the physical geography; while in the other, Señor Lopez is enabled, through his profound philological knowledge, to trace out the movements and settlements of the aboriginal inhabitants. Among other interesting proofs of the extent of Ynca conquest over the basin of the Rio de la Plata the author cites the word *Patagonia*. It has usually been derived from *patagon*, "large feet," alluding to the large hide sandals of the natives, which are said to have astonished the first discoverers. But there is no such word as *patagon* in Spanish; the word would be *paton*. In reality, Patagonia is merely a corruption of *Pata-cuna* (*pata* a terrace, and *cuna* the plural particle in Quichua), "the terraces," an admirable name for the most southern portion of the South-American continent, which describes its physical character with precision. This is one out of many examples of the way the historian supplies interesting and suggestive information. It serves to impress the nature of the country on the reader's mind, who is thus prepared to appreciate the subsequent chapters in which the events are narrated which gradually led up to the achievement of independence by the Argentine people. The method by which the history of the mother-country is never lost sight of, but made to throw light on the progressive unrolling of the colonial story, forms, at each stage, the characteristic features of the work.

The chapters on the taking of Buenos Ayres by Sir Home Popham and Gen. Beresford, and on the subsequent operations of Whitelock and Auchmuty, will have an especial interest for English readers, particularly as much new light is thrown on this portion of history with reference to the proceedings of Gen. Beresford after his surrender. The two volumes already published bring the History down to the convocation by the Spanish Viceroy of a National Congress to declare the will of the people in 1810. This act terminated the colonial régime, and subsequent

volumes will contain the history of the Republic down to the fall of the tyrant Rosas in 1852.

The Argentine Republic has produced many men who have gained eminence in science or literature. Juan Maria Gutierrez has thrown light on the language and poetry of the Araucanian Indians. Dr. Muñoz has made valuable researches into the palaeontology of a region which is surpassingly interesting from a geological point of view. Don Francisco Moreno, as an anthropologist and a geographical explorer, takes high rank, his museum being the most valuable, as regards his special branch of study, in South America. Buenos Ayres is a centre of active and really earnest intellectual movement, and among many other names which there do honour to literature that of Don Vicente Lopez certainly takes a place in the first rank.

CLEMENTS R. MARKHAM.

*Uncle Pat's Cabin*; or, Life among the Agricultural Labourers of Ireland. By W. G. Upton. (Dublin: Gill.)

MR. UPTON vouches for his facts, and I hear from those who know him that such a voucher is not the idle warrant which would include gossip and newspaper cuttings and permit the shifting to one part of Ireland of what happened in another. The facts all came within his own ken and happened in his own neighbourhood—the neighbourhood of Ardagh—and this at once lifts his book out of the class from a famous one in which he has adapted his title. While Mrs. Beecher Stowe would have vehemently insisted on the truth of all her statements, she would not have asserted that of all of them she had been able to take personal cognizance.

It is important to remember this, for such a book as Mr. Upton's could not be written about the English labourer with the faintest hope of being accepted as *bona fide*. There is this capital difference between Pat and Hodge; Hodge has been a labourer for generations. To find him otherwise we must go far back in East Anglia, for instance, to the time of Kett's rising; just as even in wilder Wessex, to find any parallel to '98, we must go back to Monmouth and the Bloody Assize. People forget that Ireland is now from one to three centuries behind England according to what part of Ireland and what part of England are compared together. Whether Hodge is the better for the change is not our present concern. Anyhow, with outdoor relief or the House to fall back upon, he has wholly forgotten (or is only just here and there waking up to remember) "the magic of property." But Pat was, till the old famine, in nineteen cases out of twenty at the very least, a cottier. I have often written hard things about the Enumbered Estates Act; I have said that, passed, as it was, crudely, ignorantly, after the English fashion, without security to existing tenants, it had in many cases proved a curse and not (as it might have been, and ought to have been) a blessing. It let loose the land-jobber, who has ever since been afflicting the country. This much was patent to everyone who knew anything of Irish matters; but the effect on the peasantry of that unlucky Act I had not

realised to its full extent. I knew that grasping landlords, new men, sometimes men of straw who had borrowed their purchase-money, must make greedy tenants, hard on those who had fallen out of the ranks, forgetful of the traditions which had bound farmer and labourer together. But I was not prepared to find that the work had gone so far as Mr. Upton says. Even now I hope that his *Cassidys* are not the type of a large class, but only the black sheep which are to be found in every flock, and certainly were not wanting in Ireland in the good old days of the middleman. Were the other alternative true, even Mr. Parnell would have to admit that the Irish farmer as he is, and until he has come to a better mind, is hardly worth fighting for. But it is not true. The *Cassidys* are the exception, big Ned M'Carthy is the rule; just as Cullen who, getting 2s. per statute perch for a draining job from the Board of Works, takes advantage of the hard times to give his labourers 9d. per Irish perch, is, I would fain hope, a very rare exception. That the tenant is nowadays harder than he was seems undoubted; but, though a branch here and there of the Labourers' Union dies for want of support, all the farmers round refusing the regulation half-acre, I will not believe that the disunion which such conduct betrays is at all general. Of course, in the last issue, this most just demand will have to be enforced by Parliament; but it would have been far better if the farmers, who have (as Mr. Davitt has often reminded them) had the help of the labourers all through their struggle against rack-rents and the other evils of Irish landlordism, had anticipated Parliamentary action in this matter.

Mr. Upton in his Preface reminds us that nature's ferocity is as irreclaimable as ever; and early in his story he makes one of his characters confess "there never would be an eviction if there wasn't a grabber to take the place agin"—a sentiment which, while it reminds us of the old saw: "Put an Irishman on a spit and you'll always find another to turn him," is no doubt intended to do the League's work by shaming men out of boycotted farms. And it is all very well for those who sit at home at ease to impugn the action of the League, and to look on agrarian outrage as something blacker than the blackest doings of any other race. Tyranny, upheld by law, will generally be "tempered" by outrage, so long as a *force majeure* prevents its being met in any other way. Man will revenge himself according to his ability; the Polynesian savage who slays Bishop Patteson by way of reprisal for the atrocities of some "black-birding" crew is acting fairly up to his light, even as Davey M'Mahon, in Mr. Upton's story, would have been had he shot the landlord who, thanks to Cassidy's machinations, had turned out him and his sick wife and children, instead of yielding to the entreaties of his wife and brother and going off quietly to America. And what the hardships were under a landlord like Mr. Pakenham, with an agent like Hughes and a scoundrel like Cassidy ready to poison his mind against those whose holdings he coveted, may be judged from the terrible uncertainty which there was even under good landlords. I heard lately of an English nobleman every lease on whose Irish estates

contained a clause making it void in case an execution was levied on the tenant. In this way a man whose great-grandfather had held the farm might be turned out at a day's notice, though he owed not a penny of rent, because he was suffering from some temporary embarrassment. English readers, forgetting the working of the Land Act of '70—as disastrous as the Encumbered Estates Act, and for the same reason—think that such things are now impossible. They forget that legislation is not retrospective, and that the old cruel leases remain, and (as a glance at an Irish paper would show them) are still remorselessly enforced. Had I not heard last year, in County Westmeath, the hunting out of the small farmer proclaimed over and over again as the panacea for the country, I should have thought Mr. Upton's facts belonged to the past. Unhappily, this winter has seen only too many Davey M'Mahons reduced from cottiers to labourers, often without a refuge like that which Davey's family found in the cabin of his brother Pat.

This Pat had, before the famine, himself been a cottier. Heartened up and helped by his fellow-labourers round, who now and then subscribe a meal, at another time get up a dance, to help the ruined family, and materially assisted by farmer M'Carthy, he keeps afloat with all this extra burden on his back, till that affair of the Irish perch. At that draining he got for a week's work two days' maintenance and a big cold, and was driven to ask relief, which was refused to him as disqualified, "though people are getting male who have land, and who are giving it to their pigs and cows when they get home." Davey had enlisted in the Federal army; but his bounty was intercepted on its way, and it would be telling too much of a story which readers ought to look into for themselves if I explained how it was recovered.

As a story-teller, Mr. Upton does not compete with Carleton or Banim, still less with the Englishman, Lever, who has done so much mischief by making his puppet dance for the amusement of an English crowd. He writes with a purpose, and he is happy in managing to escape the dullness which often overtakes novelists with a purpose. He certainly does not (any more than Carleton) idealise the Irish character; those who would love Pat must love him as he is, as centuries of misrule have made him, and will often have to prove their love by their forbearance. Nor does he extenuate the jobbery which this misrule inevitably fostered, and which the official way of dealing-out relief brought to a head. He shows that even priests can make mistakes; and he points out that landlords' wives sometimes do their best to mitigate the hardships which their needy husbands have been led, by the bribe of a bigger rent, to inflict on tenants. One thing he brings out with terrible clearness—that Irish dread of the workhouse, which makes the total denial of outdoor relief so peculiarly harsh as well as unfair. He is true to life in that scene where Uncle Pat describes a union-house during the famine, and more than hints his belief that the inmates were done to death (his wife included) with "bread-soda" in the stirabout.

Without attempting to analyse it further,

I recommend the book strongly to those who want to understand Mr. Davitt's scheme. In this view such a story is more timely than a score of *Harry Lorrequers*. The time is past for caricature, inasmuch as things in Ireland are at a crisis which demands from all who care for the joint empire the most thoughtful study. We want no more "sops for Ireland." We want justice to all classes, and not least to the labourer, whose claim to be "the Lazarus of the world" Mr. Upton's thrilling story abundantly justifies.

HENRY STUART FAGAN.

#### CURRENT LITERATURE.

*Sonnets.* By the Earl of Rosalyn. (Blackwood.) Every new volume of sonnets reminds us more and more painfully of the old clergyman's grace after a too prolonged diet of rabbits:—

"For rabbits young and rabbits old,  
For rabbits timid, rabbits bold,  
For rabbits tender, rabbits tough,  
We thank Thee, Lord! We've had enough."

It may seem heresy to say it, but it is really possible to have enough of sonnets of first-rate excellence; and of other sonnets perhaps even a single one is too much. A second-rate sermon may be useful, a second-rate essay may be agreeable; but a second-rate sonnet has no reason for being. Lord Rosalyn prefaces his little volume with the graceful plea of Oliver Wendell Holmes—

"Deal gently with us, ye who read!"

and no one would wish to deal ungently with the work of a kindly and cultivated poet who has something of "the vision and the faculty divine," and not a little of "the accomplishment of verse." But the fact remains that the greater number of Lord Rosalyn's sonnets can only be praised faintly; and, in the case of a sonnet, faint praise is nothing less than distinct damnation. These poems are frequently distinguished, not only by grace, tenderness, purity, and nobility of sentiment, but by real felicity and charm of expression; and to say this is, doubtless, to say much. The sonnet must, however, justify itself as a sonnet, and such justification is found too rarely in this volume to allow the utterance of the last word of eulogy. Still, Lord Rosalyn has his successes; and one of them is the sonnet entitled "Obiselmhurst," which possesses strength, simplicity, and dramatic force:—

"Dead! my own boy—my only one—and dead!  
Sirs, do not mock me—say it is not so.  
He was the hope of France, nay, let me go.  
I am his mother; life cannot be fled  
From those young eyes, and that beloved head  
That should have worn a crown: a crown of woe  
Truly I wear for him—though fallen so low  
An Empress still, dethroned and banished.  
I crave your pardon: now I cannot weep,  
Henceforth I weep for ever; gone! all gone!  
Throne, husband, child, all snatched away from me;  
A childless widow prays you, sirs, to keep  
Some kind thoughts for her. She is all alone,  
Her heart is broken by much misery."

*Major-General Sir Frederick S. Roberts: a Memoir.* By Charles Rathbone Low. (W. H. Allen.) If the Life of Sir Frederick Roberts was to be written at all, it could hardly have fallen into better hands than those of Mr. Low. Besides possessing an intimate knowledge of India, Mr. Low can also claim the personal confidence of his hero; and any unpleasant suspicion is dispelled by the fact that he has before come forward as the biographer of Lord Wolseley. We do not purpose to criticise the

book at length. Its merits, and also its defects, are those of most military Histories. Of its general accuracy, we have the guarantee that it has been revised throughout by Sir F. Roberts himself; and, therefore, it possesses to a certain extent the value of an official narrative of the recent Afghan War. But our shelves are already cumbered with some half-a-dozen accounts of that war, written by eye-witnesses; and we cannot say there is much that is new to be learnt from these pages. As regards style, Mr. Low remains incorrigible, if he has not become worse. Besides the customary flowers of rhetoric which are to be expected from military chroniclers, Mr. Low here displays a quite unusual passion for poetical quotation. In the Preface we have "*hoc sic jubeo; sit pro ratione voluntas.*" And the description of a march at daybreak (p. 146) begins thus:—"as Montague [who is this minor bard?] says:—

'So soon as the all-cheering sun  
Should in the further East begin to draw  
The shady curtains from Aurora's bed.'"

If Mr. Low will yet take advice, he should banish all recollection of "Montague," and prune the length of his books by about one-half. The second edition of his *Lord Wolseley* in a single volume is a great improvement upon the original two volumes.

*Hesperides*. By Launcelot Cross. (Trübner.) The pen-name of "Launcelot Cross" has appeared on the title-page of two or three attractive little volumes which have found their "audience fit though few." *Hesperides* appeals to the same circle as its predecessors—that is, to the people who make their reading an intellectual luxury, and who regard a book in the same way that other people regard an after-dinner cigar, as a mild stimulant and a pleasant sedative. Readers of sternly methodical minds, who demand that a work of literature shall have a beginning and a middle and an end, will be simply tantalised by a book which begins anywhere, and, in spite of the fact that there is a last page, ends nowhere. But people who are less exigent will find a good deal of charm in "Launcelot Cross's" discursive reveries concerning the flowers in his garden, the books on his shelves, the friends, the thoughts, the hopes which have made life worth living. The author is decidedly a bookish man, but not exclusively or tiresomely bookish. Figuratively, as well as literally, he keeps the windows of his library open that the breeze may wander in at its own sweet will, and he is always ready to turn out for a stroll along the garden-paths and talk of summers past, and of their dealings with his floral friends. "Launcelot Cross" is a mystic, and is fond of dotting his pages with citations from the mystical poets of the East, and from Boehme and Swedenborg, the two great mystics of the West. There is plenty of criticism too, a little thin at times, but always intelligent; and there are interesting notes of curious literary parallelisms of which every book-lover accumulates his own store. Occasionally we encounter a phrase to which it is not easy to attach any meaning, as when, for example, we are told that Collins was "inspired beyond the guess of folly;" and there are a few curious inaccuracies, the oddest of which is to be found in a sentence which credits Emerson with that most hackneyed line in Longfellow, "Suffer and be strong." But these lapses are infrequent, and do not seriously detract from the pleasantness of a pleasant book.

*Old Court Customs and Modern Court Rule*. By the Hon. Mrs. Armytage. (Bentley.) The antithetical title sufficiently expresses the subject of this book. If it does not show any great research, or reveal much not generally known, it is at least written with good taste and produced in a form that is handsome without being

gaudy. The enthusiasm of the authoress for her subject is so manifestly genuine that we forbear from criticising occasional exuberance of style and some misstatements of fact. But, on the whole, the book deserves that measure of success which it is sure to obtain.

*A Diary of Royal Movements, and of Personal Events and Incidents in the Reign of Queen Victoria*. Vol. I. (Elliot Stock.) The author of this book, who remains anonymous, has conceived the notion of compiling from contemporary newspapers, &c., a sort of personal chronicle of the Queen. He has not carried out his design with sufficient thoroughness to raise his work to the rank of history; but it cannot be denied that he has collected a great deal of information that reads very curiously at the present day. 1837 seems a long while ago to all of us, and there is probably no portion of past time less known than that in which our fathers lived. Independent of the actual interest of what is here recorded, a feeling of surprise cannot but be aroused at the change which has taken place during forty years both in social matters, and especially in the way of regarding quasi-public events. But, as hinted above, this book rather excites curiosity than satisfies it; and we cannot encourage the author to undertake a continuation. The present volume stops with the end of 1846.

*Music in Song*. From Chaucer to Tennyson. Being a Selection of Extracts descriptive of the Power, Influences, and Effects of Music. Compiled by L. L. Carmela Koelle. (Griffith and Farran.) The compilation of such anthologies as this affords so much simple pleasure to their authors (and to many other good people as well) that it is impossible to examine them with too critical an eye. That the present has many omissions can be seen at a glance; and it commits the odd inconsistency of including prose extracts. Yet we are more disposed to be thankful for what it does contain, and to acknowledge the very elegant manner in which the publishers have turned it out. It contains a short Introduction, written (we believe) by Dr. Stainer, of St. Paul's; and a frontispiece which does much credit to the pencil of the compiler.

*An Angler's Strange Experiences: a Whimsical Medley and an Off-fish-all Record without A-bridge-ment*. By Cotswood Isys, M.A., Fellow of All Soles; late Scholar of Winchester. (Sampson Low.) The discriminating reader will be able to guess the style of this book (dedicated to the Postmaster-General, a great angler) from the title. The fun, such as it is, belongs to a past period in the history of angling—to the days when Richard Penn wrote his much more amusing precepts and miseries of a trout-fisher. Bad puns are sorry fare at the best, nor are they here improved by being set in a framework of verse. The illustrations, with one or two exceptions, do not rise above the level of a child's picture-book before Kate Greenaway dignified such books by her graceful pencil. The author tells us that he composed these rhymes while suffering from illness, so that they were "born in a sick-room and nurtured in darkness." With every wish to sympathise with him in so pleasant and harmless an occupation, we cannot forbear to add that it is a pity they were ever suffered to emerge from obscurity; his ditties were there appropriate enough—

"At every fall smoothing the raven down  
Of darkness till it smiled."

Robust and healthy writers occasionally prove a weariness and vexation to the critic. A fresh terror will be added to his lot should people begin to publish the dreams of a sick-room.

*The Story of a Nursery Rhyme*. By C. B. With Numerous Whole-page Illustrations by

Edwin J. Ellis. (Simpkin, Marshall and Co.) This belongs to a series of shilling books which Messrs. Field and Tuer are producing rather, we suppose, as specimens of typography than as contributions to literature. In the present case, we must decline to subject our eyes to torture for the sake of "a nursery rhyme." The illustrations by Mr. Edwin Ellis have considerable decorative charm, though we know not why his children should be so lightly clad.

MR. WILLIAM PATERSON, of Edinburgh, has issued this week the third and fourth volumes of the new edition of Scott's Dryden revised by Mr. Saintsbury. They contain some six or seven of the plays, including the travesty of "The Tempest," which may be commended to the notice of Mr. Burnand. We observe that the new editor has found more to do upon "The Tempest" than upon almost all the other plays together. It is impossible to mention this work without repeating the admiration we have before expressed for the bold type in which it is printed.

THE series of "pocket editions" of American authors which Mr. David Douglas, of Edinburgh, is issuing in such charming volumes at one shilling a-piece is now augmented by *The Autocrat of the Breakfast Table* (in 2 vols.)—perhaps the one collection of modern essays that deserves to rank with those of the former masters of the art. This edition contains the latest notes of the author. Like the volumes noticed immediately above, these also bear the good old Edinburgh imprint of Constable.

#### NOTES AND NEWS.

MR. BROWNING is spending the first part of his holidays in a beautiful place, a paradise of coolness and quiet, on one of the hills in the Val d'Aosta, in North Italy.

AMONG the English who will attend the Congress of Orientalists at Leyden next week, we may mention Prof. Sayce, the Rev. Isaac Taylor, Mr. Vaux, and Mr. Bywater. Miss Amelia B. Edwards is unable to go, but her paper will be read by Prof. Sayce.

MR. HENRY SWEET has accompanied Prof. Storm on a walking tour in Norway to study the dialects of Telemarken. The two scholars have been very well received by the farmers and peasants, who were warned by the newspapers of the object of their trip.

WE are sorry to hear that Prof. Theodor Mommsen, the historian, has been very unwell this summer. He is now stopping at Trier.

DR. SCHLIEMANN has abandoned his idea of coming to England this autumn, and is now at Leipzig, seeing through the press his work on "The Larger City." It will have a Preface by Prof. Sayce, and two Appendices by Dr. Karl Blind.

WE regret to state that M. François Lenormant is again suffering from his old malady—peritonitis—of which the original cause was a wound received in the war of 1870, but which was excited afresh by the fatigues undergone during his exploration of South Italy last year. The third volume of M. Lenormant's *Origines de l'Histoire* may be expected this winter.

AMONG the protests received by the Mayor of Stratford-on-Avon against the proposed desecration of Shakspeare's grave was a very energetic one from Mr. Furnivall, as founder and director of the New Shakspeare Society.

DR. MURRAY has put out another list of words for which either earlier or later quotations are wanted for the next part of the Philological Society's new English Dictionary; and we trust that many of our readers will employ some of their leisure this autumn in

hunting for these words, and also in noting for Mr. Fennell all the imported Anglicised words, for the Stanford Dictionary, which they come across in their searches. Of the words for which earlier quotations are wanted, we may cite "apoplectically 1881," "appetizer 1862," "apple-pie order 1813," "ballooning 1863." Among those which need later quotations are "apostlehood 1450," "apostleless 1663," "apple-squire 1693," "appli 1450," "balladry 1688." Copies of the list can be had from Dr. Murray, Mill Hill, N.W., and of the Stanford Dictionary requirements from Mr. Fennell, 8 Fitzwilliam Street, Cambridge.

DR. EMIL HAUSKNECHT is now in England, preparing his edition of the English and French texts of Charles d'Orleans' Poems for the Early-English Text Society. Dr. Hausknecht has just sent to the printer his critical edition of the Early-English Romance of "Floris and Blanchefur" for Prof. Zupitza's series. In it he will give all the various readings of the widely differing MSS. of the poem. Dr. Hausknecht asks what is the earliest English version of Luther's *Ein feste Burg*. In France the hymn was translated, and sung by the French Huguenots, within thirty years of Luther's writing it, and Dr. Hausknecht thinks there must be a sixteenth-century English version.

SIR SAMUEL BAKER has written a book for the Christmas season, called *True Tales for my Grandsons*, which will be published by Messrs. Macmillan, with numerous illustrations. The same publishers will also issue Mrs. Molesworth's new book, *Two Little Waifs*, illustrated by Mr. Walter Crane.

MR. T. WEMYSS REID, well known as the author of a monograph on Charlotte Brontë and as the editor of the *Leeds Mercury*, has written a novel which will shortly be published by Mr. T. Fisher Unwin. It is a story of modern social and political life in this country, in Paris, and at Monte Carlo. The title is *Glady's Fane: a Story of Two Lives*.

MR. R. GRANT WHITE's new edition of *Shakspere* will be only a popular reader's one in three volumes, with notes at foot, as brief as possible, and will be ready this autumn. Vol. i. was printed a month ago. The Introduction will be read as a paper at one of the early meetings of the New Shakspere Society.

THE next volume, being the forty-eighth, in the "International Scientific Series" will be *Fallacies*, by Mr. Arthur Sidgwick.

AMONG Messrs. Cassell and Co.'s announcements for the autumn season are *English Poetesses*, by Mr. Eric Robertson, and *Treasure Island: a Story of Pirates and the Spanish Main*, by Mr. R. L. Stevenson.

*London Town* will be the title of Messrs. Marcus Ward and Co.'s picture-book this Christmas, designed by Mr. Thomas Crane and Miss Ellen Houghton. This work (which follows up *At Home and Abroad*, published by the same firm), treats of the many wonderful sights in our great city of interest to children, with coloured pictures and descriptive verses.

MESSRS. BLACKWOOD will publish next month a new novel in three volumes by the author of *Miss Molly*, to be entitled *Alison*.

MESSRS. MACMILLAN announce the following books of travel:—*Notes on the Caucasus*, by "Wanderer;" *Travels in New Zealand*, by the Rev. W. S. Green; and *Samoa a Hundred Years Ago*, by Mr. George Turner, of the London Missionary Society.

THE article entitled "In Suspense" in the *Cornhill* for this month—an article, by-the-way, which is more ambitious than clever—appears

also in *Lippincott's*. Fiction apart, we believe that this is the first example of contemporaneous publication in English and American magazines.

It seems that the early editions of Tennyson are not keeping up their old prices. At a late sale at Sotheby's the *Poems chiefly Lyrical* of 1830 and the *Poems* (1833) went together for two guineas; the *Timbuctoo* in the Cambridge Prize Poems of 1840 for two shillings, though in whole morocco. At the same sale a copy of Ruskin's Poems fetched £21, vols. iii. and v. of his *Modern Painters*, £12, vol. iii. of his *Stones of Venice*, £4 10s. A copy of the pre-Raffaelite magazine, the *Germ*, whose four numbers originally cost 1s. each, made £4 4s.

WHILE talking of prices, we had better tell Browning students that they can buy copies of the "remainder" of the *Dramatis Personae*, second edition, 1864, for three shillings a-piece at Reeves and Turner's, 196 Strand.

THE Victoria University has the power to grant degrees to women; but hitherto Owens College, which is co-extensive with the Victoria University, has not admitted women students. Arrangements, however, have now been made by which the College for Women in Brunswick Street, Manchester (established in 1878), will be associated with Owens College, though not absorbed in it, so that its students may become matriculated members of the Victoria University, and attend the higher classes at Owens College.

A TOUCHING circumstance is reported of the late Rawdon Brown, whose death was noticed in the ACADEMY last week. He had lived for more than forty years at Venice, where he was loved and respected by all classes; and on his death-bed he expressed the wish that his body might be enshrined in an old banner of the Republic of St. Mark.

DR. M. KRUMMACHER, of Cassel, has sent us a "Separat-Abdruck" of a paper contributed by him to the *Englische Studien* (Heilbronn: Henninger) upon the language of Carlyle. Under the three headings of "Words," "Grammar," and "Style," he has collected a list of Carlylisms, with references, forming more than forty pages. A certain proportion of the examples would not be admitted as strange by those well read in English; but, upon the whole, Dr. Krummacher's discrimination does him as much credit as his industry. We commend the treatise to the attention of Dr. Murray.

WITHIN the last few days the Catalogue of the Reform Club Library has been distributed to the members who have subscribed for it. The existing building was opened in 1841, and in November of that year a special committee was appointed to superintend the formation of a club library. The advice of the librarian of the House of Commons and of Mr. Panizzi was obtained; and Mr. Francis Place, an energetic reformer in Westminster, drew up a plan approved by Panizzi, and afterwards adopted, for indexing its parliamentary papers. Books and pamphlets were readily given by the members, and subscriptions of from £5 to £100 were paid with alacrity. Alphabetical and subject-catalogues in MS., on a system recommended by Panizzi, have been kept in the library for many years, but the present is the first printed Catalogue of its contents. The description of the books occupies over 550 pages; and, there are, in addition, two short lists of the subjects of the pamphlets which are the property of the library, and of the names of their authors. The volume concludes with a classified index of forty pages. The noble room overlooking the gardens at the back of Pall Mall, in which most of the volumes are housed, is familiar by sight to London visitors with friends in the clubland of Liberalism. The collection contains the best works of reference, a comprehensive

selection of British topographical books, and a large number of volumes in foreign languages. A handsome grant for the purchase of new works is voted from the corporate funds every year, and many of the members readily respond to the appeal of the committee for presents.

### INDIAN JOTTINGS.

TWO important books about India are announced for publication this autumn. The one is Prof. Seeley's *Expansion of England*, which will consist mainly of a discussion of the questions suggested by the conquest and government of India by England; the other is *India: the Land and the People*, by Sir James Caird, who will here give the popular results of his visit to India as Famine Commissioner.

A FIFTH edition of Mr. Bosworth Smith's *Life of Lord Lawrence* will be published this month. The author will then immediately begin the task of preparing a popular edition in one volume.

MR. KASHINATH TRIMBAK TELANG, the translator of the *Bhagavadgītā* in "The Sacred Books of the East," has been appointed Professor of Law in the University of Bombay. At the Bombay meeting of natives to support the "Ilbert Bill," presided over by Sir Jamsetjee Jeejeebhoy, the most effective speech is said to have been that of Mr. Telang.

IN commemoration of the recent visit of Lord Ripon to the Calcutta Madrasa, or Mohammedan college, nearly £5,000 has been subscribed by several native gentlemen to found scholarships for Mohammedan students.

THE works of English Sanskrit scholars begin to be more appreciated and more widely read in India. A demand for translations has sprung up, and several of these translations into the vernacular language have had a considerable sale. We have just received a Bengali translation of Wilson's classical treatise on the *Religious Sects of the Hindus*, with notes and additions, by Akahaya Kumāra Datta, the former editor of the *Tattvabodhinī Patrikā*. It is a work in two volumes, full of useful notes, and will tell even the Pandits in India many things which they did not know before.

WE are glad to see that the *Voice of India* has now reached its sixth monthly number. This periodical, it may be as well to state, consists of extracts from the native press, selected and arranged somewhat after the example of *Public Opinion* in this country. We have often wondered at the absolute indifference of the English public to what takes place in India, except when a war, a famine, or a frontier disturbance attracts an excessive amount of attention. Only a single English newspaper, so far as we know, has a regular Indian correspondent. The *Voice of India* will not entirely remove our complaint on this head, for its aim is to furnish comment only, and not news. But we can conceive no more instructive reading for anyone who really wants to know what educated natives think on political questions. The subscription price is £1 a-year; and the London office is 14 Cockspur Street.

MR. T. W. H. TOLBORT, of the Bengal Civil Service, died at Dorchester on August 4, in his forty-second year. He was an enthusiastic advocate for the printing of the Indian vernaculars in the Roman character, with which object he founded a monthly journal at Umballa, and also a Roman-Urdu Society. He had himself translated *Robinson Crusoe* into Persian, and the first half of the *Arabian Nights* into Urdu—both published in the Roman character. Of the batch of Civil servants that went out to India in 1863, Mr. Tolbort passed first in the preliminary examination, and first again in the final examination.

## SWISS JOTTINGS.

HANS KOPP, a man well known in Switzerland on account of the dexterity with which he detected the sites of Pfahlbauten, and directed the mechanical part of research among the old lake-dwellings, has come to an untimely end. On August 21 he was out in a small boat upon the Lake of Biel between Létringen and Tüscherz, when a violent "Jorand" (the evening wind which descends from the Jura upon the Lakes of Neuchâtel and Biel) suddenly overturned his boat. Kopp was unable to swim, and perished.

THE annual festival of the Swiss Alpenklub was held at Bern on August 25, 26, and 27. Twenty sections were represented. At the business meeting, section Uri was proposed as the host for next year's festival, with Ständerath Muheim as president, and Altorf as the place of meeting. At the general meeting on Sunday in the Grossrathsaal, which hardly sufficed to hold the number of guests, the president for the year, Gemeinderath Lindt, warmly advocated the extension of the system of school tours, by which a good preparation is being made for the further exploration of the Alpine world by the coming generation. M. E. Rambert, of Lausanne, read the annual Report, in which reference was made, among other matters in which the Swiss Alpenklub has been concerned, to the measuring of the steadily retreating Rhone glacier. A sum of 400 frs. was voted for the best essay on the means of avoidance or diminution of the dangers of mountain climbing. Prof. Bachmann gave an interesting lecture on the geological history of Bern and its neighbourhood. On Monday, the members of the Club went by rail to Langnau, climbed the Raafriti and the Hohengrat, and met at evening for the closing banquet in the "Löwen."

## ORIGINAL VERSE.

SONG.

Who cares for care? I lightly trip  
From day to day—  
Smooth stepping-stones across this brook of Life—  
And, as I skip,  
Old grandams say,  
"Clotilde,  
'Tis time you were a wife."  
Young Spring with me is dancing by,  
And leaves his flowers—  
Late violets wither though we pluck them not.  
Then why not I?  
Yet in these bowers  
Clotilde  
Has drawn the spinster's lot.  
Young Love, they tell me, will not wait,  
And Age is lone  
For withered maids who wed not while they may—  
But let them prate!  
A cheery crone,  
Clotilde  
Will laugh as loud as they.  
When autumn joys are faded quite—  
And cold I lie,  
Kind winds shall whisper through the naked trees,  
"Come, swallow sprite!  
'Tis time to fly,  
Clotilde!  
To sunnier lands than these."

E. P.

July 1870.

## OBITUARY.

THE untimely death of Miss Teena (Mary Lilian) Rochfort-Smith last Tuesday morning (September 4) will deprive the New Shakspeare Society of the edition of the *Four-Text Hamlet* which she meant to give it. After her recovery from two serious illnesses, which brought her near the brink of the grave in spring and summer, she had taken up her *Hamlet* again, and revised the

early pages on a somewhat modified plan. But on Tuesday week, at Goole, the chance dropping of a lighted lucifer on a bit of needlework, and then stamping on its flames, set fire to her dress and the curtains of her room. She could not put them out with the quilt she seized, and she rushed downstairs and into the garden. There the flames were got under, but with such injury to her that within a week she died, after much suffering, not yet twenty-two, leaving her friends to lament the loss of the sweetest, most sympathetic, and unselfish spirit they have ever known, and one of the most accurate, penetrating, and able minds and strongest wills they have ever come across. Miss Rochfort-Smith had intended to make a Concordance to the New Shakspeare Society's "Old-Spelling Shakspeare;" and she had planned a series of Musical At-Homes for the poor of her neighbourhood this autumn and winter. She was a gifted singer. The little volume of Early-English Miscellanies which she had begun for the Early-English Text Society will be completed by a friend.

OF Ivan Tourguenief, who died on September 4, we hope to give some notice next week.

## MAGAZINES AND REVIEWS.

*Blackwood's Magazine* for September has an article, of a sort that we are glad to see becoming more common, on "The Berkshire Ridgeway." This green turf road, which runs from Streatley to Devizes, is a piece of the old Icknield Way, and a walk along its course is described in a manner that makes more vivid the history of the struggles of Wessex against the Danes. "A Polish Love Story" claims to be written down from the lips of a Polish peasant-woman; it is full of simple pathos. An article on "An Italian Official under Napoleon" tells the story of the early life of Cesare Balbo, and illustrates the hold which the Napoleonic idea had on the Italian mind of the time.

*Macmillan's Magazine* has the beginning of an answer by Mr. Alfred Wallace to Prof. Fawcett's article on the "Nationalisation of Land;" so far, Mr. Wallace does nothing but repeat the statement of Mr. Henry George. A paper by Miss Alice Gardner on "The Emperor Julian's View of Christianity" shows real power. The writer has the true critical spirit, and has striven to understand and explain the attractions of Hellenism to the philosophic mind in Julian's day. The rest of the magazine consists of padding.

In the *Deutsche Rundschau* Prof. Pischel writes on "The Home of the Gypsies." He summarises the evidence on this disputed question, and, after deciding in favour of India, finds the Dardic and Kafiri languages most like that of the Gypsies. Their original home he places in Dardistan, and thinks that further investigations in the Hindu Kush would throw light on the subject. Lady Blennerhassett writes a good article on "M<sup>me</sup>. de Staël and her Relations with Germany." Herr Beyer contributes a paper on "Die Anfänge der Metall-Cultur;" he collects the references to the use of metal in early Greek poetry, and traces its relation to the rest of civilisation. A little story, "Die Montenegrinerin," is translated from the Polish of Thomas Jex, and introduces us into a region rarely visited in fiction.

## THE LIBRARY ASSOCIATION.

THE arrangements for the sixth annual meeting of the Library Association are all but completed. The meeting will be held at Liverpool on Tuesday, Wednesday, Thursday, and Friday, September 11, 12, 13, and 14. The chair will be taken by Sir James Picton, the Chairman of

the Liverpool Public Library, Museum, and Arts Committee, who will deliver an opening address.

In addition to the Report of the council, the Association will consider Reports on illustrations to the cataloguing rules of the Association, on size notation, on classification, and on the proposed examination of library assistants.

The papers to be read include:—"The Rise and Growth of Public Libraries in America," by Mr. T. E. Stephens; "The Origin and History of Some Liverpool Libraries," by Mr. Peter Cowell; "Chinese Libraries," by Prof. R. K. Douglas, of the British Museum; "Founders of Libraries—James Lenox," by Mr. Henry Stevens; "Old Church and School Libraries of Lancashire," by Chancery Christie; "Functions and Operations of the Free Library System;" "Library Pests," by Mr. Samuel Smith; "Free Library Buildings," by Mr. William Henman; "Starved Free Libraries," by Mr. W. B. Orelund; "A System of Differential Rating," by Mr. T. Formby; "Technical Literature and Free Public Libraries," by Mr. John Southward; "Q: an Experiment in Bibliology," by Mr. E. C. Thomas.

Visits will be paid to Knowsley by permission of the Earl of Derby, and to Haigh Hall by special invitation of the Earl of Crawford and Balcarres. The members will be entertained by the local committee and by the Mayor of Liverpool. The meetings will be held at the Free Public Library, Liverpool, where communications will find the secretaries.

Altogether, a very pleasant and interesting meeting is anticipated; while it is evident from the programme that the Association proposes to attempt a large amount of serious work.

## THE SHAPIRA MSS. OF DEUTERONOMY.

It is probable that the true history of this stupendous fraud will never be told; but, while English scholars are still waiting for Dr. Ginsburg's fuller report, it may be as well that they should be informed that an adequate refutation of the forgery has already appeared in Germany, where no spurious sensation was got up about the affair.

It appears that Mr. Shapira first took his precious prize to Berlin, where Prof. Strack was unable to examine it by reason of the weakness of his eyes. However, on June 30 he was at Leipzig, where he showed it to Herr Hermann Guthe, whose acquaintance he had made at Jerusalem in the summer of 1881. Herr Guthe forthwith subjected the pieces of sheepskin to a thorough examination, in company with his friend Dr. Ed. Meyer. This examination extended over the first five days of the first week of July, six or seven hours being devoted to it each day; and a careful copy was made of the writing. The result is given in a pamphlet of ninety-four pages—*Fragmente einer Lederhandschrift enthaltend Moses letzte Rede an die Kinder Israel*, mitgetheilt und geprüft von L<sup>o</sup>. Hermann Guthe; mit einer autographirten Tafel (Leipzig: Breitkopf und Härtel). Herr Guthe first gives a description of the MS. and its history, so far as told him. He then sets out, in about thirty pages, the text of the MS., side by side with the text of Deuteronomy and a German translation of both. Lastly, he comments at some length upon the character of the writing, the orthography, the style of the language, and the arrangement of the text. At the end is a plate giving facsimiles of the alphabets used in two of the pieces of sheepskin.

Herr Guthe's attention does not seem to have been turned to the decisive evidence first disclosed by M. Clermont-Ganneau—that the pieces of sheepskin have evidently been cut off a modern synagogue roll. His condemnation

of the forgery is based upon internal evidence, though he records certain experiments made by Prof. Hofmann to prove that the application of olive-oil would produce the appearance of antiquity. He agrees with Dr. Ginsburg in thinking that the forger is not to be looked for in Palestine. In his Preface (which, it is important to remark, is dated August 14) he states that his conclusions have received the general approval of Prof. Nöldeke, of Strassburg, and Prof. Kautzsch, of Tübingen.

### THE PROPOSED JORDAN CANAL.

(To the Editor of the ACADEMY.)

Trieste: Sept. 2, 1883.

I SHOULD not have troubled you with these lines had any other man taken up the task; and I address you under reserve. Living far from England, where the supply of newspapers is very limited, the Englishman is utterly unable to estimate what attention the home Press has or has not bestowed on any given subject. In this case there must be many who, like myself, have seen notices, not discussion, and to them these lines are addressed.

The inter-oceanic line of communication via Palestine excited some attention about a quarter-of-a-century ago. At that time the projector was a certain Capt. William Allen, R.N., better known among his friends as Parson Adams. His travels in Africa are well known; and his plan for a convict station at Ambas (Cameroon) Bay may be carried out now that Serjeant Balandine has advocated sensible views about transportation, and now that the Lentaigine theory about home-consumption-of-crime has notably done its best to produce a criminal nation. When talking with "Parson Adams," I could not but notice the admirably light heart with which he addressed himself to a heavy task, and the way in which he overruled, or rather ignored, my objections.

I thought the ghost laid for ever. But now I rub my eyes and ask myself if it be a bad dream after reading the proceedings of a "recent meeting of the Balloon Society" (!). Is it in nubibus, in Cloudeuckooland, in Nephistopheles-realm, or in the region called London where such Laputan projects are gravely adopted by "general opinion"? Do Sir Wm. Wheelhouse and Capt. Molesworth realise what they propose to do? or is the whole world gone crazy upon the subject of "Inter-oceanics"? A cut of twenty-five miles from Acre eastwards would obliterate the whole Jordan Valley between its head and the Dead Sea; would sink Tiberias and a host of "holy places" under 800 and odd feet of sea-water; would make Jerusalem an inland harbour, and would demand a canal, at least 100 mètres deep, from "Lake Asphaltites" to the Akabah Gulf. And, when the latter is reached, it will be found one of the most dangerous of inlets, in every way worse than the Suez route. Harbours hardly exist there; the depth is too great for anchorage, and the wind-storms from the Desert are frightful. May I refer the reader for proof to my three volumes on the *Land of Midian*?

Truly the complaint called "Holy Land on the brain" has of late been developing in strange directions. Among other projects one notes a proposal to "fulfil prophecy," and to "restore Israel," by a Joint Stock Company (Limited). But, as no man in his senses would live in Palestine if he could live in England or France, funds will probably fail, and prophecy must wait a little longer.

The projector verily is abroad. Another prepossessing scheme has been agitated during the last dozen years for ruining North-west Africa. It began with the intention of "flooding the Sahara" (Sahrá), and of creating an inland sea some three times larger than the Mediterranean. The dimensions shrank and shrank, chiefly from

the conviction that water declines to flow upwards except under exceptional circumstances. The residuum, the "inundation of the Ohottes" (Shatt), is, I see, highly approved of by the "great engineer," M. Ferdinand de Lesseps—a retired consul whose engineering education was, I may safely say, superficial. The result would be edifying: the line of stagnant, fetid pools subtending the shore would become huge hot-beds of fever, and breed a malaria which, carried by the scirocco, would soon clear out the coast-lands, and at times poison the islands of the Western Mediterranean.

But to abolish the whole Jordan Valley! This is, in popular phrase, a cut above my comprehension.

### CORRESPONDENCE.

#### AN OFFER TO BIBLIOGRAPHERS.

Bodleian Library: Sept. 1, 1883.

Probably few people know that a Subject-Catalogue of the Bodleian has been for some years in compilation from a spare set of the slips written for the Alphabetical Catalogue. As the volumes in the library would be not far short of a million and a-quarter, if each volume as issued had been bound separately; and as no pains will be spared to insure that the Subject-Catalogue shall be perfectly simple to

use, as well as thorough in point of subdivision, it will, I trust, be far the most valuable index to knowledge which has ever been produced. Despite increased efforts, however, some years must elapse before its completion (indeed, the first great section will not be ready for another year), and I am anxious that during the interval our labours should be of as much immediate use as possible.

If any reader in the library wants to know what we have on his special study, we are always ready to get the titles relating to it sorted out there and then; and we can generally put them before him—arranged in chronological order—in an hour or two. We cannot offer to do the like for anyone and everyone, however, because we should be so overwhelmed with applications that the special staff employed would have to be multiplied far beyond our means to afford any hope of promptly satisfying them. But, if anyone who is preparing for publication a bibliography of any subject (to appear as a distinct work, and not merely as an appendix to a book) will write to me, I will try to get the titles relating to that subject immediately separated and arranged for him to come here and look at them. If he cannot come here, I can probably recommend him someone who will copy or collate the titles for him. Even this offer may bring more applications than we can meet without materially delaying the systematic progress of the catalogue. I can only say that our best shall be done to help all, and that if we are obliged to disappoint anyone he shall at least not be kept waiting for an answer.

May I, at the same time, contradict a report circulated by various papers that I undertake to send anyone immediate notice of any book on his special subject which may be added to the Bodleian? Some day that may be feasible; at present it is not, and the offer was made only to persons authorised to read in the library. All Oxford graduates, however, in all parts of the world, come under that category; and we shall be only too glad to be of use in this way to them, and to any other of our former readers who are now at a distance from us.

I take this opportunity of saying that we have some scores of spare copies of the following catalogue of a collection of books which is now in the Bodleian, and that, so long as the stock lasts, we shall be happy to send a copy for the cost of postage (6d.) to any library or Hebrew scholar:—"Collectio Davidis—i.e., Catalogus . . . Bibliothecae hebraeae, quam . . . collegit B. Davidis Oppenheimerus . . . Hamburgi MDCCCXXVI . . ." The catalogue contains 744 pages small octavo, and has a Latin translation on alternate pages.

EDWARD B. NICHOLSON.

#### THE AGE OF HOMER.

Queen's College, Oxford: Sept. 1, 1883.

In answering Mr. Leaf's questions, I am forced to speak dogmatically, since I have no space here to give the grounds of the conclusions at which I have arrived. Perhaps a history of the way in which my article in the *Journal of Philology* came to be written will best explain the point of view assumed in it. In replying to Mr. Monro a year or two ago, I stated that I had been compelled by the philological evidence, and in spite of my own strong prejudices, to become a convert to Prof. Paley's theory as to the date at which our present Homer was committed to writing. I could find no proof of a written Homer older than the age of Perikles at the earliest; on the contrary, the absence on the part of the Alexandrine critics of a reference to any old texts, and the hesitation they display in regard to words which may or may not have been provided with the aspirate, are clear evidence that none such were known

to them. Wackernagel's speculations on the representation of the vowels would only show that the first texts of Homer were written in the pre-Euklidian alphabet. The Atticisms, moreover, pointed out by Prof. Paley as belonging to the age of Periklēs are too numerous to be explained away. I felt myself, therefore, driven to the conclusion that the old Epic literature was first committed to writing at Athens after the establishment of the Athenian supremacy over Ionia, and that it was at the same time modernised in order to suit the literary requirements of the age. Epic poetry had fallen out of fashion; the rhapsodists who had recited it had to seek other means of earning their livelihood, and the old oral Homer was extinguished by the Batrakhomyomakhia, just as the old romantic literature of Europe was extinguished by *Don Quixote*. Only a comparatively small portion of it was saved by being modernised (as Chaucer was by Dryden) and thrown into the literary form demanded by the reading public of Perikleian Athens.

Now, it is evident that, if my view of the origin of our written Homer is correct, we ought to find traces of the period in which it was produced not only in the language of the poems, but also in their general colouring and incidental references. By the side of the archaic we ought to find the pseudo-archaic; and the life and manners of the heroic age ought to be mingled with the life and manners of the age of Periklēs. The object of my article in the *Journal of Philology* was to show that such marks of the Perikleian epoch were, as I believe, to be discovered in the *Iliad* and *Odyssey*; how far I have succeeded in my attempt must be left to others to decide.

I can now answer Mr. Leaf's questions briefly.

1. "Epic literature" embraces Hesiod and the fragments of the older Cyclica, as well as Homer. Prof. Paley is at present engaged in examining the language of Hesiod with a view to determining the modern elements in it.

2. The Homer of Herodotos was the oral Homer in its various forms as recited in Ionia. I must know the age of the law respecting the recitation of Homer at Athens before I can answer Mr. Leaf's question in regard to it.

3. The Homer from which Plato quotes was the literary Homer; the Homer which he condemns in the *Republic* was the popular one (as is shown by the word ἀροῦμενοι).

4. Aristotle and Aristarkhos, so far as we know, concerned themselves only with the literary Homer.

5. I see no reason for doubting the story of the Spartan at Tegea. But, whether it is true or not, the fact which it illustrates is abundantly verified by the results of excavation.

6. I must leave Dr. Oberdick to answer this question himself.

7. Mr. Leaf has not caught my meaning. That Aeolic songs underlie our Homer is proved by the Aeolisms that occur in the poems; but these songs were first transformed by generations of Ionic rhapsodists, and the Ionic Homer itself, in one of its forms, was finally Atticised. Consequently, our Homer does not "contain part of the Aeolic songs which formed" the original (not "real") Homer; they underlie the whole of it.

8. I do not understand the bearing of this question, since I maintain that Homer was merely modernised, not composed, in the Perikleian age. Where we are sure that we are dealing with what is really archaic, and not archaistic, we may recognise the old Homer under its modern dress.

9. I am inclined to think that the *Odyssey* took a literary shape a generation before the *Iliad* did so. But the question must remain doubtful, since the modernisers of the two poems may have belonged to different schools of theology, and yet have lived at the same time.

I am unable to plead guilty to the "errors" with which Mr. Leaf charges me. He has not noticed that my point is that, though passages occur which presuppose an acquaintance with both the Dorians and Delphi, "the name of Dorian"—one passage only excepted—and the name of Delphi are, with a studied affectation of archaism, carefully excluded from the text. What grounds has Mr. Leaf for saying that Pythō was "the older name" of Delphi? Apart from Homer and Hesiod, it is first found in the hymn to Apollo as the title of the temple, not of the town. As Pape has well pointed out, Pythō can only mean "the oracle" (the length of the first syllable has been explained by Fick's discovery of the true character of the so-called second aorist; comp. λαθάνω and λήθουμι); indeed, according to Hēsychios, Pythōn, which Pape, I know not why, asserts to be the older form of Pythō, signified μαντικός. Proper names, moreover, like Pythagoras or Pythodēmos indicate pretty clearly the primitive meaning of the word, and go to show that Pythōn was originally the title not of the dragon, but of Apollo himself. In Pindar, the name of Pythō is, for the first time, transferred from the temple to the town of Delphi, and its poetical use caused it subsequently to be regarded as the archaic title of the latter place. Hence its use in Homer is a pseudo-archaism. As for κνήστις, Mr. Leaf and I fully agree as to the meaning of the word, but "cheese-knife" is, I believe, a more correct English term than "cheese-scraper." I have not unfrequently seen the stone-like cheeses of the Levant out—that is, really scraped—with a knife. In *Od.* i. 141, the δαυπός is mentioned as a special servant by the side of the ταινίη, and it will not be denied that the latter was "a trained slave." Indeed, some ancient critics proposed to expunge the line in which "the carver" is mentioned, on the ground that his duties did not differ from those of "the housekeeper" (see *Athen. Deipn.* v. 193). In *Od.* xvi. 253, two carvers are mentioned who are specially called "servants, trained to carve."

A. H. SAYCE.

#### JOSEPH AND OSARSIPH.

Weston-super-Mare: Sept. 1, 1883.

In to-day's ACADEMY Prof. Sayce says: "So far as I am aware, no one has noticed that the name of Joseph is to be found in the fragment of Manetho quoted by Josephos (*Cont. Ap.* i. 26)." Allow me to refer to a paper on the life of Joseph which I read and published in 1880, in which I commented on the names *Peteseeph* given by Chæremmon to Joseph, and *Osarsiph* assigned by Manetho to Moses, as quoted by Josephus. I pointed out that the last syllable is common to these names and to *Joseph*, and that both *Peteseeph* and *Osarsiph* are Egyptian names in structure. The first is formed on the model of such names as Potiphar, Pet-ba'al, Petisis, &c., with its latter element perhaps Sep (or Sept), the god of the Arabian nome, preserved in the modern name *Saft* (the Pi-sap-tu of the list of Assurbanipal—see Brugsch, *Zeit.* 1881, 16), east of Zagazig. *Osarsiph* is the unaltered name *Osiris-sapi*, applied to the deceased god Osiris as god of the under-world. And I added the following remark:—

"And Moses took the bones of Joseph with him," which very well accounts for the wild tradition, as it would otherwise seem, of Chæremmon that Joseph (*Peteseeph*) as well as Moses (*Tisithen*) led the exodus; and for Manetho's confusion of Moses with *Osarsiph*, the priest of Heliopolis, if by *Osarsiph* Joseph was really meant."

In a paper on "Biblical Proper Names," &c., I have compared the names given in our English Bible as *Saph* and *Sippai* with the Sep or Sept above mentioned. But Prof. Maspero, in an obliging communication on that paper, suggested

to me that the latter Hebrew name is "très exactement le dieu larve, *Sopi*, une des formes d'Osiris momifié"—viz., the Osiris-sapi before mentioned. Canon Cook speaks of Manetho's *Osarsiph* as "evidently Joseph," but in a note he gives an explanation with which I cannot agree:

"There is an evident reference to one or both of Joseph's names. The last syllable, *Siph*, answers to *Seph*, and also to *Zaf*, food. *Osir* means rich, powerful, &c.; *Osarsiph*, rich in food."

I was not aware when I wrote my paper on Joseph that Dr. Ebers had already suggested the *Osar-sup* (as he reads it) of the Egyptian pantheon as the origin of the *Osarsiph* of Manetho (*Durch Gosen zum Sinai*, 548; 561 in his second edition).

HENRY GEORGE TOMKINS.

#### "THE PROPHECIES OF ISAIAH."

Tendring Rectory: Sept. 1, 1883.

I have just read Dr. A. B. Davidson's valuable article on the second edition of vol. ii. of my *Isaiah*. Had it appeared when the book first came out, it would have materially aided me in correcting the text for a second edition. To have elicited the opinions of so respected but so reticent a scholar cannot but soften any natural regret at his vehement dissent from some parts of my book. Should he go still further, and himself become a critic and expositor of Isaiah, we shall see how he explains the difficulties which so many writers on the prophecies ignore. That would help students to test the degree of soundness of his criticisms on my own published views. We shall also then see if he is able to carry out better than I have done his own avowed principle of expounding without being influenced by any decided critical theory. It is obvious that to expound as if *Isa.* xl.-lxvi. were self-evidently the work of one author would be a violation of this principle; the theory itself would carry us back to pre-Ewaldian times.

May I add two explanations which seem called for? (1) I do not remember to have stated that "the Servant in chaps. xlii., xlix., and liii. was to the mind of the Prophet an historical person in the future." I am sure that I have never held that the author or authors of *Isa.* xl.-lxvi. consciously referred to any historical person. The expression quoted by Dr. Davidson from vol. i., p. 125, is, I admit, ambiguous, and calls for correction, but it is sufficiently explained by the passage cited and endorsed from Delitzsch in the very same sentence. (2) It is no pleasure to me to assist dogmatic theologians in their inevitably biased study of the prophets. Circumstances (which may since have changed) led me, in this work upon Isaiah, to consider the bearings of prophecy upon fulfilment; but my own tastes were, and are, as strictly critical and historical as those of a layman or a professor. T. K. CHEYNE.

#### SCIENCE.

*A List of British Birds.* Compiled by a Committee of the British Ornithologists' Union. (Van Voorst.)

It was an excellent idea on the part of Mr. Solater, in 1878, that a committee should be formed to draw up a Catalogue of British Birds in accordance with the most approved principles of modern nomenclature. His own name, together with those of Mr. Wharton, Mr. Dresser, Mr. Seebohm, and Prof. Newton (although the last-named subsequently excused himself from serving), and two or three more, will show ornithologists the painstaking, exact character which the work was likely to possess. Whether this classification and

nomenclature will be accepted beyond the sacred precincts of the British Ornithologists' Union is another matter. Yet it is of great importance that some such common classification should be originated; and it may be hoped that, if the leading ornithologists adopt and use that here recommended, their example may prevail in journals and with writers not so exclusively scientific. The arrangement selected here is due to Prof. Huxley, and its outlines have been explained by Prof. Newton in his article on "Birds" in the new edition of the *Encyclopædia Britannica*.

Independently of any system of classification, however, this volume is most useful. It gives just such details upon every species of British birds as are most frequently wanted, thus forming an admirable handbook to a more regular History. Whether we espouse the arrangement here recommended or not, it is always useful in ornithology to possess references and synonyms. Without professing to give an exhaustive synonymy, the compilers refer in the case of each bird to Naumann, Gould, Harting, Yarrell, Dresser, Macgillivray, and other authors. Next, in every case the committee, thanks to the special labours of Mr. H. T. Wharton, append the quantity of the bird's scientific name and its etymology. This latter is a particularly useful feature in the book; the etymology often giving the chief feature in a bird's economy, and frequently supplying much interesting lore. This part of the volume is excellently done, and students of British birds will hereafter lie under deep obligations to Mr. Wharton. We have before now broken a lance with him in the *ACADEMY* on the word *cotile* or *cotyle*, and do not see reason in these etymologies for anything but approbation. In the third place follows, in each article, a general description of the bird, whether resident, winter visitant, or the like, together with its general distribution. The claims of all pretenders to join the British Avifauna are strictly examined, and doubtful intruders, escaped birds, and other impostors are rigorously included in brackets, their own names being printed in italics. It will be useful to know that the committee's labours embrace 452 species, of which seventy-six are bracketed, so that we may authoritatively conclude now, after the most scientific examination, that the exact number of British birds is 376. The committee have tenderly left us every species of which even a single specimen has been detained in an undoubtedly wild state.

Pre-scientific observers will miss the Swift among the *Hirundinidae*. It now appears under the *Picariæ*, along with the Nightjars and Woodpeckers. Many points in its economy would seem to separate it from the Swallow family, much as Gilbert White would have been shocked at the divorce. A few more references in the list would, every here and there, have been useful. Thus the Brambling, according to the committee, "has once been known to breed in Perthshire." The authority for this statement is not given. It must have been a most exceptional case, judging from the bird's history; and a reference to Prof. Newton's *Yarrell* shows that it is "not known with certainty to have bred with us except in captivity." Again, this list states that the Wryneck is "rare in

Scotland, where, however, it has been observed as far north as Sutherlandshire." Prof. Newton, however, asserts that Mr. Shearer mentions two examples in Caithness, while one, if not two, have been taken in the Orkneys; Saxby speaks of two in Shetland, and three instances have been recorded from the *Færoes* (*Yarrell*, fourth edition, vol. ii., p. 492). Brevity here, as in other cases, may prove misleading. We are too thankful, however, for so exhaustive and useful a list to waste any more space in carping at deficiencies. The mean seems well preserved between conciseness and verbosity. It should be added that a table distributes the birds into their different families, and, best of all, an Index of twenty pages helps the busy man at the same time that one ignorant of modern schemes of classification can easily identify his old friends, for it is not everyone who could recognise a Gadwall under the terrible-looking *Chaulelasmus streperus*, or Anglice *Elanoides furcatus* into the Swallow-tailed Kite. We are glad to find *Cinclus melanogaster* now included authoritatively in our fauna as the Scandinavian form of the Common Dipper.

This List fills up a void in ornithological literature, and will be permanently valuable to all who study our British birds.

M. G. WATKINS.

#### SOME BOOKS ON BUDDHISM.

*Anecdota Oxoniensia*. Aryan Series. Vol. I., Part I. "Buddhist Texts from Japan." Edited by F. Max Müller. (Oxford: Clarendon Press.) In the Preface Prof. Max Müller tells the very interesting story of the search for Sanskrit Buddhist MSS. in the island of Japan. It has long been known that the Chinese Buddhist literature contains a large number of translations from Indian Buddhist books, both in Sanskrit and in Pali, and also, unfortunately, that the Indian originals have, for the most part, been irretrievably lost. Of the few fragments that have survived, an account had been given by Prof. Max Müller in a paper read before the Royal Asiatic Society in London; and he has lately devoted considerable trouble to the endeavour to find similar fragments in Japan. The results have not been very encouraging, the discoveries being confined to six short texts and eighteen detached pieces, mostly on single palm-leaves or sheets of paper. But there is an undeniable attraction in the narrative of the means by which there have been discovered to-day in an island in the Far North-east, whose very existence was unknown in India—the signs of the outermost ripples of that great religious movement which agitated the valley of the Ganges more than 2,000 years ago. One of the short texts so discovered is the one edited in this first issue of what promises to be the very valuable series of publications undertaken by the Clarendon Press under the name of *Anecdota Oxoniensia*. Were it not for its remarkable history, this Buddhist tract, the title of which is the *Vajracchedikā*, or Diamond-splitter, would scarcely have won much attention from scholars. It belongs to the so-called Greater Vehicle, and is well known by translations in both Tibet and China, whence also copies of the text have been received in Europe; and these, in fact, rather than the Japanese copies, have formed the basis of the present edition. It inculcates purity of heart, which, it declares, will lead to virtuous conduct, and depends upon a perception of the unsubstantiality and impermanence of all individual

forms of being. It is interesting to notice that the author of the tract still thinks it worth while to argue against the desirability and sufficiency of Arashatship, from which we may possibly draw the conclusion that he lived at a time when the so-called Lesser Vehicle was still a power among his contemporaries. But we must have more texts, and longer ones, before us in order to draw chronological conclusions for which we can venture to claim any real validity. Meanwhile, we may thank the distinguished Oxford Professor for his addition to our too scanty collection of texts from the school of the Greater Vehicle.

DR. WILLIAM HOEY has published, under the title of *Buddha, his Life, his Doctrines, and his Order* (Williams and Norgate), a translation of Prof. Oldenberg's work on the history of early Buddhism, which was reviewed in the *ACADEMY* of August 26, 1882. As we have so recently dealt at some length with the original work, we have only now to add that the translation seems to us to have been excellently done. Here and there, in his endeavour to be strictly accurate, the translator has adopted an idiom that is rather German than English. But, on the whole, he has reproduced, with much skill, the easy and graceful style which distinguishes Prof. Oldenberg's writings from those of so many German scholars. In some cases his renderings of the very difficult technical terms of the Buddhist system of ethics are open to question, and Dr. Hoey does not seem to have sufficiently considered the renderings adopted in the best English versions of early Buddhist texts. It is, however, impossible, as yet, to determine the best phrases for some of these terms, which have no real equivalent in English, and Dr. Hoey has himself pointed out this difficulty in his short Preface. This volume will be a valuable assistance to those who wish to acquire an accurate knowledge of Buddhism as described in its own earliest records.

*Geschiedenis van het Buddhisme in Indie*, door Dr. H. Kern, Hoogleraar te Leiden (Haarlem: Tjeenk Willink), does not in the least pretend to carry out what the title claims. It is another manual of Buddhism purporting to state what Buddhism was, but making no endeavour to trace the history either of Buddhist beliefs or of the Buddhist Order, whether in India or elsewhere. Like those of the previous work, its divisions are based upon the old distinction between Buddha, Dharma, and Sangha; but the last member of the Buddhist Trinity is not specially treated, and the method followed by Prof. Kern in his consideration of the first is the direct contrary of that which has been followed with so much success by Prof. Oldenberg. There is no perspective in the picture drawn by the Dutch scholar. The beliefs of the Buddhists regarding the details of the personal history of Gotama have varied in every time and country, growing in magnificence as the interval of time became greater. Our author, with an impartiality that is beyond praise, regards them all as of equal value, and brings them together into one narrative which has the merit of comprehensiveness and only the disadvantage of not representing any single phase of Buddhism that ever existed. When the various accounts of a supposed episode in the life of the Buddha or of one of his personal followers, written by authors distant from one another by centuries in date and by thousands of miles in domicile, are welded together into a new account, differing both by omission and addition from each and all of those on which it is based, we obtain a fresh version of the episode that is eclectic enough, but that corresponds to nothing either in actual fact or in the history of belief. It is difficult to see what use the student can make of such a result. When the various accounts are not thus welded into a

new whole, but are simply ranged side by side, we should at least expect to find a collection of the materials out of which some future writer might construct a "History of Buddhism in India." But the narratives are not preserved in their original form. They are given in abstract, in a way that makes it impossible for the reader to distinguish between the words of the author he is quoting and the words of the Professor himself—unless, indeed, when the reader meets with one or other of those contemptuous sallies in which the Dutch Professor exhibits his scorn for the whole concern. In these cases too, therefore, the student of history will prefer to use the unadulterated originals. And no one but a student will wade through these long and arid reproductions of ancient legend, in which their beauty and poetry (the only qualities which would attract him to them) have evaporated under the effect of an unsympathetic travesty. The greater part of the work is occupied with this unsatisfactory *précis* of previous labours. There are a few notes, but they do not touch on the question of historical sequence, the consideration of which would, indeed, have been fatal to the interest of the body of the work. At the close of the *précis* of the various forms, old and new, of the Buddha-legend, we have a short chapter (pp. 232-63) in which the author's conclusions are stated. Here, at last, the reader will hope to find some sketch or summary of what the author considers to have been the history of Buddhist belief in India. He will be sadly disappointed. The author acknowledges "that some portions of the legend are very old" (p. 236). But he only gives as an example the contest between the Bodhisattva and Māra; and then goes on to give us some scattered reflections on "the Buddha-legend" regarded as a unity and as a whole. The chapter is therefore appropriately entitled "Beechamvingen over de Buddha-legende;" and the most striking remarks in it are not historical, but only astronomical. According to a certainly very ancient tradition, Gotama, after he had given up the world, went first for instruction to two older teachers named Uddaku and Alāra Kālāma. On this story Prof. Kern remarks that *udra* meant water, and that another word for water is *ardra*, and that this latter word has been used (when and where we are not told) as the name of a well-known star—namely, α in Orion. It follows, of course, that Uddaku is this star; and, further, that as Alāra Kālāma died six days before Uddaku, he must also be a star somewhere near α in Orion. Now, there is a star near that one, a star called Mrigaciras. The difference of names is, apparently, somewhat perplexing, but cannot really make any difficulty in the identification. For the star Mrigaciras is also called Saumya (when and by whom is not stated, but that is doubtless of no importance). Now, Saumya means about the same as Kālāpu; and though it is true that Kālāpu is not the same word as Kālāma, yet the name Kālāma is actually once so spelt in a German abstract of a mediaeval work from Tibet. This star is clearly the one that must be identical with Kālāma. "The explanation of the word Alāra is uncertain," adds Prof. Kern, who would wish not to put forward any suggestion not likely to command assent. We are left, therefore, to congratulate ourselves that the explanation, by the chain of reasoning just followed out, of the origin and gradual growth of this ancient tradition should be not only so complete and satisfactory from the historical standpoint, but also so eminently certain. Then follows a section, half the length of the previous one, on the Dharma, or system of ethics founded by Gotama. This is quite seriously identified at the opening (p. 281) with "the sun, or god of

day, in his regular course—that is to say, with Vishnu"—a stroke of unconscious humour that is too delicious to be quarrelled with. The section is then devoted to a summary of the cosmological ideas prevalent in Buddhist countries, and with this summary the account of the Dharma closes. Side by side with the Dharma the Buddhists, even of comparatively early times, spoke of Abhidhamma. This the author proceeds to discuss, but, strangely enough, includes under it nothing which is exclusively treated of in the so-called Abhidhamma Pitaka. Why such subjects as Name-and-Form, the Five Skandhas, and so on should be called Abhidhamma it would be difficult to explain from any Buddhist work of any school. We cannot be surprised that a Sanskrit scholar, distinguished especially for his knowledge of the very difficult subject of Indian astronomy, should make free use of that knowledge in his explanation of Buddhism. But why does he write a book at all upon a system of belief which he so thoroughly despises? He says, in the Preface,

"There are so many works on Buddhism, and among them some so excellent, that it might seem superfluous to add to their number. Of this I have been, and still remain, so convinced that I should not have taken the step of writing this book had I not in a weak moment made a promise that I did not wish to break."

It is a case of book-making, and adds one to the series of promises which had been better kept in the breach than in the observance. The work forms one of a series on the various religions of the world, being brought out in parts by the publisher, and is also appearing in German.

*Essai sur la Légende du Buddha, son Caractère et ses Origines.* Par Émile Senart. (Paris: Leroux.) This new edition of a work which was reviewed at length in the ACADEMY on its first appearance deserves a short further notice, not merely on account of the name of its author, but also because the Introduction and the conclusions have been entirely rewritten, and because almost every page has received in detail, and often in the forms of expression, a careful revision. M. Senart still adheres, as might have been expected, to the general results at which he had previously arrived. But he has given a new and fuller expression to his views, and has materially added to the value of his work by an elaborate and much-wanted Index.

#### OBITUARY.

DR. HERMANN MÜLLER, of Lippstadt, who died on August 25, at Prad, in Tyrol, of inflammation of the lungs, was the first authority in one branch of natural science—the relation of insects to the fertilisation of flowers. A zoologist by profession, he paid special attention to, and greatly elucidated, those points in the structure of insects which adapt them to carry pollen from flower to flower, and thus secure cross-fertilisation. His two chief works, *Die Befruchtung der Blumen durch Insekten* (a translation of which, with a Preface by Charles Darwin, was recently published by Messrs. Macmillan) and *Alpenblumen, ihre Befruchtung durch Insekten*, contain the record of an immense series of most careful and elaborate observations on this subject, which will certainly never be surpassed and probably scarcely rivalled. But, in addition, his minor publications on this and cognate branches of natural history were very numerous, a large number having been contributed to the German serial *Kosmos*, and to our own *Nature*. The genesis of the colours of flowers was a subject which he had worked out with great care. By his death science has lost a true and active worker.

#### SCIENCE NOTES.

A VOLUME of the late Prof. Balfour's scientific papers will shortly be published by Messrs. Macmillan.

It is proposed to hold an International Forestry Exhibition at Edinburgh next year.

THE new biological laboratory at Johns Hopkins University, Baltimore, which was to be opened this month, contains two large rooms for general advanced work in animal physiology, in addition to others specially designed for work with the spectroscope, with the myograph, for electro-physiological researches, and for physiological chemistry. It also contains a special room constructed for advanced histological work, and well supplied with apparatus and reagents, a room for micro-photography, and rooms for advanced work in animal morphology.

SINCE we last noticed (ACADEMY, August 4) the official publications of the International Fisheries Exhibition, we have received from Messrs. Clowes several more parcels. The series of handbooks has been augmented by *The British Fish Trade*, by Mr. Spencer Walpole; *Sea Monsters Unmasked* (illustrated), by Mr. Henry Lee, in which may be found the latest scientific opinions about the sea serpent; *Indian Fish and Fishing and Fish Culture* (both illustrated), by Dr. Francis Day; and *Fisheries and Fishermen of all Countries from the Earliest Times*, by Mr. W. M. Adams. The other series includes papers on "The Scientific Results of the Exhibition," by Prof. E. Ray Lankester; "A National Fishery Society," by Mr. Charles E. Fryer; "Trawling," by Mr. Alfred W. Ansell; "Crustaceans," and "Mackerel and Pilchard Fisheries," by Mr. Thomas Cornish.

#### PHILOLOGY NOTES.

THE British Museum recently acquired—we believe, through Dr. Neubauer—a valuable collection of Karaite Biblical MSS., giving the Hebrew text written in Arabic characters, but for the most part furnished with the Hebrew vowel points and accents. One of these, containing Exod. i. to viii. 5, has been reproduced by the autotype process, under the editorship of Dr. Reinhart Hoernling, and will be issued to subscribers by Messrs. Williams and Norgate. Dr. Hoernling has added a transliteration into ordinary Arabic type, a description of the palaeographical peculiarities of the MS., and a collation of the Hebrew text to which it corresponds.

PROF. J. GOLDZIEHER will shortly publish, with Brockhaus, of Leipzig, an essay in Mohammedan theology, entitled *Die Schule der Zahlr-iten, ihr Ursprung, ihr System und ihre Geschichte*.

ELWERT, of Marburg, announces works upon Cicero's Letters in 44 and 43 by Rüte; and upon the use of *obros* in the *Iliad*, by Ph. Braun.

THE *Revue politique et littéraire* of September 1 prints a large portion of the annual Report delivered this year by M. James Darmesteter to the Société asiatique. For the previous five years the reporter was M. Renan, who took up in 1868 the task that Jules Mohl had begun in 1840.

M. CLERMONT-GANNEAU contributes a paper to the *Revue critique* of August 20 upon the names of the personages associated with the crucifixion in early mediaeval art. The soldier with the spear, who has become familiar as St. Longinus, got his name from the spear itself, λόγχη. Another soldier, holding up the sponge, is occasionally found to bear the name of Stephanon, which M. Clermont-Ganneau would similarly derive from a misreading of the word στήθιον. Again, the name of the penitent thief, St. Dysmas in the Greek Church, may be a cor-

ruption of [*els rds*] *durps*—i.e., the West—derived from the representation of the sun and moon found in primitive pictures of the crucifixion. The name of the impenitent thief is Gestas—possibly the remaining *els rds*.

### FINE ART.

GREAT SALE OF PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

*The Organ Cases and Organs of the Middle Ages and the Renaissance.* By Arthur George Hill. (Bogue.)

THE organ has many lovers, some regarding it from the musical point of view and some from the mechanical, but few indeed from the historical. And there have been many books on organ-building and organ-playing; but that which is to give us the real story of the instrument has yet to be written. Mr. William Chappell, in his unfinished *History of Music*, has given us the first chapter, but it does not come beyond the days of pagan Rome; and, although the instrument of that time is, no doubt, the ancestor of that of ours, the whole line of the pedigree has yet to be traced out. Messrs. Hopkins and Rimbault's excellent book is very meagre in the historical chapters; and, beside it, we have little else than monographs on particular instruments, none of which go back much beyond the sixteenth century. Mr. Hill does not supply the want, for he deals for the most part only with existing organs, the oldest of which are but modern; and, although he has a few pages of general historical matter, they are not such as to show evidence of original research and are not free from actual errors. For instance, it is rather startling to be told, as we are on p. 14, that Smith took down the ancient organ of St. Paul's in 1697; and certainly the Durham organ did not survive the Civil Wars; nor is the book called *The Rites of Durham Abbey* the work of one Davies. But Mr. Hill does what was sorely wanted in that he insists that an organ is something more than a mere collection of pipes and "movements," and that an old instrument has an historical as well as a musical value, and deserves respect of the same kind as that which they who hate the ways of the "restorers" would have paid to our old buildings. He well protests against the continual alteration and enlargements to which English organs especially are subject, and which have left us now scarcely any genuine examples from the hands of the famous masters of organ-building of the seventeenth and eighteenth centuries.

It seems to be but too true that the greatest enemy of the organ is the organist. There are honourable exceptions, but the average church organist is a man of only one idea, and that a very small one. To him the church exists only to contain the organ, the organ only that he may display his dexterity upon it, and the services only as occasions for the exhibition. His ambition is to have a larger instrument than his rivals, or to possess this, that, or the other new stop. Each has his own fancies, and it has come to be almost a matter of course that the appointment of a new organist is followed by the remodelling of the organ. One after

another the famous works of Harris and the Smiths have been sacrificed to the vulgar demon of bigness, and have given place to new, mechanically superior indeed, but in no way better, or even so well fitted to accompany the service, which is the true use of a church organ.

But Mr. Hill has more to say about the case than about the instrument itself. He calls attention to the merit of the old cases, which date from the fifteenth even down to the eighteenth century; and he would have new organs provided with the like, instead of being, as they generally are, left as naked stacks of pipes, whose ugliness compels them to be thrust out of sight as much as possible, often into corners ill fitted for the display of their musical qualities. Certainly, if our churches are to contain large organs, their presence must be recognised, and the conditions of it properly accepted and met. The organ has itself become an edifice, and the attempt to conceal it is absurd. If it is honestly shown, it must receive such treatment as will prevent it from being a disfigurement. It is not fairly meeting the difficulty to put forward a small part for show, as is done in many cathedral churches, while the ugly heavy pipe work is packed away round the corner where it is conventionally supposed to be out of sight. Whatever is there needs suitable treatment; and it is no easy task to maintain the balance between the conflicting architectural and ecclesiastical claims of the church and its huge parasite, the organ, so that the latter may have full scope as an instrument without usurping to itself a greater importance than of good right belongs to it.

Our present difficulties, in England at least, are different from, and in some respects greater than, those which the old organ-designers had to contend with. But, in the absence of a living tradition, the best education for our work is the study of theirs. And this gives a practical value to such a collection of drawings as Mr. Hill presents. Most of the famous old organs existing in Europe are here, and some which no longer exist. Every part of Western Europe is well represented except Spain, which is expressly passed over for want of information, and, strange to say, England, which might have well supplied many more plates than it has. One English example given, by-the-by, is one that never existed. It is the very queer instrument drawn opposite p. 91, and said to be from Westminster Abbey, but the like of which was never seen there. It is taken from a Dutch print purporting to represent the Coronation of William and Mary. But Dutch impudence has been too much for Mr. Hill. I do not remember this particular organ, but I have seen Dutch engravings of the Coronation of William and Mary going on in buildings having at least as great a likeness to St. Peter's at Rome as they have to St. Peter's at Westminster, and I doubt not it comes from one of them. Why is it dated 1677 on the plate?

What Mr. Hill has to say on the architectural treatment of the organ is for the most part sound, but further study will probably make him modify his opinions on some points; and it is singular that an organ-builder should not insist more strongly than he does on the necessity of the mechanical and acoustical re-

quirements of the instrument being recognised in the design of the case. He does well in his condemnation of the stupid barbarians who destroy Renaissance organ-cases on the plea that they are out of keeping with the Gothic churches for which they were designed. But I cannot agree with him when he advises that we should ourselves adopt the Renaissance style for organs in old churches. It may be quite true, as he says, that there is no reason why a Renaissance organ should not now be designed for a Gothic church; but, on the other hand, there is no reason why it should. The sixteenth-century designer produced a Renaissance design because that was the style of his time, in which he did well or ill according to his ability. The fact that our time has not any style of its own has at least the advantage that, having all past styles to choose from, we are free to select the best, not to be copied, but to become the basis of our own style. Now the merits of Renaissance work are those of the artist and not of the style. Let us therefore learn all we can from him as we should from others, but let us choose a better medium than the Renaissance style for putting our acquired knowledge into practice.

J. T. MICKLETHWAITE.

### THE HAMILTON DANTE.

In a "Separat-abdruck" of the *Jahrbuch der königlich preussischen Kunstsammlungen* for 1883, Dr. Lippmann has set the question of the authenticity of the illustrations in the "Hamilton Dante" beyond doubt. No full notice of these drawings has ever appeared before. Waagen, who published his *Treasures of Art in Great Britain* in 1854, only enjoyed a very cursory inspection of them—enough to convince him of their great value, but also to suggest that they were by different hands. The difference, however, between the later and earlier drawings only points to modifications in the style of a single artist; probably the later ones were done when he had passed under the influence of Signorelli, and all are unmistakably in the manner of Botticelli. The drawing of the heads, management of drapery, composition, the use of flowers, indubitably prove the workmanship of the painter of "Spring" in the Florentine Academy. Other evidence, though this is sufficiently convincing, is not wanting. Among the angels in the lowest group of the illustration to canto xxviii. of the *Paradiso* is a figure holding a kerchief on which "Sandro di Mariano" is written in minute but legible characters.

Vasari, indeed, has left a curiously inaccurate notice of Botticelli's work upon the "Divine Comedy." On his return from working in the Sixtine Chapel at Rome, Botticelli, says the chronicler, "per essendo persona sofistica," commented part of Dante, illustrated the *Inferno*, and published his illustrations. From these misstatements it is clear that a vague rumour of Botticelli's work was at any rate widely spread. Perhaps the unfounded idea of the commentary was suggested by his assiduous study. The other sentence contains more truth; some of the designs for the *Inferno* were published. In the "Landino Dante" of 1481 four cantos of the *Inferno* (viii., xvii.-xix.) have illustrations identical with those of the "Hamilton Dante." The other engravings, however, bear no resemblance to them, some even betraying a German influence.

The text of the poem is written across the sheets of parchment in four columns upon one side, the other side being devoted to the illustra-

tion of the subsequent canto, so that the eye can pass easily from the verse to the drawings. Of these sheets, some are missing; there are in all eighty-seven, with eighty-four drawings, the spaces for the illustrations of the last three cantos of the *Paradiso* not being filled in. The outlines are done with a light metal pencil, probably a mixture of lead and silver, and are finished with a pen. Only one is coloured, and that in the *Inferno*.

There is, as has been observed, a marked difference between the earlier and later designs. The artist does not seem to feel at home in the *Inferno*, or to have devoted so much attention to it. The fiends are conventional, and not seldom grotesque. The great pictures, such as the defiant *Farinata* rising from the burning tomb, are inadequately rendered, and naturally there is very little decorative work. The *Purgatorio* offered full scope, however, for the artist's peculiar genius, especially the magnificent pageantry of the closing allegory; and he seems, indeed, to have felt "puro e disposto" on issuing into the light. His faculty for composition appears to striking effect in the pictures of Justice in *Purgatorio*, canto x. The group, of which Trajan's memorable action forms the centre, is very noble. And the vision of the lady walking amid the flowers in *Purgatorio* xxviii. suggests at once the Florentine "Spring" with its grouping of trees and flowers. To single out another, the figures of Dante and Beatrice sweeping up to the stars at the close of the *Purgatorio* are full of swift and graceful motion; while the composition of the great group of the blessed which Beatrice points out to Dante in the chaste sphere (*Paradiso* iii.) is very fine, and in Botticelli's most original manner. This is one of the three illustrations Dr. Lippmann has selected for his heliographs, which are admirable reproductions. It is to be hoped that before long reproductions of the whole series will be issued; and that, as the original has been allowed to pass out of England, accessible copies at least will be in all our museums.

## CORRESPONDENCE.

ST. HELEN'S CHURCH, NORWICH.

Norwich: Sept. 1, 1883.

A supplementary account of the work here of the National Society for Preserving the Memorials of the Dead may prove of interest. In the church fifty memorials remain; two are partially covered by the pews, two have lost their brasses, and the rest name ninety-one persons. In the cloister are five memorials (two partially obliterated), naming five persons. In the churchyard are twenty-six memorials, of which three have the inscriptions obliterated, and on the others thirty-three persons are commemorated. Among the monuments in the interior may be noted those to the Masters. The earliest is a stone slab, dated 1675, as under:—

HERE LYETH Y<sup>e</sup> BODY OF NICHOLAS RIX  
WHO WAS MASTER OF THIS HOSPITAL  
32 YEARS & A QUARTER HE DEPARTED  
(THIS LIFE Y<sup>e</sup> 14<sup>th</sup> OF NOVEM<sup>r</sup> 1675  
AGED 74 YEARS.

Mihi Christus est, et in Vita, et in  
morte lucrum

SAMUELL RIX Y<sup>e</sup> SON OF NICHOLAS RIX  
AGED 24 YEARS & A HALFE DEPAR  
TED THIS LIFE Y<sup>e</sup> 1<sup>st</sup> OF JUNE 1676  
& LYETH HERE INTERR'D  
mori vixit, vivere obijit

Also another with the inscription:—

Here Lyeth M<sup>r</sup> Ann Rix who dyed Jan. the 15<sup>th</sup>  
16 4 aged 8.

The two figures omitted are obliterated.

To the above-named three persons there is a mural tablet with the following inscription:—

To the Memory of M<sup>r</sup> NICOLAS  
RIX, who was Thirty two years  
A careful diligent and faithful Master  
of this Hospital, until the tormenting  
fits of y<sup>e</sup> Stone made him resigne that  
office, and afterwards his painful life,  
which he exchanged for Eternal Rest  
November y<sup>e</sup> 14<sup>th</sup> 1675. aged 74  
To the Memory also of ANN his wife, who  
conclud<sup>d</sup> her long as well as pious life  
of Eighty three years Jan: y<sup>e</sup> 14<sup>th</sup> 1694.  
And of SAMUEL their onely son who  
died June the 1<sup>st</sup> 1679  
This Monument was erected by MARY  
daughter of the said NICOLAS and  
ANN, widow of THOMAS SHELWELL  
late of London Gentleman  
The said M<sup>r</sup> MARY SHELWELL died y<sup>e</sup> 8<sup>th</sup> of June,  
1718. ag<sup>d</sup> 76 years and lies in a vault near the  
middle part of this Altar.

On the slab the year of Samuel Rix's death is  
1676—on the mural tablet, 1679. The slab to  
Mrs. Ann Rix gives her death on January 15—  
the tablet, on January 14.

HERE VNDER LIETH THE  
BODY OF STEPHEN . . .  
WHO DEPARTED THIS LIFE  
TENTH OF MARCH  
1671

Blomefield's History gives "Priest" as the sur-  
name.

out of Gratitude to the Memory  
of Auguftin Steward Gent who  
Willingly left this World for y<sup>e</sup>  
hopes of a better Decemb. y<sup>e</sup> 14<sup>th</sup>  
1689 Aged 57 years  
And Mary his Wife who  
Exchanged this life for y<sup>e</sup> } Hidden  
of a blessed & immortal on } by pews.  
Decemb. 9<sup>th</sup> 1697 Aged 65 y

Here Resteth in Hopes of a Joyfull  
Resurrection y<sup>e</sup> Body of JOHN KIRKPATRICK  
of this City Merchant and Treasurer  
to this Hospital: He was a Man of sound  
Judgement good Understanding and  
Extensive Knowledge: Industrious in  
his own Business and Indefatigable in  
that of this Corporation in which he  
was Constantly Employed. He Dyed  
very much Lamented by all that knew  
him on the 20<sup>th</sup> day of August in the  
Year of our Lord 1728  
Aged 42.

This John Kirk-Patrick was, says Blomefield,  
"a judicious Antiquary and made great  
collections for the City of Norwich jointly with  
Peter le Neve Norroy: published a prospect of  
the City, and gave a Gilt Silver Cup for the  
Mayor's use." It is also recorded that he  
helped Blomefield with his History of Norfolk.

BRASS.

HERE LIETH THE BODY OF  
DANIEL MARKON WHO DIED THE  
18 OF NOVEMBER AT THE AGE OF  
36 IN THE YEARES OF OVER LORD  
16 27

WM. VINCENT, Secretary.

## NOTES ON ART AND ARCHAEOLOGY.

THE ornaments, initial letters, &c., of Messrs.  
Macmillan's *English Illustrated Magazine* will be  
taken for the most part from Heinrich Alde-  
grever and the French school of the sixteenth  
century. Mr. Alma Tadema's "Shy," which  
will form the frontispiece to the first number,  
has been engraved by Mr. Theodor Knesing;  
and the greater number of the wood-cuts have  
been entrusted to Mr. J. D. Cooper.

In the next number of the *Magazine of Art*  
we are promised a reproduction in colour of

E. Burne Jones' "Cupid's Hunting-grounds,"  
and a timely note, by Mr. Austin Dobson, on  
the famous "Calais Gate," which will soon be  
among the things of the past.

MR. BATSFORD, of High Holborn, has made  
arrangements for issuing in this country Alex-  
ander Schütz's Illustrations of the Architecture  
and Decorative Art of the Italian Renaissance.  
The work consists of 332 folio plates, printed in  
phototype. These have been classified in four  
volumes or portfolios, of which the subjects  
are—(1) The Early Renaissance, from Brunel-  
leschi to Giuliano da Sangallo; (2) The Later  
Renaissance, from Bramante to Palladio; (3) De-  
coration in Stone and Terra-cotta; (4) Decoration  
in Wood. The price of the whole is sixteen  
guineas, but the volumes can be obtained  
separately.

THE first "Salon Triennial" will be opened  
this month at Paris. It will be composed of  
works that have appeared in the last three  
Salons. The experiment by which a means  
will be afforded of testing at short intervals the  
tendency of taste and the progress of individual  
artists is one of great interest.

AN exhibition of the works of the late painter  
Manet, the *doyen* of the French Société des  
Impressionnistes is about to be organised at the  
Ecole des Beaux-Arts. Two of Manet's pictures,  
"Course de Taureaux" and "Ballet Espagnol,"  
were lately to be seen at the Impressionniste  
exhibition at Messrs. Dowdeswell's, in Bond  
Street.

THE excavations now being made at Delos  
by members of the French School at Athens  
have resulted in an interesting discovery. In  
the neighbourhood of the theatre of Apollo  
they came upon the remains of a private  
house which apparently belonged to the  
Alexandrine epoch. A court surrounded by  
pillars and twelve chambers has been opened  
out. The floor is composed of mosaic, represent-  
ing flowers, fishes, and other ornaments. In  
the middle of the court is a well, now quite  
choked up. The door of the house and the  
line of roadway or street leading to it have also  
been discovered. The excavations will be con-  
tinued, and it is hoped that a large portion of  
the old town will be brought to light.

A MONUMENT in honour of Daguerre, the  
inventor of photography, has been inaugurated  
at Cormeilles-en-Parisis.

THE centenary of Peter von Cornelius, the  
founder of the modern art revival in Germany,  
is to be celebrated with a grand festival by the  
artists of Berlin. Cornelius was born at  
Düsseldorf on September 23, 1783, though  
some authorities give the year following.

M. REVILLOUT has recently been reading  
some papers before the Académie des Inscryp-  
tions upon "The Silver Standard in Egypt  
under the Ptolemies." Up to the time of  
Philopator (221 B.C.), Egypt, like Greece, had a  
silver standard only, copper being used for  
fractions. Philopator founded a double stand-  
ard, the proportion between silver and copper  
being one to 120. His son, Epiphanes, intro-  
duced a currency of copper, with coins of the  
same weight and denomination as the silver  
coins, the proportional value being as above.  
The Romans (30 B.C) restored a silver standard,  
but debased the currency. M. Revillout based  
his conclusions upon an elaborate comparison of  
the demotic papyri with the contemporary  
Greek papyri.

THE colossal statue of Victory from the Isle  
of Samothrace has been restored, and effectively  
placed on a staircase in the Louvre.

A NEW room has been opened at the Cluny  
Museum. Among its contents are the Jacquem-  
mart collection of old shoes, the six tapestries of  
the fifteenth century known by the name of the

tapestries of the *Dame à la licorne*, and a finely sculptured *cheminée* found in the Rue de la Croix-de-Fer at Rouen.

A NUMBER of terra-cotta figures discovered by peasants of Myrina have been added to the collections of the Louvre. Most of them appear to be imitations of Tanagra figurines. The most remarkable is a large one of a dancer perfectly preserved; and another, also large, representing a naked Venus with a vase near her, is signed ANTIQTOY.

A SATISFACTORY reproduction by Dujardin of one of the simplest heads ever drawn by Rossetti graces the *Portfolio* this month. A pleasant article by Prof. Colvin on "Donatello" is placed between the continuations by the Editor and Miss Amelia B. Edwards of their studies of Paris and Ancient Egyptian Art. Mr. Chattock's etching of "Chagford Bridge" is a faithful and accomplished study.

THE Autotype Company have sent us a copy of Mr. Herbert Schmalz's picture called "Voices," exhibited at the Royal Academy last year. Both the design and the execution readily lend themselves to this process of reproduction, which has now reached a very high degree of excellence.

## THE STAGE.

### MISS MARY ANDERSON IN LONDON.

AMERICA at the present time possesses two actresses who divide between them the privileges of popularity. Miss Clara Morris and Miss Mary Anderson are the ladies whose names rise to one's lips when the most prominent ornaments of the American stage are in question. It may be that Miss Calhoun, of the Haymarket—a young American actress from whom those who know her the best expect the most—will one day come to be counted along with her more famous sister-artists. Her Rosalind, at the Imperial, did something to make it likely. But at present, at all events, Miss Morris and Miss Anderson are more immediately in the front; and the playgoing world that concerns itself with foreign stars has, for some time, been pleasantly disquieted at the expectation of welcoming one at least among the eminent luminaries. Miss Mary Anderson, who arrived in town during the season, appeared for the first time on Saturday night, when the Lyceum was as full, and its audience almost as enthusiastic, as if the approved tragedian had been appearing for the first time in a Shaksperian revival. But Miss Anderson, or her manager, Mr. Abbey, was, from one point of view, hardly well advised in selecting such a piece as "Ingomar," which, more than thirty years ago, Mrs. Lovell adapted from the German. "Ingomar" inculcates all the virtues; "Ingomar" is the pink of propriety; but "Ingomar," it must be frankly confessed, is likewise a trifle dull. The action of its characters is conventional; little in the piece suggests that its author has studied nature—has been near to life. Nor does he appear to have been an adept at devising with ingenuity those sensational incidents which are among the most effective resources of the modern playwright. Thus "Ingomar," in itself, cannot violently interest—cannot powerfully charm. We endure, but we may hardly love it. It may on this account be argued that it was scarcely wise to make it the medium of displaying to the English public an actress whom it was desired should be popular. But, on the other hand, it is evident that a success won in such a piece as "Ingomar" may count for almost as much as a triumph won elsewhere. And Miss Anderson has done more than succeed. She has conquered and fascinated. The personal charm of the actress, and her curious discretion in the management of her talent, have roused

to enthusiasm those critics who are the most unused to the mood of ecstasy. It is recognised already, and almost universally, that with Miss Anderson a new and potent attraction has appeared upon our stage; and her performance in the part of Parthenia has given us at the least an agreeable foretaste of what she may accomplish in characters more obviously worthy of her. She has a voice of much melody, and of no overwhelming power. She has beauty of feature, and beauty of refined expression. Her figure commends itself by its agility of grace. So much for the lady to whom, for America's sake and for her own, we extend a cordial welcome. But it is undesirable to follow in minute detail the various features of her present performance. Even in hands as accomplished as Miss Anderson's, Parthenia remains a character too unreal to support the labour of analysis. Had Miss Anderson appeared as Galatea—the Galatea of Mr. Gilbert—that, we admit, would have been not more real; but then Galatea is frankly ideal—we do not judge her by the standards of nature. The delightful actress who has just come among us will not be able, we surmise, to ensure a long renewal of popularity for "Ingomar;" but her own popularity is placed beyond question. She has an abundant measure of tact, of talent, and of charm. She has intelligence and sensibility; she has beauty, and "la grace, plus belle que la beauté." In a world where many qualities may go unrewarded, these latter qualities never go unrewarded, and least of all upon the stage. So Miss Mary Anderson is of course a success.

### GLOUCESTER MUSICAL FESTIVAL.

#### I.

THE 160th meeting of the Three Choirs of Gloucester, Worcester, and Hereford opened last Tuesday with service in the cathedral; and a sermon was preached by the Very Rev. C. J. Vaughan, Dean of Llandaff, in aid of the widows and orphans of the poorer clergy. At one time clerical intolerance threatened to sweep away these Festivals, or at any rate to deprive them of any special musical value; and, though the storm has not quite passed away, the force of public opinion has made itself felt, and the claims of art are still recognised. If the opening sermon and the services held every morning during the Festival stir up the worshippers to a bountiful alms, they are doing good; we have, however, to concern ourselves here, not about the religious, or charitable, but merely the musical features of the Festival.

"Elijah" and "The Messiah" are, of course, the Alpha and the Omega of the week's music. There is a great deal to be said in favour of these Oratorios being chosen: of their kind, they are very fine, and at present the most popular; also, it must be remembered that in the Western provinces the opportunities of hearing them worthily interpreted are few and far between. From an art point of view, however, we shall hope some day to see one, or even both, give place to other works equally deserving of a hearing. Besides the "Elijah," Mendelssohn is represented by two other important compositions—the "Hymn of Praise" and the "Walsburgis-Night." Beethoven's Mass in C and Gounod's "Redemption" complete the list of choral works which are not novelties. Beyond the predominance given to Mendelssohn, we have no fault to find with the selection. The new compositions have all been written expressly for the Festival, and they are all by native composers—Dr. Stainer, Dr. Parry, and Dr. Arnold. The first wrote "The Daughter of Jairus" for the Worcester Festival of 1878, the second "Prometheus Unbound" for the last

Gloucester Festival, while the third, who is organist at Winchester, is known as the writer of an Oratorio entitled "Ahab," performed some years ago in London. In due course we shall notice the Festival novelties. It is a good thing to encourage native art; but care should be employed in the selection of new works; the best only should be given.

We shall not speak in detail about the performance of such a familiar work as the "Elijah." Mr. Santley gave a fine rendering of the Prophet music. The other principal soloists were Miss Mary Davies, Miss Anna Williams, Miss H. Wilson, Mme. Patey, Mr. Lloyd, and Mr. F. King. Mr. C. L. Williams showed great ability as conductor; this is indeed saying much, for he is new to the post.

Dr. Stainer's Sacred Cantata was performed in the cathedral on Wednesday morning. It is entitled "St. Mary Magdalen," and the story of that shadowy personage is related in three scenes by the Rev. W. J. Sparrow-Simpson. We have the Magdalen in the house of Simon—for, following an ancient legend of the Church, the identity of the woman who anointed the feet of Christ in the house of the Pharisee with Mary Magdalen is assumed—the Magdalen by the Cross, and the Magdalen at the Tomb. From beginning to end the theme is Magdalen. In the second scene the death of Christ is mentioned; but he says,

"See, I am dying—  
Dying for thee."

In the last scene we read how he "burst the grave's dark portals;" but the Resurrection is introduced only to show us how from a sinner Magdalen became a saint. The evangelists speak only of "the woman in the city;" her name and her individuality were of no importance. She was the dark figure in the picture which set off the bright face of the forgiving Master. The subject does not possess sufficient interest for a Cantata occupying an hour and a-half in performance; and the total lack of contrast in the story tells unfavourably upon the music. The composer starts with an overture which is twice interrupted by a recitative for bass voice. The principal theme is characteristic and treated with considerable skill; but the second subject is vague and somewhat long. In the opening scene we would notice the Magdalen's first song, "Ah, woe is me": the first part contains some curious but effective passages; the latter part is smoothly written and tastefully harmonised. The recitative following, with its chromatic phrases, reminds one of Gounod's "Redemption." The Angel's song, if not particularly original, is decidedly pleasing. The concluding chorus, "For none of us liveth to himself," is bold and interesting; the orchestra is busily and skilfully employed. In the second scene, the most striking features are the opening recitative and following *chorale*, and the song of mourning cleverly combined with the taunts of the Roman soldiers. The last scene is not the most striking of the three, but it concludes with an elaborately worked chorus. The music throughout the Cantata is modern in feeling; the chromatic element is perhaps a little forced; and at times there are passages which remind one very much of other composers, especially Schumann. The work, nevertheless, is most ably written and effectively scored. However, in spite of many excellent qualities, the general result is unsatisfactory; but for this, as we have implied, the composer is not altogether to blame. With a more promising *libretto*, we believe that he will produce a work of greater value and interest. The Cantata, conducted by Dr. Stainer himself, was well performed and well received. The solo parts were sung by Miss Anna Williams, Miss Hilda Wilson, Mr. E. Lloyd, and Mr. F. King.

The rest of the concert included two fine

anthems of the early English school—Bird's "Bow thine ear" and Gibbon's "Hosanna to the Son of David." It is right that such noble specimens of English art should not be neglected; and there is certainly no more fitting place for their performance than a cathedral. They were fairly well sung; the first was taken at a too rapid rate, and the balance of voices was not always perfect. The morning concert concluded with Beethoven's Mass in C, the soloists being Miss Anna Williams, Mdme. Patey, Mr. Boulcott Newth, and Mr. F. King.

The first evening concert in the Shire Hall, on Tuesday, was well attended. The programme was well chosen; and the fact deserves special mention, for often at these miscellaneous entertainments songs are selected unworthy of a Festival. The first piece was Mozart's Symphony in G minor, admirably played by the band, and ably conducted by Mr. Charles L. Williams. Mr. W. H. Brereton gave a vigorous rendering of Schumann's "Die Beiden Grenadiere," and Mdme. Patey was enthusiastically applauded for her singing of Schubert's "Ave Maria;" both songs were accompanied by orchestra. Mdme. Avigliana sang the aria from "Der Freischütz," and Mr. B. Newth Handel's "Where'er you walk." The first part of the programme concluded with Dr. C. H. Parry's new choral work, "The glories of our blood and state." The well-known words are by the poet Shirley. The theme is Death; and the composer has approached his subject with decided earnestness. The piece is divided into three sections; the two first are wild and restless; the last is quieter, and ends effectively in the major key to the words

"Only the actions of the just  
Smell sweet, and blossom in their dust."

Dr. Parry does not appeal to popular taste; but his skill and seriousness will be readily acknowledged by musicians. His music is addressed to the intellect rather than to the heart; and he has not yet learnt to express his thoughts as if he were thoroughly master of them. In listening to his composition, we feel as if we were working with him; whereas the greatest musicians prepare everything, and only leave us to enjoy the fruits of their skill and labour. The new work was conducted by the composer, but the performance was not all that could be desired. The second part of the concert included Cherubini's "Anacreon" Overture, and two very clever and taking part-songs: the first was "I wish to tune my quivering lyre," by Dr. Dyer, and the second, "Allen-a-Dale," by C. H. Lloyd. A word of praise is due to Miss Amy Hare for her intelligent rendering of Chopin's "Ballade" in G minor. We forgot to mention Mr. Carrodus's admirable playing of the first movement of Beethoven's Violin Concerto in the first part of the concert.

A notice of "Sennacherib" and the remainder of the Festival must be deferred till next week. But we must express our surprise that such a work as Dr. Arnold's, with much sound and little sense, could ever have been chosen for the occasion.

## BRITISH ASSOCIATION for the ADVANCEMENT of SCIENCE, 22, Albemarle-street, London, W.

The NEXT ANNUAL GENERAL MEETING will be held at SOUTHPORT, commencing on WEDNESDAY, SEPTEMBER 19TH.

President-Elect—

ARTHUR CATLEY, Esq., M.A., LL.D., F.R.S., V.P.R.A.S., Sadlerian Professor of Mathematics in the University of Cambridge.

NOTICE to CONTRIBUTORS of MEMOIRS.—Authors are requested to give early notice of their intention to offer Papers. Information about Lodgings and other local arrangements may be obtained from the Local Secretaries, Town Hall, Southport.

T. G. BONNEY, Secretary.

## UNIVERSITY COLLEGE, LONDON.

The SESSION of the FACULTY of MEDICINE will begin on OCTOBER 1ST.

The SESSION of the FACULTIES of ARTS and LAWS and of SCIENCE will begin on OCTOBER 2ND.

Instruction is provided for Women in all Subjects taught in the Faculties of Arts and Laws and of Science.

Prospectuses and Copies of the Regulations relating to the Entrance and other Exhibitions, Scholarships, &c. (value about £3,000), may be obtained from the College, Gower-street, W.C.

The EXAMINATION for the ENTRANCE EXHIBITIONS will be held on the 26TH and 27TH of SEPTEMBER.

The SCHOOL for BOYS will RE-OPEN on SEPTEMBER 25TH.

The College is close to the Gower-street Station of the Metropolitan Railway.

TALFOURD ELY, M.A., Secretary.

## THE VICTORIA UNIVERSITY, MANCHESTER.

The PRELIMINARY EXAMINATION of the University will be held at the OWENS COLLEGE on MONDAY, OCTOBER 1ST, and the following days. This Examination is open to all persons who have Matriculated—i.e., entered their names in the Registers of the Owens College and of the University.

For detailed information regarding Courses of Study, Degrees, &c., application should be made to the Registrar.

A. T. BENTLEY, M.A., Registrar.

## OWENS COLLEGE, VICTORIA UNIVERSITY (MANCHESTER).

SESSION 1883-4.

I. DEPARTMENT of ARTS and LAW.

II. DEPARTMENT of SCIENCE and ENGINEERING.

Candidates for Admission in these Departments must not be under 14 years of age, and those under 16 will be required to pass an Entrance Examination in English, Arithmetic, and Elementary Latin, to be held on the 25TH SEPTEMBER.

III. DEPARTMENT of MEDICINE and SURGERY.

Students are required, before entering, to have passed one of the Preliminary Examinations prescribed by the General Medical Council.

The SESSION in DEPARTMENTS I., II., and III. will commence on the 2ND OCTOBER.

IV. DEPARTMENT for WOMEN (223, Brunswick-street).

The SESSION will commence on the 9TH OCTOBER.

V. EVENING CLASSES.

The SESSION will commence on the 15TH OCTOBER. New Students will be admitted on the 10th, 11th, and 12th October, between 6.30 and 9 P.M.

ENTRANCE EXHIBITIONS are offered for Competition at the beginning of the Session in Classics, Greek Testament, Mathematics, English, and History; and also a DAUNTESBY MEDICAL SCHOLARSHIP, value £100.

Prospectuses of the several Departments may be obtained at Mr. CORNISH'S, Piccadilly, Manchester, and they will be forwarded from the College on application.

J. HOLME NICHOLSON, Registrar.

Just published, fcap. 8vo, price 2s. 6d.

## BOUQUET, by WILLIAM BAYLEY.

London: BAYLEY'S, 17, Cockspur-street.

## AUTOTYPE PHOTOGRAPHIC BOOK ILLUSTRATION.

ADVANTAGES.

1st. They present Faithful Representations of the Subjects.  
2nd. Printed on the paper of the Book itself, mounting not required.

3rd. For Editions of 1,000 and under they are cheap.

Employed by the Trustees of the British Museum and by the Learned Societies; also by many of the leading Publishers.

Amongst the Works recently done, or at present in the press, may be cited: *Lady Brassy's "Tahiti";* Professor Gardner's *"The Types of Greek Coins";* F. T. Hall's *"Pedigree of the Devil";* Audsley's *"Ornamental Arts of Japan";* Lockyer's *"Spectral Analysis";* Burgess's *"Archaeological Survey of India";* "Samuel Palmer: a Memoir."

Of this last work the *Athenaeum* says: "This book is admirably illustrated by fourteen Autotype reproductions from lovely and characteristic sepia drawings."

For Terms and Specimens, apply to the Manager,

PART IV., completing the Work, is published this day.

This day is published, New and Cheaper Edition.

## MY TRIVIAL LIFE and MISFORTUNE:

a Gossip with no Plot in Particular. By "A PLAIN WOMAN." New Edition. Complete in 1 vol., crown 8vo, 6s.

"The story of 'My Trivial Life' is a genuine book, and may indeed be esteemed for one of the bitterest and cleverest novels produced of late years."—*Saturday Review*.

"It is, in fact, a work of great ability, by one who observes keenly, and at the same time sees deeply into character. She has the power of presenting real people."—*Athenaeum*. "A book really cleverly and amusingly written."—*Vanity Fair*.

"The author reminds me again and again of Jane Austen."—*Truth*. "She delights the intellect by a continuous succession of bright, witty, often caustic sketches of what is commonly known as 'good society.' . . . Imagination, wit, and the power of mental analysis have all contributed to make 'A Plain Woman's' story a remarkable book."—*Scotsman*.

Edinburgh and London: WM. BLACKWOOD & SONS.

Now in preparation, and will be ready  
October 1st.

## COLOURED FREEHAND DRAWING COPIES FOR CLASS TEACHING.

- No. 1. From Egyptian Ornament.
2. From Japanese Ornament.
3. From Greek Ornament.
4. From Persian Ornament.
5. From Renaissance Ornament.
6. Butterfly.
7. Butterfly.
8. From Japanese Ornament.
9. From Celtic Ornament.
10. From Italian Ornament.
11. From Chinese Ornament.
12. From Renaissance Ornament.

These copies are specially adapted for the teaching of large classes. THE COLOUR makes the copy attractive to children, enables them to distinguish the form more readily, and induces a habit, so useful to draughtsmen, of looking at and comparing masses or spaces instead of simply observing outlines.

It is not intended that the colour should be copied by the children, though, when possible, the teacher will find it useful to allow this practice as a reward for careful drawing.

## ALEXANDER & SHEPHEARD

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

### "ENGLISH MEN OF LETTERS."

*Sheridan.* By Mrs. Oliphant. (Macmillan.)

THERE are passages in Mrs. Oliphant's *Sheridan* which in point of style are fully equal to the best that can be found in the series of books to which it belongs. But the impression left by the volume as a whole is that in its probationary career at the printer's it has either had one reading too few, or, like a Queen's speech, one reading too many, for the symmetry and consistency of some of its periods. Its noticeable defect is the doubtful treatment it often metes out to its numerous parentheses, which, whatever their importance to the clauses in which they appear, are usually dropped in at the end to save the writer's conscience, pretty much as Sir Lucius's allusions to Bob Acres's "honour" are dropped in at the close of nearly every comforting appeal to fortify that intrepid hero's courage. We have all been saying, as each volume of this useful series has issued from the press, that it is above all things well written. No doubt we have been right. These books are probably as free from glaring errors both of style and design as is the specimen of the bookbinder's art in which they appear; unfortunately, they are about as free from variety also. A distinct character they certainly possess, but they are as uniform in outline as a row of suburban villas. There is only the most faintly adumbrated personality of an author behind any of them. Each of the writers has a literary individuality which is recognisable in his other work; but, when he takes pen in hand to depict an English man of letters, this somehow seems to forsake him. In respect of the "inveterate likeness" which these volumes bear towards each other we shall certainly never see their like again, as Sir Oliver says of the "figures of men" in canvas which Careless is about to "knock down with their own pedigree." And to these words let none of us, for mercy's sake, be tempted to make the graceless Charles's irreverent rejoinder.

Supposing it were possible to discover a person of reasonable intelligence who had never so much as heard of Sheridan, we doubt if Mrs. Oliphant's book would afford such a one a distinct idea of his character. The monograph can hardly be said to vitalise its subject. Perhaps it is unfair to apply such a test. But what, after all, is the object of these little manuals? It surely must be one of two things—either to serve as introductions to the subjects dealt with, or as synopses of the best that has been said and known respecting them. If as introductions,

why not tell each story as if it had never been told before, beginning at the beginning and going straight forward to the end, never turning aside (never, we mean, on the printed page) to contrast authorities and to weigh up points in dispute? If as synopses, why burden each book with what in that case must be a tedious critical analysis? This, however, concerns Mr. Morley's share of the work and not Mrs. Oliphant's, except so far as the author of the present book has not dealt with Sheridan as she would have felt bound to deal with an imaginary personage in one of her fascinating novels if she had desired her readers to know and love him. We trust Mr. Morley would have had no cause to look aghast at such novelesque treatment of an historical theme. Assuredly the wraith of the original Captain Absolute would not have dared to rise in horror at a more serious sort of romancing, in lieu of any sarrago of humdrum facts.

Mrs. Oliphant has brought a quick eye to bear on the foibles and occasional inconsistencies of Sheridan's character. Nevertheless, it is doubtful if her portrait is on the whole properly proportioned. It does not leave behind it an adequate sense of Sheridan's importance in two prominent walks of life. It were hardly unjust to say that it is a slight sketch touched by a light hand, of a brilliant, an indolent, a fortunate and fashionable man. Then Mrs. Oliphant patronises Sheridan not a little. When, for example, the penniless young man is about to carry off his well-dowered Lydia—that is, his Betsey—out of the reach of his rivals, his biographer sits above the flighty pair with a benignity that is tempered only by her good-humoured pity for that species of folly with which she is so familiar in fiction. Indeed, we hope it is not rude to say that, like Malvolio, Mrs. Oliphant, in her dealings with Sheridan, stands too frequently on the "humour of her state," and contemplates him with "exalted demure travail of regard." Mr. Froude, in writing of Byron, has recently reminded us that Vesuvius is a volcano; we trust Mrs. Oliphant will not take it amiss if, in following so approved a precedent, we remind her that Sheridan was a great man, and that his greatness did not merely consist in his ability to throw off two or three marvellous works with wide margins "of leisure, of pleasure, and of facile life" around them. As a man, Sheridan was at once the idol and the victim of Fortune. He was no mere shuttlecock tossed up and down on the noisy battledore of popular applause. He was capable of strenuous endeavour. As Mrs. Oliphant says, he had even a mysterious genius for finance. He had an unerring eye for a political as well as a dramatic situation. He was no such blunderer as his grandfather, who "shot his fortune dead by chance medley" with choice of the text *Sufficient for the day* on the anniversary of the Hanoverian Succession. He never drew down upon himself such ridicule as was richly merited by his father when he pompously presented a medal as an honorary mark of dramatic merit to the author of a tragedy he admired. As a man of the world Sheridan made no serious slips—none, at least, which were independent of constitutional indolence, and which were due to faults of

judgment or deficient knowledge of life. Sheridan's blunders came oftenest of his ignorance of books. Such, for example, was the blunder of paying £600 for the impudent Ireland forgery. Even in that case his prudential insight, if not his critical acumen, would probably have been justified by the financial results but for Kemble's deliberate design of frustrating the manager's purposes in delivering twice with marked emphasis the line of *Vortigern* which ran,

"But when this solemn mockery is o'er."

The middle of life, which, as Mrs. Oliphant truly says, is the testing-ground of character and strength, did not, as she implies, find Sheridan high and dry on the shoals of social wreckage. At forty-five, nay at fifty, he was still one of the two or three leading actors on the stage of public life, with a supremacy on another stage which he had left a score of years behind him, and which no one in the meantime had arisen to dispute. Mrs. Oliphant's book is open to the objection of making too little of Sheridan's claim as a politician. Haydon used to say that publicly Sheridan acted once or twice with grandeur and principle. He never acted—at least, he is never known to have acted—in his public character with less than untarnished honour. It is true that once or twice he openly did the somewhat dirty work of advocate-in-chief for the Prince Regent's debts and debaucheries; but it says much for his political purity that he obtained nothing for such services, and relinquished his questionable office when "the finest gentleman in Europe" would have made the dirty work still dirtier. Mrs. Oliphant is probably right when she attributes Sheridan's side in politics largely to the accident of his early companionship with Fox, but this affects neither his patriotism nor, in the best sense, his principle. Perhaps there is, as Mrs. Oliphant says, all the difference imaginable between Burke's leading, organising, earnest, fervent spirit in politics and Sheridan's more light-hearted adventuring. This concerns Sheridan's temperament, not his sincerity or importance, the first of which is established by the fact that he made as many sacrifices as Burke himself to public duty, and the second by the certainty that he was master of an art which Burke never compassed—the art which seems given to no more than one man in a generation—of putting himself *en rapport* with the people, and, without the dazzling aid of office, of "catching all passions with the craft of will." It was not in political life alone that Sheridan, with his "mysterious genius for finance," had none of the baseness of a mercenary. There is a forgotten novel by Sheridan Knowles written to prove that his kinsman was of the most benevolent disposition. Certainly there is a sort of romantic generosity to be seen in the penniless young fellow who could conceal for months the fact that he had married Miss Linley at Calais, when an announcement of that circumstance would have given him a right to command the lady's dowry of three thousand pounds.

Perhaps Sheridan was never a wise man, he can hardly be called a good one, yet he was free from the worst vices of his condition and craft. He never exhibited envy of his favoured rivals; his temper was never soured

by misfortune. People said he had stolen his wit and borrowed his plots, that his fertile soil was capable of one crop and no more. But he was too well versed in the infirmities of human nature to look for generosity where he was more likely to meet with malice, and too sensible or too indolent to be angry when his experience justified his insight. Sheridan's own infirmities were inconvenient certainly, but not noxious. "Intercourse with him," says Prof. Smyth, tutor to Tom Sheridan, "was one eternal insult, mortification, and disappointment." No doubt this was true. The man who not only did not answer his letters, but neglected to read them; who not only neglected his appointments, but forgot them; who not only forgot his debts in irregular pursuits and dissipated society, but tacitly defied them, and was known to return home late at night—the muddled reveller—and wedge up his bed-room window, which rattled, with bank-notes out of his impoverished pocket, was not a man likely to prove a stay and a comfort to the people around him. Sheridan had just that minimum of selfishness which perforce adheres to the profligate; he had few or none of the higher virtues which belong to the chivalrous spirit; but force of character he certainly possessed. It is a grave error to say that either the middle or the end of life found him deficient in strength. We cannot talk of him as we have allowed ourselves to talk of Goldsmith. If he had died at thirty-seven years of age, when he stood on that apex of applause and honour which came of having written the three brightest comedies of the time and delivered the finest speech within living memory, no career would have seemed so brilliant as his, and no character so full of force. Then, indeed, society would have counted as nothing what he sacrificed to its pleasures. But Sheridan lived to be old, to be "a poor, broken-down, dissipated old man;" and hence it is, it seems, open to some of us to talk of him as a man devoid of character, or at least of character meriting respect. The truth is that more of us than would care to own to it rejoice in friend Dogberry's genius for calculating a man's character out of his circumstances. We find, for instance, that poor Steele enjoyed a great reputation for benevolence, but that when he was upon the point of his departure for Wales, and his friends came to lay their heads together, each man was his creditor. So we conclude that this humbugging Dick was a quack. We find that poor Savage spent alternate nights under the piazzas of Covent Garden and among the ribbands of St. James's, and closed his career in a prison at Bristol; so we find it easy to conclude that this second Dick was not only a Bohemian, but a blackguard. If the life of either had been extended or abridged by five poor years our estimate might have been other than it is. And because Sheridan was checkmated at last by Whitbread, because he lost his seat in Parliament and was left by Prince and party to sink or swim, and sank but too rapidly into unknown depths of "debts and duns and drink," most of all because health failed him, and because in the shameful end he was hustled into his coffin and stolen away to the shelter

of a friend's house lest he should be arrested dead—because of all this we conclude that our third Dick was a characterless prodigal of genius.

But Sheridan, like Fielding and his two afore-mentioned brothers-by-affinity, was a true son of that most un-English period and place, the eighteenth century in London. Unlike Steele, he did not spend his life in sinning and repenting, in inventing codes of morality and breaking them. Unlike Savage and Fielding, he did not run riot in more than a single sensual excess. But he was at one with all of them in regarding life, as Mrs. Oliphant says, as

"a vulgar sort of drama, a problem without any depths—to be solved by plenty of money and wine and pleasure, by youth and high spirits, and an easy lavishness which was called liberality or even generosity as occasion served."

And with this view of life they had each of them character enough to carry it through—Steele, like Charles Surface, with a bailiff behind the chair of every guest; Savage with the funds of Tyrconnel; Fielding with those, perhaps, of Allen; and Sheridan with his "mysterious genius for finance." This was all that there was in life for any of them, and they had nothing further to do with it, or to find out about it, at least not until the end, when Steele in Wales and Savage in Bristol, and Fielding in Lisbon and Sheridan in London—all broken in heart and shattered in body—turned pale with awe at the nearness of the death which had rarely before occupied their thoughts. But for each of them it is true, as Mrs. Oliphant eloquently says of Sheridan, that

"the finest thing of all was that death, which in England makes all glory possible, and which restores to the troublesome bankrupt, the unfortunate prodigal, and all stray sons of fame, at one stroke, their friends and their reputation."

T. HALL CAINE.

*Roman Britain.* By the Rev. H. M. Scarth. (S. P. C. K.)

THIS is the second volume of the series on "Early Britain" now in course of publication by the S. P. C. K. In the first one, on *Celtic Britain*, Prof. Rhys complained in his Preface of the scarcity of material for the work. Exactly the reverse is the case with regard to the volume before us. The difficulty has rather been to make a judicious selection out of the abundance of material available for a small work on the subject. It need, however, hardly be said that it has been done well by the author of *Aquæ Solis*. The work does not pretend to be more than a handbook; but it is based upon sound principles, avoiding the many errors which occur in the books upon the same subject by the late Prof. Goodwin and the late Thomas Wright.

The first three chapters are devoted more especially to the condition of the Britons before the landing of Caesar, the two expeditions of Caesar to our island, and the interval between that period and the Claudian conquest. On the much discussed question of the place of Caesar's landing, Mr. Scarth is silent; but, from his statement that the river at which the Britons opposed the passage of

the Roman army twelve miles from the landing-place "was probably the Stour," it is evident he adopts the theory that the landing took place near Hythe or Lymne rather than in the neighbourhood of Deal. And in this we think him right, for, had the disembarkation occurred at the latter place, it would have been made close to the mouth of the Stour, and this river would have flanked his march inland. This seems confirmed by the statement of Caesar that, four days after his arrival, eighteen vessels containing his cavalry, approaching the English coast, were overtaken by a tempest, and, when within sight of his camp, were dispersed and some lost—the remainder being "driven back." All this was seen from his camp—a most unlikely thing if he were intrenched on the low ground near Deal, but from the heights above Hythe and Lymne highly probable. Mr. Scarth's description of Caesar's campaign is well summarised. We hardly think that he need have considered it "doubtful" that Coway Stakes was the spot where the Romans crossed the Thames. The balance of evidence seems decidedly in favour of that theory. That the stakes existed until a recent period (if, in fact, many are not still remaining) is certain. On what other occasion could they have been placed there? No battle appears to have taken place in the neighbourhood with the Britons at any subsequent period; and that the stakes were placed there during an internecine war is again improbable.

The fourth and fifth chapters embrace the period between the invasion by Aulus Plautius, A.D. 43, and the campaigns of Petilius Cerealis, A.D. 71-74. Mr. Scarth says nothing as to which portion of the Brigantian territory was attacked first, or as to the length of time occupied in the operations against that tribe, which was probably two or three years; but as he adopts the view published in vol. xxxviii. of the *Archæological Journal* that Lincoln was the base of operations, we infer he agrees with the theory that the eastern portion of the Brigantian territory was first attacked. Another statement in chap. v., regarding Colchester, is that we "have reason to think, from inscriptions found there, that it became the permanent quarters of the 14th legion. . . . We should therefore have the 14th legion stationed at Colchester, and the 2nd at Gloucester." So far, no inscriptions by the 14th legion have been found at Colchester, or by the 2nd at Gloucester. The evidence as to the first-named seems to prove that its head-quarters were at Wroxeter and finally at Lincoln (before its withdrawal from Britain in A.D. 70). Two of its inscriptions have been found at the former place and one at the latter. It is more probable that the 9th legion garrisoned Colchester before Lincoln became a Roman station, when it was removed there, as we find by the inscriptions it has left in that city (also at Woodcroft, Northants, *en route*); and from that point—with the *Legio Secunda Adjutrix* purposely sent over to supply the place of the 14th—it no doubt set forth with Petilius Cerealis against the Brigantes. Afterwards it became the garrison at *Isurium* (Aldborough), and subsequently at *Eburacum* (York), when a settlement was formed there. Mr. Scarth is certainly mistaken when he says (p. 51) that no inscribed

stones have been found at Gloucester. Several have been found, including the well-known tombstone of Rufus Sita, and two altars, one dedicated to Mars, the other to the genius of a cohort, whose name is lost. So with regard to Lincoln (p. 53): "Inscriptions recording soldiers of the 2nd legion have been found at Lincoln, as well as at Caerleon and Caerwent." As a matter of fact, the Lincoln inscriptions are those of the *Legio Secunda Adjutrix Pia Fidelis*; those of Caerleon, &c., are of the *Legio Secunda Augusta*, two distinct legions.

Of the events in the reign of Vespasian Mr. Scarth gives us a very succinct account. Agricola first completed the subjugation of the Ordovices, or inhabitants of North Wales, thence proceeding, after a period of wise administration, against the Brigantes, who had for the most part been subdued by Petilius Cerealis. According to Mr. Scarth's view, the campaign against this tribe had two bases, one on the eastern side of the kingdom at Lincoln, the other on the western side at Chester. Though probable, there is no historical evidence for this; the account given by Tacitus seems to refer solely to the western route, for he tells us that Agricola personally superintended the passage of the estuaries, &c. Between Chester (where Agricola appears to have passed the winter of 78-79) and the Solway numerous estuaries would have to be passed, but between Lincoln and the Tees the Humber would be the only difficulty of this nature. Very correctly, as we think, Mr. Scarth says: "He [Agricola] seems to have meditated an attempt to reduce Hibernia, or Ireland. This is just touched upon by Tacitus; but, if contemplated, it was not carried out." Tacitus tells us of the garrisoning of the British coast opposite Ireland, and then says that the Romans knew something of Ireland, its coasts, harbours, &c., by the intercourse of commerce. The northward progress of Agricola, his first line of forts (probably between the Tyne and Solway, and on the line of the future Wall of Hadrian), the advance to the Clyde and Forth, and the construction of another line of defence (subsequently utilised by Lollius Urbicus) which served also as a basis of operations against the Caledonii, the great and final battle with that tribe, under the command of Galgacus, near the Grampian Hills, are all well told. It has often occurred to us that the recall of Agricola by Domitian, undoubtedly through motives of jealousy, was a severe blow to the development of Roman Britain. Of the governors who succeeded him we know little; and our island, with the exception of a few insurrections, seems to have been in a prostrate state for the next forty years, until the arrival of Hadrian.

Mr. Scarth shows himself a decided supporter of the idea that the great wall between the Tyne and Solway was built by Hadrian—a conclusion that most antiquaries seem now to have adopted. The evidence of inscriptions, &c., along its route seems decisive on the point. His description of the wall and its accompaniments, with the stations upon it, is well done, and the same may be said of his account of the wall built between the Forth and Clyde by Lollius Urbicus, in the reign of Antoninus Pius, and hence known as the "Antonine Wall." We doubt, however, whether the area of the Roman station at

Newcastle-upon-Tyne (p. 80) could have been sixteen acres. Mr. Scarth's previous statement (p. 76) that the stations on Hadrian's Wall averaged from three to six acres is correct; and Newcastle (*Pons Aelii*), though now obliterated, was not likely to have exceeded these dimensions. We must also take exception to the statement (p. 84) that Lollius Urbicus "held his office in Britain for twenty years." That legate appears to have come over to Britain soon after the accession of Antoninus Pius in 138; and the Scotch wall was built, as inscriptions prove, between 140 and 144; while in the year 146 we find another legate, Papirius Aelianus, in command, so that Lollius Urbicus could not have held the office more than eight years at the utmost. The campaign of Severus against the Caledonii, the usurpation of Carausius and the causes of it, the re-union of Britain to the Roman empire by Constantius Chlorus, and its subsequent history to the reign of Honorius are all treated of at length; and a well-written chapter is devoted to a summary and estimate of the strength of the Roman forces in the island.

A chapter on the Roman roads embraces, as might be expected, the Itinerary of Antoninus, which is very correctly given, though in two instances we think the allocations of the stations are at least open to doubt. One of these is making Flamborough Head the termination of the 1st iter. Wherever this terminus was, it must have been at a large walled station, named *Prætorium*; but no suitable site has yet been discovered. The other allocation is that of *Glanventa*, the starting-point of the much discussed 10th iter. Mr. Scarth prefers either Horsley's selection, Lanchester, or the station at Ellenborough (Maryport), though we think that most antiquaries have long discarded these sites, the latter being identified as *Axelodunum*. In connexion with the roads, a summary is given of the Roman milestones which have been found in modern times.

In his chapters on the chief Britanno-Roman cities—London, Bath, Colchester, Lincoln, Silchester, Caerleon, Cirencester, Wroxeter, &c.—Mr. Scarth shows his complete mastery of all the known facts concerning them. It is singular that burning seems to have been the fate of most of the stations and villas in Britain. The large bath and temples at Bath, the fine Forum at Silchester, the massive buildings at Wroxeter and Caerleon are all noticed in these chapters, while the ports communicating with the Continent—Richborough, Dover, Lymne, &c.—are specially treated of. So, also, in chap. xviii., are the villas, particularly those at Lydney and Woodchester. There is no doubt that the remains of many of these handsome mansions, with rich tessellated pavements, still lie beneath the surface of the ground. Mining operations, potteries, descriptions of domestic utensils, jewels, *ex voto* offerings, coins, are all included in Mr. Scarth's subsequent chapters, in which he also enters into the "Lex Colonica," and concludes with a description of the complex Roman mythology and the earlier introduction of Christianity into Britain. Of the various sculptured or inscribed remains of the Roman period found in Britain, altars are the most numerous. Except Venus and

Saturn, dedications to all the chief deities of the Roman pantheon have been found, with a host of native gods and others from Continental tribes, showing that "gods many and lords many" was more than a mere expression.

In his Appendices Mr. Scarth has an essay on Roman influences existing in Britain after the departure of the Roman forces, and a number of inscriptions bearing upon the work generally. The latter are carefully selected, and form a valuable corollary. With regard to one of them, a medicine stamp found at Bath in 1731, it is said (p. 151): "The word after T. IVNIANVS is read *DIEXVM* or *DRYXVM*." This point was, we believe, settled in 1873 by the discovery at Biggleswade of a similar stamp, in which the word occurs plainly as *DIOXVM*.

As an introductory guide to the study of the Roman epoch in Britain, we consider Mr. Scarth's work all that could be wished. Its plan and execution are alike excellent; and, until a new and complete *Britannia Romana* is issued from the English press, it will no doubt hold its ground as an able synopsis of the first four centuries of English history.

W. THOMPSON WATKIN.

---

*Early-English Literature.* By Bernhard ten Brink. Translated from the German by Horace M. Kennedy. (Bell.)

MR. KENNEDY has done a great service to students of Early-English literature in translating this excellent work. The period covered by Prof. ten Brink's History may be roughly described as the pre-Chaucerian; he begins with *Beowulf* and ends with *Piers the Plowman*. None of our own scholars has yet furnished a satisfactory guide to this obscure period of our literature. Availing himself of their editorial labours in portions of the field, the Strassburg Professor has anticipated them in providing a closely connected view of the whole. The work is done in a most painstaking, thorough, and masterly way. The amount of erudition packed into this small space—Mr. Kennedy's translation occupies less than four hundred pages—is astounding; only less so than the author's comprehensive vigilant alertness to all aspects of the productions passed under review—textual, metrical, aesthetic, historical. Nothing escapes him; the diction, the rhythm, the artistic merits, the relations with predecessors and contemporaries, the general character of the various epochs, the personal character of the most prominent writers, the substance as well as the style of their compositions, the influences, external and internal, that went to make them what they are, are all considered with patience and described with acute judgment. The author speaks of one of his aims as being to interest "wider circles" in the history of English literature. If by "wider circles" he means that vaguely understood personality "the general reader," it may be doubted whether this part of his wishes is likely to be realised. This closely packed compendium of laboriously excavated facts, minute criticisms, and profound speculations is emphatically a book for the student and not for the general reader. The general reader will seek his

general ideas of the course of English literature before Chaucer in much more sketchy performances. In fact, unless the student reads with Prof. ten Brink's volume in one hand and the works criticised in the other, he is likely to be bewildered rather than edified by the minute distinctions of merit and character which the critic sees where eyes less familiar with the obscure light would be conscious only of a uniform level of harsh, crude, artless, unattractive composition.

An extract from his account of *The Owl and the Nightingale*, which we give all the rather that it contains one of the few touches of fancy by which the severely businesslike style is relieved, may serve as a sample of the author's treatment. After a succinct description of the substance of the poem, enlivened by a quotation, and after giving his reasons for assigning it to the reign of Henry III., he proceeds:—

"In this connexion the question rises whether some of the religious lyrics considered in the last chapter did not come from the hand of the same poet. We lack materials for a decisive answer. But few of the songs extant could quite correspond to the personality of the man as we know him from the *Owl and the Nightingale*. He certainly had lyrical talent. His smooth, melodious versification, his copious and redundant language, his frequent musical repetition of phrase and theme, betoken a poet who well knew how to make a strophic song. He employs the short couplet, the metre used by the author of the *Eleven Pains of Hell*; no one has constructed it better than he, and scarcely any before Gower more regularly.

"He is certainly the equal of the best lyrists of the epoch.

"In his, as in their, verse dwells a peculiar charm. This poetry is comparable to a maiden who returns to the parental house which she forsook as a child. Joyous in her foreign training and experience, she nevertheless thinks of her childhood again, and unconsciously practises many a former habit, many a long-forgotten pastime. So the English muse, having scarcely outgrown the Norman school, returned to her ancestral home and contemplated the past."

The best lyrists of the epoch of Henry III. ! A good deal of the pedagogic and scholarly energy now spent on Greek and Latin will have to be turned in the direction of Early English before many are in a position to feel, as Prof. ten Brink feels, their "peculiar charm." His book should help to show men of scholarly faculty what a rich and comparatively fresh field there is for them in Old English and Early English, what texts there are to be critically revised, what questions of date and authorship to be settled, what various literary growths to be traced through all the stages of their development and decay.

Prof. ten Brink's History of the thirteenth century is particularly valuable. Characteristic productions of the period have been made generally accessible by the Early-English Text Society, to whose president, Mr. Furnivall, the author very fitly dedicates his work. These productions are here grouped and shown in their relations to dominant literary and political influences, the various strains of popular literature, scholastic literature, and courtly literature being separated with a clearness that has never before been attempted. But, indeed, the work is through-

out the work of a master long familiar with his materials and free and bold in the treatment of them. In his Preface Prof. ten Brink apologises for putting forward some of his speculations without the supporting proofs, and says he has reserved these for another work. The apology is an index to his caution in theorising, but it was really unnecessary. In the first few pages, he sketches the state of things literary and political out of which the epic style of *Beowulf* grew; and this is the only part of the work where he is likely to be accused of withholding proofs. Elsewhere he at least indicates them. In imagining the various prehistoric stages of the development of Anglo-Saxon poetry he does seem to follow too much the method of *a priori* deduction. But the documents are so scanty that no other method is possible if the thing is to be done at all, and Prof. ten Brink may at least claim the merit of great plausibility. The arguments on which he founds his views about Cædmon and Cynewulf are given at some length in Appendices. There is, by-the-way, one possibility about the poems ascribed to Cædmon which, so far as I am aware, has never been considered. This is, not that there never was such a person as Cædmon, the cowherd to the monastery at Whitby, but that the literary monks really wrote the poems and ascribed them to the old cowherd to increase the fame of their monastery as being honoured with a miracle. In the days when rival monasteries did not hesitate to steal the bones of fashionable saints to enhance the fame and the profitableness of their own shrines, it may be presumed that the moral sense was not sufficiently acute to prevent the perpetration of a literary forgery for a pious purpose. We must, of course, postulate a man of great genius among the monks, to initiate a style which dominated Anglo-Saxon poetry for four centuries. But, if such a man there was at Streoneshalh, it is much more likely that his genius was nourished to its full strength in the scriptorium than in the ox-stable. Is it credible that such mastery of verse should have suddenly appeared in an old cowherd, who had previously been incapable of making a secular song? By a miracle, yes; and Bede believed that a miracle had been wrought. Bede recounts several miracles that happened *almost* within his own knowledge, miracles of which he had been told by persons who had heard the facts from eye-witnesses. It would be a pity, however, not to credit the beautiful legend of Cædmon, though the hypothesis of a band of poetical brothers at Whitby, who made the cowherd the father of their pious alliterations, might meet some of the difficulties of the authorship. Nobody now believes that all the poems which it has been the custom for some time to treat as Cædmon's were written by the same hand, although the subjects correspond very closely with the subjects as described by Bede.

It remains to compliment Mr. Kennedy on the good English of his translation. Its accuracy is guaranteed by the author's revisal. Not the least difficult part of Mr. Kennedy's work must have been the translation of the Old- and Early-English extracts into lines of the same rhythm with the originals. In this

he has been very successful. His rendering of Thomas de Hales's *Lure Ron* strikes us as particularly happy.

WILLIAM MINTO.

*British Honduras: an Historical and Descriptive Account of the Colony from its Settlement, 1670.* By Archibald Robertson Gibbs. (Sampson Low.)

BRITISH HONDURAS, or British Yucatan, as it used to be called, cannot claim to be "one of the pearls in the British Crown." It is a tropical colony, and our countrymen seek fortunes, not permanent residences, in the tropics. They encamp for a time, make money or lose it, and then, if perchance yellow fever or the other plagues which are bred out of the sun and the dank vegetation spare them, come "home" to "enjoy" the competency which they have accumulated. Unhappily, however, from even that prospect they have of late been debarred, for the Antilles and Central America are no longer the lands in which doubloons can be picked up by every roamer. The Pagoda-tree of the West has been as wearily shaken as its representative in the East; so that the planter is fortunate nowadays who can make both ends meet at the close of a sultry year. In Jamaica, which in many respects is superior to Honduras, estates can be bought for the value of the machinery on them. It has, of course, "boundless resources," and "one of the best climates in the world"—as all colonies have in the books of their historians—yet, somehow, people do not care to develop the one or to enjoy the other. There is no immigration of fresh enthusiasts, and some emigration of old ones who have had enough of the "boundless resources," which they cannot get labour to profit by, and, after the second attack of "vomito," find the "splendid climate" not to agree with them.

British Honduras can scarcely be compared with Jamaica. The entire population of the colony does not exceed twenty-eight thousand, while those who can reasonably claim to be whites number only 375. Of these, 271 are males, and include among them Germans, Frenchmen, Belgians, Spaniards, Italians, Swiss, Danes, Swedes, Norwegians, Finns, Poles, and "the three varieties of the insular-minded Briton." The remainder are coloured Creoles, Yucatecanos, Hispano-Indians or Mestizos, Sambos, pure Africans, the aboriginal Waikas and Caribs, the imported Mayas, Hindus, and Chinese, and the mongrel crew who spring from this indescribable miscegenation. These people, fewer in number than many a fifth-rate English town, cut logwood and mahogany, though that business, which at one time was the staple industry of the "Baymen," is every year getting more and more difficult, owing to the trees in the vicinity of the sea-coast and the river-banks having disappeared. Labour has become scarce since slavery was abolished, while the changed fashion in furniture and in dyes makes the trade no longer so lucrative as it once was, though mahogany, owing to the whim for walnut and maple having had its day, is again rising in price. Sugar cultivation is, however, promising to recompense the colonists somewhat; still, for the

present, it is well not to be too sanguine. Cocoa-nuts, bananas, plantains, oranges, and other tropical fruits for the supply of the New Orleans market are also rousing great expectations in the bosom of British Honduras; and there is some talk of mines, tobacco, cotton, and the varied crops which can flourish under a tropical sun.

The climate is, however, more sub-tropical than tropical; and, as becomes an historian who is "bound by the immemorial law of his tenure" to render homage, aid, relief, and other customary service to the country which he is trying to serve, Mr. Gibbs is loud in his praise of its salubrity, "immunity from pestilence in an epidemic and endemic form," and from the hurricanes and earthquakes which devastate the adjoining regions. He supplies in a commendably brief space a fair account of the rise and progress of the colony, its bickers with autocratic Governors and Chief Justices, who seem to have possessed an extremely elementary idea of the duties of their office; its dispute with Spain, who regarded the settlement as an infringement of her sovereign rights; with the Indians, who plundered the colonists; and with the United States, which still consider British Honduras, which was in existence more than a century before the Great Republic was dreamt of, an infringement of the *ex post facto* "doctrine" associated with the name of President Monroe. This narrative—looking at it from the outsider's point of view—is, we confess, a chronicle of very small beer, though it bears ample evidence in favour of the energy of our countrymen under circumstances which were often adverse to the struggles against hard fortune.

In several instances Mr. Gibbs displays considerable graphic power. His hints of life in slavery times, and the glimpses he affords us of the manners of the logwood and mahogany cutters, are indeed so good as to make the reader regret that the author has not seen his way to supply fuller accounts of what, after all, is more interesting to the world at large than the materials with which he occupies so much of his little book. However, he is apparently anxious to attract attention to the "resources" of the colony, and hence his occasional dullness. He displays little sense of proportion, and regards the arrival of a chaplain, the building of a new brick store, or the erection of a Baptist meeting-house as of equal importance with the "Pork and Dough Boy War," the manumission of the bond-men, or the caning of a tyrannical judge in the main street of Belize. His sentences also are at times a little queerly constructed; and, from the old-fashioned manner in which he apporions the nominal dignities of "Mr." and "Esq.," it would seem that he regards them with the same anachronistic respect as the Select Men of Massachusetts, who in 1641 sentenced "one Plaistowe" to deprivation of the rank of "Mr." for stealing a bushel of Indian corn. As a rule, he is exceedingly accurate in points of detail, his slips seldom being serious. For instance, he mentions (p. 81)—and mentions with a brevity which only whets our appetite for fuller particulars—"Sir George M'Gregor," that picturesque adventurer who in 1820 managed to get himself declared Cacique of Poyais, and, like poor

Tonneins, the Attorney King of Araucania, played a leading part in the burlesque of savage royalty. The Christian name of "His Highness," who died in Caracas in 1845, after devoting the closing years of his lurid life to the propagation of silk-worms, was really "Gregor," and he had no claim to the title of "Sir," unless his Portuguese order of the Tower and Sword invested him with this grade of chivalry. Many unimproving anecdotes of his proceedings still linger along the Spanish Main, and any one who could collect the story of the Poyais Adventure would be doing good service to the history of English enterprise in America. Nor will Mr. Gibbs' description of the mahogany-tree (p. 116) command the appreciation of botanists; while his statement (p. 124) that "logwood belongs to the same class (*Decandria monogynia*) as its gigantic neighbour [logwood], order, *Lomentacea*, *L. haematoxylon*," will hardly bear criticism. It is also more than doubtful whether the indiarubber of Honduras is derived from *Septhonia elastica* (p. 125), *Castilloa elastica* growing everywhere in company with *C. Markamiana*. However, after making allowances for these and similar defects, Mr. Gibbs must be accorded the credit of supplying within the compass of 196 pages a very concise and useful account of a colony on which singularly little has ever been written; and had he thought fit to have added an index the value of his volume would have been appreciably enhanced.

ROBERT BROWN.

#### THE FOLK-LORE OF ROUMANIA.

*Rumänische Märchen.* Uebersetzt von Mite Kremnitz. (Leipzig: Friedrich.)

M<sup>D</sup>ME. KREM<sup>N</sup>ITZ, a Roumanian lady, who edited the *Rumänische Dichtungen* which the Queen of Roumania published recently under the pseudonym of "Carmen Sylva," and who is the author of several sketches and stories, the latter issued under the name of George Allan, has now brought out an excellent collection of Roumanian folk-tales. They are translated for the most part from the publications of P. Ispirescu and T. M. Arsenie, and from the columns of the periodical *Convorbiri Literare*; and they form a valuable supplement to the well-known *Walachische Märchen* published in 1845 by Arthur and Albert Schott. They are good specimens of the class of popular literature to which they belong, closely connected with the similar tales of the South of Europe, especially of Sicily and Greece, and offering in many of their features a clear proof of the effect produced upon them by neighbouring Slavonic influences. Their themes are, of course, for the most part familiar, but some of their details are curious and noteworthy. Among these may be mentioned the opening of some of the tales, resembling the fantastic preludes common in Hungary, such as "Once upon a time, after the flea had been shod on one foot with ninety-nine pounds of iron, and had sprung into heaven to fetch us down stories."

The most novel of the tales seems to be the eleventh, "The Voice of Death." By dint of incessant prayers a man became so rich that he objected to the thought of death. So he

set off to look for a land where people did not die. After wandering far he came to a country in which he found that no one knew what to die meant. So he settled there joyfully, along with his wife and children. It turned out, however, that although the inhabitants of that land did not die, yet they were from time to time summoned by a voice, uttered by an unseen speaker; and, having obeyed the summons, they were never seen again. He wondered greatly at the folly of the natives in thus obeying, and determined to act otherwise himself. Some time passed quietly by. But one day the man's wife suddenly began to cry out "I am coming," and attempted to leave the house. Her husband vainly tried first remonstrance, and then force. She tore herself from his grasp, leaving her cloak in his hands, fled out of doors, and disappeared for ever. Some years later, as the man was being shaved in a barber's shop, he began to cry aloud, "I will not go; do you hear, I will not go." This he repeated many times angrily. At last he jumped up, snatched the razor from the barber's hand, and rushed out of the shop, threatening to punish his unseen summoner. The barber ran after him to recover his razor, and chased him through the town, and out of it into the open country. There he saw the man he was pursuing fall into an abyss and disappear. When the barber had told his wondrous tale, crowds accompanied him to the spot where the man had disappeared; but no trace of the abyss could be found, far and wide on all sides stretched an unbroken plain. And from that time forward men began to die in that land after the fashion prevalent elsewhere.

Another of the stories about death is noteworthy, so far as its beginning and end are concerned, though the greater part of its machinery is commonplace. A princely infant, at a very early period of its existence, screamed so incessantly that its imperial father attempted to soothe it by promises. But they were vainly lavished upon it until, in despair, the emperor exclaimed: "Hold your tongue, my son, and I will give you youth without age and life without death." Thereupon it gave over crying, and all went well. When the prince grew up, he demanded from his father the fulfilment of his promise. When he found that he could not obtain it from the emperor, who pleaded that promises made to infants were not binding, he set out to look himself for the promised boon on which he had set his heart. Far did he wander, and with many adventures did he meet. Among the lands through which he passed, mounted on a magic steed, was one which was covered with human bones, its inhabitants having been killed by a female fiend. She had been a woman, but her parents, whom she refused to obey, turned her by a curse into a woodpecker. This demon the prince overcame, shooting off one of her feet, and compelling her to sign an agreement written in her blood. He then overcame a second fiend of the same kind, a "scorpion-bag," after which he bounded over a dense forest ring encircling a palace wherein a fairy dwelt. Having married her, he lived long with her in happiness. But at length he entered a forbidden Valley of Lamentation, and im-

mediately became home-sick. Although warned that a journey to his native land would be fatal to him, he insisted upon undertaking it, and set forth homewards on his magic steed. As he passed through the lands which had been devastated by the woodpecker and scorpion-hag, he found them all blooming and peopled by living inhabitants, who laughed him to scorn when he told them of what he had seen when he last was there. Such tales, they said, had come down to their grandfathers from their remote ancestors, but they looked upon them as fables. At length he reached his long-lost home, but could scarcely recognise it. All was changed, and the palace in which his parents used to live was a crumbling ruin. With tottering steps he wandered from one silent room to another. In one of these he found an old chest, which he opened. At first it seemed to be empty, but a voice called to him from within, saying, "Welcome! If you had kept me waiting much longer I must have perished." This was the voice of "his death," which laid its hand upon him, whereupon he immediately turned into a heap of dust.

In this instance a story of the Rip van Winkel class has been enlarged by the insertion of episodes taken from one of the numerous narratives about destructive demoniacal beings overcome by a hero whom some wondrous animal assists. Many of the Roumanian tales are evidently pieced together in a similar way. This is the case with No. 5, which is properly one of the great group of stories about husbands who are condemned to wear by day the appearance of inferior animals, but at night resume the brilliant shapes which they wore before they were transformed by a spell. But the opening of the tale belongs to a different set of stories—those in which three sisters predict what their fate will be in married life. According to the Roumanian story-teller, a certain king, before going out to fight, handed over the keys of his palace to his three daughters, and told them they might go where they liked except into one forbidden chamber. Into it they straightway went, and in it they found a book wherein it was written that the two elder sisters would marry princes, but that the youngest was to have a pig for her husband. These predictions came true, and the youngest princess was eventually married to a pig, but one which could lay aside its porcine husk when the day came to an end. The present variant of the story differs from most of the forms of the White Bear or the Psyche and Eros groups. The Roumanian wife lost her husband for a time, but not because she indiscreetly regarded him by artificial light. The fault which rendered her for a while a widow was her being induced to tie a thread round his left foot. As usual, she recovered him in the course of time, assisted by the Sun, the Moon, and the Wind. An explanation is given in the story of the fact that the Sun always comes home at night in a bad humour. In the morning, it seems, the Sun-god stands at the door of Paradise, and then he is gay and smiles. By mid-day he grows angry at the sight of all the sins of men, so he turns his genial warmth into a consuming fire. In the

evening he stands at the gates of Hell, whence he comes homewards sad and irritable.

Two of the stories turn upon the anger of a proud husband whose wife has humiliated him. They are both well-known tales, but the form which they take here is worthy of notice. The first (No. 7) tells how an ingenious maiden, whose hand was sought by a slow-witted suitor, amused herself by such merry jests as letting him drop into a deep cellar, or fall into a hole set with sharp knives, and other similar provocatives of mirth. After being considerably gashed and confused, her wooer swore solemnly that he would marry her, and would live with her happily, provided he did not kill her at once. Suspecting this, the clever Ileana, after accepting him, provided him with an image of herself made of sugar on which to expend his wrath. This he hewed in pieces, under the impression that it was his too facetious wife. At length a piece of sugar flew into his mouth, and he exclaimed, "Ah, Ileana! sweet were you in life, and sweet are you still in death," and burst into bitter tears. Whereupon Ileana came forward, stating that she was prepared to be a thousand times sweeter in future; and all went well. In the literary form of the story in Basile's *Pentameron* (iii. 4), the irritated husband greedily licks the dagger with which he has stabbed the sugar puppet, which he supposes to be his wife, and is so struck by the sweetness of what he takes to be her blood that he is on the point of killing himself, by way of making amends, when his wife comes forward and stays his hand. In two of Gonzenbach's Sicilian stories (Nos. 35, 36), the husband cuts the puppet's head off, and then licks his sword, "in order to cleanse it," and cries, "Ah! if I had only known how sweet you were, I would not have killed you," or words to that effect. In a Spanish variant the husband cuts off his supposed wife's nose. It falls into his mouth, and he at once recognises his wife's sweetness. The other Roumanian story about a husband's revenge (No. 8) tells how a princess married a fisher lad. She loved him dearly; but at the wedding breakfast, when an egg was brought, according to the custom of the country, for her and her husband to partake of, she insisted on having the first mouthful, on the ground that she was a princess and he was only a fisherman. He was so annoyed by this that he disappeared, and she long sought for him in vain. At length she discovered him in an inn, where he filled the post of waiter, professing to be deaf and dumb. She declared that she would make him speak within three days, and agreed that she was to be hanged if she failed. The three days had all but passed, her husband still remaining speechless; and she was on the point of being suspended when he drew near to her, and said, "Will you ever call me a fisherman again?" The moral is, of course, the same as that conveyed by all the stories of the class to which belong the German "König Drosselbart" (Grimm, No. 52), the Norwegian "Hacon Grizzlebeard" (Norse Tales, No. 6), the Neapolitan "Soperebia Castecata" (Basile, iv. 10), and many other kindred tales.

Of the rest of the twenty stories contained

in Mdme. Kremnitz's collection, the following account may be given. No. 1 describes the tricking of a demoniacal being, in this instance a dragon. No. 3 is a variant of the familiar calumniated-mother story, in which a princess is falsely accused of having brought into the world two puppies, and is buried up to the breast in the earth by way of punishment. Nos. 4 and 15 belong to the class of *Lügenmärchen*, the first relating the prowess of a pertinacious fowl, the second telling how two old people adopted a mouse, which, to their great grief, was scalded to death in boiling milk, whereupon a magpie pulled out all its feathers as a sign of grief, an empress, hearing the news, fell out of a balcony and was killed, and the emperor, her husband, became a monk "in the Cloister of Lies on the other side of the Truth." In No. 6 a heroic lad enables a friendly giant to recover his soul, which had been stolen from him by malicious fairies, and afterwards captures and marries a fairy maiden, who is unable to escape from him so long as he possesses a rose she was accustomed to wear on her head—just as Manohará, the heroine of one of Schiefner's *Tibetan Tales*, was unable to fly away to her heavenly home until she recovered her magic head-jewel. No. 9 is a borrowed tale, being the Russian form of the soldier who found heaven monotonous, and was turned out of hell for insubordination. No. 10 tells how a girl, whose beauty was so great that all things that saw it rejoiced thereat mightily, was carried off by a griffin to its nest, wherein she was discovered by a prince, who had much difficulty in luring her down from her lofty dwelling-place. No. 12 chronicles the follies of feeble-witted youth. In No. 13 a youth is persecuted by his stepmother, but is long saved from all perils by an ox, the right horn of which is a magic cornucopia. After the death of the ox, the youth is assisted by a dragon, to which he promises to give whatever it shall demand at the happiest moment of his life. What the dragon eventually demands is the princess whom the hero has just married. The bridegroom naturally objects to parting with his bride on his wedding-day, and thereby incurs the wrath of the dragon. Fortunately for him, in accordance with ancient custom, "a loaf, white as the visage of Christ," has been left by his father in the bridal chamber, and the loaf requests the dragon to burst. It does so, with an explosion which shakes the whole palace. No. 14 tells at great length how a youth went out to seek for his sister, whom a dragon had carried away, and found her, along with the sisters of two companions whose acquaintance he made on the way, secluded from the world in a tower of glass. The most remarkable incidents in the story are the recognition of the hero by his long-lost sister, and the discomfiture of a usually invisible dragon. The first was brought about by a cake which had been made for the purpose by the youth's mother, consisting of ashes from the hearth mixed with milk from her breast. As soon as it was tasted it produced a recollection of home in the maiden's mind. For the second the hero was indebted to the friendly information that if he turned to the right and spat three times he would be

able to see the dragon, and so to fight it without difficulty. No. 16 appears to be a combination of the stories of the grateful corpse and Puss-in-Boots. No. 19 is one of the common step-sisters stories, in which a good-natured girl renders aid to suppliants and is rewarded, and her ill-natured sister refuses it, and is punished. Nos. 17, 18, and 20 are stories full of adventures with swallowing or petrifying hags and other demoniacal beings. In each of them the rescuer is ungratefully treated by the rescued, two out of the tales taking the form known as the Three Brothers story. No. 20 is rendered remarkable by the fact that the hero, after riding through a zone of cold to the abode of Wednesday, a realm of heat, to that of Thursday, and a region in which it was neither too hot nor too cold, to the home of Friday, arrived at the palace in which dwelt "the Fairy of the Dawn," who became his wife.

W. R. S. RALSTON.

### CURRENT LITERATURE.

*Ballads of the Cid.* By the Rev. Gerrard Lewis. (Sampson Low.) Mr. Lewis gives us, in a dainty little volume, free translations—or, rather, imitations—of selected ballads from the *Romancero del Cid*. Neither the edition of the *Romancero* used nor the number of the particular ballads is given, so that it is difficult to follow the original closely. In selection our author allows himself great liberty; he weaves the matter of several ballads into one poem, and cuts out just as freely what does not suit his purpose. By this means his readers escape the tedium of the endless variations of the originals, while at the same time the translator conveys a very fair idea of what these ballads really are. By aiming at simplicity in language and in metre he reflects the tone of the originals better than by affected verbal archaism or by rigid adherence to Spanish measures; it is only occasionally that a too modern phrase slips in. "The preternatural light it made" and "Paints with bold bright brush the landscape" jar terribly in a ballad supposed to be of the twelfth century. The original poems at the end of the volume are a sad contrast to the translations; they are dolefully pointless and prosaic. We venture to suggest that in a second edition their place may be well supplied by more versions from the *Cid*, or by selections from the other *Romanceros*.

*Vienna, 1683: the History and Consequences of the Defeat of the Turks before Vienna.* By Henry Elliot Malden. (Kegan Paul, Trench and Co.) This is a useful and modest little book. Mr. Malden says that "the historical scholar will find nothing new in the following pages." To this statement we must assent, if by new we are meant to understand original views or fresh evidence derived from MSS. There is a good deal, however, that will be new to almost every English reader. How many of us have read Sobieski's *Letters*, Schimmer's *Sieges of Vienna*, or Starhemberg's *Life and Despatches*? The author has read these and many other books of a like character, and the result has been that he has produced a remarkably clear and picturesque narrative of an event of first-class importance of which few Englishmen know anything beyond the vaguest outline. Mr. Malden has no doubt as to the heroic qualities of the King of Poland. He has been slandered from malice and misrepresented from ignorance, but in Mr. Malden's view there is nothing to detract from his being "a man who above all others living fulfilled the character of a hero." We agree with him in

this, and are pleased to find the truth so clearly stated. We could have wished for a little more strong language of the same sort regarding those who thwarted Sobieski's designs for the good of his own country.

*Spinoza's Ethics.* By W. H. White. (Trübner.) It is doubtful whether a translation of Spinoza's *Ethics* was really wanted. Whoever can follow such an argument at all can learn with less labour to follow the clear scholastic Latin of Spinoza; while many can follow Hartmann, and even Schopenhauer, who would find it a labour to learn German. However, if the thing were to be done, Mr. White has done it very fairly well. His English is clear and manly, and he appears generally to represent Spinoza's meaning accurately enough, though there are some passages where revision might be useful. E.g., the 2nd corollary of the 16th proposition of the first part: "Sequitur Deum causam esse per se non vero per accidens" is translated "It follows that God is cause through Himself, and not through that which is contingent;" surely the meaning is that to be a cause belongs to God's essence, and is not a mere accident of His nature. Again, the 3rd axiom which follows the 16th proposition of the second part might have been turned more tersely; and perhaps, as Spinoza gives notice that he uses many words in a sense of his own, it might have been better to translate *existimatio* by "esteem" rather than by "over-estimation." The Preface deals chiefly with "the question which we have a right to ask of any person who professes to have anything to say to us, *Wherein can you help me?*" by an analysis of some of Spinoza's most edifying propositions, including those which treat of Immortality. Mr. White is not the least successful of the interpreters of the actual thought of Spinoza on this vexed question, perhaps because he is not too careful about his author's consistency.

*Gleanings in Ireland after the Land Acts.* By W. H. Bullock Hall. (Stanford.) The author claims, with truth, to be possessed of certain "exceptional advantages for forming an opinion on the Irish land question." He has a wide knowledge, at first hand, of the conditions of agriculture in many countries, a keen and rapid power of observation, and (above all) a warm sympathy with the Irish people. But having said so much, we are compelled to add that this little book is very disappointing. The question does not admit of being disposed of in some hundred pages, not a few of which are occupied with personal details of the most trivial character. In the hands of a literary craftsman such details may serve to give the right colour to the picture; but with Mr. Hall they are only blotches of paint. As for any practical suggestions, we have got up from the book more perplexed than when we sat down to it. But perhaps this is the very result which Mr. Hall meant to produce.

*The Handbook Dictionary, for the Use of Travellers and Students.* By George F. Chambers. (John Murray.) If anybody wants to carry about with him a dictionary of English, French, and German, it is not likely that he will find one more complete and more condensed than this. By arranging three parallel columns in a tall duodecimo page, by adopting various typographical devices and—above all—thin paper, more than 700 pages and probably about 40,000 English words, with their equivalents in the other two languages, have been got into a pocket volume. On the other hand, it must be confessed that the printing is somewhat blurred. Our only other reservation is a doubt whether the compiler has not aimed at too much. The wants of a traveller are very different from the wants of a student.

*Handbook to the Cathedral of St. Paul.* By G. Phillips Bevan and John Stainer. (Griffith and

Farran.) This is a mere pamphlet of less than one hundred pages, and would hardly call for notice here if it were not for the sections treating of the organ, the choir, and the bells, which are presumably contributed by Dr. Stainer.

MR. H. J. S. COTTON, of the Bengal Civil Service, has published as a pamphlet (Kegan Paul, Trench and Co.) a lecture that he delivered at the Positivist School last June on "England and India." It consists of a searching examination of the existing connexion between the two countries, and of a courageous plan for the future—"a federation of states under the colonial supremacy of England." Among many suggestions that are novel, we can only allude to the defence of the caste system and to the proposal that the English and Eurasian settlers should be constituted into independent communities after the pattern of the free cities of Germany. Now that the whole question of our position in India seems to be coming up for consideration, there is some hope that views which appear revolutionary only because they are far-reaching may attract the attention they deserve. The pessimist critics have had their say; it is time that those who hold a constructive policy should likewise be heard.

RICHMOND PARK during the Commonwealth was in the possession, and under the control, of the Corporation of London; and Sir Thomas Nelson has obtained the consent of that body to the printing of the extracts from the official records of the City which bear on its management of the park from 1649 to 1660. To these extracts—which relate to such things as the purchase of fallow deer and the provision of food for them in the winter, to the repair of the fences and walls, and to the payment of taxes and tithes—is prefixed a brief history of the park itself. The volume is adorned with five photographs of some of the loveliest pieces of scenery within the confines of the enclosure, and with a facsimile of Van der Gucht's engraving after Hollar of the King's palace at Richmond, a portion of which may still be seen on the Green. At the Restoration the park was restored to the King. Charles II. thereupon declared that "the City of London were still loading him with their kindnesses," and that he looked "upon the said Parke . . . not as restored, but as freely given unto him." Yet he did not shrink, as Sir Thomas Nelson records, from seizing and revoking the City's charters a few years later. The volume is printed for private distribution, and does credit to the munificence of the Corporation.

VISITORS to the Channel Islands who wish to have a few characteristic specimens of the local dialects will find Mr. John Linwood Pitt's *Patois Poems of the Channel Islands*, the Norman-French Text with Parallel English Translation, Historical Introduction, and Notes (Guernsey), a handy little volume. It forms the first of a series projected under the auspices of the Guille-Alles Library, an institution founded and endowed by the two worthy Guernseymen after whom it is named. To their beneficent pertinacity of purpose the inhabitants of the erst bookless island are indebted for practically free access to more than 30,000 volumes in French and English. Other volumes promised in the series are *Witchcraft in Guernsey*, *Choice Excerpts from the Roman de Rou*, &c. It is a pity that Mr. Pitts has not kept the promise of his title-page more fully in the matter of "notes." There is only one note of a general kind giving the names of the principal writers in the *patois*; the peculiar words, forms, and phrases that occur in the poems might have suggested a hundred.

WE have received a copy of the catalogue of the Luther Exhibition now on view in the Grenville Library at the British Museum. It has been compiled for the most part by Mr.

Bullen, who has also prefixed a brief sketch of Luther's life; but Mr. Reid has written upon the portraits and Mr. Keary upon the medals.

### NOTES AND NEWS.

MESSRS. SMITH, ELDER AND Co. announce a new edition of the complete works of Thackeray, containing some of his early contributions to *Punch*, *Fraser's*, &c., that have never before been collected, with many additional illustrations. It will form twenty-six volumes, and is to be called the "Standard Edition."

THE same publishers also promise a new volume by Miss Thackeray (Mrs. Ritchie)—*A Book of Sibyls*: being Essays on Mrs. Barbauld, Miss Edgeworth, Mrs. Opie, and Miss Austen, reprinted from the *Cornhill*; and a popular edition of Mr. Matthew Arnold's *Literature and Dogma*, with a new Preface.

WE understand that the late Mr. James Thorne's son has completed his father's revised edition of Peter Cunningham's *Handbook of London, Past and Present*, and that Mr. John Murray has secured the services of Mr. Henry B. Wheatley to make certain additions to the book, and see it through the press. It will now form three volumes octavo. We hope, however, that Mr. Murray will some day give us a handy abridgement of the work, not larger than its convenient original form.

IN the November number of *Longman's Magazine* a story will be begun by Mr. W. Clark Russell, entitled "Jack's Courtship," and in the January number a new novel by Mrs. Oliphant.

*The Groundwork of Economics* is the title of a work by Mr. C. S. Devas which Messrs. Longmans have in the press. Mr. Devas follows the historical method of the German economists—with this difference, that he takes Christian ethics as a foundation.

THE text which Miss Kate Greenaway has taken to illustrate for her Christmas book this year is a selection from the poems of Jane and Ann Taylor, including "Little Ann," which ought to furnish an admirable field for her pencil.

COPIES of the speech delivered by Dr. W. W. Hunter, editor of the *Imperial Gazetteer*, and now member of the Viceroy's Legislative Council, in favour of what is known as the "Ilbert Bill," may be obtained in this country from Messrs. Trübner.

WE are glad to hear that the improved state of his wife's health has enabled Mr. Horace Howard Furness to begin work again at his variorum edition of "Othello."

THE New Shakspeare Society is, after all, not to lose Miss Teena Rochfort-Smith's *Four-Text Hamlet*, as we were last week informed it would. Her work will be finished by her friend Mr. Furnivall as soon as he can find time for it.

A WELL-KNOWN authoress of artistic and antiquarian tastes assures us that there is, in an Elizabethan wainscoted room in a Western cathedral town, a contemporary bust of Shakspeare on a splendidly carved mantel-piece, side by side with Queen Elizabeth, Sir Walter Raleigh, and other celebrities of the time; and that this bust is much more like the Stratford one than the Droeshout portrait. We receive this piece of information with interest, and hope to get a photograph of the mantel-piece as a specimen of Elizabethan carving; but the bust is, of course, no more Shakspeare's than the portrait of the bald and bearded Earl of Worcester in the Hunsdon-Procession picture is Shakspeare's portrait, though many folk have declared it such.

THE forthcoming number of the *Scottish Review* will contain papers on "Zola's Parisian Middle Classes," "Emerson's Social Philosophy," "Scottish Patriotism," and "Scotland in the Eighteenth Century."

MR. WALTER TREGELLAS is engaged on a work upon Cornish Worthies, which will be published in two volumes by Mr. Elliot Stock.

MESSRS. RIVINGTON will publish shortly the first volume of a new series, edited by Mrs. Creighton, to be called "Highways of History." Its aim is to detach from the chronological arrangement of the history of England certain important subjects which admit of consecutive treatment, such as the relations of England to Scotland and to Ireland. The volumes will be by different writers, and will consist of about 120 pages each. The first will treat of the Growth of the Colonies.

THE same publishers also announce, among their educational works, an *Introduction to Greek Verse Composition*, with Vocabulary, by Mr. A. Sidgwick and the Rev. F. D. Morice; a *Syntax of Attic Greek*, by Mr. F. E. Thompson, of Marlborough; *Graecula*, intended to serve as an introduction to Mr. Morice's *Stories in Attic Greek*, by Mr. H. B. Heatley, of Rugby; and *Chapters in the History of English Literature, from 1509 to 1625*, by Miss E. W. Crofts, of Newnham.

THE next volume in the "English Citizen" series will be *The State and the Land*, by Prof. Frederick Pollock.

MESSRS. HURST AND BLACKETT announce a new work by Mr. Percy Greg entitled *Without God*. The same firm will also issue during the coming month *In the West Country*, by the author of *Queenie*, and *Golden Girls*, by Mr. Alan Muir, each in three volumes.

MESSRS. F. V. WHITE AND Co. will publish at an early date a new novel by Mrs. George Linnæus Banks, entitled *Forbidden to Marry*. It is founded on a life history, and the scene is laid in Manchester, Cheshire, and Derbyshire.

SAMUEL BAGSTER AND SONS (LIMITED) have now nearly ready the *Handbook of the English Versions of the Bible*, with copious examples illustrating the ancestry and relationship of the several versions, and comparative tables, by the Rev. Dr. J. I. Mombert. This work, on which the author has spent years of research, presents an exhaustive view of the English versions from Anglo-Saxon times to the Revision of 1881, with information not contained in any single work extant. It will be published in America by Messrs. Anson D. F. Randolph and Co.

A COMPREHENSIVE critical History of Philosophy, by Dr. Asa Mahan, in two volumes, is announced by Mr. Elliot Stock.

MESSRS. W. H. ALLEN AND Co. will publish in this country the new edition of Dr. S. Wells Williams's *Middle Kingdom*, with coloured illustrations and original maps.

EARLY next month Messrs. Hamilton, Adams and Co. will publish a volume entitled *Curious Epitaphs*: collected from the Graveyards of Great Britain and Ireland, with biographical, genealogical, and historical notes, by Mr. William Andrews, of Hull. An important feature of the book will be "A Bibliography of Epitaphs" extending over twenty pages.

A HISTORY of that quaint old Scottish burgh, Culross, which once played an important part in ecclesiastical history north of the Tweed, has been written by Mr. David Beveridge. It will probably be published by subscription.

THE first annual issue of the *Railway Companies Directory*, edited by Mr. Percy L. Adley, giving a complete list of directors, offices, and

passenger and goods agents of the railways of the United Kingdom, with the capital, dividends, mileage, and weekly traffic receipts for the last five years, will be published in December.

MESSRS. GILLESPIE BROS., of Glasgow, will commence next month a new penny serial entitled *Sunday Talk*. The attractive publication entitled *Summer Talk* is to be resumed next year.

THE *Wakefield Free Press* has passed into the hands of Mr. James McInnes, and will henceforth be published daily.

DR. LORENZ MORSBACH, of Bonn, is compiling for the Early-English Text Society a volume of Early-English deeds, as a companion to Mr. Furnivall's "Fifty Earliest English Wills in the Court of Probate, Somerset House." He has as yet found only a few before A.D. 1450 among the "Additional Charters" in the British Museum, and he will be much obliged to any English antiquary for notices of other early deeds, to be sent to him at 31 Weberstrasse, Bonn. He would like to get ten English deeds from 1150 to 1450 for every county in England, and then arrange them chronologically by dialects.

PROF. SCHURMAN, of Dalhousie College, Halifax, Nova Scotia, has paid a long visit to Germany and England this vacation, and has obtained a grant of the Early-English Text and New Shakspeare Societies' yearly prizes for his English classes in the college. His last Shakspeare class numbered sixty-two. His examination-paper is a most refreshing contrast to the Cambridge and usual English papers. He pays his pupils the compliment of believing that they have perception, judgment, and imagination.

A FEW days ago, in cataloguing some books in the Christ Church Library, a fine autograph of Montaigne was discovered on the title-page of Paolo Giovio's *Istorie* (Italian translation by L. Domenichi); two autographs of Walton on the fly-leaves of English theological pamphlets were also found.

AT the recent meeting of the American Library Association at Buffalo, under the presidency of Mr. Justin Winsor, it was announced that a school for training library assistants will shortly be established as a "postgraduate course" in Columbia College, New York.

THE important collection of documents relating to Savonarola which had been got together by Count Capponi has been acquired for the Magliabechiana Library at Florence. The Italian Government has also bought a collection of historical papers belonging to the Palla-Strozzi family at Florence, some of which go back to the twelfth and fourteenth centuries, and others complete the correspondence of the Florentine ambassadors at the Court of Spain.

THE *Athenaeum belge* states that M. Emile de Laveleye's recent work on the Elements of Political Economy is being translated into the following eight languages:—English, German, Russian, Spanish, Polish, Servian, Bulgarian, and Greek. His short sketch of the life of Garfield, originally written for Swiss schools, has already been translated into Dutch, Swedish, and Portuguese.

ROUMANIA can now boast of two Reviews, one monthly and the other quarterly. The first is entitled the *Columna lui Traian*, and is edited by M. Hasdeu, Professor of Comparative Philology at Bucharest. The other is called generally *Revista pentru istorie, arheologie, si filologie*. It is edited by M. Tocilescu, the Professor of Epigraphy and Ancient History; and it gives plates of inscriptions and antiquarian remains.

## FRENCH JOTTINGS.

M. HENRI MARTIN, the veteran French historian, has been undertaking excavations at Carnac, in Brittany, during the past few weeks.

M. MASPERO has promised to contribute to an early number of the *Revue historique* a paper on the feudal system in ancient Egypt.

M. E. DE PRESSENSÉ is preparing a new edition of his *Vie de Jésus*.

HACHETTE announces a bibliography of the sources of French history, by MM. Gabriel Monod and Emile Molinier.

It is stated that Henri Rivière left instructions to a friend, an officer of marines now in France, to publish such of his papers as he might think to be of public interest. Meanwhile, a sketch of his life is announced by Calmann Lévy, written by M. Delannay, with letters addressed by him to M. Alexandre Dumas and other friends.

At the suggestion of M. Aucoc, the Académie des Sciences morales et politiques has appointed a commission to resume the publication of the ordinances of the French kings—a work which stopped about thirty years ago with the reign of Louis XII. It is now proposed to continue it down to the Revolution.

The annual public meeting of the five Académies which constitute the Institut will be held this year on October 25, under the presidency of M. Heuzey, of the Académie des Inscriptions, when an address will be delivered by M. Cherbuliez.

THE prix Jean Reynaud, of the value of 10,000 frs. (£400), has been awarded by the Académie des Sciences morales et politiques to M. Perrens, inspector-general of the University of Paris, and author of (among other works) a History of Florence.

PROF. CHARLES JORET, of Aix, will shortly publish a work upon the popular flora of Normandy.

THE French papers comment upon the fact that, out of fifty cadets at the Ecole polytechnique who have just received commissions in the Engineers, not a single name bears an aristocratic prefix.

THE Minister of Public Instruction has ordered that revaccination shall be compulsory in all the lycées and colleges throughout France.

THE September number of *Le Livre* prints two copies of French verses by Mary Queen of Scots which, though not absolutely unknown, have not before been attributed to her by those who have written on the subject.

THE *Revue politique et littéraire* of September 8 contains a translation into French of the last story written by Turgenev. It was first published at St. Petersburg in the early part of the present year, in a collection of tales for the young edited by Count L. Tolstoi. The title is "La Caille: Impressions d'Enfance;" and it describes the incident of a hen quail, caught by a dog and killed while trying to divert attention from its chickens after the manner of the lapwing.

## ACKNOWLEDGMENTS.

WE have on our table the following:—*The British Fisheries Directory, 1883-84* (Sampson Low); *A Critical History of Philosophy*, by the Rev. Dr. Asa Mahan, in 2 vols. (Elliot Stock); *A System of Subjective Political Economy*, by Arthur M. Smith (Williams and Norgate); *A Summary of Military Law*, by H. F. Morgan (Marcus Ward); *Elementary Applied Mechanics*, Part II., by Thomas Alexander and Arthur Watson Thomson, with numerous Diagrams and a series of Graduated

Examples (Macmillan); *Accented Five-Figure Logarithms*, of Numbers from 1 to 99999, without Differences, Arranged and Accented by Lewis D'A. Jackson (W. H. Allen); *My Home Farm*, by Mrs. J. H. Burton (Longmans); *One Thousand Medical Maxims and Surgical Hints*, by N. E. Davies (Chatto and Windus); *Health Resorts and Spas*; or, Climatic and Hygienic Treatment of Disease, by Herbert Junius Hardwicke (W. H. Allen); *The Limping Pilgrim on his Wanderings*, by Edwin Waugh (Heywood); *The Red Cross: its Past and its Future*, by Gustave Moynier, Translated by John Furley (Cassells); *Queer Fish: Character Sketches*, by Robert Overton (Dean); *Aesthetical Sanitation*, by William White (Stanford); 6 by 4: "A Technical Tale" of Tone, by A. Neutral-Tint (Tinsley Bros.); *Chiromancy*; or, the Science of Palmistry, by Henry Firth and Ed. Heron Allen (Routledge); *Wortfolge*; or, Rules and Exercises on the Order of Words in German Sentences, with a Vocabulary, by Frederick Stock (Bell); *Macaulay's Warren Hastings*, Edited, with Introduction and Notes, by S. Hales (Longmans); *Code-Book of Gymnastic Exercises*, by Ludwig Paritz, Translated by O. Knoke and J. W. Macqueen, with 268 Wood-cuts (Triebner); *The Manual of Compendious Shorthand*; or, Universal Visible Speech: a Practical System of Stenography, by Edwin Guest (Wyman); *Catechism of Shorthand*, with Special Reference to the Question—Which is the Best English System of Shorthand? by Thomas Anderson (W. H. Allen); *Mushroom Culture for Amateurs*, by W. J. May (Upcott Gill); *Proceedings of the Royal Colonial Institute*, Vol. XIV. (Sampson Low); *Transactions of the Royal Historical Society*, New Series, Vol. I., Parts I. and II.; *Report of the Council of the City and Guilds of London Institute for the Advancement of Technical Education*; *Eclecticism: an Historical Dissertation* (Calcutta: Central Press); *The Barrow Route to the Isle of Man*, by E. P. Stokes (Hazell, Watson and Viney); *Holiday Handbooks*, Edited by Percy Lindley—*The Ardennes*, Holland, The Moselle; *A Day in the Columbia: a Summer Idyll* (Glasgow: Wilson and Mc Cormick); *Transactions of the Philological Society for 1882-3-4*, Part II. (Triebner); *Calendar of the Royal University of Ireland for 1883* (Dublin: Thom; London: Longmans); *Calendar of the Durham College of Science*, Newcastle-upon-Tyne, for 1883-84; &c., &c.

WE have also received the following New Editions, &c.:—*Vers de Société and Parody*, with other Essays, by H. A. Page (Fisher Unwin); *366 Menus and 1,200 Recipes of the Baron Briaie*, in French and English, Translated by Mrs. Matthew Clark (Sampson Low); *Mademoiselle de Mersac*, by W. E. Norris (Smith, Elder and Co.); *San Bemo*, Climatically and Medically Considered, by Arthur Hill Hassall, with numerous Illustrations (Longmans); *The Republic of Uruguay: its Geography, History, Rural Industries, Commerce, and General Statistics*, Issued by Authority of the Consulate-General (Stanford); *The Chairman's Handbook*, by Reginald F. D. Palgrave, Fifth and Enlarged Edition (Sampson Low); *London in 1883*, by Herbert Fry, Third Year of Publication (W. H. Allen); *The Irish Educational Guide and Scholastic Directory, 1883-84* (Dublin: Mara); *Socrates: a Translation of the Apology, Crito, and Parts of the Phædo of Plato* (New York: Scribner's); *The Sportsman's and Tourist's Time-Tables and Guide*, Edited by J. Watson Lyall, Eleventh Year of Publication (Simpkin, Marshall and Co.); *The Great-Eastern Railway Company's Tourist-Guide to the Continent*, Edited by Percy Lindley, with Sepia and Pen-and-ink Sketches by F. Butler and A. Bryan, Fifth Annual Issue; &c., &c.

## A TRANSLATION.

FOLK-SONG FROM OLD FRENCH.

WHAT shall one do if Love depart?  
I sleep not night nor day:  
All night I think of my true-love,  
Him who is far away.

I gat me from my restless bed,  
And donn'd my gown of grey,  
And went out through the postern gate  
To the garden at break of day.

I heard the bonny laverock then,  
The nightingale did sing,  
And thus she spake in her own speech,  
"Behold my love coming

"In a brave boat up the Seine river,  
Wrought of the pleasant pine;  
The sails are all of satin sheen,  
The ropes of silken twine:  
The mainmast is of ivory,  
The rudder of gold so fine.

"The good sailors who man the bark  
Are not of this country;  
The one is the son o' the King o' France,  
He wears the fleur-de-lis;  
The other's the son—but what care I?  
My own true-love is he."

EMILY H. HICKRY.

## OBITUARY.

IVAN TURGENEV.

THE death of Ivan Sergiyvitch Turgenev, which took place at Bougival on September 3, has removed the greatest writer that Russia has yet produced, and the chief of European novelists since Balzac.

Turgenev was born at Orel in 1818, where his father, who was a cavalry officer, was then quartered. The family of Turgenev was noble and wealthy; and, though he lost his father while yet a lad, he received the education of a Russian gentleman of fortune. He was surrounded by tutors in every language but his own, and he has said himself that he owed his first introduction to Russian literature to an old servant. Turgenev entered the University of Moscow about the year 1834, but remained there for only one year, proceeding to St. Petersburg. His academical course in that city terminated in 1838, when he entered the University of Berlin, where he studied for two years, following with attention Werder's lectures upon Hegel. On his return to Russia Turgenev seems to have led for some years the life of a country gentleman, residing chiefly on his own estates, and indulging—a rare taste for a Russian—in sporting excursions through his native land. While yet at college he had tried his hand at poetry, and it is said that one of his pieces pleased the poet and critic Bielinski. Turgenev, however, felt that poetry was not his calling, and he had resolved to leave literature alone when one day he was asked to fill up a few pages by the editor of the *Severnenik*, a Moscow literary magazine. Turgenev contributed a prose sketch, destined to be the first in the series afterwards translated into French as *Récits d'un Chasseur*. The truth to nature in these pictures from Russian peasant life, and the literary grace with which they were clothed, at once made a mark. The success of the *Sportsman* tales was all the greater because the author—unconsciously, perhaps—preached in eloquent words on the evils of serfdom. Turgenev painted the lot of the serf as he saw it, and his vivid sketches stung the conscience of Russia to the quick. Alexander II., then heir-apparent, showed some of these stories to his father, and insisted that serfdom ought to be abolished. "That is true," replied the Emperor, "but it will cause a revolution." This series of stories, which mark the first period of Turgenev's literary career, finished in

1851. We believe their author had then been appointed to a post in the Ministry of the Interior; but his official life was brought to an abrupt close in consequence of a criticism on the dramatist Gogol, published in 1852. In this essay Turgenev laid stress on Gogol's services to his country in exposing official fraud and oppression. Nicholas considered such plain-speaking untimely. Turgenev lost his place, and spent a month in prison, followed by two years' enforced seclusion on his estate, after which his sentence was remitted through the good offices of the heir-apparent.

Between 1855 and 1860 Turgenev produced some excellent work; in 1858 he gave Russia *A Nest of Nobles*—a masterpiece of power and grace. This was followed by some brilliant sketches, and then *Fathers and Sons* began to appear in a magazine in 1861. In general artistic merit this novel was not equal to its predecessor, but its social success was far greater. It is next to impossible for a foreigner to realise the sensation which this book caused at the time by its vivid contrast between the Russia that was passing away and the Russia that was growing to take its place. "Where are we going?" was on the lips of every Russian. *Fathers and Sons* was followed by *Smoke* in 1865, to which succeeded several short stories. *Virgin Soil*, Turgenev's last great work, came out in 1877. The later writings of Turgenev show no loss of power, but they are pervaded by a profound depression whenever the author thinks of his country. In one of his very last pieces he apostrophises thus:—

"In the day of misgiving, in the day of anguished brooding over the fate of my country, thou alone art my staff and support, great, mighty, and free language of Russia. Were it not for thee, who would not despair at the sight of that which is done in my native land? But it cannot be that such a language has been given to any but a free people."

This apparently was the only gleam of light Turgenev saw on his native horizon. The last twenty years of his life was spent in self-exile. In 1868 he had settled at Baden; and there he lived till the close of the Franco-German War, when he sold his German villa, and migrated to Paris. France remained his adopted country till the last, with the exception of short annual visits to Russia.

Turgenev possessed in the highest degree that combination of imagination and the analytical faculty which is essential for the production of life-like fiction. He has been styled the chief of European realists. But he was a realist only in the sense that all great artists who borrow their inspiration direct from nature may be called realists. His art had not the least affinity either to that of the French school whose delight it is to rake together the garbage of life, or to that of some modern writers who painfully evolve "studies of character" out of their own consciousness. Turgenev's descriptive touches are as fresh as nature herself, and it may be truly said of his characters that they are more real than the people we meet every day. Though vitalised to the highest conceivable degree by a strong imagination, they are none the less controlled by rare power of cool, clear analysis. His pages are warmed and lighted by a poet's fancy, but at the same time the artist never loses sight of his models. Hence there is nothing grotesque about Turgenev's most original creations. We find in his works an endless gallery of bold and striking portraits; but Pecksniffs and Murdstones are not to be seen. Probably Turgenev's marvellous power for drawing a character and a type in one stroke came of this combination of the creative and critical faculties. Bazarof, the hard-headed and soft-hearted medical student, was a typical early Nihilist; in his day he counted his fellows by

the thousand, and yet his name at once calls up a living man. It has been said that Turgenev wrote with a purpose, but this is only true to a limited extent. He wrote in a time when his country was passing through a momentous crisis; and, as he drew from everyday life, he dealt perforce with burning questions. His insight into character—or, to use a convertible phrase, his power of human sympathy—was so great that he realised the inmost feelings of his characters with a marvellous distinctness. Hence his pictures of Russian life are at once eloquent sermons and delightful works of art. But Turgenev wrote with no set purpose. He studied life and human nature, and he presented his impressions to his fellow-men just as any other great artist might. Life is full of sermons if we have but eyes to see them. It was Turgenev's evil fortune to write in days when his truthful sketches of life aroused of necessity the angry passions of many different parties. His earlier work caused him to be regarded as a dangerous man—a kind of conspirator. His later work met with little sympathy from the younger Russian school. Such of his writings as appeared after the war of 1877-78 were greeted with manifest impatience. The critics said, "At a time like this Turgenev gives us love idylls." They asked a great artist to become a great social reformer and politician, which was as if they had asked nature to give them roses in January. It is probable that when in his early tales Turgenev painted serfdom in such ugly colours he did not contemplate the possibility of a full emancipation. His mission was to paint life as he found it; others drew the moral.

In this short notice it is only possible to glance at some of his other literary characteristics. His humour and pathos are as natural and artless as was the man himself. He had a keen love of nature, and some of his simple descriptions rise to the highest standard of prose poetry. Nothing human is perfect, and his art had a few technical blemishes. His story will now and then hang, and his canvas is apt to be too crowded. But these are trifling flaws in his work. If it be the function of the novelist to paint with truth the strength and weakness, the joys and sorrows, the hopes and fears of humanity, then Turgenev must rank with the greatest masters of fiction—with Fielding and Thackeray, with Balzac and Auerbach.

Turgenev belongs to Europe at least as much as to his native land. By virtue of that touch of nature which makes the whole world kin, his tales are enjoyed by the readers of all civilised countries. In France his works have long since acquired the rights of citizens; indeed, to Turgenev French was almost as his mother tongue, and he helped to translate many of his works into that language. English readers are fortunate in possessing versions of some of his masterpieces produced by such craftsmen as Mr. Ralston, Mr. Eugene Schuyler, and the late Mr. Ashton Dilke.

A. R. R. BARKER.

#### MAGAZINES AND REVIEWS.

In the September number of the *Antiquary* Mr. Hubert Hall continues his paper on "The Public Rights in the River Thames." It possesses a political as well as an historical value. Sir James Ramsay's extracts from the accounts of King Henry V. are important. The statistical information with regard to the revenue will be useful to any future historian who comprehends that the life of the people is of as much importance as the wars of nobles. Prof. Peroy Gardner discourses on early Oriental coins; his paper is a remarkably interesting one, as few but professed numismatists have anything beyond the most vague knowledge of the coins of Parthia, and know still less of the

Greek issues of India. The Rev. Henry Hayman's paper on Ilchester is of permanent value. It is hardly suited for a magazine, but should rather be expanded into a book. Mr. J. Theodore Bent contributes an account of Ireland written by a person named Haynes after the rebellion there in 1595. It contains some highly curious matter. We are sorry that the spelling has been modernised. We do not feel quite sure, also, that the English has not in some cases been made more modern than it was in the original.

The numbers of the *Revista Contemporanea* for August contain interesting recollections of Madrid at the beginning of the century by Dionisio Chauliá, and a chapter from the forthcoming work of M. R. Ferrer on Ouba, giving an account of Columbus's second visit to the island. The lecture of S. Jimenez on Goethe and Schiller, and the speculations of M. Mingues on Greek and Egyptian civilisation in America, are both concluded in these numbers. S. Gutiérrez begins a historico-critical sketch of the Ode, which promises well. He notices the close union of music and verse, but does not take sufficient account of dancing as a factor in the composition of the early ode. The Spanish Budget is treated of by T. Martinez, and there is a good verse translation of Barbier's "Malpome" by Aniceto Valdivia.

## CORRESPONDENCE.

DR. JOHN WALKER, BENTLEY'S COADJUTOR.

Oriel Lodgings, Rochester: Sept. 10, 1883.

I have lately been engaged in working out the history of Dr. John Walker, Bentley's coadjutor in the Græco-Latin Testament, and hope soon to publish some interesting facts about him. He appears to have been a man of great ability, extreme devotion to study, and delightful character; but, as he failed (I believe) to publish anything, he has not obtained a niche in any of the biographical dictionaries, and is only known as an appendage to Bentley. The most important of the facts I have recovered (I can hardly say discovered) about him is that he died November 9, 1741, about six months before Bentley, and, therefore, could not take up the work that had dropped from the great critic's hands, though he was deeply interested in it, and had gone on collating MSS. till within a few years of his death with the same energy as when he began in 1719. Prof. Jebb has pointed out a trace of his work as late as 1732 (*Bentley*, p. 163); but it is clear from the Bentleian collections at Trinity College, not to speak of other evidence, that he continued a good deal longer at the task, for his collations of nine Greek MSS. of the Gospels are found in a copy of the Greek Testament not published till 1735 (*Trin. Coll.*, B. 17, 44 and 45: see A. A. Ellis, *Bentleii Critica Sacra*, p. xxx., Camb. 1862).

At the time of his death, at the early age of forty-eight, he was Archdeacon of Hereford, Chancellor of St. David's. Dean and Rector of Boxford, Rector of St. Mary Aldermary, and chaplain to George II. He had also been chaplain to Archbishop Wake, with whom he seems to have been intimate since 1721. He married, probably in 1726, Charlotte (natural) daughter of Sheffield Duke of Buckinghamshire (whose epitaph in Westminster Abbey, ending "ens entium miserere mei," many of your readers will recollect). His own epitaph, with some particulars about his wife and children, is given by W. Cole, writing in the year 1762, on folios 118B and 119 of vol. xxxii. of his MS. collections (British Museum Add. MS. 5833). He was probably a Yorkshireman, having been educated at Wakefield, Bentley's own school.

The object of this letter is to elicit from any of your readers, either privately or through the medium of your columns, information on the following points:—

1. As to his birth and parentage. Was he brother of Richard Walker, the staunch vicar-master, and of Samuel, who was also fellow of Trinity in 1712, the year before he obtained his own fellowship?

2. Where he was buried. Cole says nothing on this point; but I am assured, on competent authority, that he was not buried at Hereford.

3. What became of his family? Are any of his descendants still living who, perhaps, possess papers or facts about him? My brother, by a process of exhaustion, has discovered that one of his sons, who was, according to Cole, "a fellow of a college in Cambridge," must have been Henry Walker, of King's, B.A. 1757, M.A. 1760; another was a beneficed clergyman, "preferred by my Lord Maynard;" another, "a supercargo, or in office in the East India trade;" another, "an officer in Germany." He also seems to have left two daughters.

4. Any other facts not contained in the ordinary Bentleian literature or in the Wake archives at Christ Church or in the British Museum, all of which I have searched, though I will not dare to say exhausted. Several Cambridge friends have also kindly informed me of all the official facts in their possession; and Prof. Mayor has added other interesting particulars.

I hope to publish what I have collected about him in the introduction and appendices to the St. Germain St. Matthew, the first of a series of "Old-Latin Biblical Texts," shortly to appear at the Oxford University Press.

JOHN WORDSWORTH.

## THE NAME OF ROBIN HOOD.

98 Rosbuck Road, Sheffield: Sept. 10, 1883.

According to Jacob Grimm, Robin Hood was originally the name of a supernatural being, identical with the wood-sprite known in Germany as Hodeken. With regard to the praenomen Robin, Grimm compares the case of Robin Goodfellow, whom indeed he seems inclined to consider as the same person with Hood. English writers on the Robin Hood story have generally treated Grimm's theory with ridicule, and it must be admitted that they have had some apparent grounds for their incredulity. It can scarcely be doubted that the incidents related in the famous ballad cycle are in the main not mythological, but are founded more or less on the actual history of the various real persons on whom the nickname of Robin Hood was conferred by popular fancy; and Grimm adduced no clear proof of the existence in English tradition of any other Hood than the semi-historical hero of the ballads. Nevertheless, I believe it is possible to show that the sagacity of the great German mythologist had led him, in this instance as in so many others, to the correct conclusion. One of Kemble's Anglo-Saxon charters mentions a place in Worcestershire called Hódas ác (Hód's oak). If this local name occurred only in a single instance, we might suppose that the oak in question, like many other trees mentioned in Anglo-Saxon charters, had received its name from a real person. But it happens that there is also in Nottinghamshire a village called Hodsock (Domesday *Odesach*). It is obviously improbable that two men, living in districts so widely apart, should each have given his name to an oak-tree. We may therefore safely conclude that "Hód's oak" is to be added to the scanty list of mythological allusions in English local nomenclature. Hudswell, in Yorkshire, and Hudspeth (preserved as a surname) seem to be of similar origin, and may be compared with the longer forms "Robin Hood's Well" and "Robin Hood's Path," which are common in various parts of England.

HENRY BRADLEY.

## THE AGE OF HOMER.

London: Sept. 10, 1883.

I have to thank Mr. Sayce for his full and prompt reply to my questions. I am only sorry that he has not answered my No. 4, as the

statement which he makes under that number is entirely wide of the important question which I asked. His views with regard to the relation of Plato to the two Homers are certainly stated clearly enough, and really form a very neat *reductio ad absurdum* of the whole theory, if we remember as we read them what the "literary Homer" was: a deliberate parody, or, as Mr. Sayce contemptuously calls it, a "Batrakhomyomakhia," which "holds up to mockery all that had once claimed the deepest reverence of the Greek people." For it would appear that Plato, being, of course, notoriously deficient in the sense of irony, though acquainted with the old Homer as well as with this irreverent parody, always spoke of both by the same name, and quoted the "Batrakhomyomakhia" times without number in the tone of an admirer, while sternly arraigning the "unconscious immorality" of the ancient songs. This is a supposition which can hardly be accepted except by those who, with Mr. Sayce, "see no reason to doubt" the story in Herodotus that the bones of Orestes were ten feet long and proved a talisman of victory to the Spartans.

Plato, moreover, as it happens, expressly contradicts Mr. Sayce. The first three points brought forward to prove that our Homer is a cynical parody are (1) "Agamemnon, king of men, himself is a mean-spirited poltroon, whom his subordinates treat with contempt;" (2) "Akhilles is a revengeful savage, who . . . insults his fallen enemy;" (3) "the depth of cynical unbelief betrayed in such gratuitous narratives as the 'charming' of Zeus by Hêrê." Now, it happens that the "indictment of Epic poetry" in the *Republic* 377-92 (books ii. and iii.) is a review of precisely what Mr. Sayce calls the "cynical" passages in Homer; he mentions, in particular, (1) Achilles' insolence to Agamemnon, 369E; (2) the charming of Zeus by Hêrê, 390B; (3) Achilles' treatment of the fallen Hector, 391B. It appears, therefore, that the passages on which "Plato could not have failed to dwell" if Mr. Sayce's theory is wrong are precisely those upon which he did dwell.

The process of modernising, too, which Mr. Sayce holds to have been applied to Homer seems to have consisted chiefly in filling the text with archaisms. To use Mr. Sayce's own illustration, this is as though Dryden had "modernised" Chaucer by filling his text with words out of *Beowulf*, or the best imitations of them that he was capable of making. In fact, Mr. Sayce attempts to uphold two inconsistent hypotheses—on the one hand, that the sceptic who rewrote Homer in the time of Perikles wanted to make it like an archaic poem; on the other, that he deliberately altered it to adapt it to contemporary ideas.

It would take too long to discuss the other highly disputable points which Mr. Sayce raises, nor do I think it necessary until a plausible hypothesis has been put forward to reconcile these inconsistencies. I would merely add that it is for our present purpose a matter of indifference whether "cheese-knife" or "cheese-scraper" is better English, as neither Mr. Sayce nor myself had employed either word; but I must protest, in the name of our common language, against the idea that what I expressed by a "grater" can be exactly the same as what Mr. Sayce calls "a particular kind of knife for cutting cheese." But I do not think that Mr. Sayce has caught the real aim of my remarks about the grater and the trained carver.

WALTER LEAF.

## HAVE ANIMALS MINDS?

With reference to Mr. H. H. Howorth's excellent review of Bishop Goodwin's *Walks in the Regions of Science and Faith* in the *ACADEMY* of September 8, may I be allowed to call his

attention to the following passage in Prof. Huxley's *Hume* (p. 104)?—

"We must admit that Hume does not express himself too strongly when he says, 'No truth appears to be more evident than that the beasts are endowed with thought and reason as well as men. The arguments are in this case so obvious that they never escape the most stupid and ignorant.'"

A CONSTANT READER.

### SCIENCE.

*The Chronicle of Joshua the Stylite.* Composed in Syriac A.D. 507. With a Translation and Notes by W. Wright. (Cambridge: University Press.)

THIS Chronicle, which had been hitherto only known by the Latin abstract of J. S. Assemani (*Bibl. Orient.*, vol. i.), was first published in the original Syriac, together with a French translation and notes, by the Abbé Martin in 1876. As a work in Syriac literature rarely advances beyond the *editio princeps*, it seemed not unlikely that the Chronicle of Joshua would share the fate of that of Bar-Hebraeus, and become the *corpus vile* on which a long succession of critics might exercise their skill in emendation. Prof. Nöldeke worthily led the way in one of his characteristic reviews; but the book having been set as one of the subjects for the Semitic Languages Tripos at Cambridge, it happily fell to the lot of the learned Professor of Arabic to lecture on it. His practical mind at once recognised that there were errors in the text which no mere critical sagacity could remove, and that a fresh collation of the MS. was indispensable. This was generously undertaken by Dr. Guidi, who patiently examined again and again the half-obliterated letters of the palimpsest. By the help of these collations, together with the emendations of himself and of literary friends, the editor has produced a text as perfect as we can reasonably expect, and added a vigorous translation with terse, scholarly notes, so that we can now enjoy, with comparative freedom from distraction, the vivid sketches of contemporary life penned by the earliest of Syriac historians.

The leading subject of the Chronicle is the war between the Romans and the Persians, A.D. 502-6. The origin of this war he assigns to two causes—viz., (1) the unwillingness of the Persians to restore Nisibis, which he says had been ceded to them for 120 years (a strange statement, which has lately received some illustration from the *Romance of Julian* published by Hoffmann, p. 220); and (2) the frequent refusals of the Emperor to aid the Persian monarch with grants of money in his struggle against their common foe. With this clue to the political relations of the two countries Joshua traces the history of each in the generation that preceded the rupture between them. Leaving the combatants standing, as it were, face to face, he then proceeds to describe, in a series of life-like pictures, the events which happened before his eyes in the district which was soon to become the theatre of hostilities. The chief interest in the war itself centres round the cities of Edessa and Amid. The former, true to its tradition of special blessedness, successfully baffled the repeated efforts of Kawād; the latter was

besieged and captured by the Persians, only to fall again into the hands of the Romans; thus, as Gibbon writes, "the same line, though marked with slaughter and devastation, still separated the two empires."

The following graphic description of the habits of the Gothic mercenaries may serve as a specimen of the style of the chronicler, which is well kept up in the English version:—

"Because they did not live at their own expense from the very first day they came, they became so gluttonous in their eating and drinking that some of them, who had regaled themselves on the tops of the houses, went forth by night, quite stupefied with too much wine, and stepped out into empty space, and fell headlong down, and so departed this life by an evil end. Others, as they were sitting and drinking, sank into slumber, and fell from the housetops, and died on the spot. Others again suffered agonies on their beds from eating too much. Some poured boiling water into the ears of those who waited upon them, for trifling faults. Others went into a garden to take vegetables, and when the gardener arose to prevent them from taking them, they slew him with an arrow, and his blood was not avenged. Others still, as their wickedness increased and there was no one to check them, since those on whom they were quartered behaved with great discretion and did everything exactly as they wished, because they gave them no opportunity for doing them harm, were overcome by their own rage, and slew one another. That there were among them others who lived decently is not concealed from thy knowledge; for it is impossible that in a large army like this there should not be some such persons found" (chap. xvi.).

Excellent as Dr. Wright's work really is, yet no one would be more ready than himself to acknowledge that difficulties, some apparently insoluble, still remain; this residuum it is the duty of those who review the work to attempt to diminish. Perhaps sufficient materials might in time be collected for a page of addenda, to which whatever is of value in the following remarks is offered as a slight contribution. We cannot forbear observing *en passant* that a facsimile specimen of the MS. would have been a welcome addition. This defect, however, may be remedied by Dr. Guidi when he publishes, as it is hoped that he will do, the rest of the MS. In the Preface (p. viii.) ambiguity might be avoided by omitting the epithet "larger" as applied to the work of Dionysius, since it is the shorter of his two Histories which contains the Chronicle of Joshua. A few lines lower down, the statement attributed to J. S. Assemani with regard to the date of the transcription of the MS. ("when Moses of Nisibis was abbot," &c.) does not seem to be borne out by the reference (*Bibl. Orient.*, t. ii., pp. 98, 99). Exception might be taken in chap. xii. to the reading כרם [כרש], adopted from Martin, since this involves an inversion of the usual order (comp. p. 88, l. 5); the lacuna, if there really be one, would be better filled up by גרשן. In a note to chap. lxi. it is stated that "A word is evidently wanting here;" but a reference to Nöldeke's *Syr. Gr.* (p. 257) will show that כרם by itself is used to denote "within a period of time." There is no occasion to alter the reading in chap. xvi. in order to harmonise it with another passage; the text as it stands may be rendered "to face a battle." Again, a needless alteration

has been introduced at the end of chap. xxviii., note 2, by the substitution of the masc. for the fem. form; the latter is justified by its recurrence p. 61, l. 21. In the translation of chap. xlix., reference should be made to Luke xxi. 9, instead of to the parallel passage in Matt. xxiv. 6; nor is it unworthy of notice that the quotation agrees in the order of the words (*primum hæc fieri*) with the Curetonian, and not with the Peshito. In the passage from Isaiah, cited at p. 76 of the translation, "before us" is an oversight for "before me." In chap. xxx., the translation "of whom beyond all others it was thought that he had taken upon him to labour in teaching" must be corrected thus: "to whom beyond all others it was thought to be an agreeable task to labour in teaching" (comp. Acts xxviii. 22, Pesh. and Duval, *Traité du Gram. Syr.*, p. 359). There is scarcely sufficient justification in the note on chap. lviii. for translating כרם (which from the context is part of a Roman officer's dress) by "a pair of trousers;" for in the Arabic quoted by way of illustration the second noun gives us the definite article of clothing, in the Syriac it does not. The same combination occurs in the Syro-Hexaplaric version of Judg. xvii. 10 as the rendering of ζυγος ἱματίων; and we have a similar phrase in the Peshito of Gen. xiv. 22, &c., where a *change of clothes* is meant. In no passage is the superiority of the present edition more conspicuous than in the account of the miraculous egg, inscribed with words prophetic of Roman triumph, which was laid by a goose on Good Friday (chap. lxviii.). By ascertaining the correct reading of the MS., and introducing necessary emendations, Dr. Wright has removed nearly every obscurity, and brought out for the first time the correct form of the inscription. Re-translated into the original Greek it was probably Πωμαίοι with νικῶσις written below. These letters, it is said, "were raised to the sight and touch, like the letters which monks trace on Eucharistic cups." This last word can only be looked on as a provisional rendering, since כרם does not occur in the Syriac Lexicons, and would be a very irregular transliteration of ποτήρια. Supposing the first and second letters to be correct, כרם (*panis frustum*), which has been doubtfully suggested by Dr. Nestle, would not be an unlikely conjecture. It is used in connexion with the administration of the elements in chap. xxxiv.; and the comparison with the Eucharistic cake would be singularly appropriate if, as we suppose, it bore, even at that time, the letters Ις Χς standing in relief with νικ below. In chap. xxxix. we are told that Mar Peter (Bishop of Edessa) appealed in person to Anastatius to remit the tax (συντέλεια). As, however, the money had already been extorted, the Emperor did not like to return it; "but, in order not to send our father away empty, he remitted *two folles* (φóλλεις) to the villagers." This rendering, which has been generally accepted, results from an ingenious suggestion of the Abbé Martin that the initial letter of the word כפלים should be detached, and taken to represent a numeral. But a concession which is stated to be "environ onze centimes" seems, in the absence of further explanation, scarcely ade-

quate to the occasion; and the context points to the remission, not of any part of the tax already paid, but of some special burden. Now, if we examine the strange combination of Syriac letters, we seem to detect, in a slightly distorted form, the Greek *ἐπιβολή*; and this we may with some confidence pronounce to be the right word, for the *ἐπιβολή* was looked upon as an especially hateful impost, since it designated the compulsory assignment of unoccupied and unproductive estates to neighbouring owners, in order that no land might be left without an occupier responsible to the government for the payment of taxes.

R. L. BENSLEY.

### CORRESPONDENCE.

DR. ISAAC TAYLOR'S "THE ALPHABET."

5 Alexandra Road, Wimbledon, S.W.

In the Preface to his recent work, *The Alphabet*, Dr. Isaac Taylor remarks that, "in dealing with a subject so extensive, and with materials so copious, it has proved no easy task to keep the book within any reasonable limits." In the main portion of the book, which treats of the genealogy of letters, the author has carried out his plan with success, and has presented concisely a great number of interesting and instructive facts. Other parts, which treat of the application of alphabetic writing to language, and the relations which have existed or ought to exist between the two, might, however, be extended with advantage. Ordinary literary readers cannot safely be presumed to know anything about the historic values of the letters, about transliteration, about phonology, or about the theory of the alphabet as a notation for spoken sounds. To make these matters intelligible to them, a few further explanations would be useful, especially in the following passages.

With the remarks on p. 185, vol. ii., as to the difficulty of enlarging the Roman alphabet by means of new letters, all who know anything of the subject practically will agree. Fortunately, new letters are not necessary, as it is found possible to spell English phonetically and consistently with only the common twenty-eight types. This discovery, which greatly simplifies the problem of spelling reform, should be noted.

On p. 299 the inconvenience of using italics, in transliteration, to mark the "front" and "inverted point" consonants is referred to. The inconvenience is that in clarendon type there is no italic, and hence the printer must borrow from some other fount. Moreover, the relation of the two types has sometimes to be reversed, as when (*samskr̥t*) appears in roman and (*samskr̥t*) in italic. By means of these mixed founts, together with turned letters and digraphs, the most complete scientific alphabets have been constructed, such as Mr. Alexander J. Ellis's "Palaeotype" and Mr. Henry Sweet's "Narrow Romic."

Dealing with the alphabet of *Açoka* (p. 289), Dr. Taylor observes that "none of the artificial alphabets which have been proposed by modern phonologists excel it in delicacy, ingenuity, exactitude, and comprehensiveness." It has the additional merits of conciseness and simplicity, as it appears to represent all vowels by means of five letters and two modifiers; while in "Visible Speech" and "Narrow Romic" the number of vowel-symbols is more than seven times as great.

On p. 291 it is pointed out that the name of this Buddhist Rāgā is "variously spelt *Açoka*, *As'oka*, *Asoka*, *Açoka*, or *Asoka*, according to the system of transliteration adopted. . . . The second letter is the palatal sibilant *ṣ*, which is usually sounded like *s* in *sure*." This, of course, does not mean that such is the true sound of

this letter, or that it can be correctly transliterated in all these five different ways. To represent the consonant in *sure*, (*ś*) is the proper sign; (*s*) indicates an *s* with "front" modification; (*ṣ*) or (*ṣ*) can only mean the "inverted" or "cerebral" *s*; while (*ç*) is appropriated to the "front-open-breath" consonant in German *ich*. Translitterators will agree as to the spelling when the analysis of the native pronunciation by phoneticians becomes known.

Some peculiarities of the English alphabet are illustrated on p. 300. "In the words *ink*, *inch*, *under*, *plinth*, we employ the same symbol, *n*, to express four distinct nasals, whereas Indian languages have separate symbols for the guttural, palatal, cerebral, and dental sounds." The reasons for this difference of practice should be given—namely, that the value of *n* in *ink* is fixed by a rule of position; that the English *ch* is totally different from (*o*) the front stop; that the front nasal (*ñ*) is unknown in English; and that *ch* in the spelling *inch* is unphonetic. The modifications which *n* undergoes in *inch*, *under*, *plinth*, are "positional" or "euphonic." They are not "significant" in English—that is to say, they are not used independently to distinguish the meanings of words. Hence they would not be marked in our national orthography, however accurately phonetic it might become.

The names of the letters are employed on p. 84 to determine their ancient values. "If the Latin *V* had been pronounced as *v*, its name would have been *ev*, as in the case of *ef* and the other continuants. The name *ve* shows that it was a stopped consonant, and hence the sound must have been *w*." It might be remarked, further, that, though the name (*dablju*) begins with a stopped consonant (*d*), the phonetic power of *w* is that of an open consonant or continuant. In like manner, the order of consonant and vowel in the name (*wai*) would, on this theory, lead to the supposition that *y* formerly represented an explodent.

On p. 29, vol. i., Dr. Taylor enumerates the advantages of our historical spelling in providing variant symbols for homophones. To realise the full advantage of this principle, it should be more generally carried out. We should never have to rely for the meaning on the context, as in *right way*, *right of way*, *right line*, *right angle*, *right hand*, *right honorable*; where the one written symbol stands for six different senses. Even where variant spellings are now used for the same spoken word, such as *right*, *wright*, *writhe*, *rite*, they are not intentionally designed as such, but owe their existence entirely to the phonetic spelling of former times. They indicate the older pronunciations (*riht*, *wriht*, *wriit*, *riit*) which are now levelled under one form (*rait*). By this retention of the antiquarian symbols our spelling becomes historical in the sense that the title *Fidei Defensor* on our coins, or the religious ceremony of the *congé d'élire*, may be called historical. Also in the sense that our spelling offers an enigma to the historian, who is puzzled to discover what it does not record—namely, the course of evolution of English speech during the past three centuries. Again, it would be well if each of these spellings had some obvious connexion with the sense in which it is used, so that the association of symbol and meaning could be easily agreed on and recollected. At present we have disagreement; some authorities writing "silver brooch" (pp. 212, 392, vol. ii.); others "silver brooch." But these distinctions cannot well be carried out in alphabetic writing, which must, at least intentionally, always be phonetic. Hence, those who attach importance to the principle of symbolising not sound, but sense, are consistent when they advocate the disuse of the alphabet in favour of an ideographic system.

JAMES LECKY.

DR. ABEL'S "ILOHESTER LECTURES."

Oxford: Sept. 11, 1883.

My absence in the East of Europe has prevented my sending an earlier reply to Dr. Abel's letter (ACADEMY, July 28). I am only afraid that your readers will be weary of these Slavonic minutiae.

1, 2. As I appear to have mistaken Dr. Abel's meaning in these instances, of course I will withdraw my objections, merely remarking that Karamzin is of no authority as an ethnologist or philologist, whatever his merits may be as an historian.

3. Dr. Abel must acknowledge that it is exceedingly difficult to disentangle the Polish words which have crept into both Little and White Russian. As I have previously said, we must wait till we get a dictionary based on sound philological principles. At present we have nothing but flimsy and confused vocabularies, such as those by Piskounov and others. It is dangerous to build up theories with such inadequate materials.

4. As regards the pronunciation of the infinitive of the verb *veljet*, I write it as it sounds to me. "From considerable experience," Dr. Abel assures me that it is pronounced *velit*; but perhaps, if we compared dates, my own experience of twenty-nine years would prove a longer one than Dr. Abel's.

5. It does not appear safe to follow Schafarik in all his surmises about the realities of the Wilzen. Wilno on the Wilia, in a country occupied during the historical period by Lithuanians, does not seem to have more connexion with the Wilzen than our Wilton. The origin of many of these names is merely guess-work.

Lastly, one is surprised to see a mere political and party writer like M. Henri Martin quoted seriously as an authority on Slavonic history and literature. He certainly does not enjoy such a reputation in any Slavonic country. The anecdote about Frediakowski looks like mere spiteful gossip. On questioning a little while ago a Russian friend, well acquainted with the literature of his country, he unhesitatingly treated the story as a fiction.

W. R. MORFILL.

### SCIENCE NOTES.

MR. R. T. OMOND, assistant to Prof. Tait, of Edinburgh, has been appointed superintendent of the Ben Nevis Observatory out of nineteen candidates. The path to the summit of the mountain was finished last week, and the work of building the permanent observatory will be begun forthwith, so as to be finished before the winter.

As we have had occasion to remark more than once before, University College, Bristol, seems to be flourishing as a school for scientific and technical training, though it still stands in need of more pecuniary support. Laboratories are now open for chemistry, physics, and electricity; and the coming term will see laboratories for biology and geology likewise provided. As regards the engineering class, a special feature is made of practical work in connexion with the manufacturing engineers of the neighbourhood. Architectural drawing and surveying are also henceforth encouraged by similar means.

By the kindness of the trustees of the Gilchrist Fund, the committee of the Royal Victoria Coffee Hall have been able to arrange for the delivery of six "Penny Science Lectures." The lectures will be as follow:—October 2 and 9, "Ice, Water, and Steam," by Mr. W. Lant Carpenter; October 16, "Life," by Mr. P. H. Carpenter; October 23, "Comets," by Mr. E. B. Knobel; October 30, "The Rights

and Feelings of an Animal," by Mr. C. A. V. Conybeare; and November 6, "Food and Feeding," by Dr. R. W. Richardson. The lectures will be illustrated with the oxy-hydrogen lantern.

MESSRS. MACMILLAN have in the press the second volume of Prof. Gamgee's *Text-Book of Physiological Chemistry*.

In looking through the list of the "International Scientific Series," which now numbers forty-seven volumes, we find that Dr. Draper's *History of the Conflict between Religion and Science* has been distinctly the most successful, having reached seventeen editions; then comes Mr. Herbert Spencer's *Study of Sociology*, with eleven editions. Of recent issues, Sir John Lubbock's *Ants, Bees, and Wasps* is already in its sixth edition.

In this connexion we may mention that a fifteenth edition has just appeared of Dr. Ludwig Büchner's famous *Kraft und Stoff*.

In the *Boletín de la Institución Libre de Enseñanza* of August 31, Don Joaquín Costa claims a place among early inventors of fire-balloons for the Jesuit Bartolomé Lorenzo de Gusmão. More than seventy years before Montgolfier, he made an ascent in Lisbon, August 8, 1708, and was thereupon accused of sorcery, and imprisoned by the Inquisition; but, by the exertions of his Order, he got free, and escaped to Spain. He is not mentioned in the *Encyclopædia Britannica*, nor by French writers, except by Larousse, who acknowledges his priority.

#### PHILOLOGY NOTES.

THE third fasciculus of vol. vii. of Lane's Arabic Lexicon, edited by Mr. Stanley Lane-Poole, is well advanced, and will be published this autumn.

MR. QUARITCH has sent us a third edition, revised from the second edition prepared by the late Henry G. Williams, of the *Practical Grammar of the Arabic Language*, with interlinear reading lessons, dialogues, and vocabulary, by Faris Ash-Shidyāq.

THE Asiatic Society of Bengal have sanctioned the publication of the six following works in the "Bibliotheca Indica":—*Sankhāyana Śrauta Sūtra*, edited by Dr. A. Hillebrandt; *Saunaka's Śarvānukramanī* of the *Rig Veda*, edited by Dr. Rājendralāla Mitra; *Tattva Chintamani*, with the Commentary of Mathurā Nathā, edited by Pandit Kāmākhyānātha Tarkaratna; *Selections from old Commentaries on Manu*, edited by Prof. J. Jolly; and *Brahmagupta's Karanagrantha*, the so-called *Khanda-Khādyā*, edited, with translation and notes, by Dr. G. Thibaut.

A SECOND edition has just been published of Dr. F. Blass's treatise upon Greek pronunciation.

THE last number of Bursian's *Jahresbericht* contains an interesting report of recent books on numismatics by Dr. Weil. The other subjects treated are Greek tragedy, Latin grammar, and the Italian dialects (by Dr. Deecke).

AT a recent meeting of the Académie des Inscriptions, M. Maspero read a paper on two fragments of a Roman inscription of the period of the Antonines, found by him at Coptos in Upper Egypt, and now deposited in the Boulaq Museum. They record the work accomplished by the soldiers of two legions in constructing roads, and more especially in digging cisterns for the use of travellers.

In a recent number of the *Deutsche Literatur Zeitung*, Prof. Zupitza characterises the third edition of I. Schmidt's English Grammar as the best in existence.

#### FINE ART. ART BOOKS.

*Some of Aesop's Fables with Modern Instances.* Shown in Designs by Randolph Caldecott, from New Translations by Alfred Caldecott. The Engravings by J. D. Cooper. (Macmillan.) We confess to having delayed what must be on the whole an unfavourable notice of this book lest we should spoil the enjoyment that others may be able to derive from it. We yield to none in admiration for Mr. R. Caldecott's genius, which has added a gallery of new types to the nursery and the drawing-room. Aesop, it might have been anticipated, would have supplied just the appropriate field for his pencil, which seems to have an inexhaustible gift for depicting what is human and what is humorous in the animal kingdom. We regret to say it, but even in the pictorial representations of the Fables we do not think that Mr. Caldecott is here equal to his better self; and the "Modern Instances" are, in our judgment, the next thing to a failure. The only quite satisfactory bits are those in which Mr. Caldecott has repeated *more suo* the central motif in a little subordinate sketch, where a few strokes serve to tell the story far more effectively than an elaborate composition. It is to be hoped that Mr. Caldecott will not be encouraged to let his fancy condescend to the rough work of the political caricaturist.

*Wild Flowers of Switzerland; or, a Year among the Flowers of the Alps.* By H. C. W. (Sampson Low.) Though there are already not a few books describing, both botanically and pictorially, the flora of the Alps, no new work on the subject can ever be unwelcome. The characteristic of the present one is that the flowers have been painted of the natural size, and from living specimens. There are sixteen plates in all, grouped rather with regard to artificial effect than actual truth. Facing each plate is a skeleton outline, for the purpose of assisting identification; and at the end are four several Indexes, giving the Latin, English, French, and German names. The reproductions by chromo-lithography are on the whole satisfactory, with the exception of the Chinese monstrosity that forms the frontispiece.

MESSRS. LONGMANS have sent us a copy of the new edition of their *Illustrated New Testament*, which first appeared in 1863 at the price of ten guineas, and is now re-issued for one-tenth that sum. It is important to remark that the delicacy of the wood-engravings—by the help, we suppose, of some mechanical process of reproduction—has been marvellously preserved, so that the general public can now possess the equivalent of what was before reserved for the richest purses. It may be doubted whether the masterpieces of Italian painting are altogether fit subjects for woodcuts on this comparatively small scale; but no one who has examined these plates will deny that all has been accomplished that the material conditions permit. At a time when it is the fashion to overrate the work of the American schools, the republication of this handsome volume comes opportunely as a reminder of what English wood-cutters could achieve twenty years ago.

IN the ACADEMY of December 2 last (No. 552) appeared a notice of "The Book of Fortune," a series of drawings by the celebrated Jean Cousin, then in course of reproduction in the pages of *L'Art*. The series, completed some time since, has now been published in a single volume quarto. The issue is strictly limited to 200 "examples;" and, for the convenience of English readers, the Introduction and Notes, as they appeared in *L'Art* from the pen of M. Ludovic Lalanne, have been entrusted to Mr. Mainwaring Dunstan for translation. The

volume thus forms one of the admirable series of the "Librairie de l'Art." But, while we are glad to welcome the republication of these interesting sketches, we cannot but regret that the editor of *L'Art* has not devoted some few pages to a biographical account of this distinguished master. Jean Cousin, though too little remembered now, was, in his own day (the earlier and middle years of the sixteenth century), an artist of very considerable reputation, and, as we pointed out, stood in the van as an acknowledged leader in portraiture, in engraving, in sculpture, in ivory carving, and, above all, in painting upon glass. The life, as well as the art history, of such a man would be full of interest; and, though the materials are scanty, a certain amount of information is attainable. The drawings here reproduced, though to some extent marred by the monotony of the subject, will well repay a careful examination. They show great ingenuity of conception and a happy freedom of execution, neither of which qualities enliven the larger number of *Emblemata* which, about the same period, were so popular. The designs which border the Emblems, or enclose a space left blank for some verse or inscription, belonging, as they do, to a particular period and to the most distinctive French school, are in many instances singularly harmonious and graceful, and would, we think, prove admirably suggestive in ornamentation or wood-carving.

*Design in Textile Fabrics.* By Thomas R. Ashenhurst. (Cassell.) This is one of a series of *Manuals of Technology*, edited by Prof. Ayrton and Mr. Richard Wormell, which are designed to answer the demand for text-books describing the application of science to industry. It is somewhat surprising that this should be a new demand. If it had been the application of art, there would be less room for astonishment; but, as science has for one or more generations had it mostly its own way with our industries, it is strange that there should be a lack of educational literature on this subject. So, however, it seems to be, and the men who work the machines have become such machines themselves that it is necessary to inform them as to what they are doing. Nor is it only necessary to inform them, but it must be done in a simple and attractive way. The machine-man is not to be trusted to take great trouble to learn the reason of his existence. No doubt with much wisdom, the editors have determined that "the subjects will be treated analytically rather than synthetically—that is to say, the machine, as the workman knows it, will be taken as a whole and analysed; and special care will be taken to avoid the method so common in scientific books, according to which a number of abstract principles are first developed, while their practical application is deferred to the end of the book, which, probably, the practical man never reaches."

This, rightly understood, means that not only have the workmen hitherto been ignorant of the science of their industries, but the teachers have been ignorant of the science of instruction. Now, at last, we are to have a golden time. The teachers will place the intellectual pabulum before the workmen in such an attractive and digestible form that it shall indeed be the fault of the latter if they do not clearly apprehend what they are doing, and how it is done. We regret to find that Mr. Ashenhurst has yet found it necessary "to lay down the leading principles clearly and completely," and that "the reader must not expect to go through this work in a hurried manner, or to thoroughly grasp all the details of the subject without further effort." After all, we fear that the royal road to sound knowledge has not yet been discovered. But, if a royal road cannot be made, a high-road can, which shall take the shortest route, and make travelling comparatively quick and comfortable. This at

least is effected by such admirable treatises as this of Mr. Ashenurst, who combines thorough theoretical and practical knowledge with a singular faculty of clear statement. If the science of weaving is not abstruse, it is at least intricate, and few could explain it so shortly and so lucidly as the author of this book. Even without the practical experience of manufacture or the patent illustration of a loom, the ordinary reader who wishes to understand how cloth or lace or velvet is made can do so with the help of this book and a very slight intellectual effort. Indeed, if the rest of the series are like to this, it will be useful not only to the workman and the designer, but to the public in general, to whom some amount of technical knowledge as to how the things they use are and ought to be constructed will be not only interesting, but of practical benefit. Viewed as a text-book for technological examinations, it could scarcely be improved.

*Decorative Painting.* By B. C. Saward. (Upcott Gill.) If the delicate and graceful sprays of leaf and flower with which the particular pages of this book are adorned be specimens of Miss Saward's draughtsmanship, she may be at least congratulated on having done much to make her book charming to the eye; and she has certainly spared no pains to give useful information as to the various processes of decorative painting which form the subject of it. She writes so tersely and practically that there is scarcely more room for criticism than in a recipe-book. Moreover, we must confess that, even if we wished to do so, our knowledge would hardly entitle us to pronounce judgment upon her instructions for "Lustra," "Smoked China," "Sydertype," or "Pebble-painting." As to the colour of the paper and type, the buff and purple fly-leaves and text of brownish red on bluish gray are not to our taste, but the binding is pretty.

*Okuma.* Roman japonais illustré, par Félix Régamey, d'après le Texte de Takizava-Bakin et les Dessins de Cheguinoi. (Paris: Plon.) It would require an expert to determine how much both of the text and of the illustrations in this curious volume belong to the Japanese originals, and how much to the adaptive genius of M. Régamey. That the whole bears such a semblance of verisimilitude must be due partly to the admirable manner in which it has been produced by one of the first of Parisian publishers. The story, so far as it permits itself to be read, is of a truly horrible character, surpassing anything that could be conceived by the wildest imagination of the West. And, if the truth must be told, the greater number of the illustrations are worthy of the story. It is only the decorative tail-pieces and the initial letters that will approve themselves to a taste not corrupted by an absurd fashion. But these essential demerits do not blind us to the peculiar character of the work, nor render us ungrateful to the French editor and publisher who have lavished so much pains upon it. As a curiosity, *Okuma* has a reason for existence; and as an example of colour-printing on blocks it is not likely soon to be surpassed.

#### THE MANCHESTER ART GALLERY.

THE transformation of the old proprietary Manchester Royal Institution into the City of Manchester Art Gallery is completed, and the autumn exhibition now to be seen is the first under the new management. The occasion is one that calls for special notice, as it forms a new departure, and should be fruitful of good. The cotton city devised the art treasures exhibition of 1857, and no one who remembers that wonderful display will doubt that Northern energy can do a great deal when applied to art. It is to outsiders possibly a matter of surprise that

the impetus then given to the art feeling of the district did not result in a permanent gallery, but those who passed through the period of trouble and disaster that followed a few years later will know that sterner matters demanded immediate and absorbing attention. It is a fact that some fifty or sixty thousand pounds were promised; but, as the promoters had decided not to start unless they had a guarantee of £100,000, the project fell through. The work is now likely to be done by other agencies, though in a more gradual fashion. The Corporation came into possession of a fine building—one of Barry's best—and they have undertaken for the next twenty years to spend at least £2,000 annually on works of art. There is a confident expectation that many important gifts will be made; and this hope is justified by the fact that Lawson's "Minister's Garden," Hunt's "Shadow of Death," and Prinsep's "At the Golden Gate" have already been presented. The management of the gallery is entrusted to a committee of twenty-one persons, fourteen nominated by the Corporation, and seven by the representatives of the Royal Institution. There are plenty of men who have the requisite knowledge and public spirit, and the mixed committee promises to be a very useful arrangement. The building has had sundry alterations, and the result is a very well-lighted series of galleries, which, at the present moment, contain nearly a thousand objects of art. There is no necessity to criticise these in detail, as many of the most important have already been noticed in the columns of the ACADEMY. The general quality of the exhibition is high, and it is probably not an exaggeration to style it the most important that Manchester has seen since 1857. Among other notable pictures may be named the portraits of the "Duchess of Devonshire" and of the "Bishop of Manchester" by Millais, and the weird "Gray Lady" by the same artist; the "Prince Arthur" of Mr. Yeames; "The Ides of March," by Mr. Poynter; "Grandfather's Pet" of Mr. Herkomer; the "Trophies of Victory" of Mr. Gow; and the "Banquet" of Mr. Linton. The portrait-painters are well represented by Mr. Holl, Mr. G. F. Watts, and Miss Jopling, while among the local artists who shine in the same line Mr. J. H. E. Partington must be named. Messrs. F. J. Shields, Clarence Whaite, R. G. Somerset, Joseph Knight, Ward Heys, Anderson Hague, and many other Manchester artists are here in strength.

But, in addition to the temporary exhibition of pictures, there are various matters of interest to be named. In the lower suite of rooms has been placed the very remarkable and important series of textile fabrics collected by Dr. Bock. These have not only an archaeological interest as showing the course and progress of art when applied to these materials, but have also a present value for the educational aid they offer to the designers of the present day. It is a pleasant and a noteworthy fact that on the very first day they were open to the public the visitors included a number of earnest students whose future work in design will, it may be hoped, show the good influences thus received. Dr. Bock's collection is further supplemented by a series of Oriental textiles from the South Kensington Museum, which has also contributed pottery, &c. Another educational agency is supplied by an extensive series of casts of classical, Renaissance, and modern sculpture. These typical specimens of the best that has been done have an important function, but they will need much explanation and comment, which, so far, there has not been time to supply. The history of modern art from Cimabue downwards is shown by a long series of autotypes and engravings from pictures that are usually admitted to be art classics.

Manchester has therefore not only made an

important and beneficial change in the management of its autumn exhibition. It has secured the beginnings of a permanent gallery, and it has laid the foundation of an institution for the art education of the people. What the city library does for literature the city gallery is to do for art.

WILLIAM H. A. AXON.

#### THE ART FOR SCHOOLS ASSOCIATION.

A SCHEME, which seems as feasible as it is unassuming, has been set on foot with the object, by the gift of a careful selection of pictures, of relieving the grim ugliness that too often characterises our elementary school-rooms. The aim is not merely decoration, but education. That the constant vision of the finest creations of art exercises a refining influence upon the seer is not to be questioned, while the value to children of pictures which tell a history is readily understood. The surprising thing is that the artistic element should not have been already generally supplied to Board and other schools. The idea, indeed, occurred to the authorities of the Art Museum at Manchester, by whom collections of pictures, casts, and other objects of art are offered to the local schools on loan; but no general scheme of the kind was planned till Miss Christie, of Kew, mooted her proposal and gathered together a strong committee a month or so ago. The prospectus of the "Art for Schools Association" has just been issued; and we observe that Mr. Ruskin has accepted the position of president, while Messrs. Robert Browning, Matthew Arnold, William Morris, G. F. Watts, Stopford Brooke, Sidney Colvin, J. Cotter Morison, Comyns Carr, Sir Frederick Leighton, Messrs. W. E. Forster, A. J. Mundella, John Morley, George Howard, Lord Aberdare, and other well-known names in art and education appear among the vice-presidents and committee. The objects set forth in the prospectus, and endorsed by this influential list of supporters, are these:—

1. To negotiate with art publishers for the purchase of prints, photographs, etchings, chromolithographs, &c., on advantageous terms, and to supply them at the lowest possible price to schools.
  2. To reproduce, from time to time, by one or more of the processes familiar to engravers and printers, carefully selected examples likely to have a large circulation.
  3. To print a descriptive catalogue and price list of the examples which the committee are prepared to recommend to the notice of schools.
  4. To present to schools, in special cases, and as the funds of the association shall allow, small collections, and books explanatory of them.
  5. To arrange various loan collections to be placed at the disposal of schools, on such terms as may prove convenient.
  6. To bring together a number of examples to be exhibited in a suitable place as a tentative model of a standard collection. The collection to consist of (1) pictures of the simplest natural objects, birds and their nests and eggs, trees, wild flowers, and scenes of rural life such as town children seldom see, and country children often fail to enjoy consciously until their attention is specially called to them; (2) pictures of animals in friendly relation with human beings, especially with children; (3) pictures of the peasant and artisan life of our own and foreign countries, incidents of heroic adventure, &c.; (4) pictures of architectural works of historic or artistic interest; (5) landscapes and sea-pieces; (6) historical portraits; (7) scenes from history; (8) and last, but by no means least, such reproductions as are available of suitable subjects among the numerous works of the Italian, Dutch, and modern schools, especially of those in our English public galleries.
  7. To assist in, or otherwise promote, oral instruction such as may explain the works of art in our national collections, or those supplied to schools by the help of the association.
- "It is hoped that, by the middle of November, the committee will be in a position to exhibit a con-

siderable collection of pictures suitable to the objects of the association. But this progress must depend on the support received; those, therefore, who are in sympathy with the cause are invited to help by contributions of money and pictures.

"Presents of prints, photographs, etchings, chromo-lithographs, &c., should be sent to Mrs. Frederic Harrison, 38 Westbourne Terrace, W."

The notion is so obviously useful, and the sum required to begin with so moderate—£5 will supply a sufficient number of good autotypes for one school, and a couple of hundred pounds would set the association firmly on its feet—that we are glad to bring the subject before our readers.

#### NOTES ON ART AND ARCHAEOLOGY.

No one who was present at the meeting of the Society of Antiquaries on May 24, or the following week, can have forgotten the admirable series of rubbings of old German brasses then exhibited and explained by the Rev. W. F. Creeny, of Norwich (see *ACADEMY*, June 2). Encouraged by his reception on that occasion, Mr. Creeny has undertaken to publish a book (which has been long wanted) on the ornamental brasses of the Continent. While England possesses more than four thousand of these memorials, scarcely two hundred are known to exist on the Continent; but most of these are grand as to their dimensions, and luxuriously rich in diapered backgrounds and in architectural and heraldic details. Mr. Creeny purposes to make a selection of at least fifty which possess most merit as engravings or most historic interest, and to reproduce them in facsimile from accurate rubbings. They will be arranged chronologically, and short descriptive notes will be given of each. We have seen one of the proposed illustrations, and can vouch for the extraordinary accuracy with which the details are rendered; they bear examination with a magnifying glass. The subscription price is thirty shillings, to be reduced to one guinea if it should be found that the book can be produced at a lower cost.

This autumn will be published vol. viii. of the Catalogue of Oriental Coins in the British Museum, by Mr. Stanley Lane-Poole, containing the description of the coins of the Ottoman Turks, of which the British Museum has a fine series, numbering nearly 1,200. The volume also describes the Crimean and other Turkish war medals, and the Introduction deals with the intricate questions of Turkish metrology and monetary systems. It will be illustrated with twelve autotype plates, and will have two tables—one of the dynasties of Asia Minor; the other, drawn up by Mr. E. J. W. Gibb, showing the growth of the Ottoman empire and its chief divisions.

THE drop-scene of the Lyceum Theatre at Edinburgh, opened by Mr. Irving's company this week, is a reproduction in monochrome of Mr. Alma Tadema's picture of "Sappho," so well known from Mr. O. O. Murray's etching.

ON Monday last Mr. Henry Clark read a paper before the Liverpool Art Club on "Italian Medals of the Fifteenth and Sixteenth Centuries." This is intended to be the first of a series of similar addresses on special subjects.

WE may add to the notice of a Roman villa in Somerset, which appeared in the *ACADEMY* of September 1, that Mr. Elton has just brought to light a fine pavement with the well-known swastika in red.

A PLEASANT and characteristic etching, by R. W. Macbeth, of a sturdy Scotch girl feeding her ducks is the principal pictorial attraction of the *Art Journal*. Among the more interesting of the articles are "On and Off Shore," by

Grant Allen; "Technical Art Education," by A. Harris; and the "Museum of Arab Art at Cairo," by Stanley Lane-Poole.

A MASTERLY etching by Ch. Courty, after a portrait of an old lady by Franz Hals, is the most notable of recent plates in *L'Art*. Among the articles may be mentioned "Dilman Riemenschneider," by Mlle. V. M. Herwegen, "Les Pourbus," by Henri Hymans, and "Rubens au Musée de Munich," by Emile Michel.

PROF. A. C. MERRIAM has published an interesting little monograph on the Greek and Latin inscriptions upon the bronze crab which supported the obelisk now at New York. The inscriptions, and more especially the Latin one, were but half-legible when the crab was removed from Alexandria, and an erroneous reading of them led Mommsen to assign false dates to the Egyptian prefecture and Ethiopian expedition of Petronius. Aided by the application of acids, Prof. Merriam has succeeded in recovering the true reading of the texts, which is as follows:—

L. IH KAIZAPOZ  
BAPBAPOZ ANEΘHKKE  
APXITEKTONOYINTOZ  
PONTIOT

ANNO XVIII CAESARIS  
BARBARUS PRAEP  
AEGYPTI POSUIT  
ARCHITECTANTE PONTIO.

The dates are now clear, the eighteenth year being reckoned from the capture of Alexandria in 30 B.C. Petronius must have succeeded Cornelius Gallus as prefect of Egypt in 26 B.C., and have remained in that post at least as late as 20 B.C. He was probably followed first by Aelius, and then by Publius Rubrius Barbarus, whose name is recorded at Philae in an inscription of 13-12 B.C., the very year, in fact, as that in which we now find him to have been mentioned as prefect in the inscription on the crab. Prof. Merriam brings forward strong reasons for identifying him with a certain Publius Rubrius Barbarus who is named in an inscription of Oasinum the date of which is probably about 23 B.C. Pontius, the architect, seems to have been the Athenian artist who designed the beautiful fountains recently discovered on the site of the garden of Maecenas, which, according to Prof. Lumbroso, shows strongly the influence of Alexandrian art. He probably directed the removal of the two obelisks which were set up in the Capitol in 10-9 B.C., since Pliny (*N. H.* xxxvi. 14) mentions them in connexion with the obelisks at Alexandria, which we now know to have been erected by him three years before. Prof. Merriam is right in following Mr. Poole's explanation of the curious symbol which denotes "a year" on Egyptian monuments of the Greek period, and resembles a Latin L. It is clearly derived from the demotic form of the hieroglyphic representative of "a year."

#### THE STAGE.

WE regret to record the sudden death of Mr. Dutton Cook, which took place on Tuesday. Next week we hope to give some estimate of his position as a dramatic critic. Almost the last work that he did was to pass for the press a new series of studies of theatrical history, &c., which will be published in two volumes by Messrs. Sampson Low under the title of *On the Stage*.

#### MUSIC.

##### GLOUCESTER MUSICAL FESTIVAL.

###### II.

AFTER what we said last week about Dr. Arnold's new cantata, "Sennacherib," it will be unnecessary to describe the work in detail. The composer gives us an overture to repre-

sent Jerusalem, the besieged city. The presence of Sennacherib's army is indicated by a march; and, after various solos, duets, &c., allotted to the personages mentioned in the ancient Hebrew record, we have a musical picture of the destruction of the mighty host of the King of Assyria, followed by a concluding chorus, "The sword of the enemy." There are passages in this final number, and also in the chorus "O Lord, Thou art great," which show that Dr. Arnold can compose in a straightforward if not effective manner. He seems, indeed, to be aware that his style of writing is altogether too plain to be acceptable; and so he gives us extraordinary chords and modulations, peculiar phrases, and very original orchestration. But the harmonies are for the most part meaningless and the music disjointed; while the strings and wood-wind move about in mysterious ways as if frightened by the blatant noise of the trombones and the roll of the drum. The soloists were Mlle. Avigliana and Messrs. Newth and King; they all made the most they could of their respective parts. It will naturally be asked how such a work came to be chosen for a Festival. We fancy that it is easier to ask the question than to give any satisfactory answer. Beyond the facts that Dr. Arnold is organist of Winchester Cathedral and the composer of an Oratorio, "Ahab," and some church and chamber music, there seems no particular reason why he should have been commissioned to write a work for the Gloucester Festival. In accepting "Sennacherib" the authorities have scarcely helped on the cause of English musical art; and we think the composer will have reason to regret that he was tempted to try his hand at a form of art for which he had not sufficient strength.

The second part of the evening programme was devoted to Mendelssohn's "Hymn of Praise," with Miss M. Davies, Mrs. Warren, and Mr. E. Lloyd as vocalists.

ON Thursday morning the programme commenced with Mr. O. V. Stanford's "Elegiac Symphony." The work was first played at a concert of the Cambridge University Musical Society last year. It seemed as if we were to have a second opportunity of hearing Mr. Stanford's composition; but the press seats were placed close to the entrance door, and many of the large audience who crowded to the cathedral to hear "The Redemption" came late, and evidently only looked upon the instrumental music as a sort of opening voluntary while they were being shown to their seats. Thus much of the music was lost amid the clattering of feet and the noise of talking; and we cannot say anything about the performance, or add anything to what we wrote about the work when given at Cambridge. The wonderful success of "The Redemption" everywhere is most striking: for the Thursday morning's performance every seat in the cathedral was sold. The solo vocalists were Miss Hilda Wilson and Messrs. Lloyd and F. King, and all the music was interpreted in a careful and impressive manner. Gounod's Oratorio in a cathedral is certainly the right work in the right place.

ON Thursday evening the second concert took place in the Shire Hall. The principal feature of the programme was Mendelssohn's masterpiece, "The First Walpurgis-Night," with solo parts by Mme. Patey and Messrs. Newth and Santley.

ON Friday morning the customary performance of "The Messiah" was given in the cathedral; and in the evening the sacred edifice was crowded for the Special Nave Service, which closed in a fitting manner the week's work.

The charities have greatly benefited by the daily collections and sale of service-books.

J. S. SHEDLOCK.

SATURDAY, SEPTEMBER 22, 1883.

No. 594, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*Prolegomena to Ethics.* By the late Thomas Hill Green. Edited by A. C. Bradley. (Oxford: Clarendon Press.)

(First Notice.)

THOSE to whom the name of the late Prof. Green is known through the testimony of his Oxford pupils, or through the few critical essays published by him before his untimely death in March 1882, will open this book with a keen interest, which must, I think, become keener during the perusal of it.

The editor (to whom the charge of the MS. was left by Mr. Green) explains in his Preface that at the author's death some twenty or thirty pages remained to be added; and, though the whole of the rest was written out nearly ready for printing, no part of it can be considered to have undergone the final revision. It was already divided into sections, and the editor has judiciously introduced a further division into books and chapters. He has also prefixed an excellent Table of Contents, giving in from one to five lines an abstract of each section. The average length of a section is a little more than a page.

After a brief Introduction on the idea of a natural science of morals, which indicates the opposition to be maintained to those who would include ethics in the domain of physical science, the first book proceeds to the task of establishing a scientific basis of ethical system in the existence of a "spiritual principle in knowledge and in nature," the relation of man as intelligence to this principle, and the "freedom of man as intelligence." The argument is first applied to showing that the question about a given thing, Is it real or not? means Is it *related* as it seems to be?—that this question implies the conception of reality or nature as a single and unalterable order of relations, and that this conception, or the consciousness of which it is a function, cannot be the product of experience, but is presupposed in it. Thus

"a form of consciousness, which we cannot explain as of natural origin, is necessary to our conceiving an order of nature, an objective world of fact from which illusion may be distinguished. In other words, an understanding—for that term seems as fit as any other to denote the principle of consciousness in question—irreducible to anything else, 'makes nature' for us, in the sense of enabling us to conceive that there is such a thing. Now, that which the understanding thus presents to itself consists, as we have seen, in certain relations regarded as forming a single system. The next question, then, will be whether understanding can be held to 'make nature' in the further sense that it is the source, or at any rate a condition, of there being those relations."

And this is pursued by means of an analysis of the meaning and implications of relation, and a search for "a principle which renders all relations possible and is itself determined by none of them," which is inferred to be some unifying principle analogous to that of our understanding. A discussion ensues of the views on "things in themselves" held by Kant, who interpreted his saying, that "understanding makes nature," as meaning that understanding, as the unifying principle which is the source of relations, acts formatively on feelings as on a material given to it from an opposite source called "things in themselves," rendering them into one system of phenomena called "nature," which is the sole object of experience, and to which all judgments as to matters of fact relate. Mr. Green demurs to the reality thus ascribed to feeling apart from thought, holding that all sensitive life is determined by relations which can only exist for a thinking consciousness, though it may not be the consciousness of the beings to whom such life belongs. As to what that consciousness in itself is, he admits that we can only speak negatively, but the latter part of § 51 is perhaps one of the very few places in which he slightly departs from his habitual lucidity and habitual caution. He then recapitulates, showing the importance to a theory of ethics of thus holding that nature implies something other than itself as the condition of its being what it is, and that that something else is a self-distinguishing consciousness. This he calls a principle which is not natural, explaining that hereby is meant "that it is neither included among the phenomena which through its presence to them form a nature, nor consists in their series, nor is itself determined by any of the relations which it constitutes among them." And in the second chapter he asks in what relation we ourselves stand to this principle, calling this the question which lies at the root of ethical enquiry. The greater part of this chapter is occupied by an exposition of those views on the relation of perception to sensation which appeared in earlier writings of Mr. Green. Besides showing that more is implied in perception than a succession of sensations, he here argues against the confusion of the stimulant of sensation with the perceived object, whereby the latter is imagined to be outside consciousness.

"An affection of the sentient organism by matter external to it is the condition of our experiencing the sort of consciousness called perception; a relation of externality between objects is often part of that which is perceived, but in no case is there such a relation, any more than a relation of before and after, between the object perceived and the consciousness of it, or between constituents of that consciousness."

Assent might with some reason be delayed to some propositions in the remainder of this chapter when the fact that

"the perception of this or that object depends on the presence of that which in occurrence is past as a fact united in one consciousness with the fact of the sensation now occurring"

is held to imply that

"the agent of this neutralisation of time can as little, it would seem, be itself subject to conditions in time as the constituents of the result-

ing whole, the facts united in consciousness into the nature of the perceived object are before or after each other."

And, further (§ 67), it is said,

"in the growth of our experience, an animal organism, which has its history in time, gradually becomes the vehicle of an eternally complete consciousness."

Can there be such a relation between one thing in time and another not in time, and can the latter be really conceived, or the word "eternal" be intelligibly applied to a conceivable thing, except comparatively—that is, as expressing permanence through a period in which other things change? Must not a thing which is "reproduced," whether by itself or not, be *ipso facto* in time? But, whatever be our final judgment as to the view here set forth, it could hardly be urged with more force and illustrative ingenuity than are employed in the concluding pages of this chapter. The last and shorter chapter of the first book deals with "the freedom of man as intelligence" or as "a free cause," the word "cause" being used to express a relation other than any existing in the determined world, where the determining thing is determined by something else. "The world has no character but that given it by this action; the agent no character but that which it gives itself in this action. This is what we mean by calling the agent a free cause." And to a fairly stated objection it is replied,

"To say that man in himself is *in part* an animal or product of nature, on the ground that the consciousness which distinguishes him is realised through natural processes, is not more true than to say that an animal is in part a machine, because the life which distinguishes it has mechanical structures for its organs."

Stating incidentally arguments in disproof of a materialist analysis of the mind, the chapter ends by touching on the bearing of the theory of evolution. Both here and in later passages the author seems in some expressions rather inclined to over-estimate the difference between the lower human and higher brute intelligences, and to recognise rather imperfectly the presumption in favour of a principle of gradation. But I do not know that more need be demanded on behalf of the principle of evolution than the admission in the last sentence of this first book—

"that there may have been a progressive development, through hereditary transmission, of the animal system which has become organic to the distinctive intelligence of man; that the particular modes of successive feeling upon which a unifying intelligence supervenes in man, rendering them for him into a related world, may be the result of a past experience on the part of beings in whom such intelligence had not yet supervened, and who were in that sense not human; and that certain modifications of the sensibility, arising from this pre-human history, may have been the condition, according to some unascertained law, of that supervention of intelligence in man."

The second book treats of the will; and no part of the whole work shows greater analytical subtlety than this. The world of moral action being a world in which the determining causes are motives, a motive is defined as the idea of an end which a self-conscious subject presents to itself, and which it strives and tends to realise. A motive is

thus distinguished from a mere want, which may condition a motive, but cannot be one, or part of one. Desires or aversions yield an act of will by the reaction of the self upon them and its formation of an object of will out of them. As against "indeterminists," it is maintained that there cannot be an unmotivated choice of motives; as against "determinists," that the motive of will is not co-ordinate with desires or aversions, and that a man's character and circumstances, expressed in an act of will, are not reducible to the physical antecedents of the act, the character being the man as distinguished by a "self-determining consciousness."

"It is difficult, no doubt, to understand the relation to man's self-determining consciousness of that in him which is merely natural (or, to speak properly, of that in him which would be merely natural if it were not related to such a consciousness); but we do not overcome the difficulty by ignoring the absolute difference between such a consciousness and everything else in the world—a difference which remains the same, whether we do or do not extend the meaning of 'nature' so as to include modes of being thus absolutely different. In its primitive, no less than in its most developed, form, the self-determining consciousness as little admits of derivation from that which has or is it not as life from that which has or is it not."

Even if the perusal of this chapter leaves the reader still preferring to content himself with the vaguer assurance that any fair analysis of an act of will leaves a residue unaccounted for in a chain of physical causes and effects—indeed, even if he holds an antagonistic view—he can hardly regret the time given to studying here once more the perplexities of this ancient question and the possibilities of its solution.

The second chapter proposes to remove the misapprehension that bad and good action are thus reduced to the same motive by a discussion of the nature of will in its relation to desire and reason. The desire, which is a factor in human experience, being distinguished from instinctive impulse, as involving a consciousness of its object, and thereby of self, it is further maintained that, as distinguished from particular desires, there is a real existence of

"desire as such, if by this we understand the one soul or subject, and that a self-conscious soul or subject, which desires in all the desires of each of us, and as belonging to which alone, as related to each other through relation to it, the several desires are what they are."

Desire is really the self or subject as desiring, intellect the self as understanding. Yet these are essentially distinct, though dependent on each other. We have to understand in desiring, and to desire in understanding. The comparison of desire and intellect is followed by that of desire and will, in which it is held that, though the will is other than any such desire as those which it is said to overcome, it is not other than desire in that sense in which desire is ever the principle or motive of an imputable human action, an action that has any moral quality, good or bad. The will "supervenes" on mere impulses

"through the self-conscious subject's identification of itself with one of them, just as a perception is not a sensation or congeries of

sensations, but supervenes on certain sensations through a man's attending to them, i.e., through his taking them into self-consciousness and determining them, as in it, by relation to others of its contents."

Perhaps this sentence indicates as well as any one sentence in the volume can do, the connexion set forth in it between a theory of knowledge and a theory of ethics.

Thirdly, a similar interfusion is shown to exist of the intellect and the will, there being no factor or element in an act of willing separable (except verbally) from thought.

"Desire of the kind which enters into willing involves thought; thought of the kind which enters into willing involves desire; for the desire is the direction of a self-conscious subject to the realisation of an idea, while the thought is the presence of an idea in such a subject impelling to its own realisation."

These sections conclude the second book.

ERNEST MYERS.

*The Life of Edward Lord Hawke, Admiral of the Fleet.* By Montagu Burrows. (W. H. Allen.)

In the last century Cornwall produced in proportion to its population a larger number of naval officers than any other English county. All of the ports on its southern sea-board, from Saltash to Penryn, were parliamentary boroughs, each returning a brace of representatives to the House of Commons, and many of their representatives were connected with the Admiralty either ashore or afloat. The voters naturally sent their sons into a service in which they could bring their influence to bear upon the bestowers of promotion. Sir Charles Wager, who presided over the Admiralty in Walpole's administration, was a burgess of West Looe long before he had attained to eminence in his profession; and, according to some accounts, he was a native of that town. Boscawen, the rival of Hawke in the race for distinction, belonged to a Cornish family which controlled the political opinions of seven of the members of the Lower House. The ancestors of Lord Hawke had long been resident in the county—their pedigree is contained in the 1620 Visitation of Cornwall; and the tomb of one of them, though it seems to have since perished at the hands of the destroyer, stood sixty years ago in the chancel of their parish church. Hawke's uncle, Martin Bladen, one of Walpole's warmest supporters, twice fought, but fought in vain, the Cornish borough of Saltash, in the Whig interest, against the redoubtable Shippen. "Cornwall," says Hawke's biographer, "has thus the honour of having produced the two greatest admirals of the period, Hawke and Boscawen."

This volume of Prof. Burrows is more than a memoir of a single admiral; it contains a short summary of the history of the British Navy at a period which still calls for a detailed account of the triumphs and failures of our seamen. Not a captain of a man-of-war rose into prominence during the fifty years between 1720 and 1770 but finds mention in its pages, with some new particulars of his career or some forgotten facts recovered from obscurity. If this circumstance adds,

as it undoubtedly does, to the value of the volume in the eyes of the historical or the biographical student, their gain is a loss to the general reader and to the popularity of the work. There is absent from this last literary labour of Prof. Burrows that singleness of purpose, that directness of aim, which would hit the mark of public favour and cause the narrative of the deeds of the gallant old Admiral to be read and re-read by the school-boy as often as the Life of Lord Nelson or the account of Anson's voyage round the world. The question which Prof. Burrows has set himself to solve is the reason for the comparative neglect from which Hawke's memory has suffered, but we doubt if the biographer himself would be found to contend that he had cut the Gordian knot. It is true that Hawke's fortunes and those of his uncle Bladen were identified with the success of the Whig party, and that it was the aim of their political opponents to depreciate the value of their services. But this could not by itself have been a sufficient reason for the decline of his posthumous reputation, for Anson, too, was a Whig, as well as a member of the Administration of the Pelhams, and Anson's name still finds a conspicuous place in the world's memory. Horace Walpole never lost an opportunity of depreciating the services of Lord Hawke, but neither in his times nor in our own have the epigrams of Arlington Street and of Strawberry Hill been treated as the expression of a new gospel. Something may have been due to the fact that within a year after his death "the gallant Rodney" crushed a French fleet out of existence and took captive a French admiral. A deed so decisive in its character as this, and so striking in the attendant circumstance that the English commander was at that very time under sentence of recall, may perchance have helped to stamp out of the popular fancy the recollection of its buried hero. On many occasions, moreover, Hawke had set himself in opposition to the wishes of the Lords of the Admiralty; he had called their attention to the remissness of the officials in furnishing the fleet with the necessary provisions for the health of the seamen, and had even ventured upon condemning the beer with which his squadron was supplied—a circumstance which caused their lordships great concern. It was by acts like these that he gained the dumb gratitude of his sailors and secured the eloquent hostility of the world of officialdom.

The actions with which Hawke's name are associated are three; but of these only the last was crowned with complete success. The battle off Ushant fell short of a brilliant victory through the incompetence of one of his subordinates; had the Admiral been supported, as he might have expected, by all his captains, the French fleet, large as were the ships and skilfully as they were handled, would no doubt all have fallen a prey to the English. The projected landing at Rochefort was doomed to failure from the first. There was long delay before the troops could be embarked, the expedition was detained in its passage across the Channel by fogs and calms, and the enemy had time to prepare themselves for the arrival of the attacking forces. When the fleet was off the coast of France, indecision

and differences of opinion between the commanders spoil any chance of victory which might have been left. For the Battle of Quiberon Hawke alone was responsible; had it ended in defeat, no one would have shared his disgrace, and, as the contest was crowned with victory, all the glory was his own. Though a strong gale was blowing on a lee shore, and the French admiral had sought safety from his pursuer amid the shoals and currents of that rock-bound coast, orders were given by the English commander that "he was for the old way of fighting, to make downright work" with the enemy; and nothing but night prevented their total destruction. For resolute courage, for cool decision in the hour of excitement, the fight has no rival in history. The joy of Hawke's countrymen exceeded all bounds: bonfires and illuminations testified to the delight of the populace; the magazines were full of odes and ballads, which Prof. Burrows has raised from their graves; aged statesmen awoke from their slumbers to send the Admiral their thanks; while children in the nursery—a charming letter from a son of the Duke of Rutland is printed on p. 420—wrote that they wished to go to sea with him. This was the brightest hour of his fame; it was somewhat dimmed a few years later by his administration of the Admiralty. Prof. Burrows finds some consolation in his retrospect of Hawke's career at the Board in the fact that Lord Shelburne closed a letter to him with the expression of his "unalterable respect and regard;" but even those who are disposed to take the most favourable view of Malagrida's character will doubt the correctness of the biographer's conclusion that those were words "which such a man would scarcely have used towards one who was occupying a post he could not properly fill." W. P. COURTNEY.

*James Fenimore Cooper.* By Thomas R. Lounsbury. (Boston, U.S.: Houghton, Mifflin & Co.; London: Sampson Low.)

THIS is a book well worth reading. It is the first complete biography of Fenimore Cooper, and the opening sentence of the Preface contains about the newest fact in the volume: "When Cooper lay on his death-bed, he enjoined his family to permit no authorised account of his life to be prepared." It is as complete as portrait, preface, index, and bibliography can make a book, and is rendered interesting by a spirited, decisive, and manly style, though it is hardly possible to produce agreeable reading out of Cooper's life-long quarrels with critics, his warfare with the press, his newspaper libel suits, his dissatisfaction with his countrymen and their dissatisfaction with him, and the consequent torrents of abuse and the tirades of personalities. The account of these form nearly the half of the book; and, although Mr. Lounsbury has, with wonderful diligence and judgment, gathered numerous bits of facts which do not go to alter the former grounds of judgments passed on Cooper, yet the biographer keeps himself and his reader wide awake and alive with interest all through his three hundred pages, which here and there would be still further improved by compression

and by a stricter adherence to historical sequence.

We regret that Mr. Lounsbury has not taken advantage of the opportunity of giving an informatory and critical chapter on the early American novels and stories of American life. He has described the life of "The Great Persecutor" of the American press, as he was certainly felt to be, as that of a loveable and laughable man. As about his novels, so about Cooper there is a bigness, a strongness, an open-air feeling, as of one who looked upon life and living on a large scale, and an imperious vanity and fondness for the commonplace that follow on the heels of self-help, that really make one with any humour in him good-natured to his failings. That he was a good hater and a good fighter the American journalists knew to their cost, though it is too much for any man, far less a novelist, to take upon his shoulders the single-handed and unremunerative duty of censor of the press—especially the American press in his day. No man fought so many law-suits in season and out of season as did Cooper, and no author made less by it. In fiction some think his best work was his *Pathfinder*; in life he certainly proved himself to be the greatest American Faultfinder. And, indeed, an American can, with some show of reason, be pardoned for not appreciating Cooper's patriotism at his own value; he had such a high-strung sense of patriotism that the more disagreeable the truth was the more delightful it was for him to tell it. Cooper had a number of strong and likeable features of which the public knew nothing, but he had as many weak points in his character which he took sure means to keep continually before them. He had, we are told, a growing distaste for the common appliances of common life, yet in fiction his strength comes out best in delineating characters of "low life"—his trappers and squatters, his Mohicans, Leather Stocking, Long Tom Coffin, his men of the forests. Indeed, his power in this respect is still unrivalled. His descriptions of "polite society" are absolute failures. His heart softened and his pen ran smooth the moment he wrote of simple life on sea or land, or sketched the big boyish characters which his heart loved. Had Cooper but stuck to his trappers and sailors, the Americans would have stuck to him. His Indians are, it may be, characters of his own invention, but they show Cooper's skill and picturesqueness at his very best. With him we see and feel for them, and no higher praise can be given. Already they are historic. He is one of the earliest American novelists who, like most wise men, found romance in his own country, about his own feet, and did not require to travel for it in foreign lands. His pages at times have that directness, that feeling of having been written on the spot, with the native's personal fondness for the scenery he describes, which are always valuable. We may not agree that by him "the life of the wilderness and the sea had been told as by no other writer," but no one will for a moment question that "over the fields and forests and streams of his native land he had thrown the glamour of romantic association and lofty deeds."

Mr. Lounsbury is not only fair in his

criticisms; at times he is humorous. "There is too much fiction in his fiction." The characters "engage in making love when they ought to be flying for their lives." But what will the new American novelists say to this quotation?—

"Cooper's best work has power, and power always fascinates, even though accompanied with much that would naturally excite repulsion or dislike. Moreover, poorly as he sometimes told his story, he had a story to tell. The permanence and universality of his reputation are largely due to this fact. In many modern creations full of subtle charm and beauty, the narrative, the material framework, of the fiction has been made so subordinate to the delineation of character and motive that the reader ceases to feel much interest in what men do in the study which is furnished him of why they do it. In this highly rarefied air of philosophic analysis, incident and event wither and die" (p. 281).

It not infrequently happens in biography that the biographer unintentionally projects himself into his pages and takes us into his confidence, and whispers in our ears short confiding sentences. Mr. Lounsbury buttonholes us at several stages, and we listen with pleasure to his clear, vivacious leaderettes. His views have an individuality and impartiality that never miss their mark; they are the pleasantest pages in the book. The liveliest bit of writing (pp. 278-81) naturally enough refers to Cooper's conventional types of women, which are, in truth, no better than lay figures or milliners' models. We English may consider it "bad form" to write, as the English Professor at Yale College has done, on such a subject, but there is unblushing truth and full-blooded manhood in these words:—

"The female characters of his earlier tales are never able to do anything successfully but to faint. In novels, at least, one longs for a ruddier life than flows in the veins of these pale, bleached-out personifications of the proprieties. Women like them may be far more useful members of society than the stormier characters of fiction that are dear to the carnal-minded. They may very possibly be far more agreeable to live with, but they are not usually the women for whom men are willing or anxious to die" (pp. 280-81).

Mr. Lounsbury neatly refers to a Wm. Sotheby who "had to endure the double degradation of being called a small poet by the small poets themselves" (p. 97). He has the courage of his own opinions, which, on the debated subject of international copyright, are expressed with considerable vigour. We have already said he is fair and impartial in his criticisms; let us add he is also just in his conclusions. English authors need not be without hope so long as there are in America men of letters like Mr. Lounsbury who can think so clearly and write so vigorously as he can on this vexed question. This quotation deserves to be made widely known:—

"Even at this day we have little to boast of if the average cultivation of the people, as well as its average morality, finds expression in the laws. The record in these matters of the highest legislative body in the land is still the most discreditable of that of any nation in Christendom. To gratify the greed of a few traders, it has never refused to lay heavy burdens upon scholarship and letters. It has steadily imposed

duties on the introduction of everything that could facilitate the acquisition of learning and further the development of art. It has persistently stabbed literature under the pretence of encouraging intelligence. It has never once been guilty of the weakness of yielding for a moment to the virtuous impulse that would even contemplate the enactment of a copyright law. If it ever does pass one, it will do so, not because foreign authors have rights, but because native publishers have quarrels. Thus consistent in its unwillingness to do an honest thing from an honest motive, it will even then grant to selfishness what has been invariably denied to justice" (p. 166).

JAMES PURVES.

*Teutonic Mythology.* By Jacob Grimm. Translated from the Fourth Edition, with Notes and Appendix, by James Steven Stallybrass. Vol. II. (Bell.)

It is a pity that we in England have had to wait so long for a translation of one of Jacob Grimm's most masterly and delightful works. Had it been accessible a generation ago, much of that extraordinary rubbish upon religion and etymology which disfigures the "literary corners" of our country newspapers, displays itself at large in more ambitious periodicals, and fosters such silly and pestilent manias as the Anglo-Israelite theory could never have been allowed or listened to. Even at the present day, "high-class" editors who would scorn to permit the flat-earth or anti-vaccination lunatics a place in their columns will gravely give admission to philological and mythological heresies of just as ludicrous a type, to the astonishment of the foreigner and the shame of the intelligent native. However, late though it appear, the book is very welcome, and its influence will no doubt be widely felt ere long. We shall all be glad to hail the forthcoming third volume, which completes the work. Mr. Stallybrass has put Grimm's charming and idiomatic German into good, clear, idiomatic English, in a style which shows him to be possessed by a thorough love and knowledge of his subject and of his author; and the few modest notes which he has added here and there are both helpful and suggestive.

Long ago as it is since the *Teutonic Mythology* appeared, it is still the best single book on the subject; nor is it ever likely to be wholly superseded. For not only is there in it a vast yet orderly mass of facts, references, and discoveries, but it is also pervaded by that heaven we call genius which is able to make drier subjects than this pleasant and nutritious; and it is touched by that magic craft which can turn the most ordinary work-a-day instrument—dictionary, paddle, drinking-cup, or the like—into a real masterpiece of art and beauty. But, though there is no book of the kind so useful and delightful as this, the student of to-day must supplement it by the fresh collections of material made since Grimm's time; and he must read it in the light of the new theories of which even Grimm had but a faint inkling, albeit his instinct was so sound that his work needs little correction, and is again and again found to anticipate unknowingly the latest results of modern research.

The comparative method applied to the

mythology of existing savages and to those dead religious systems of the far past, of which little or nothing was known when this book was written, has brought us to a new standpoint as it were, from which even the facts first discovered by Grimm appear under a different illumination and in a fresh perspective. Thus, though Grimm duly notices the mentions of Ancestor-worship in his authorities, he does not suspect how vast a part it has undoubtedly played in religious history. It is evident, too, that he was powerfully influenced and attracted by a phase of Scandinavian religion which, though brilliant and striking in itself, and set forth by imaginative genius in one or two old poems, is, after all, but late, transient, and saturated with borrowed elements. For Wal-hall and its Wal-cyries, its Ein-herjar and the whole Wodinic hierarchy, are not the trunk and stock of Teutonic mythology; they are certainly grafted, if fruitful, boughs. The admirable sections in this volume on Death, Destiny, the Seasons, the Trees, and Animals are alone sufficient to prove this, and to give the reader a truer view of the genuine religious feelings, thoughts, and outward expression thereof among perhaps the most earnest people of Aryan race. Further, it is to be noted that some of the documents used by Jacob Grimm, especially *Landnámabók*, the *Lives of the Kings of Norway*, and the older Northern and English poems, must be treated as critically and minutely as the Vedas, or Homer, or the Old Testament books if we would get at their true meaning and avoid mistakes in using them. In Grimm's days neither the means nor the method for this study existed, and he was obliged to make what he could out of the uncritical and half-understood texts before him.

A few notes are added here in hope that they may be of some use to the translator and his readers. P. 551, for "house" read "garth" or "yard;" it seems to be the stone-walled court which the giantess objects to Brunhild driving through. P. 565, Geofon is a goddess, not a god. P. 600, "askunna" is certainly wrong, and the half-line quoted, out of a magnificent passage, is senseless as it stands in the MS.; it might be corrected—"slag-giaold Ása," as Dr. Vigfússon suggests, these words occurring in a list of "kennings" in *Edda*. P. 638, for "caulculatores" read "calculatores." P. 640, Winland has nothing to do with Windland. P. 688, uht-sceaða is miswritten for niht-sceaða. P. 701, "fengari" is a loan-word from the Greek used by some Court poet (probably one of Harold Hardrede's panegyrist) in a metaphor, and from his now lost verse transferred to the Thulor. P. 810, "svigi" means a torch. P. 858, the note on "bonheur" is surely wrong.

There are several parallels and references which strike one in reading the book as explanatory of bits of English folk-lore, &c. Thus, our common omnibus-driver's story of the origin of Hanwell (Anvil) and Hammer-smith has its analogy in the tradition of the Homburg "hüne" on p. 543. That the Wise Men came originally from Gowkham, not Gotham, is shown by the parallels on p. 681—an observation which suggests the possibility of Gokstad being, after all, a corruption of Geir-stad, and so of identifying the rheumatic

bones of the Christiana wicking-ship corpse with those of the famous king who, according to the *Ynglinga-tal*, died of gout, and whom we know to have been buried with special splendour, and even worshipped after his death. Our Derby ram, so renowned in song, is evidently a cousin of Notker's sacred boar, while the account of this beast coming out of the sea recalls the vivid picture in one of the Japanese picture-books where the water is being churned into foam by the struggles of a huge pig. The Scottish "Billy blin" of the ballads is explained by the "blinde belien" of p. 473. As to "iviöja" (p. 483), Hrafnagald, or, as it should be written, Hrafnagald, is a modern forgery, and all references to it should be struck out; the real passage to supply is that of the English Chronicler's poem on Brunanburh, where he calls Constantine of Scotland "eald inwidda," old warlock. P. 525, it looks as if our "grisly" really came from "wrisilic;" "tussock-grass" seems to be "giants' grass" from the parallel passages on p. 532. The "waking of the well" was still kept up in England till the Reformation, as we learn from fifteenth-century song and tradition; the whole passages in *Landnámabók* with regard to water-worship should be quoted in this connexion; they are merely mentioned pp. 585-92. On p. 868 should be given a reference to the splendid dream of Arthur in that North-country alliterative Mort Arthur to which Sir Thomas Mallory is indebted for some of his best passages. On p. 544 the old communal custom of having axes, ladders, &c., belonging to the entire village (as in some places in Russia still) is alluded to. Divination by scales is noticed as one of the regular ordeals of old Indian law, and is represented down to the seventeenth century in England by the weighing of witches, the superstition against weighing babies prevailing even to this day—facts which might be added to those given on p. 860. On p. 507 the origin of our old nickname "Bodda," or "Budde," the modern "bodger," "bodge," will be found interesting from its connexion with a good story of King Caut. The "rán ok regin," p. 496, recalls our colloquial "devil and deep sea," and, by the way, the derivation of Ran (parallel to arachne and aranea) should be added. The English chap-book stories of Tom Tram's childhood (the Youthful Gretti of the late Icelandic saga) are given a German analogue on p. 553. A good late example of the "magic sark" tradition of p. 892 is to be found in the verses of Ragnar's Sons saga. The steel stang, "stahel stangon," of the mediæval giants is a common heroic weapon of Japanese legend. Modern British examples of the "need-fire" and of burnt-offerings since Grimm's day may be remembered in connexion with instances cited p. 604. That the two candlesticks between which the drinker stood when practising divination by the bowl or cup are the "ondugeissulor" of Ari's informants there can be little doubt. Throwing over the shoulder, after circling the head three times, is still a household rite in England among children, who practise it with orange-skins or apple-parings, just as divination or luck-wishing by piebald horses is constantly observed by children and servants—the last puerile survival of the sacred stud

kept for divination and as a religious observance by the old Teutons from the days of Tacitus to those of Sweyn Fork-beard.

It would be impossible here even to give fit references to those passages which by their humour, shrewd observation, delightful power of narrative, or sagacious and philosophic thought have especially delighted one in the repeated perusal of Grimm's charming book, so full is it of bits to be remembered; but the little French story of the woman who stayed behind when Hell was harrowed to give that goddess a piece of her mind, and so lost the benefit which all her fellow-prisoners took advantage of, and the naïve and dramatic account of the Dwarfs of the Ramsflue, will not easily be forgotten.
